All of you here tonight, along with every wage earner, can remember the famous cost-of-living wage increases which came about under the Truman administration, and how our Fair Deal friends boasted of what they were doing for the workingman. If I recall correctly, there were five rounds of those so-called cost-of-living wage increases. Now I ask you, why were they called cost-of-living wage increases? The answer is simple. It is: That the Truman administration deliberately sponsored one of the most terrific periods of inflation this or any other country has ever endured. Between the end of World War II and the end of the Truman administration, the cost of living increased 47.4 percent. Just think of it. I repeat, under the Truman administration, the cost of living increased almost 50 percent—47.4 percent, to be exact. Do you wonder that the American workingman had to have five rounds of such so-called cost-of-living wage increases?

The truth is, the Truman administration had the American workingman on a treadmill. Or, to put it another way, it reminds me of the story about the farmer dangling an ear of corn on a pole just out of reach of his mule's mouth, just to keep him running.

Now let's take a look at the record of the Republican Party and Mr. Eisenhower's administration since he took office 3 years ago today. Let's see what our party and our President have done for the average workingman, or for the little man, if you please.

Inflation under the Truman administration has been stopped dead in its tracks by the sound Republican policies put into effect under the Eisenhower administration. In the 3 years we Republicans have been in power nationally the cost of living in the United States of America has increased less than 1 percent, as compared to the astounding 47.4-percent increase which took place, to the detriment of all, during the 7 years of Truman.

And now, get this: While we were checking inflation, the wise policies put into effect by the Eisenhower administration made it possible for our working people to get wage increases—real wage increases—not phony cost-of-living wage increases. Should you believe this to be only my personal opinion, let me cite my source of information. It is the American Federation of Labor. That great labor organization, in its monthly research report, volume 8, No. 2, issued in February of last year, stated that wage increases—and I quote—"were almost entirely over and beyond the amount needed to compensate for the cost of living." In other words, the AFL disclosed in its official report, that wage increases during 1954 represented the greatest gain in real wages since World War II. And they pointed out that those wage increases had been gained with fewer hours and less work-time loss through strikes, than in any year in recent history.

I repeat, my source of information is the American Federation of Labor. Do you wonder, ladies and gentlemen, that George Meany, president of the American Federation of Labor, said publicly, just a few months later, at a luncheon at the Washington Press Club—and I quote—"Yes, right now we never had it so good."

Let's take one more look at this whole matter of real wage increases. The pre-Eisenhower peak in real wage earnings was $61.28 during the year of 1944, which was the height of World War II. With peace under the Truman administration real wages plummeted nearly $10 a week and did not start back up again until the Korean war had begun. In the last year of the Truman administration real weekly earnings, with the Korean war going full force, averaged only $59.89.

But under President Eisenhower and the Republican Party, in peacetime, with none of our boys fighting and dying, real earnings of the American workers have climbed each year to set a yearly new all-time high, with the result that the latest official figure or real wage is $68.32 per week. I call this doing something for the little man instead of just talking about how much will be done for him, don't you?

But let's look at the matter in another way. Some of our friends of the opposition try to tell us everything is being done for the rich by this administration and nothing for the average American. Well, according to the United States Treasury we have approximately 9,000 millionaires in the United States, out of 168 million people. Last year the motor-car industry of America produced and sold over 8 million automobiles. Now you and I know that the 9,000 millionaires have not bought all of them. At least 8 million motor cars were sold to the little men of the country in 1955. During the past 3 years of the Republican administration, approximately 4½ million new homes have been built in the United States. Now I don't believe anyone can tell you that the 9,000 millionaires in this country are occupying all of those 4½ million homes. Neither are they looking at the 30 million television sets, or using all of the millions of refrigerator and deep-freezes, automatic washers and dryers, and all of the many other appliances which make modern living so much better than it was a few short years ago.

Now the truth is Mr. Meany was right in his Press Club speech. The little man has never had it so good as under the Eisenhower administration.

Of course, that is not all of the story, by any means. The Republican Party under the leadership of President Eisenhower can list scores of other things it has done in the interest of the little man. For example: 10 million more workers have been brought under old age and survivor benefits of the Social Security system, while at the same time the actual amount of retirement benefits has been increased for all. Unemployment coverage has been extended to 4 million additional American workers. Draft calls have been reduced. And let me emphasize that no American boy is being drafted today to be maimed or killed in a futile war.

Taxes have been cut by 10 percent on the average. Numerous benefits have come to the average citizen in the way of reduced excise taxes, and other helpful tax law provisions have been voted. For example, 2,100,000 working mothers can now deduct $600 annually from their income tax report for child-care expense; 1,300,000 parents have been given an additional deduction of $600 where a dependent child earns more than his $600 exemption yer year; 1,800,000 retired people have been given an additional $1,200 annual retirement exemption from taxes, and 8,500,000 families get larger medical expense deductions than ever before, all thanks to the Republican Congress and a Republican President cooperating on the gigantic job of revising and rewriting the Nation's internal revenue laws for the benefit of the average American—the so-called little man.

And on the economic front, let me point out that in the year of 1955 our national product reached the grand total of more than $390 billion. The total of our individual incomes last year was $302 billion. More than 65 million Americans were gainfully employed in December of 1955, and less than 2 million were unemployed, mostly for reasons of their own.

So, if I may use the same sort of an expression as did that great leader of American labor, George Meany—Never did America have it so good as under the Republican administration headed by the man we salute here tonight—our President—Dwight David Eisenhower.

For many weeks now all Americans—and in fact thoughtful persons all over the world in every land and clime—have been concerned over the state of the President's health. There are very few human beings who do not know that in late September the man we honor tonight suffered a heart attack out in Denver, which incapacitated him for some time.

I cannot tell you tonight the condition of the President's heart, but I do know one thing—he has a heart. Not since our Party a 100 years ago gave to the Nation the Great Emancipator, Abraham Lincoln, have we had a President more humane—more interested in the welfare of his fellow men, more religious in mind and nature, more ready and willing to take his difficulties and the troubles of his country to Almighty God in prayer, than the present Chief Executive of the United States, our beloved Dwight David Eisenhower. We know—not as Republicans but as Americans—that he is a good man, that he is a trustworthy man, that he is a man of faith and of courage; that he bears good will toward all men, and that he is dedicated to the pursuit of peace. May all of us here tonight, each in our own way, say a silent prayer that God in his wisdom may strengthen and renew the gallant fighting heart of our President so that he may continue to give to us and to the world the enlightened leadership which has been his during the past years.

So here tonight, not as Republicans alone, but as a grateful people, we give our salute to Eisenhower.

Kiwanis Trophy Award

EXTENSION OF REMARKS

OF

HON. WILLIAM H. AYRES

OF OHIO

IN THE HOUSE OF REPRESENTATIVES

Monday, January 23, 1956

Mr. AYRES. Mr. Speaker, throughout the world there are many organizations putting forth every effort to make the world a better place in which to live. One of these organizations is Kiwanis International.

Every Member of Congress is familiar with Kiwanis as I doubt if there is a single Member who has not at one time addressed at least one of the Kiwanis clubs in his district.

On Saturday evening, January 21, it was my privilege to attend the annual dinner honoring the past presidents of my own club, West Akron Kiwanis, in Akron, Ohio. Several years ago one of our members, Mr. Ray Fair, originated the idea of presenting a speech trophy each year to one of the members who proved himself to be an outstanding salesman for Kiwanis. It is customary to present the winner with a trophy patterned after the favorite sport in Spain. In the past the following Kiwanians have been so honored: Jacques Belet, Lee Shannon, Walt Garner, John Kistler, Ed Kusel, and Lloyd Oliver.

This year the honor was bestowed on Mr. Austin F. O'Brien. The choice was excellent and I feel confident Mr. O'Brien will uphold the tradition of the honor.

Festival of Music

EXTENSION OF REMARKS
OF
HON. HERBERT H. LEHMAN
OF NEW YORK
IN THE SENATE OF THE UNITED STATES
Monday, January 23, 1956

Mr. LEHMAN. Mr. President, I have prepared a statement commenting on a forthcoming musical presentation on January 30 to be broadcast over the facilities of the National Broadcasting Co. This presentation has considerable significance in the cultural world, and will be heard and listened to by many millions of our fellow citizens. It will bring together a very large number of outstanding artists of our time.

It has been suggested that in recognition of this event, as well as of the general public interest in music, the week of January 30 be proclaimed as Festival of Music Week.

I ask unanimous consent, Mr. President, that the remarks I have prepared for this occasion be printed in the RECORD.

There being no objection, the statement was ordered to be printed in the RECORD, as follows:

On Monday evening, January 30, 1956, the National Broadcasting Co. will telecast in color and black and white, over its nationwide facilities, a major presentation entitled "Festival of Music."

Although the chief emphasis of this program is, of course, on music, it will have overtones of education, art, and culture. Because of the scope of this program, the great array of talent to be presented, and the groundbreaking nature of the transmission itself, this NBC undertaking commands our attention and invites reflection.

A century ago America was awakening to the universal language of music. Our forefathers were crowding into small concert halls—into drawing rooms and other available auditoriums, to hear the first performances of Beethoven's Fidelio and Verdi's La Traviata. But an opportunity to see and hear these performances was available only to the privileged few. Still, the national appetite for musical presentations was not to be denied. There were touring companies which appeared in centers of population from one end of the country to the other. Who of that era will forget the barnstorming production of Ben Hur, and the tours of the Metropolitan, Chicago, St. Louis, and San Francisco opera companies? The enthusiasm of those who attended band concerts by John Philip Sousa and the great philharmonic orchestras left their landmark in the thousands of public-park bandstands across the land.

Then there was the phonograph which caught the public fancy, then declined in popularity, then rose again to present heights. Surely it was a wise man who said he preferred to write a nation's songs rather than to make its laws.

Then, in recent years, the inventive genius so characteristic of America produced the television. American inventive genius made it possible, through television, for half the Nation's population to have the finest songs and the most notable performances of the greatest artists brought into their own homes. And now television, the world's seventh scientific wonder has added the brilliant hues of the spectrum—color television—to the conventional black and white.

It would seem appropriate, I think, as a recognition of the possibilities of this new medium, to establish a week in which we may remind our people of the values which can and sometimes do come to them through television—a Festival of Music Week.

The National Broadcasting Co.'s Festival of Music will be an unprecedented color-television transmission which for quality of artistic performance, I am told, will be outstanding. The NBC color-television transmission of Monday, January 30, will last 1½ hours. Mr. Charles Laughton will act as master of ceremonies. He in turn is to present the glories of the world's greatest composers, sung and played by such great artists as Marian Anderson, Jussi Bjoerling, Zinka Milanov, Jan Peerce, Roberta Peters, Gregor Piatigorsky, Artur Rubinstein, Isaac Stern, Rise Stevens, Renata Tebaldi, Blanche Thebom, and Leonard Warren.

Seldom has so distinguished a group of artists been assembled for a single performance.

It might be appropriate, therefore, to take advantage of this significant event and to set aside the week of January 30, by proclamation, as Festival of Music Week.

Education Is a Federal Problem

EXTENSION OF REMARKS
OF
HON. HUBERT H. HUMPHREY
OF MINNESOTA
IN THE SENATE OF THE UNITED STATES
Monday, January 23, 1956

Mr. HUMPHREY. Mr. President, recently in response to an editorial entitled "Education Is a National, Not Federal, Problem," which appeared in the Star, of Minneapolis, Minn., I cited the activities of Federal Government which related to our educational system, with specific reference to legislation developed and passed providing Federal aid to education. I ask unanimous consent that my letter dated January 13, 1956, be printed in the CONGRESSIONAL RECORD.

There being no objection, the letter was ordered to be printed in the RECORD, as follows:

JANUARY 13, 1956.

The EDITOR, THE MINNEAPOLIS STAR,
Minneapolis, Minn.

DEAR MR. EDITOR: Your editorial of Wednesday, December 21, entitled "Education Is a National, Not Federal Problem" deserves further consideration. This editorial was written in reply to my letter of the same date printed in your column Everybody's Ideas.

You may recall that I served as a member of the President's Commission on Intergovernmental Relations. We studied with great care and detail the educational needs of our country, and gave specific attention to the efforts currently being made by the respective States and local subdivisions in order to meet educational needs. Furthermore, we studied the financial needs or capacity of States and localities to further develop their educational structure, including both facilities and personnel.

The primary responsibility for public education does belong to the State and its political subdivisions. The educational system should be close to the people. The management of our schools should rest essentially with the local citizenry. Our public education system is one of the great achievements of our people.

Indeed, education is a national problem. Your second paragraph indicates a lack of understanding as to the American tradition, or an unwillingness to accept the role of the Federal Government in our educational structure. You stated as follows, referring to my letter: "But he also implies that education is a problem for the Federal Government, and there he is at odds with the tradition of America. Financing education is a local and State problem, which on the whole has been handled well at those levels."

Let's examine the role of the Federal Government in education, and see whether or not my conviction that the Federal Government does have a responsibility in the educational field is at odds with the tradition of America.

The legislative milestones in the development of Federal aid to education are as follows:

In 1787 the Northwest Ordnance set aside certain public lands for public education purposes.

In 1826 the Morrill Act provided for grants of Federal land to each State for the establishment of colleges specializing in the subjects of agricultural and mechanical arts. Our own University of Minnesota is such a college.

1867: Congress established an independent Federal Department of Education. Its name was officially changed to the United States Office of Education after 1929.

In 1917 the Smith-Hughes Act established the first program of Federal grants-in-aid to promote vocational education in public schools. This in turn was strengthened and expanded under the George-Barden Act.

In the 1930's the Public Works Administration made loans and grants for school construction, and the Federal Emergency Relief Administration, along with the WPA, provided funds for school construction plus adult education and nursery school programs.

1936: The George-Barden Act.

In 1940 the Lanham Act, which authorized athletic aid to local governments for construction, maintenance, and operation of school facilities.

In 1944 the Servicemen's Readjustment Act, commonly known as the GI bill of rights, set up a program of additional benefits for World War II veterans, and later extended to veterans of the Korean war.

In 1946 the National School Lunch Act authorizing aid in the form of funds and food to cities for use in school-lunch programs.

In 1950 Public Law 874, authorizing Federal payments for maintenance and operating costs of schools overburdened by increased enrollment resulting from Federal activities.

Also in 1950, Public Law 815 authorizing grants to States for construction of schools in federally affected areas. Both of these laws have been extended.

In 1954 Public Law 530 authorizing the White House Conference on Education, along with Public Law 532 establishing a 9-member advisory committee on education.

This is but a brief review of some of the activities of the Federal Government directly relating to our educational structure. Again, I should add that our vast programs for scientific, technological and medical research are not included in the above listing of legislative enactments. The scope of our research programs is growing every year, and the amount of funds appropriated runs into the millions. Surely, Mr. Editor, it is within our tradition for the Federal Government to have an important role in education—a tradition which started in 1787 and continues to this day—a tradition which was recently reaffirmed by the reports and conclusions of the White House Conference on Education.

Until the 1930's the overwhelming share of school revenues were obtained at the local independent school district level. Then came the period of State aid to the local schools. State aid was bitterly opposed, but the economic necessities of a modern school system equipped to meet the growing population brought acceptance and approval of State aid.

The impact of the depression and World War II, along with the postwar surge in population, placed tremendous burdens on our school system. There can be no doubt as to the shortage of school facilities, despite a major school construction program by local school districts. It is common knowledge that our classes are overcrowded, that our teacher shortage is growing every year, that our colleges are not graduating an adequate supply of new teachers to fill the gap and to replace those who are retiring.

Here are the facts as reported in the Congressional Quarterly for February 1955. Since then, the situation has grown even more critical despite the enlarged program of local school districts and States.

A report by the United States Office of Education shows that in the fall of 1954 there were 2,600,000 pupils in excess of normal school building capacity in the United States. About 9 percent of all pupils were being accommodated in makeshift or improvised quarters. Nationwide there is a shortage of over 340,000 classrooms. An additional 58,000 teachers were needed in 1955. The teacher total is diminishing rather than growing in relation to pupil population. It is estimated that in the next 5 years approximately 620,000 public elementary and secondary classrooms and related facilities will be needed. The 1955 building program was scheduled to produce about 60,000 classrooms, far short of current needs without taking into consideration the lag in construction during the depression and war and immediate postwar years, or the future growth of the population.

Again quoting from the Congressional Quarterly: "While school needs are essentially a State and local community problem, the Federal Government has played a major role in promoting education. For example, in fiscal year 1953, Federal expenditures for education in the States totaled $1,200,000,000. The bulk of the Federal funds, $725.6 million, were for education of veterans. Other major items were support of land grant colleges, vocational education and payment to the States for school construction and maintenance in federally affected school districts. This figure does not include the vast sums of money appropriated by Congress for research, much of which was allocated to our universities and technical schools.

I know of no public or lay spokesman who is recommending that the Federal Government take over the responsibilities for our public school system. However, our public education program is in trouble due to inadequate facilities, shortage of teachers, and lack of adequate local and State revenues. To be sure, some of the States could do a better job than they are doing. Federal legislation should not be designed to relieve States and local governments of their responsibilities. Federal aid should be supplemental and not replacement. Federal aid to public education should in the main be limited to school construction needs. Control over school management, curriculum, and educational program must remain in the hands of the local community and its appropriate school agency. There is no evidence that would lead one to conclude that Federal aid means Federal domination. Our land-grant colleges have not been dominated by the Federal Government. Our vocational education programs are not dominated or managed by the Federal Government. Yet, in both of these areas of education the Federal Government has made a sizable contribution.

Regrettably, many States and localities are restrained by constitutional and charter limitations in providing the necessary funds for school purposes. Theoretically, one can argue that city charters and State constitutions should be changed, and indeed this should be done. In the meantime, our public education structure continues to deteriorate and becomes evermore inadequate to meet the heavy increase in school enrollment. The Federal Government is the people's Government; it belongs to the people. The Federal Government is responsive to public opinion and public will, yes, even more so than some State and local governments. The Congress is elected by the people, just as is a State legislature. The President is elected by the American people, just as is the governor by the people of his State.

Our Nation is becoming evermore integrated. The American people move from one area to another. Our system of commerce and transportation has united this country into one great Nation. Education is a national problem, and the provision of proper educational facilities is the responsibility of the people of this country acting through their instrumentalities of government. While editors and Senators, governors and Presidents, Congressmen and legislators argue over Federal aid to education, our school system suffers and remains inadequate. We are in a struggle for survival. We need a strong, intelligent, and well-informed citizenry. We need competent scientists and technicians. We need, above all, equality of opportunity for education. That equality of opportunity is being denied today to millions of our young people—young people who are called upon to serve in the defense of this country; young people who may reside in our State or some other State in the years to come; young people who will be called upon to shoulder burdens of yet unknown and uncharted proportions in the future.

I suggest we bring this argument on Federal aid to education to a halt and get on with building the schools, training the teachers, providing scholarships for talented men and women, expanding our programs of research and development, equipping our universities and institutions of higher learning to meet an unprecedented enrollment. A rich and prosperous America can afford to pay the bill. Our failure to pay this bill could well result in jeopardy to our national security and long-term national prosperity. Education is a sound investment. There are no cutrate prices nor bargain-basement sales on the development of talent, skill, and good citizenship.

Sincerely yours,

HUBERT H. HUMPHREY.

Educational Benefits for Veterans

EXTENSION OF REMARKS

OF

HON. EDMUND P. RADWAN

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Monday, January 23, 1956

Mr. RADWAN. Mr. Speaker, for the past several weeks I have been working intensively on a bill which I consider most essential to the continued progress and security of our Nation. Today I was privileged to introduce it for the approval of the Congress. It is entitled "A bill to extend the educational benefits of the veterans' Readjustment Assistance Act of 1952 to all veterans of the Armed Forces who have served therein since June 27, 1950." Because the purposes of this proposal can easily be hidden behind such an austere title, I would like to explain them briefly.

As you all know, Congress passed a bill during the closing days of World War II which was intended to show our 11 million citizens under arms the Nation's appreciation for their victory, and to lend them a helping hand as they returned to civilian life. That was the purpose of the "GI bill of rights," as it was promptly dubbed, but as it turned out, the Nation could not have done itself a greater favor in its efforts to aid the veterans. Just as an example, the 7,800,000 veterans who took advantage of the education and training program are now paying back the cost of that program, because their education has permitted them to attain an income level at which they are paying an extra billion dollars in Federal income taxes. These benefits were revived for the Korean vet, and then once again permitted to expire.

For some time, as my constituents are aware, I have been concerned with several serious national problems. It is said that Russia has now surpassed us in the education and training of scientists and engineers, and that they are at the present time training over twice as many engineers as we are. Everyone knows that science and engineering is the key to survival in this scientific world.

Another problem is represented by our need to keep our guard up in this period of so-called peace. It is difficult to make the Armed Services attractive to our young men when we are technically at peace. Still a third problem lies in the fact that we have and probably will continue to have a serious shortage of doctors in this country. A fourth problem exists in the need to aid and improve our

educational system generally. The recent White House Conference on Education, and the constant efforts to bolster our colleges and universities are ample proof of that. Finally, as I indicated above, we have been a Nation that has always shown gratitude to its veterans.

My purpose in introducing the above-described bill is to extend the education and training benefits of the GI bill to all veterans of the Armed Forces. Rarely does one enactment serve so many useful purposes. It should certainly encourage enlistments in the Armed Forces, and at the same time encourage many who would otherwise not receive a higher education to acquire training in the sciences and engineering. As happened after World War II, many beneficiaries of the act will undoubtedly study medicine. The Nation's colleges and universities will receive a much needed helping hand, and the veteran will know that his gift of a period of service is not unappreciated. The overall benefit to the Nation will be incalculable.

I have long been active in veterans affairs and have served on that committee in the House. I can sincerely say that I never experienced greater satisfaction in presenting a bill concerning the veteran.

Civil Service Week

EXTENSION OF REMARKS
OF
HON. GEORGE M. RHODES
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Monday, January 23, 1956

Mr. RHODES of Pennsylvania. Mr. Speaker, under leave to extend my remarks, I would like to include a speech by the distinguished chairman of the Senate Post Office and Civil Service Committee, Senator OLIN D. JOHNSTON, which he made January 21, 1956, at a banquet held in the Willard Hotel, Washington, D. C., observing the 73d anniversary of the establishment of the Federal civil service.

Senator JOHNSTON'S speech follows:

Mr. Chairman, distinguished guests, ladies, and gentlemen, it is a real pleasure for me to be here tonight and join with you in observance of the 73d anniversary of the establishment of the Federal civil service.

I think you will agree with me that we have come a long way since 1883—when the Civil Service Act was first signed into law—the purpose of which was to make Government service attractive to able men and women who wished to make the public service a career.

I am equally confident you will agree that from time to time the road has not always been an easy one—that on occasions the rate of progress and record of accomplishments have not always been as accelerated or productive as we would have liked.

We all can recall very recent instances of roadblocks that have been erected to slow down and even untrack the civil service system.

Yet—today our civil-service system is given almost unanimous public acceptance. Any thinking man or woman—in the Federal service or outside—is well aware that the caliber, integrity, and ability of the great rank and file of our career Government employees are not merely above reproach, but are outstanding.

I know that all of us are constantly acknowledging the progress and achievements of private industry.

But how many of us are familiar with, or even aware of the record of contributions by Federal workers to this amazing parade of industrial progress.

Private industry and management are thoroughly aware of it.

Hardly a day passes that some industry representative or technician, from almost any field of endeavor one cares to mention, is not seeking guidance and help from Government experts—career employees.

Unfortunately, my dear friends, despite its wide acceptance, there has been—and only too recently—a disposition in some quarters to discredit the civil-service system and Government employees. We noted with considerable alarm—efforts, blazingly unfolding before our very eyes, to wreck the civil-service law, throw out thousands of loyal, competent employees, and return Federal employment to the chaotic political spoils system from which it had emerged some 73 years ago.

Tampering with the public career service should not be entered into lightly. Certainly it is not an undertaking to be attempted by any political party.

It was my great pleasure to appear also at last year's civil-service anniversary observance.

At that time I expressed my deep concern over the misleading, unfair and un-American operation of the administration's so-called security program for Federal employees. I referred to the reporting of security statistics as the numbers game.

It is now 1 year later. And tonight, my friends, I think I can say with calm assurance that the American people have at long last been given the facts.

The record is now clear.

Swept away is the smokescreen of political intrigue and deliberate confusion.

No longer will anyone be taken in by politically motivated, deliberate misleading and unwarranted attacks on Federal employees. Not only has the web of confusion been swept aside, but exposure of repeated injustices to loyal, patriotic, competent employees has made those in charge of this program of planned deception more cautious and less eager to smear, without cause, the reputations of employees they wanted to be rid of for reasons which were solely political and had not the slightest relationship to national security.

I am happy to be able to say that our investigation of the security program has resulted in making the air in Washington somewhat cleaner this year.

In this respect, I want to take just a moment to pay tribute to the press, particularly the reporters in Washington, D. C. True to their finest traditions, they were not fooled by the political camouflage. They probed deep and exposed to public opinion the injustices, the outrages which were being attempted in the name of national security.

I have stated many times before—and I repeat it again—that politics are, and should be, a basic part of the operations of our Government, whether it be on a National, State, or local level. They are an integral part of the two-party system which has made the economic and social health of our great country so sound and progressive.

And it follows that patronage jobs are an elementary part of our political system. However, I say most emphatically, that the practice of patronage jobs should be confined only—and solely—to positions of topmost or policymaking level.

I am unalterably opposed to the philosophy that has sprung up during the last 2 or 3 years of claiming all Government jobs as political plums. That eligibility for Federal employment be considered on the basis of party affiliation and contributions. I am opposed to this type of job clearance or approval for either party—Democrat or Republican.

When the 84th Congress convened a year ago, the morale of the Federal career service was at low tide. The service had been visited by patronage raids and jobs both high and low were under scrutiny for merger with schedule A, B, or C.

The pay raise approved by Congress with enthusiasm only a few months earlier had evaporated like the morning dew with the rising of the sun.

Several administration bills enacted by the 83d Congress were found to be deficient or unworkable. Career employees were well aware of the frigid atmosphere sweeping down upon them from above.

In that setting there is little wonder that the future seemed dark and void of any real chance of improvement short of another 2 years.

When I stood here on this platform 1 year ago, I promised you that the 84th Congress had drawn a plan of definite objectives for strengthening and reestablishing the civil-service laws toward the purpose for which they were created—as well as generally improving the lot of Federal workers.

They were not idle words, nor empty promises.

The recorded accomplishments of the 1st session of the 84th Congress are unsurpassed and unparalleled in American legislative history.

We did not choose to wait for 2 years but moved with dispatch to improve immediately the lot of the Federal career employee by approving an unprecedented number of beneficial, needed, and workable measures.

Among such enactments were:

A bill to provide pay increases to career employees under the Classification Act of 1949.

A bill to increase the pay and provide other benefits to our postal employees.

These two pay bills marked the third attempt on the part of Congress to obtain a pay increase for Federal employees—for on two previous occasions similar bills were snuffed out by Presidential veto.

Additionally, the 84th Congress approved:

A bill to amend the Employees Uniform Allowance Act so as to make its benefits available to all employees who are required to wear a prescribed uniform.

A bill to amend the Life Insurance Act to protect the policies of thousands of Federal employees who were members of various beneficial associations.

A bill to require the Civil Service Commission to grant career appointments to a large number of employees who were denied conversion under the administration's program.

A bill to give persons now retired or who retire in the near future benefits equal to the increase in pay given to active Federal employees.

A bill providing for the purchase of bonds at Government expense to cover officers and employees.

The 84th Congress also approved:

A bill to increase travel allowances and a number of other measures of importance to certain groups of Federal employees.

I believe there is rather general agreement that the list of accomplishments during the 1st session of the 84th Congress in behalf of the career service is an imposing one.

But let me hasten to add that much is yet to be desired and I am so bold as to predict here and now that much will be accomplished during this, the 2d session of the 84th Congress.

We have established a group of experts to study the Civil Service Commission and its administration of the civil service law. To

assist in this endeavor, I am inviting five outstanding Americans to volunteer their services as advisors and consultants to the committee for this study. I am happy to announce that your own president—my good friend and advisor Jim Campbell—has agreed to represent the Federal employee groups on this Advisory Council. The committee will make its report and recommendations later in the year.

This is also an appropriate time and occasion to announce that public hearings on S. 2875, the bill I introduced to revise the Civil Service Retirement Act from stem to stern, will be held February 1, 2, and 3.

It is my hope that the bill can be reported by the Post Office and Civil Service Committee within a few days after conclusion of the hearings and then be called up for consideration in the Senate soon thereafter.

The bill has many good features, some of the more important of which are:

1. It raises the factor for the computation of annuities for employees generally from 1½ to 2 percent.

2. It permits optional retirement after 30 years of service regardless of age under a vastly more favorable reduction formula for each year the employee is under the age of 60 at the time of retirement.

3. It provides for immediate annuities to employees who are separate through no fault of their own with 25 years of service regardless of age and to employees with 20 years of service who are 50 years of age or older.

4. It establishes minimum benefits for employees retired because of total disability.

5. It provides automatic cost-free annuities to surviving spouses up to one-half of the first $4,000 of an employee's annuity.

6. It increases the benefits payable to surviving children by one-third.

Finally, the bill corrects many inequities in a number of areas.

In conclusion I wish to express the hope that during the current session of the 84th Congress we will be successful in obtaining enactment of:

1. Legislation to provide health insurance to Federal employees on a joint Government-employee contributory basis.

2. Legislation to guard against unjustified salary cuts as a result of the downgrading of an employee's position.

3. Legislation to provide longevity increases to wage-board employees.

4. Legislation to provide proper employee union recognition.

5. Legislation to redirect, reorganize, and revitalize the Civil Service Commission to the end that it once again will measure up to its responsibility as chief architect and protector of the civil-service merit system.

Any contribution I can make to the enactment of the legislation program outlined above is more than justified on the basis of the contribution made by our body of career employees toward making ours the greatest Government on the face of the earth.

I thank you.

1956 Economic Report of the President

EXTENSION OF REMARKS
OF
HON. HENRY ALDOUS DIXON
OF UTAH
IN THE HOUSE OF REPRESENTATIVES
Monday, January 23, 1956

Mr. DIXON. Mr. Speaker, President Eisenhower's 1956 Economic Report clearly indicates that the goals of maximum employment, production and purchasing power envisioned by the Employment Act of 1946, were achieved by the economy in 1955. As the President indicated, we are now upon the threshold of a $400 billion economy. Of particular interest and concern to all of us is the fact that our economic achievements in 1955 in terms of increased output and employment were accomplished without price inflation.

Mr. Speaker, the dollar value of all goods and services created by the economy in 1955 gives a clear indication of the very rapid advances made in the recovery and expansion phases of the business cycle. The Gross National Product which is a measure of the value of the production created was $387.4 billion in 1955. This was nearly $27 billion above the value of all goods and services produced in 1954. It is clear, Mr. Speaker, that the economic projections of the prophets of gloom and doom missed their mark by wide margins, and I am sure as the economy continues to expand in 1956, that the people will realize the political nature of their prophecies which we can also expect to magnify out of proportion the soft spots which always are present, even in an expanding economy.

I am sure all of us are greatly cheered by the President's statement that total employment rose by over 3 million and unemployment declined by one-half million between the last 3 months of 1954 and the corresponding months of 1955. As you already are aware, Mr. Speaker, total employment during 1955 reached an alltime record high of 65 million. This in spite of the fact that additions to the civilian labor force increased by over 2½ million.

One indicator of the general prosperity which prevailed in 1955 and which accompanied this steady increase in employment was the increase in the average workweek. This resulted in considerable overtime work, especially in the latter part of 1955. These two factors, combined with a steady rise in average weekly earnings, brought labors' income earnings to record levels in almost all industries.

But of equal importance, Mr. Speaker, was the fact that unemployment as a percentage of the civilian labor force declined from 5.2 percent during the first quarter of 1955, to 3.4 percent for the last 2 quarters of the year. This is the level of unemployment, Mr. Speaker, which is below that which most economists point out is normal for years in which the country is free from war or severe economic recessions. The 2.3 million unemployed during the last quarter of 1955, although regrettable, consists primarily of new entrants into the labor force and those in the process of changing or shifting jobs to new industries or occupations because of technological advancements. The simple facts are that unemployment is near an irreducible minimum.

Another indicator of the well being of the economy is measured by the purchasing power which people have to buy goods and services. In 1955 disposable incomes, that is that income which people have to spend or save after paying all taxes, increased by $14.4 billion over that prevailing in 1954, setting a new record of $268.2 billion. But most important of all, Mr. Speaker, was the fact that although disposable income and resulting expenditures reached new levels, the price level index remained relatively stable.

It is small wonder that President Eisenhower was able to report to the American people in his 1956 economic report that—

Full employment, rising incomes, and a stable dollar have been cherished goals of our society. The practical attainment of these ideals during 1955 was the year's greatest economic achievement.

The President's statement—

It is reasonable to expect that high levels of production, employment, and income will be broadly sustained during the coming year.

Is equally encouraging.

Text of President's Talk at GOP Salute Dinner

EXTENSION OF REMARKS
OF
HON. JAMES C. AUCHINCLOSS
OF NEW JERSEY
IN THE HOUSE OF REPRESENTATIVES
Monday, January 23, 1956

Mr. AUCHINCLOSS. Mr. Speaker, I appreciate the permission of the House to extend my remarks in the RECORD and include the address made by the President of the United States on the occasion of the salute to Eisenhower dinners held in many parts of our country on January 20, 1956.

Of course, this was a partisan affair, perhaps the largest of its kind ever held, and in his brief address the President was at his best. In it he revealed the sincerity of his character which has profoundly impressed the people of our country; he stated in simple language his philosophy of government; and he showed in no unmistakable terms the reverence for duty and service to his country which have dominated his entire life. Americans everywhere admire and respect such devotion, free from the taint of personal ambition, and his underlying and undying resolution to do the right as "God gives him the power to see the right." Yes; it was a partisan occasion, but President Eisenhower spoke as a dedicated American, and his principles are enshrined in the hearts of us all.

The above-mentioned address follows:

TEXT OF PRESIDENT'S TALK AT GOP SALUTE DINNER

Thank you, thank you very much indeed. Mr. Vice President, Chairman Hall, my very dear friends here and throughout the United States, in this past half hour, on the magic carpet of television, I have traveled around the country, recognizing faces of old friends hundreds of miles distant, recalling visits to cities as I glimpsed them on the screen, feeling the enthusiasm and warm friendship of so many thousands whom I have never met. I wish I could meet them so that I might personally say to each, "Thank you."

In fact, my friends, all my friends, after such a tribute as has been paid to Mrs. Eisenhower and to me this evening, the heart is so full that it is indeed dangerous to try to say more than "thank you." I shall let it go at that.

GRATEFUL TO ALL

Naturally, I have been deeply moved through the flying minutes of this electronic hour. I am grateful to everyone—the Republican clubs, and all the organizations and individuals and their friends—who, directly or indirectly, participated in this salute.

But my deepest emotion is concerned with things not shown by the TV cameras, things of the mind and heart and spirit—the memory of millions of our people—Republicans, Independents, and Democrats—who in 1952 worked tirelessly to make reality of their ideas of good Government; the memory of men and women who stirred their friends and communities to action and who—when the election was done—returned to their jobs and their homes, quietly performing the work of America, raising their families, discharging their responsibilities of citizenship, living worthy, rewarding lives.

Those many millions made possible the event whose anniversary you observe today. They are the basis and the strength of what so many have called a new era. They brought fresh vigor to the political life of America with their vision, energy, and dedication. We in Washington—inspired by them—have sought to be worthy of their trust. The heartfelt thanks of everyone at these dinners tonight goes to them. They, in the homes of America, are the ones who truly merit a great salute.

During recent months I have had an unusual, even an enforced, opportunity to ponder on many subjects—the essential goodness and honest purposes of people; the common bonds that join all Americans, regardless of ancestry, faith, or politics; the anxiety of multitudes, at home and abroad, to encourage and pray for one stricken by illness; the unity of aspirations that binds humanity together.

DEFENSES ARE ALERT

In pursuit of these aspirations, we in the Federal Government strive with all our strength to convert the uneasy peace in which we live to one that is genuine, based on the great moral principles of justice and right. Knowing well that true peace cannot be achieved by retreat from reality and responsibility or by desertion of friends, we make certain that our defenses are alert and strong; that our partnerships with others are based on deep friendships and common great purposes; that gradually the truth of our Nation's peaceful goals and our respect for the rights of others is brought to all peoples of the earth. Let no one be in doubt; this struggle for peace will be waged relentlessly by Americans of all parties and all creeds until at last success shall crown our efforts and reward our faith.

At home we enjoy prosperity; not the false prosperity of a dizzy inflation or of economic activity based mainly on arms spending; not the tragic prosperity of a few who can squander and of millions who must pinch; rather, the genuine and widely shared prosperity of an immense productivity for peacetime satisfaction of human needs.

This record is the product of an industrious citizenry, supported in the Federal Government by a program designed for progress, and dedicated to integrity, to concern for every individual, to faith in America and its principles.

Many tasks still await action. Problems involving sectors of the home front and relationships abroad demand the earnest and sympathetic attention of all Americans. Thus the present and the future are heavy with challenge, rich with opportunity. We must not relax merely because the general record is good.

For every good citizen, his party is, or he wants it to be, an instrument for genuine service, united in its devotion to a program that preserves intact the vital principles of the American creed; that attacks every problem in the light of those principles; that recognizes inescapable change and meets it; that believes in the dignity of every individual, in his equal right to justice and fair play, in his equal opportunity for the exercise of his talents, in his right to proper sharing in the Nation's prosperity. This is my conception of the Republican Party on this January 20, 1956. As long as our party lives by these principles and dedicates itself to these goals, it will continue to draw into its ranks in ever-increasing numbers, men and women of idealism from every walk of life and from every section of our country.

PONDERS HIS ROLE

As we move toward the solution of existing problems, my own future role in our party remains undetermined; whether to be a candidate for your nomination or a worker in the ranks. I could devoutly wish that there were some method by which the American people could, under the circumstances, point out the path of my true duty. But it appears that this is a question that first I alone must answer.

That answer will be forthcoming as quickly as it is firmly fixed in my mind. I trust that it will not unduly reflect concern for self, and I pledge that in whatever capacity I shall serve, I shall support with all my strength the foreign and domestic programs for America that have been the guide of all of us for these past 3 years. That work must go on to fruition, in the interests of all Americans.

Again my warmest thanks to all of you.

Extension Through June 30, 1957, of Poliomyelitis Vaccination Assistance Act

EXTENSION OF REMARKS
OF
HON. J. PERCY PRIEST
OF TENNESSEE
IN THE HOUSE OF REPRESENTATIVES
Monday, January 23, 1956

Mr. PRIEST. Mr. Speaker, I have today introduced a bill to extend through June 30, 1957, the duration of the Poliomyelitis Vaccination Assistance Act of 1955—Public Law 377, 84th Congress. The present terminal date contained in the act is February 15, 1956.

In view of the fact that little time is left before the expiration of Public Law 377, 84th Congress, the Subcommittee on Health and Science of the Committee on Interstate and Foreign Commerce has scheduled hearings on the bill, which I have introduced today, to begin Tuesday, January 24 at 10 o'clock.

The extension of the Poliomyelitis Assistance Act has been requested by the Secretary of Health, Education, and Welfare and, in introducing this bill, I would like to make public the letter dated January 19, 1956, signed by the Secretary of Health, Education, and Welfare, and addressed to the Speaker requesting introduction of the extension bill:

DEPARTMENT OF HEALTH,
EDUCATION, AND WELFARE,
January 19, 1956.

Hon. SAM RAYBURN,
Speaker of the House of Representatives.

DEAR MR. SPEAKER: I am enclosing for your consideration a draft of a bill to amend the Poliomyelitis Vaccination Assistance Act of 1955 (Public Law 377, 84th Cong.). The proposed amendments would extend the terminal date for the availability of funds appropriated for carrying out the purposes of the act, but would not otherwise modify the original program authorization.

The present terms of the act authorize the appropriation of such sums as may be necessary for making payments to States which have submitted, and had approved by the Surgeon General, applications for Federal grants. Sections 2 and 6 of the act, however, contain provisions terminating the availability of funds appropriated for this purpose on February 15, 1956. The Supplemental Appropriation Act, 1956 (Public Law 219, 84th Cong.) included an appropriation to the Public Health Service of $30 million for "grants to States for carrying out the purposes of the Poliomyelitis Vaccination Assistance Act of 1955."

The legislative history of both the enabling legislation and the appropriation for carrying out the purposes of the act indicates that it was the intent of Congress to authorize and initiate immediately a program of Federal assistance to States but to provide an opportunity for reviewing program developments early in the second session of the Congress before completely implementing the Federal grant provisions of the act. Thus the objective of program review is the apparent reason for the inclusion of the February 15, 1956, time limit on the availability of appropriations, as well as the limitation of the initial appropriation to an amount sufficient to provide the several States with approximately half of the allotments indicated by section 3 of the enabling act.

On the basis of our experience to date, we believe that the enabling legislation provides an adequate base for program planning and administration, and we see no need for amendments other than the proposed extension of the time limit on availability of funds.

The progress of program development thus far has been contingent upon two key factors, apart from the availability of Federal funds: (1) the development and approval of State plans under the act and (2) the rate of production of vaccine required for State vaccination programs, as well as for distribution through private channels.

The progress of State plan development to date has been very satisfactory. With one exception all States have completed, and had approved, their plans for vaccination programs, and have initiated their programs of vaccine purchase and distribution. As of December 31, 1955, Federal payments totaling $7,674,766 had been made to these States from the initial appropriations for this purpose. Further progress in the implementation of these programs will therefor be governed primarily by the availability of vaccine.

The volume of vaccine production and release during 1955 was limited but it is expected that the rate of production will now accelerate. Through December 31, 1955, a total of 16,390,608 cubic centimeters of vaccine had been released for sale to public agencies and commercial users (in addition to the 13,571,223 cubic centimeters of vaccine supplied to the National Foundation for Infantile Paralysis). Approximately 53 percent, 8,750,000 cubic centimeters, has been reserved by the States for public agency purchase. It is presently estimated that by February 15 of this year, the amount of released vaccine reserved for public agency purchase will aggregate approximately 15 million cubic centimeters. This will be about one-fourth of the total required for implementation of the federally aided vaccination programs indicated by the allotment formula in section 3 of the Poliomyelitis Vaccination Assistance Act. The purchase of this amount of vaccine, together with additional State program expenses authorized by the act, will require payments to the States by February 15 of approximately half of the $30 million appropriated last year.

On the basis of present data on prospective vaccine production, we are recommending that the availability of funds appropriated pursuant to the act be extended through June 30, 1957. This should allow ample time for vaccine production to reach the required levels and for the available supply to be distributed and administered.

We shall appreciate it if you would refer the enclosed draft bill to the appropriate committee for consideration.

The Bureau of the Budget advises that enactment of this proposed legislation would be in accord with the program of the President.

Sincerely yours,

M. B. FOLSOM, *Secretary.*

D'Ewart Is Well Qualified to Serve as Assistant Secretary of the Interior

EXTENSION OF REMARKS
OF
HON. ORVIN B. FJARE
OF MONTANA
IN THE HOUSE OF REPRESENTATIVES

Monday, January 23, 1956

Mr. FJARE. Mr. Speaker, under leave to extend my remarks, I would like to call the attention of my colleagues to the excellent qualifications of Mr. Wesley A. D'Ewart for the position as Assistant Secretary of the Interior. A brief résumé of his varied activities follows:

CONSERVATION AND LEGISLATIVE BACKGROUND OF WESLEY A. D'EWART, ASSISTANT SECRETARY OF THE INTERIOR FOR PUBLIC LAND MANAGEMENT

More than four decades of firsthand experience with natural resource conservation and development were brought to the Department of the Interior by Wesley A. D'Ewart, of Montana, who on October 6, 1955, was sworn in as Assistant Secretary for Public Land Management.

This experience dates from 1912, when he became a forest ranger, until 1955, when he served as a Special Assistant to the Secretary of Agriculture, which position he left to accept the appointment as Assistant Secretary of the Interior. During the intervening years, Mr. D'Ewart engaged in ranching in Montana, was a member of the State legislature, a member of the State College Advisory Committee, president of the Absaroka Conservation Committee and a Member of Congress. As a rancher he put together a cattle operation which he still owns and which is managed by his son. On this property he carried out the best soil and water conservation practices, reseeding at his own expense over 1,000 acres of his range, building a water storage reservoir and carefully managing his grasslands so as to greatly increase their productivity.

As a member of the Montana State Legislature's House of Representatives for 3 terms and of the State senate for 2 terms, Mr. D'Ewart served on committees concerned with resource development and management. Montana has a State water conservation board that has a national reputation for the development of small water and irrigation projects. Mr. D'Ewart took an active interest in this and supported legislation and appropriations to strengthen the work this agency was doing. During this time he was instrumental in organizing and was first president of the Montana Reclamation Association. This association has taken a very active part in supporting the State Water Board and the Bureau of Reclamation in developing the water resources of Montana. Montana has 5 million acres of State-owned land. Mr. D'Ewart as a member of the State legislature, made a study of their management and operation and sponsored legislation to improve their operation.

Mr. D'Ewart was elected to the United States Congress in a special election in 1945, and served continuously until January 1955. Throughout this decade in Congress, Mr. D'Ewart was a member of the House Committee on Interior and Insular Affairs, or its earlier counterparts. This committee is charged with the conservation, development, and operation of the vast Federal public domain of the United States and its Territories. As a member of this committee he made official visits to many of the national parks, and Indian reservations ranging from Alaska to Florida. On committee business, he toured Alaska, Puerto Rico, Hawaii, and the Virgin Islands, and became familiar with matters affecting those areas which came within his jurisdiction as Assistant Secretary.

As a Member of Congress Mr. D'Ewart made many positive and constructive contributions to conservation and land management. In the 83d Congress alone he introduced, and the Congress enacted, nine bills to protect, enlarge, and improve the management of the national parks. Despite his advocacy of reduced spending in almost every Federal activity, Mr. D'Ewart testified, debated, and voted in favor of increased appropriations for the National Park Service and the Forest Service in every session of Congress during his term of office. In 1954, when the Atomic Energy Act amendments were about to be passed, it was Mr. D'Ewart who rushed through a last-minute amendment to protect the national parks from uranium prospecting. It was a D'Ewart bill which, by authorizing the National Park Service to obtain by exchange some 10,000 acres of State-owned land inside the boundaries of Glacier National Park, will enable the National Park Service to preserve the integrity of the park. For this action he received the thanks of all of the major wildlife and conservation groups, as well as the Department of the Interior itself.

Mr. D'Ewart has been a stalwart proponent of the wildlife refuge system. During the last session in which Mr. D'Ewart was a Member of Congress, he introduced what many conservationists regard as an outstanding bill to facilitate the management of our wildlife refuges. The bill provided also for an increase in the number of refuges by establishing a new Division of Duck Stamp Fees, which would provide funds for administration of the areas. The bill he first introduced was the basis for legislation pending in the present Congress.

One of the most important conservation measures enacted into law in recent years was Public Law 167. This law corrects the widespread abuses of the mining laws, particularly in the national forests. While in Congress, Mr. D'Ewart introduced and held hearings on a bill intended to end these abuses of the mining laws. Although his bill was not enacted, the attention it brought and the information brought forth in its consideration were beneficial and led to the introduction of a bill similar in form and intent which became law in the 84th Congress. As Special Assistant to the Secretary of Agriculture, Mr. D'Ewart also contributed importantly to the enactment of this legislation.

While a Congressman, Mr. D'Ewart was a member of the National Forest Reservation Commission, which has the important duty of blocking out national forest holdings by purchase of private lands lying within or adjacent to them. He gave much time to this program and was instrumental in obtaining expanded appropriations for it.

Mr. D'Ewart is one of the best informed men in the Nation on Indian affairs. He was one of those who was instrumental in the development of the Navaho-Hopi rehabilitation program, and has contributed to the enactment of other progressive measures in this field. While striving to safeguard the interests of those Indians desiring to remain on reservations, he has at the same time supported programs designed to provide increasing opportunities for those Indians who want to separate themselves from any special relationships with the Federal Government.

During his term in office, Mr. D'Ewart sponsored a number of measures, which Congress enacted, to improve public-land management in the Department of the Interior. Among these was the amendment to the Recreation Act, which permits the lease for a long term or the sale or donation of areas of the public domain having recreational value to nonprofit organizations, such as the Boy Scouts.

Assigned to the Assistant Secretary for Public Land Management are a vast and almost infinitely varied scope of responsibilities for conservation and development of the Nation's natural and human resources.

Under his direction are five key bureaus of the Department of the Interior—the Bureau of Indian Affairs, the National Park Service, the Fish and Wildlife Service, the Office of Territories, and the Bureau of Land Management.

In supervising these 5 agencies, the Assistant Secretary for Public Land Management directs the activities of more than 27,000 Department of the Interior employees, or more than half of the Department's total number. He is responsible for the custody or management of almost a billion acres of land; the welfare of 400,000 Indians; the administration of 176 national parks, monuments, and similar areas, the administration of 5 territories, numerous island possessions, and 96 trust territory island units; and the conservation of vital fish and wildlife resources.

Some indication of the responsibilities vested in Mr. D'Ewart as the Assistant Secretary for Public Land Management:

The Bureau of Land Management has exclusive jurisdiction over 486 million

acres of unappropriated, unreserved public lands, varying degrees of responsibility for 300 million acres of reserved lands, and administrative jurisdiction over 58 million acres of acquired lands. This is a total land area of 826 million acres.

Land responsibilities of the Department of the Interior are varied. The Bureau of Land Management, for example, not only issues leases on public lands and processes withdrawals, but under the mining and mineral leasing laws it leases the minerals on public domain lands. An important phase of this latter activity in recent months has been the conduct of lease sales on the outer Continental Shelf, the first three of which returned more than a quarter of a billion dollars to the Federal Treasury in bonus bid payments and first year rentals.

Through the granting of grazing permits, the Bureau has numerous range responsibilities. It also carries out sustained yield forest management of timberlands under its jurisdiction.

The Bureau of Indian Affairs is responsible for 53 million acres of Indian land held in trust by the United States. It manages 300 reservations or similar areas located in 25 States. Activities of the Bureau of Indian Affairs include: Acting as trustee with respect to Indian lands and money and assisting the owners in making the most effective use of their lands; providing public services where needed; furnishing guidance and assistance to those Indians who wish to leave reservation areas; and collaborating with the Indian people in the development of programs leading toward full-fledged Indian responsibility for the management of their own property and affairs as well as the gradual transfer of public service responsibilities to the agencies which normally provide these services for non-Indian citizens.

The National Park Service administers 21,898,000 acres of Federal land in 176 national park system areas as well as 2,020,000 acres in 5 areas administered for other Federal agencies. It is responsible for the protection of natural and historical areas while providing for their use and enjoyment by the public.

The areas over which the Office of Territories has jurisdiction cover 582,000 square miles and include a population of 3 million. It guides and coordinates operating programs designed to promote the economic and political development of the areas under the jurisdiction of the United States. The office supervises and directs the operations of the Alaska Railroad and the Alaska Road Commission, and conducts public works construction programs in the Virgin Islands.

The Fish and Wildlife Service administers 264 national wildlife refuges in 42 States, Alaska, Hawaii and Puerto Rico, and 89 fish hatcheries in 42 States. The total land area administered by the Fish and Wildlife Service aggregates nearly 18 million acres. Its activities embrace the conservation of North American waterfowl; the administration of laws governing commercial fishing; programs for the maintenance of fresh water fisheries; the control of injurious species; and programs for fish and wildlife restoration.

Statement by Senator Lehman Before Senate Judiciary Subcommittee on Immigration

EXTENSION OF REMARKS
OF

HON. HERBERT H. LEHMAN

OF NEW YORK

IN THE SENATE OF THE UNITED STATES

Monday, January 23, 1956

Mr. LEHMAN. Mr. President, because of the increasing interest, in and out of Congress, in our present immigration and citizenship laws and policies, I ask unanimous consent that there be printed in the CONGRESSIONAL RECORD the highlights of the testimony I gave on November 22, 1955, before the Subcommittee on Immigration of the Senate Committee on the Judiciary, urging and advocating general revision and liberalization of these citizenship and immigration laws.

This testimony may be of use and interest in the continuing study which is being given, and is yet to be given, to this vital subject.

There being no objection, the testimony was ordered to be printed in the RECORD, as follows:

STATEMENT BY SENATOR HERBERT H. LEHMAN BEFORE THE SENATE JUDICIARY SUBCOMMITTEE ON IMMIGRATION IN SUPPORT OF S. 1206, AN OMNIBUS BILL, PROPOSING REVISION AND LIBERALIZATION OF OUR IMMIGRATION AND CITIZENSHIP LAWS

Mr. Chairman, I appreciate this opportunity to appear before you. I need not tell you what high importance I, personally attach to these hearings, on a subject in which I have a deeper interest and with which I have a closer identification than perhaps any other legislative subject before the Congress.

I would like to pay tribute, Mr. Chairman, to your own leadership as chairman of the Judiciary Committee and of this subcommittee, a leadership which has resulted in the convening of these hearings.

As you know, I have been urging the holding of hearings on proposals to revise our basic immigration and naturalization laws for the past 3 years, since January 1953. Hence, I personally consider these hearings to be historic—the opening phase in a procedure which must lead certainly—whether next year or the year after—or the year after that—to a wholesale revision and overhaul of the Immigration and Nationality Act of 1952, the so-called McCarran-Walter Act.

In paying tribute to your leadership, Mr. Chairman, and to the support given to the holding of these hearings by other members of your committee and of this subcommittee, I would also like to pay my special respects to the ranking minority member of this subcommittee, Mr. WATKINS. My tribute to him is not on account of his views on this particular subject, because I think we start off in basic disagreement on the McCarran-Walter Act, as on quite a few other matters. But I have always found him to be deeply sincere in his desire to get the facts and to be fair and judicious, and to do the wise and honorable thing in any situation. I know that he is eager, as I am, to arrive at a proper judgment on this pending matter. I am pleased and gratified with his presence at these hearings, in this recess period, here in Washington, at such a great distance for his home State.

I make this special mention of Senator WATKINS, because I want to emphasize the completely nonpartisan nature of the move to revise the McCarran-Walter Act.

I assume that the first question before this subcommittee is: Should we revise the McCarran-Walter Act at all? Is there need or strong support for revision?

These hearings will give you the answer to that question, Mr. Chairman. But let me point out, should there be any question or doubt, that the drastic revision of present law can be correctly described as a public mandate, long overdue in being carried out.

In 1952, when the present law was approved, the President of the United States vetoed it, and the support for his veto fell only two votes short of the necessary one-third of the Senate. During the original Senate consideration of the McCarran-Walter Act, despite the absence of an adequate debate on the subject, almost one-third of the Senate voted for radical amendments to that measure.

And in the presidential election campaign of 1952, the candidates of both major parties, including the successful candidate, pledged revision of the act. President Eisenhower, as a candidate, made a number of speeches and statements to this effect. So did the candidate for the Vice Presidency, who now presides over the Senate of the United States.

Subsequent to that election, President Eisenhower urged revision in his first state of the Union message, and in many subsequent speeches, statements, and remarks.

Mr. Chairman, there are pending before the Senate at least three major bills for drastic revision of the present law, bearing the names of 20 Senators, of both parties. I have not had time to count the number of bills pending in the House on this subject, but it is a very great number indeed.

I would guess that if Congress does not make a comprehensive revision of the law in the next session, this will be a political issue in many parts of our country, and both parties will be called upon to make an accounting of the attitude of their representatives in the Congress toward the revision of this law. And many individual candidates will likewise be called upon. Let no one think that the people are not watching or are not interested. I am sure these hearings will bear me out on this point.

But Mr. Chairman, as I have said again and again, this is not a partisan question. I am critical of the officials of the present administration for not having responded to your recent efforts—extending over many months, as I understand it—to get the Secretary of State and the Attorney General to testify before this committee in regard to this legislation. But I am equally critical of the fact that no Attorney General or Secretary of State of any other administration has personally appeared to testify on this vital subject in the past 20 or 30 years.

But today this is an issue which begs for the concern of all men of good will. It calls for a strong and consistent bipartisan effort to erase from our statute books the shame of the McCarran-Walter Act.

I am sure that most of those who voted for the McCarran-Walter Act in 1952, and who voted to override the President's veto, did so in good faith but without a thorough knowledge of the provisions which they were voting to fix upon our statute books. With respect to my colleagues in the Senate who voted for this law, I believe it is fair to say that very few of them comprehended its scope and impact, at that time, when its 302 pages of highly technical material were thrust upon them during the closing days of the 82d Congress.

Few of them had any idea what effects their vote would have on the lives of literally hundreds of thousands of naturalized American citizens, resident aliens and potential immigrants overseas.

I hope that these hearings will help to dispel any remaining illusions about the McCarran-Walter Act.

I think, then, that the question of whether there is a demand for the revision of the McCarran-Walter Act answers itself. The reply to the question "Shall we revise the McCarran-Walter Act in any respect?" must be in the affirmative.

The next question, of course, is: "How shall we revise the McCarran-Walter Act? What, exactly, is wrong with the present law?"

Mr. Chairman, the rest of my remarks today will be devoted to answering these questions.

I need scarcely remind the committee that there is pending before you, among other proposals, a comprehensive bill introduced by me and 12 other Members of the Senate, S. 1206. My cosponsors on this bill are: Senators GREEN, HUMPHREY, KEFAUVER, KENNEDY, LANGER, MAGNUSON, MCNAMARA, MORSE, MURRAY, NEUBERGER, PASTORE, and CHAVEZ.

I think I may say without fear of contradiction that S. 1206 is the most complete proposal before this subcommittee. It is a complete rewrite of present law, a complete recodification of the codification of 1952. I shall discuss this bill at length in the course of my remarks.

Of course I would like to see S. 1206 adopted in substantially its present form. But Mr. Chairman, despite the herculean labors which went into the drafting of my bill—and I will describe those, too, in a few moments—I have no pride of authorship. I want to see the present law overhauled and drastically revised. I don't care whose name is attached to the bill reported out by this committee. As long as a bill of appropriate amendments curing the substantial evils of present law is reported out, I shall support that bill with all my heart.

The question then is: What are the substantial evils in our present law, Mr. Chairman, and what kind of a bill must be reported out to overcome those evils?

The McCarran-Walter Act has some good parts in it. Of course it has. It provided, within its four titles and 407 sections, some improvements over preexisting law. But the improvements were relatively few. And the preexisting law had many repressive, discriminatory, and restrictive features. The McCarran-Walter Act adopted most of the worst features of preexisting law and added scores of new evils.

So today I will not try especially to distinguish between those unfortunate features of the McCarran-Walter Act that were newly added in 1952 and those taken over from the legal jungle of immigration and nationality laws which preexisted the McCarran-Walter Act. They were all included in the act of 1952 and must all today be scrutinized and reexamined.

The Immigration and Nationality Act of 1952 is characterized by a consistent philosophy. That philosophy we must scrutinize first of all.

That philosophy is based on a collection of discarded theories—really myths—which are absolutely alien to all our legal, social, and political institutions.

I will enumerate some of those myths in a moment, but first let me say that the present law, in my considered judgment, has done more harm to our country than can be easily repaired—and I was abroad for 2 months this summer and saw at first hand the evidence of some of the damage that the McCarran-Walter Act has done, in terms of our prestige and reputation, among the plain people of Europe.

The McCarran-Walter Act represents a pyramid of unfounded fears—fear of foreigners; fear of criminals; fear of Communists and anarchists; and fear even of naturalized American citizens. Waves of fear have passed over America—fear of depression in peace and of betrayal of war. Each wave has left its flotsam and jetsam imbedded in our immigration and citizenship laws.

Like the inhabitants of ancient China, we have built a great wall designed to keep out fancied hordes of invaders. And like China's Great Wall, our modern-day wall—the McCarran-Walter Act—has, in fact, served only to isolate us, and not to protect us. Those few resourceful Communists or criminals who are determined to enter our land can enter with a minimum of danger to themselves across the long, unguarded borders of Mexico and Canada.

But our official gates of entry through which we could admit selected, qualified, and useful immigrants—and visitors—are kept so heavily barred and guarded that application for lawful entry is discouraged; only those driven by the direst necessity persist in their efforts to gain legal admission into our country. This might be called admission by adverse selection.

I know that some aliens do gain admission to the United States, but it is a fact that some of the most desirable, both would-be immigrants and would-be visitors—scientists, teachers, writers, professionals, and businessmen—are either discouraged from applying or barred from entering.

The issue before us is not just one of immigration. It is citizenship, too. The whole basic concept of membership in our Nation is involved in this legislation. And that concept affects every citizen of our land, and, of course, those living abroad, too.

Once upon a time, American citizenship was an unqualified patent of membership in our society. Once acquired by birth or naturalization—without distinction—it could not be forfeited, save by deliberate and willful surrender—by an oath of renunciation.

Under present law, citizenship acquired by naturalization may be stripped from the citizen or may be forfeited by the citizen—on any one of a half dozen or more grounds. And in many cases the citizen involved may not even know that he has forfeited his American citizenship or has been stripped of it. Some of the grounds for denaturalization are acts which a native-born citizen may perform without major penalty or without penalty at all.

And even native-born citizens may lose their citizenship on relatively minor, technical grounds, also without ever knowing about it.

This whittling away, bit by bit, of the inviolability of American citizenship status, is, in my judgment, one of the most dangerous and reprehensible aspects of our present law. And the violent distinctions between naturalized and native-born citizens are, to my mind, un-American and intolerable.

I believe that if the Congress, as a whole, and the American people, as a whole, knew of these provisions in the present law, they would not rest until the cancerous encroachments upon the sanctity of citizenship were completely cut out of the law.

These provisions, and all the other evils in the present act, were lumped together and justified as being made necessary to combat Communists.

Mr. Chairman, none of us want to see Communists gain entry into the United States. But as I have already indicated, this law does not prevent real spies or saboteurs from entering this country, if they really want to. All they have to do is either come in as diplomats, or walk across the Canadian or Mexican borders.

All this law does is hurt our own people, and our own country in the eyes of the people of the rest of the world. And it hurts thousands and hundreds of thousands of innocent people here and abroad.

In order to guarantee absolutely that no Communist ever enter the United States, it would be necessary to forbid all entries, even by diplomats. We would have to seal all our borders. Such a solution would, of course, be untenable, and impossible.

We can and should be careful about whom we admit into the United States. But we should be reasonable—not hysterical. We should have clear and enforceable standards of entry—not an impassable maze of barriers.

We have built into our immigration laws scores, and even hundreds, of restrictions which depend completely on the discretion and judgment of minor government functionaries. And from the decisions of these functionaries there is, in many cases, no appeal whatever. We have made a grant of unreviewable authority to these officials. Questions of life and death can be decided without a chance for review or appeal.

This law, as now written, presupposes that these minor functionaries have both the gift of clairvoyance and the profoundest knowledge of the inner secrets of human nature. An alien can be barred from admission if, in the opinion of a consular officer, within his sole judgment, the alien might, in the future, after his admission into the United States, join an organization on the Attorney General's subversive list. A consul may, in his discretion, bar an alien from admission into this country if it appears to the consul, again within his sole judgment, that such an alien is likely, after admission, to engage in a public disorder.

And there are scores and scores of such restrictions—all of them meaningless except insofar as they provide the consular official, or the immigration officer, with a justification for rejecting any and every alien whom the consul or immigration official does not happen to like.

Mr. Chairman, this law resembles no other law of which I have knowledge. The criteria it establishes for admission into this country are so numerous and so impossible of standardization that they violate the basic principles of our Constitution.

I realize, of course, that no alien has an absolute right to be admitted into this country. Nor is the Constitution effectively applicable to aliens seeking entry into the United States. Still, I think it would be desirable if we would apply, to the maximum possible extent, our legal principles of justice and fair play to all who come into contact with our laws—whether they be aliens or citizens of the United States.

We need to apply human standards to human beings. It has been many centuries since trial by ordeal was a practice under Anglo-Saxon law. The presumption of guilt until innocence is proven is repugnant to us. Yet, the McCarran-Walter Act provides for trial by ordeal and presupposes guilt until innocence is positively proven.

This law, Mr. Chairman, bears the dark stains of prejudice, of fear and suspicion. It is an archaic law—something out of the dim past. The law needs to be modernized, humanized and liberalized. It needs to be simplified.

It must be made flexible so that its implementation can be adapted to the changing needs of changing times.

It must be simplified so that it can be understood by all our people at home and by those abroad, too.

It must be strengthened so that a positive and uniform control can be exercised over immigration from all parts of the world in a way to serve the best interests of the United States and the needs of the people desiring admission into our country.

I said a few moments ago, Mr. Chairman, that the McCarran-Walter Act is based on a collection of outmoded myths and theories entirely repugnant to the great body of American law.

The first of these myths is that the American people have a particular blood strain which would be corrupted by Italians, Poles, Greeks, and other peoples from southern and eastern Europe, unless protected by the national-origins quota system. According to this racist theory, a person of Anglo-Saxon blood is 20 times more desirable as an immigrant and as a citizen than a person of Italian blood.

The general concept of blood strains, on which the national-origins quota system is based, is an old one, but it was generally discredited and discarded by the beginning of the present century. Still, it was embraced in the national-origins quota system when that system was adopted by the Congress in 1924. This concept was also adopted at around the same time by Adolph Hitler, who used it as justification for his notorious nonsense about the so-called Aryan race.

But in 1952, the national-origins quota system was revalidated in the McCarran-Walter Act, although its supporters insisted, at that time, despite all the evidence to the contrary, that no racial bias, prejudice, or discrimination was intended. I contend, however, that you can't change a skunk by insisting that it's a kitten.

The second myth underlying the philosophy of the McCarran-Walter Act is that all aliens are potential criminals, Communists, and saboteurs, or must be treated accordingly.

The third myth is that immigration is a burden on the national economy and that immigrants threaten the jobs and wage levels of American workers.

There are other myths, too, but these are the ones which most clearly dominate our present immigration and citizenship policies. I believe it is necessary to bring these myths out into the open, so that we may better understand what the McCarran-Walter Act is all about.

I believe it is necessary, Mr. Chairman, to eliminate the last trace of this mythology from our immigration and citizenship policies.

That is why, Mr. Chairman, I cannot go along with a proposal for piecemeal amendments to the present law.

This law needs radical surgery, not minor patchwork. It needs to have the spirit and the philosophy cut out of it, and to be infused with a new and different philosophy, as well as a new and different set of provisions.

In my opinion, Mr. Chairman, the best way to amend the present law is by an omnibus bill, retaining the good features, and there are some, but replacing all the objectionable provisions. Immigration and citizenship law is so complex and the whole immigration and citizenship code is so inextricably interwoven that the job of piecemeal amendment would be a totally impossible one, if there is to be a sincere effort to eradicate the marks of suspicion, discrimination and injustice from the present law.

At the time of the consideration of the McCarran-Walter Act, I, and some of my colleagues, including you, Mr. Chairman, prepared over a hundred amendments, perhaps there were 200, in an attempt to improve the bill. Even the sum total of these amendments did not get at some of the worst features of the law.

So, I repeat, that in my view the only way to remedy the evils complained of is to enact a substitute measure. I realize, of course, that there can be differences of opinion over the content of such a substitute measure.

I have submitted our bill, S. 1206, in the belief that it is not only the most comprehensive, but indeed, the best legislative proposal on this subject, and I say this without personal pride. I did not personally draft this bill, although I participated in scores of drafting conferences on it over a period of many months.

I believe that our bill, S. 1206, represents the best thinking and the most expert information now available in legislative form on this subject. It was the work of perhaps 30 to 40 different experts and legislative draftsmen, outstanding lawyers, professors of law, former officials of the immigration service, social scientists and lay workers in the field of immigration and citizenship.

I want to add that we worked directly from the report and hearings of the President's Commission on Immigration and Citizenship, headed by the former Solicitor General of the United States, Mr. Philip B. Perlman, and including some of the most distinguished representatives of the Government and of the great religious faiths in our country.

This bill, S. 1206 conforms in general to the recommendations of scores of religious and nonsectarian organizations of all kinds and complexions, veterans groups, church organizations, labor unions, scientific organizations, and representatives of industrial and commercial firms in this country. This bill was drafted after exhaustive consultation. I hope this committee will find it worthy of exhaustive study and review.

And now, Mr. Chairman, I would like to turn to some of the specific provisions of S. 1206, and in the course of commenting upon them, I will also comment upon the comparable provisions of the McCarran-Walter Act.

Incidentally, Mr. Chairman, I shall append to my testimony, and ask that there be inserted into the record, a detailed summary of the provisions of S. 1206. Hence, my testimony this morning will touch only upon the highlights of this measure.

APPROPRIATE ADMINISTRATIVE AGENCY

The Immigration and Naturalization Service in the Department of Justice and the Bureau of Security and Consular Affairs of the State Department, are the agencies presently charged with primary responsibility for the administration of our immigration laws. This divided responsibility is the result of a long history of transfers, consolidations, and separations which have accomplished little in efficiency or logical administrative organization except to establish the relative immunity of both the INS and the consular service to cabinet-level direction. The general attitude which prevails in the lower echelons in these services—and understandably so—is anti-alien.

I do not mean to cast any reflections on the individual civil servants involved. They merely reflect the general spirit of the present law.

It is clear to me that neither the State Department nor the Justice Department is equipped to discharge the full responsibility for this highly sensitive operation. The Secretary of State cannot give major attention to this complex problem. His concerns are already far too burdensome.

I can say the same of the Attorney General.

The Congress has been faced before with the problem of coordinating and consolidating complex programs. In many instances, the solution has been found in the creation of an independent agency of the Government.

In this bill we are proposing the creation of a single, new and independent agency to be known as the Immigration and Naturalization Commission, and to consolidate within this commission the present immigration and naturalization responsibilities of both the Attorney General and the Secretary of State.

I believe this subcommittee would be extremely interested in reviewing the discussions in Congress which led to the establishment of the Atomic Energy Commission following World War II. You will remember that there were those who sincerely believed that all atomic energy functions and activities of the Federal Government should be vested in the hands of the Department of Defense. But witness after witness, representing many varied backgrounds, argued in favor of an independent Atomic Energy Commission.

When I recently reviewed some of this testimony, I was struck by the many parallels between the arguments used for the establishment of the AEC and the arguments which persuaded me to propose the creation of an independent Immigration and Naturalization Commission. It occurred to me that we might never have had the success in our postwar atomic energy developments if the sole responsibility had remained with the military, whose prime concentration and interests would have logically been in the weapons field.

In the same way, the primary concentration of the Department of Justice is upon detection of law violations and the apprehension of violators. Hence the prevailing spirit in the Immigration and Naturalization Service is naturally one of suspicion and even of antagonism toward the alien. The whole emphasis is on prevention of immigration and to deportation of aliens already here. I do not mean to say that there are not individual immigration officers who have a kindly and humanitarian spirit. I do say, however, that the prevailing attitude, which springs, as I have said, from the law, is that of the cop on the beat.

I would like to see the emphasis placed on the welcoming of duly qualified aliens and on resettling them and helping them to integrate into our national life. This can best be done by setting up a new agency which will reflect the spirit of the proposed new law.

In reference to the Consular Service, the immigration function is, for most consular officers, a part-time and transient duty, the least interesting in their category of duties and generally regarded as the most onerous. It is an apprenticeship job for foreign service officers on their way up the ladder of promotion. Yet these vice-consuls and consuls have what amounts to the power of life and death over aliens who apply for admission into our country.

The Hoover Commission has, in the past, recommended that the Consular Service and the Immigration and Naturalization Service, be merged for the sake of efficiency. They do duplicate each other's work to a major extent.

I agree with the Hoover Commission in this respect. I think these functions should be combined, and that they should be placed in a new independent agency, along the lines I have suggested. I hope this committee will look favorably upon this important aspect of S. 1206. The approval of this proposal will help give a fresh start to a radically modified immigration and citizenship policy.

Today, the alien seeking admission to the United States has no assurance of uniform justice and no right of appeal from the decision of a consular officer. The alien who has landed in the United States has a limited right of appeal and review; but these rights are far from being either adequate or uniform.

Under present law, administrative review in deportation and exclusion cases is not assured by statute; it exists at the pleasure of the Attorney General in the form of a Board of Immigration Appeals set up by order of the Attorney General. And the Attorney General is not bound by the decisions of this Board.

The proposed act establishes an orderly system of fair procedure and adequate review, by an independent, quasi-judicial tribunal. This so-called Board of Immigration and Visa Appeals would be independent of the Commission itself and is modeled after our Tax Court.

As is generally true of other independent agencies, the Commission, under the terms of S. 1206, would be governed by the Administrative Procedure Act. And this would assure a separation of the prosecuting and adjudicative functions, and fair and open hearings, unavailable under present law. It is my proposal that the Board's decisions in visa denial cases would be final, but limited judicial review would be permitted in other matters coming before this Board.

QUOTA SYSTEM

In the year 1797, a Congressman looked at the population of the new American Nation,

and said that while a liberal immigration policy had been a good thing up to then, the United States had already reached the peak of its absorbable population, and that immigration to the United States should be stopped altogether. That was in 1797.

This Representative was the forerunner of many others down through the centuries who thought that they recognized the limits of the potentialities of the United States. It is unfortunate that some of this heritage of pessimism is still present in our land today.

Our capacity for absorbing immigration is still great today. I do not know what it is. No one knows. But it is a fact of our history that our greatest periods of economic expansion took place immediately following great tides of immigration. Our Nation continues to support an ever-increasing population at an ever-higher standard of living.

Other witnesses will be more competent than I to discuss in detail the economic implications of immigration. I am sure, however, that we not only can absorb; but that we critically need a constant but controlled stream of fresh immigration for the expansion of our economy.

Of course, I do not propose unlimited immigration into the United States. I know of no responsible student of the subject who does. Indeed, I propose a very conservative level of immigration, not measurably greater than the average number who have been entering the United States for permanent residence in recent years.

I propose a limit of roughly 250,000 immigrants per year, which is considerably less, in my judgment, than the number we could safely admit. But I wish to be conservative in this matter. My main purpose is not to increase greatly the flow of immigration but to change radically the discriminatory and restrictive manner in which immigration is regulated today.

Indeed, if S. 1206 is approved and if proper enforcement powers are given to our border patrols, the amount of immigration into our country—if we include illegal immigration from Mexico and Canada—would be considerably reduced from the present level.

I don't know how many illegal immigrants are currently entering the United States from Mexico and Canada, but I have seen official figures for 1952 and 1953 indicating that this illegal immigration has been in the neighborhood of 2 million entries per year.

I propose, of course, the long-overdue abolition of the national origins quota system.

I propose, in its place, a so-called unified quota system, an entirely new manner and formula for the selection of individual immigrants.

I believe that with due consideration for a potential immigrant's ability to meet specified standards of health, security, literacy, honesty, and ability to earn a living, the alien's admissibility should be based on the criteria first of our country's need for him, and then of his need for our country.

The national origins quota system reflects neither of these two criteria. And of course the national origins quota system, whatever its merits—and I know of none—is stamped with the loathsome stigma of racial and national discrimination.

In fact the national origins quota system is a totally inflexible and unworkable method of selecting immigrants. It is so unworkable that ways and means must constantly be found to get around it. The whole series of emergency immigration bills we have enacted in recent years, the hundreds and thousands of private bills we enact periodically, and which take up so much of the time of this committee, and the special bills, such as the bills to admit sheepherders—all these are made necessary solely by the incredible national origins quota system.

I say that this is no way to run the immigration policies of our Nation. It is unwise, expensive, unfair, discriminatory, and above all, works against the best interests of the United States in foreign policy, economics, and national defense.

May I say further, Mr. Chairman, that it is a little realized fact—but a very true fact—that the national origins quota system has never accomplished its own stated purposes. The advocates of the national origins quota system in 1924 had as their avowed purpose the maintenance of the so-called pattern of national origins as it was purported to be in the United States in the year 1920. I will not discuss further the fallacy of the underlying theory. I have already done so.

Rather, I must point out that the NOQS has worked in an exactly opposite manner. In reality we have not received 42 percent of our immigrants from Great Britain and Northern Ireland since 1927, as contemplated in the original statute. It has been much less for the very simple reason that Englishmen do not particularly wish to emigrate to the United States.

It is perfectly clear that the NOQS has not served to preserve our so-called national origins pattern.

If this is so—and I am sure that it cannot be refuted—why then did the authors of the Immigration and Nationality Act of 1952 continue this system? The answer is quite clear—this was a devious way by which immigration from Spain, Italy, Greece, the Middle East, Africa, Asia and all areas of the world, except a few northern European nations, could be kept to a bare minimum.

True, there was a slight—a very slight relaxation of restrictions for the Nations of Asia by means of the Asia-Pacific Triangle formula. But it was a most paradoxical relaxation—one which fixed the concept of the blood test into our immigration laws. Today not only is an immigrant born in Japan charged to the Japanese quota and to the overall Asia-Pacific Triangle quota, but an immigrant born in England whose mother was Japanese and whose father was English is also charged to the Japanese quota and to the overall Asia-Pacific Triangle quota.

Mr. Chairman, I believe the unified quota system, which is at the heart of S. 1206, is logical and administratively practical.

I have outlined it in a simple chart which I will append to my testimony.

In simple terms, four preference categories are established. The first preference category is designed to expedite the reunification of families. The second preference is designed to bring to the United States persons with special skills and technical and artistic abilities who will promote our national economy, our national security, and the arts. The third preference category is designed to provide a quota to be used for the oppressed, the persecuted, and the refugees, including orphans, of the world. The fourth and final preference is designed to be allocated to promote the foreign policy interests of the United States.

Finally, S. 1206 provides for a so-called newcomer quota of 50,000 a year for all qualified persons throughout the world wishing to immigrate who are eligible on a first-come-first-serve basis.

Mr. Chairman, I commend this new quota approach to you for your most serious consideration. No halfway approach, no pooling of unused quotas, can remedy present law.

There is one aspect of the unified quota system which has elicited some criticism—namely, placing the nations of the Western Hemisphere under the general quota system. I would like, briefly, to answer the criticism.

In the first place, it is inaccurate to say there is no quota system for Western Hemisphere nations today. In actuality there is and there isn't, depending on where you live, who your parents were, and the sometimes informal quotas established by individual consular officials.

I say to those who criticize placing Western Hemisphere nations under the quota system, let's be fair to all. The same criteria should apply to all peoples, regardless of the place of their birth. I believe our Latin American neighbors will respect us for such a policy.

FAIR PLAY AND DUE PROCESS

Mr. Chairman, I turn to another general area of immigration policy on which I would like to comment. I turn now to the question of the violations of our standards of justice and fair play written into our present immigration laws.

We should have an immigration law which guarantees to aliens and to naturalized citizens the maximum possible sweep of administrative justice and judicial review available under our system of government. The Immigration and Nationality Act of 1952 does not do this. S. 1206 is, I believe, a fair and honest attempt to achieve this goal, while at the same time providing adequate safeguards for the security of our Nation.

In the proposed act, every practical protection has been provided for our national security. Comprehensive and workable standards are established so that genuine subversives and antidemocratic elements are effectively barred from the United States. The proposed law contains enforceable provisions for the deportation of those truly undesirable aliens who, despite all precautions, might obtain entry into this country.

It is my belief that the antisubversive provisions of the proposed act will be more effective in actual operation than those of the 1952 act. The fact is, that the 1952 act erects such a confused and contradictory network of antisubversive provisions that it catches in its web many anti-Communists while allowing true subversives—Nazis, Fascists, and Communists, to slip into the United States.

Turning to the question of the deportation provisions in present law, I believe that these sections of the law ride roughshod over our Constitution. Here the special inquiry officer of the Immigration Service is both prosecutor and judge in deportation hearings. The statutes of limitations on deportation were abolished in the 1952 act, and all of the new grounds for deporting an alien have been made retroactive.

I would like to comment at this point on the subject of private immigration bills. In every session of Congress, hundreds and thousands of these bills are introduced by Members of both Houses. I do not believe we should deny to an alien or to a citizen the recourse to congressional relief in extraordinary circumstances calling for such relief. But what Congress is doing today is acting as a supreme court of immigration appeals.

I believe that the Congress—in order to provide a more just and orderly procedure for the handling of the thousands of these individual cases—should establish a statutory Immigration Review Board with adequate powers, together with authorization for limited review of the Board's decision in our courts.

This was the justification for the establishment of the United States Court of Claims—and while it hasn't completely solved the problem of private claim bills, it has greatly relieved the Congress of this burden.

I have already discussed the impact of present law on citizenship status. Under S. 1206, two basic changes are made in present law:

First, those acts which automatically cause loss of citizenship are limited to (1) renunciation of United States citizenship; (2) obtaining naturalization in a foreign country; (3) deserting in time of war; (4) leaving the country to avoid military service; (5) conviction for treason; and (6) an attempt to overthrow the Government by force of arms.

But under the terms of S. 1206, all distinctions between native-born and naturalized citizens are removed.

Mr. Chairman, I have spoken at great length—much too great length, I am sure—in view of the number of witnesses you have

yet to hear today and during the many days to come. You have indulged me, I know, because of your awareness of how deeply I feel about this issue.

I want to make clear, however, that in this testimony I have only scratched the surface. I have not undertaken to describe all the defects in the present law or all the provisions of my bill designed to cure these defects. To do so would not only try your patience, but would be beyond my physical capacity at one sitting. I have given some of the highlights. Some further details—but by no means all—are included in one of the appendixes which I have attached to my testimony. I am also submitting for the record various pertinent statements, data, and material which I believe will supplement the record in regard to this legislation.

In conclusion, let me say only this. You have as heavy a responsibility as any committee I know. The complexity of the legislation before you is as apparent to me as it is to you. You have sought and will receive the guidance of many persons who are more expert than I on some of the technical phases of this legislation.

I know that you, and members of the staff of this committee, will continue, during the months ahead, to explore all the manifold intricacies of this legislation. I know also that many aspects of the matter will receive no public testimony whatever.

I can only suggest and urge that you give this legislation all the time that it needs.

I would be less than honest with you, or with myself, if I held out the hope, or entertained the hope, that a major revision of present law is likely in the coming session of Congress.

But progress toward that goal can be made. The hearings which you are now holding represent such progress. I hope that the committee may reach some definite conclusions regarding some of the legislative proposals before you.

If this much can be done, much will have been accomplished, not only for the thousands and hundreds of thousands of aliens directly affected, but for the prestige of America throughout the world.

The Largest Corporation in the World

EXTENSION OF REMARKS

OF

HON. JOHN J. WILLIAMS

OF DELAWARE

IN THE SENATE OF THE UNITED STATES

Monday, January 23, 1956

Mr. WILLIAMS. Mr. President, I ask unanimous consent to have printed in the CONGRESSIONAL RECORD an address which I made before the Baltimore Life Underwriters' Association, Inc., and the Maryland State Association of Life Underwriters, at their annual convention held in Baltimore on October 14, 1955.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

THE LARGEST CORPORATION IN THE WORLD

(Address by JOHN J. WILLIAMS, United States Senator, of Delaware, before the Baltimore Life Underwriters' Association, Inc., and the Maryland State Association of Life Underwriters, October 14, 1955)

The Government of the United States represents the largest business corporation in the world.

The President and members of his cabinet are comparable to the president and executive management of a major corporation. The Members of Congress represent the board of directors, while the 165,000,000 Americans are the stockholders. Whenever the Government's revenues exceed its expenditures, the directors can declare a dividend—or tax reduction.

Next year as we approach the question of a tax reduction—or dividend—it is important that we first examine the financial background of this organization.

We find that in 22 of the past 25 years our Government has operated with an unbalanced budget—or red ink. Furthermore, when we subtract the surpluses in the 3 years in which we did have a balanced budget from the accumulated deficits of the other 22 years, we have a net total deficit for this period of $250 billion.

This means that during the past 25 years our Government has averaged spending in excess of its income $10 billion per year, $800 million per month, $26 million per day, or slightly over $1 million per hour for every hour during the past quarter of a century.

This $250 billion accumulated 25-year deficit has been added to the national debt or charged against the future generations, and today we are still operating with an unbalanced budget.

It is with this background that the Congress next year will approach the question of: Should we again reduce taxes?

In view of the financial record and huge debt of our Government, should our 165 million Americans — stockholders — expect their President and executive committee—the Cabinet—to recommend to the directors—Members of Congress—the payment of any dividend by a tax reduction until the balancing of the Federal budget is assured, even then should not some provision be made for paying at least a portion of the Federal debt?

There are only three methods by which a tax reduction of any description could be financed at this time.

First, would be to reduce Government expenditures to the point where there would be a surplus sufficient to finance the proposed tax cuts.

Second, would be to keep on spending, but cut taxes in the low-income groups, and transfer the load to the so-called high-income groups.

The third alternative, assuming Government spending continues, would be to borrow the money, further increase our national debt and charge the cost against the future generations.

First, I make it clear that in my opinion Government expenditures can and should be cut if the Congress and the American people only have the will to do it and it is this proposal that I shall now discuss.

On this question I am confident that the overwhelming majority of the American people would enthusiastically endorse the suggestion that Government expenditures be reduced sufficiently to balance the budget and to cut taxes. If we were to conduct a poll of the American citizens asking the question as to whether or not we should eliminate or reduce Government subsidies, I think that the overwhelming response would be in the affirmative. Yet I wonder if we are not overlooking the fact that during the recent years this principle of Government subsidies has expanded until it has become an accepted if not a fixed part of our economic system.

The question is often raised as to whether or not, in a showdown, the American people would back up their Representatives in Congress for an abolishment of this principle. Sure, everybody would agree that all Government subsidy or support programs should be reduced or repealed—all, that is, except those which directly affect them.

The most of the criticism against Government subsidies is leveled against the Government farm-support program. The reason for this is that the Government's support of agricultural products directly affects not only the American farmer but also the budget of the millions of American housewives.

This, however, is only one of the many forms of subsidies now being financed by the Federal Government and in many instances those who are most vocal in their criticism of the farm-support program are themselves recipients of some form of Government subsidies.

For instance, the owners and officials of the airlines in this country would no doubt agree that the principle of Government subsidies is vicious; yet they are perfectly willing to accept subsidies from the Government amounting to many millions of dollars annually—subsidies which in effect guarantee their operations against loss.

Our American railroads were built and developed years ago under the principle of Government subsidies. Large grants of land were given to the promoters in the early stages of development. Today these same railroad lines are still accepting their subsidies for carrying the mail.

Our American newspaper system has been rather critical of the principle of Government subsidies in general, particularly the subsidy as related to the farm-support program. Yet I recall few instances where the members of the press have objected to their subsidies in the form of low postage rates, nor have they objected to the special earmarking of over $100 million of the ECA funds to be used to subsidize the distribution of American newspapers and magazines in continental Europe.

If we were to conduct a poll of the leading corporations in this country—a group which surely believes in the principle of free enterprise—I venture to say that almost without exception they would express opposition to the principle of Government support prices. Still we find that a large number of this same group have enthusiastically endorsed a plan to let the American taxpayers guarantee the investments of the American industries in foreign countries.

Likewise, we find that our merchant marine, another division of our free-enterprise system, is perfectly willing to have the Government continue underwriting a large percentage of the cost of the construction of its ships, nor do they object to the Government's annual contribution of several million dollars to subsidize the operations of these same vessels.

We hear a lot of discussion among prominent men, many of whom are identified with our State and local governments, expressing grave concern over the encroachment of the Federal Government upon the rights of the individual States; yet in many instances we find that these same officials are clamoring for more and more Federal aid for the construction of our State highways, our public schools and our hospitals, and for Federal aid in many other fields which were formerly recognized as inherent State functions.

Our western mining industry has been successful during the past years in having legislation passed whereby the Government will support the price of the products—oft-times at rates far in excess of the prevailing market prices. This subsidy, amounting to several million dollars annually, is also at the expense of the taxpayers.

Even our children, from the day they enter the public schools, become recipients of Government subsidies by virtue of the fact that our Federal Government makes annual contributions of several millions to the school-lunch programs.

One of the most conservative groups in this country is the American bankers; yet they had no objection to the policy of the Government guaranteeing a support at par under all Government bonds, thereby protecting their huge investments.

These are not all, but I cite them as examples to emphasize the extent to which this principle of Government subsidy has

become a fixed part of our economic system. Again at the next session of Congress, instead of reducing these subsidies, the majority of the proposals which will be before the 84th Congress will be to increase them further.

My opinion is that the time is long overdue when we should start a systematic reduction of all subsidies, but until such time as Congress and the American people demonstrate their intention to do this we must recognize the fact that Government expenditures will not be reduced, nor will the budget be balanced whereby we can have a sufficient surplus to make a reasonable payment on the national debt with enough left over to finance a tax reduction.

Now, let us discuss the second proposal—that we can keep on spending, still cut taxes in the low-income group, but make up the loss in revenue by increasing the revenue rates in the upper brackets.

To explode this suggestion I point out the following statistics:

1. To raise the personal exemptions by $100 (or from $600 to $700) would result in a loss in revenue of $2,500,000,000. To make up this loss by increasing the rates in the upper brackets would necessitate a 100 percent tax rate (or complete confiscation) of every personal income in excess of $20,000.

2. To increase personal exemptions by $200 (or from $600 to $800) as was proposed at the last session of Congress, would result in a loss in revenue of $4,500,000,000 and to offset this loss it would necessitate a 100 percent tax rate (or complete confiscation) of every income in excess of $10,000.

Certainly no one in America would suggest such drastic action.

That brings us to the third alternative and one which can only be justified in the name of political expediency; and that is, to keep on spending, cut taxes, and borrow the money to make up the difference, thereby increasing our tremendous national debt and passing the responsibility of this debt on to the future generations.

This is the most politically popular proposal and the most dangerous. If we as a government cannot live within our income today during a period when we are enjoying the highest level of prosperity in the history of our country then when can we ever expect a balanced budget! And to accept the theory of permanent deficits is an open invitation to uncontrolled inflation.

Inflation resulting from the past deficits has already cut the value of the American dollar by one-half. That means that one-half the value of every savings account, every Government bond, pension account, and life insurance policy has been eaten away by the past inflationary financing policies of the Federal Government.

To illustrate this we have only to point out that 10 years ago the Federal Government sold a bond upon the basis that if we put up $3, in 10 years we would receive $4 However, the $4 which is being received today in payment of the $3 investment will not buy any more than 2 of the originally invested dollars. Actually one-third of that which they originally invested has been taken away through inflation.

A continuation of this unsound policy of planned deficit financing will only further depreciate the value of the America dollar and thereby further destroy the life savings of millions of Americans.

The most unfortunate result of this inflationary spending and deficit financing policies of the past 25 years has been the pauperizing of many of our aged and retired people. Many individuals who retired a few years ago on pensions, life insurance, or savings accounts, which they then considered to be adequate, have as a result of the depreciated dollar—or increased cost of living—found themselves in the embarrassing position where their incomes will not provide the actual necessities of life, and they are now being forced to appeal to the public for charity.

As a Member of the United States Senate and as a member of the Senate Finance Committee, I am opposed to a further continuation of these unsound and inflationary deficit spending policies. I am opposed to any form of tax reduction under such circumstances. Government expenditures can and should be reduced, but until such time as the reductions have actually been authorized by the Congress and until such time as the budget is actually balanced and a reasonable payment made on our national debt, no form of tax reduction should even be considered.

My time today has permitted me to call attention to only a few of the contributing factors, domestic subsidies, which are responsible for the overwhelming debt that today threatens the solvency of our largest business organization in the world—the Government of the United States.

Other factors are foreign subsidies, unnecessary and extravagant expenditures, corruption, and inefficiency which for too long a time has prevailed in the management of this greatest corporation. A continuation of these practices will speedily bankrupt our Government and destroy our republic.

If we wish to preserve our American form of Government we must now begin to set our house in order and make America strong financially, physically, mentally, and morally, never forgetting the wise advice expressed by Thomas Jefferson:

"I place economy among the first and most important virtues and public debt as the greatest of dangers to pursue our independence. * * * The same prudence which in private life would forbid our paying our money for unexplained projects, forbids it in the disposition of public money."

SENATE

TUESDAY, JANUARY 24, 1956

(Legislative day of Monday, January 16, 1956)

The Senate met at 12 o'clock meridian, on the expiration of the recess.

The Chaplain, Rev. Frederick Brown Harris, D. D., offered the following prayer:

O Thou God of our salvation, to Thee we lift our hearts in prayer, bringing nothing but our need and the adoration of our contrite spirits. From Thy bountiful hands we have received the gift of life, the blessings of home and of friendship, and the sacrament of beauty in all the earth. In the fullness of Thy mercy Thou hast given us work to do and the strength wherewith to do it.

For this still moment may we hush all other sounds save the divine knocking and the entreating voice which reaches us through all the stubborn self-willed barriers which we erect: "If any man will open the door, I will come in." We know, O spirit of love and purity, that when our heart's door swings on its hesitant hinges and Thou dost enter, those things which are unlovely and unclean cannot stay to embitter and pollute. Thus with hospitality to the highest, even in this sad and mad day, may we walk and work in the peace that the world giveth not, in the charity that thinketh no evil, in the good will that bridges all chasms, so that when the sunset comes we may face its summons with an approving conscience and with Thy "well done." We ask it in the dear Redeemer's name. Amen.

THE JOURNAL

On request of Mr. CLEMENTS, and by unanimous consent, the reading of the Journal of the proceedings of Monday, January 23, 1956, was dispensed with.

MESSAGES FROM THE PRESIDENT

Messages in writing from the President of the United States were communicated to the Senate by Mr. Miller, one of his secretaries.

ECONOMIC REPORT OF THE PRESIDENT—MESSAGE FROM THE PRESIDENT (H. DOC. NO. 280)

The PRESIDENT pro tempore laid before the Senate a message from the President of the United States, which was read and, with the accompanying report, referred to the Joint Committee on the Economic Report.

(For President's message, see House proceedings for today.)

EXECUTIVE MESSAGES REFERRED

As in executive session,

The PRESIDENT pro tempore laid before the Senate messages from the President of the United States submitting several nominations, which were referred to the Committee on Agriculture and Forestry.

(For nominations this day received, see the end of Senate proceedings.)

MESSAGE FROM THE HOUSE

A message from the House of Representatives, by Mr. Maurer, its reading clerk, announced that the House had passed the bill (H. R. 7927) to extend the time within which the State of Louisiana may make initial payment on the purchase of certain property from the United States, in which it requested the concurrence of the Senate.

ENROLLED JOINT RESOLUTION SIGNED

The message also announced that the Speaker had affixed his signature to the enrolled joint resolution (S. J. Res. 12) to request the Secretary of State to arrange for the International Joint Commission, United States and Canada, to conduct a survey of the proposed Passamaquoddy tidal power project, and for other purposes, and it was signed by the President pro tempore.

HOUSE BILL REFERRED

The bill (H. R. 7927) to extend the time within which the State of Louisiana may make the initial payment on the purchase of certain property from the United States, was read twice by its title and referred to the Committee on Banking and Currency.

LEONG DING FOON QUON

The PRESIDENT pro tempore laid before the Senate the amendment of the House of Representatives to the amendments of the Senate to the bill (H. R. 1496) for the relief of Leong Ding Foon Quon, which was, in line 5, to strike out "returning resident aliens" and insert in lieu thereof "a returning resident alien."

Mr. KILGORE. Mr. President, I move that the Senate concur in the House amendment, which makes a very slight modification of the Senate amendments. It really amounts to little more than the correction of a typographical error. It corrects the words "returning resident aliens" to "a returning resident alien."

The PRESIDENT pro tempore. The question is on agreeing to the motion of the Senator from West Virginia that the Senate concur in the amendment of the House to the amendments of the Senate.

The motion was agreed to.

NOTICE OF CONSIDERATION OF TREATIES ON THE EXECUTIVE CALENDAR

Mr. CLEMENTS. Mr. President, I should again like to call to the attention of the membership of the Senate that on tomorrow, after the transaction of the usual morning business, two treaties, Executive F, of the 83d Congress, 2d session, and Executive P, of the 82d Congress, 2d session, will be called up for consideration by the Senate.

Mr. SALTONSTALL. Mr. President, will the Senator yield at that point?

Mr. CLEMENTS. I am happy to yield.

Mr. SALTONSTALL. May I ask if it is the understanding of the acting majority leader that if any particular Member on either side of the aisle desires an opportunity to speak tomorrow on the treaties, he may consult with the majority leader later in the day?

Mr. CLEMENTS. I would be pleased if he would do so. Later in the afternoon the plan for tomorrow may be much more clearly defined.

Mr. SALTONSTALL. I thank the acting majority leader.

ORDER FOR TRANSACTION OF ROUTINE BUSINESS

Mr. CLEMENTS. Mr. President, I ask unanimous consent that there may be the usual morning hour for the presentations of petitions and memorials, the introduction of bills, and the transaction of other routine business, and that any statement made in connection therewith be limited to 2 minutes.

The PRESIDENT pro tempore. Without objection, it is so ordered.

EXECUTIVE COMMUNICATIONS, ETC.

The PRESIDENT pro tempore laid before the Senate the following letters, which were referred as indicated:

STRENGTHENING OF INTERNATIONAL RELATIONS THROUGH CULTURAL AND ATHLETIC EXCHANGES

A letter from the Director, United States Information Agency, Washington, D. C., transmitting a draft of proposed legislation to provide for the promotion and strengthening of international relations through cultural and athletic exchanges and participation in international fairs and festivals (with accompanying papers); to the Committee on Foreign Relations.

REPORT OF ANTHRACITE EXPERIMENT STATION, SCHUYLKILL HAVEN, PA.

A letter from the Secretary of the Interior, reporting, pursuant to law, on the activities of, experiments by, and donations to, the Anthracite Experiment Station, operated by the Bureau of Mines, at Schuylkill Haven, Pa.; to the Committee on Interior and Insular Affairs.

PROPOSED CONCESSION PERMITS, EVERGLADES NATIONAL PARK, FLA.

Two letters from the Assistant Secretary of the Interior, transmitting, pursuant to law, proposed concession permits in the Everglades National Park, Fla. (with accompanying papers); to the Committee on Interior and Insular Affairs.

AMENDMENT OF CODE, RELATING TO APPEALS BY THE UNITED STATES

A letter from the Attorney General, transmitting a draft of proposed legislation to amend section 3731 of title 18 of the United States Code relating to appeals by the United States (with accompanying papers); to the Committee on the Judiciary.

PETITIONS AND MEMORIALS

Petitions, etc., were laid before the Senate, or presented, and referred as indicated:

By the PRESIDENT pro tempore:

A resolution of the General Assembly of the State of Rhode Island; to the Committee on Foreign Relations:

"Resolution memorializing Congress with urgent and earnest request to give the State of Israel the right to buy arms for the purpose of defending her people against aggression

"*Resolved*, That the members of the General Assembly of the State of Rhode Island and Providence Plantations now earnestly and urgently request the Congress of the United States of America to use utmost efforts to give the State of Israel the right to buy arms for the purpose of defending her people against aggression; and be it further

"*Resolved*, That duly certified copies of this resolution be transmitted by the secretary of state to the President of the United States, the presiding officers of each branch of Congress and to the Senators and Representatives from Rhode Island in the Congress of the United States."

A resolution adopted by the City Council of the City of Visalia, Calif., favoring the enactment of legislation to provide appropriations for the construction of the Terminus Dam project; to the Committee on Appropriations.

By Mr. ALLOTT:

A joint resolution of the Legislature of the State of Colorado; to the Committee on Interior and Insular Affairs:

"Senate Joint Memorial 1

"Memorializing the Congress of the United States to enact legislation approving the apportionment of power credits made by the Upper Colorado River Commission

"Whereas the Upper Colorado River Commission, at Santa Fe, N. Mex., on January 5, 1955, agreed on a formula for apportioning the power credits generated at Glen Canyon and other storage projects in the upper basin; and

"Whereas that formula allocates to the State of Colorado 46 percent thereof, to the State of Utah 21.5 percent thereof, to the State of Wyoming 15.5 percent thereof, to the State of New Mexico 17 percent thereof; and

"Whereas such allocation is fair and equitable to the States of New Mexico, Utah, Wyoming, and Colorado: Now, therefore, be it

"*Resolved by the Senate of the 40th General Assembly of the State of Colorado, in 2d regular session convened (the House of Representatives concurring herein)*, That the foregoing apportionment of power credits and the above formula adopted by the Upper Colorado River Commission be and it hereby is recommended to the Congress of the United States for its favorable consideration and that the said formula be enacted into law; and be it further

"*Resolved*, That copies of this memorial be forwarded to the President of the Senate, and to the Speaker of the House of Representatives of the Congress of the United States, and to each Member of Congress from Colorado.

"STEPHEN L. R. MCNICHOLS,
"*President of the Senate.*
"MILDRED H. CRESSWELL,
"*Secretary of the Senate.*
"DAVID A. HAMIL,
"*Speaker of the House of Representatives.*
"LEE MATTIES,
"*Chief Clerk of the House of Representatives.*"

(The PRESIDENT pro tempore laid before the Senate a joint resolution of the Legislature of the State of Colorado, identical with the foregoing, which was referred to the Committee on Interior and Insular Affairs.)

A resolution of the House of Representatives of the State of Colorado; to the Committee on Agriculture and Forestry:

"House Memorial 4

"Memorializing the Congress of the United States to permit ranchers and farmers and other citizens to sell their agricultural and other products to individuals of foreign nations; and that ranchers and farmers be further allowed, in the payment of income taxes, to treat losses and gains from the sale of crops and livestock as long-term capital gains and losses

"Whereas it is a known fact that although the agricultural and livestock industries of our Nation are suffering adversity and depression, such industries are restrained from selling agricultural surpluses, in a private capacity, to individuals in foreign lands; and

"Whereas farmers and ranchers could, if allowed, profitably dispose of existing agricultural surpluses by selling its produce to individuals in foreign lands, including the Far East, in return for gold privately held there, as well as for other valuable goods; and

"Whereas the farm and ranch industries pay income taxes at regular rates on long-term maturing crops and livestock sold, without benefit from fast writeoff by depreciation of land and improvements necessarily bought each year: Now, therefore, be it

"*Resolved by the House of Representatives of the 40th General Assembly of the State of Colorado*, That it is the consensus of the members of the house of representatives of the 40th general assembly that farmers and ranchers specifically, and all citizens generally, be allowed and encouraged to sell their produce to any individuals residing anywhere in the world so long as such transactions are not made with individuals of a nation with whom a state of war exists; and that farmers and ranchers and all citizens be given access to the same dollar exchange as is now available to foreigners in such business transactions and trade; and be it further

"*Resolved*, That farmers and ranchers be allowed to treat profits and losses from the sale of crops and livestock as long-term capital gains and losses; and that capital invest-

ments made by farmers and ranchers be given the same depreciation consideration of fast writeoffs as has been widely extended to industry for years past; and be it further

"*Resolved*, That copies of this memorial be transmitted to the President of the United States and to the Senators and Congressmen representing the State of Colorado in the Congress of the United States.

"DAVID A. HAMIL,
"Speaker of the House of Representatives.
"LEE MATHIS,
"Chief Clerk of the House of Representatives."

A resolution of the House of Representatives of the State of Colorado; to the Committee on the Judiciary:

"House Memorial 5

"Memorializing the Congress of the United States to take action for the enforcement of the 14th amendment to the Constitution of the United States by investigating State restrictions upon suffrage, and to enact legislation making certain discriminations and practices against private citizens a Federal offense

"Whereas every citizen in our country is entitled under the Constitution of the United States to personal security, and should be protected in that right, including protection from the brutal attacks of lynch mobs; and

"Whereas the present reign of terror engulfing the State of Mississippi, and occurring in lesser degree in other States, consists of the brutal murder of Negro citizens, the intimidation of voters and those who seek the right to exercise this sacred right of American heritage, and the intimidation of white citizens unsympathetic to violent suppression of legally protected rights; and

"Whereas subterfuges such as organizations known as the Federation for Constitutional Government, White Citizens' Councils, and other groups, have as their avowed purpose the circumvention of the United States Supreme Court decision against segregation in the public schools; and

"Whereas the deprivation of civil rights of any law-abiding citizen of the United States is a denial of our democratic traditions, undermines our national unity, and reflects discredit upon our Nation in the eyes of the world; and

"Whereas many States have systematically disenfranchised many of their citizenry by a variety of restrictions; and

"Whereas the 14th amendment to the Constitution of the United States provides in part that "when the right to vote at any election for choice of electors for President and Vice President, Representative in Congress, the executive and judicial officers of a State, or members of the legislature thereof, is denied to any male inhabitants of such State, being 21 years of age, and citizens of the United States, or in any way abridged, except for participation in rebellion, or other crime, the basis of representation therein shall be reduced in the proportion which the number of such male citizens shall bear to the whole number of male citizens 21 years of age in such State," and further provides "the Congress shall have the power to enforce by appropriate legislation the provisions of this article": Now, therefore, be it

"Resolved by the House of Representatives of the 40th General Assembly of the State of Colorado, That the members of this house do hereby memorialize the Congress of the United States to take immediate action looking to the enforcement of the 14th amendment to the Constitution of the United States by investigating all State restrictions upon suffrage, with a view toward having each State abandon such restrictions or suffer reapportionment of the lower House of the Congress in keeping with the constitutional mandate; and, further, to enact legislation making systematic denial of economic opportunity, lynching, and other assaults by public officials or private citizens, acting either in concert or individually, a Federal offense; and be it further

"Resolved, That a copy of this memorial be transmitted to the President of the United States and to the Senators and Congressmen representing the State of Colorado in the Congress of the United States.

"DAVID A. HAMIL,
"Speaker of the House of Representatives.
"LEE MATTEES,
"Chief Clerk of the House of Representatives."

REPORTS OF COMMITTEES

The following reports of committees were submitted:

By Mr. McCLELLAN, from the Committee on Government Operations:

H. R. 7156. An act to provide for the conveyance of certain land of the United States to the Board of County Commissioners of Lee County, Fla.; without amendment (Rept. No. 1442).

REPORT ON INVESTIGATIONS OF INEFFICIENCIES IN DEPARTMENT OF AGRICULTURE GRAIN BIN PROGRAM (S. REPT. NO. 1443)

Mr. McCLELLAN. Mr. President, from the Committee on Government Operations I submit a report made to it by the Senate Permanent Subcommittee on Investigations on Inefficiencies in the Department of Agriculture Grain Bin Program. The subcommittee held hearings on this matter in the latter part of July and early August.

As background, we learned that in order to store surplus grain, the Department of Agriculture has been actively engaged in the purchase of grain-storage bins since 1939. As of August 20, 1954, it had on hand 192,878 grain bins with a capacity of 843,890,529 bushels. The cost to the American taxpayer for these facilities totals $177,217,000.

In the 1949 and again in 1950, a large number of bins purchased by the Department of Agriculture were found to be defective after erection. The Department of Agriculture endeavored to recoup its losses; but because the Navy Department provided inadequate inspection at the manufacturer's plant and because the Department of Agriculture made no adequate provision for inspection at the erection site, the Government had considerable difficulty. In fact, only $31,000 out of $893,864.89 of the dollar volume of the claims outstanding against manufacturers and erectors flowing from defective grain bins purchased in the year 1949–50 has been collected by the Government.

The subcommittee received allegations that a large number of the grain bins, both wooden and metal, purchased during 1954 were defective. The subcommittee unanimously found after its hearings as stated in the report, that:

The metal grain bin program of 1954 was handled in an atmosphere of confusion, gross carelessness, and a lack of coordination which was compounded by the division of responsibility between the Department of Agriculture, Naval Inspection Service, and State agricultural offices to whom the bins were delivered.

The fact that some of these bins are neither weather nor grain tight, the fact that moisture and vermin might enter the structures, and the necessity of moving the grain to new bins to prevent its deterioration and contamination have made the 1954 grain bin program unnecessarily costly to the Government.

The Department of Agriculture did not adopt sufficient corrective measures, following the mistakes in 1949 and 1950. From the number of defective grain bins in 1949 and 1950, the Naval Inspection Service knew, or should have known, of the deficiencies in its inspection service. Both the Department of Agriculture and the Naval Inspection Service were guilty of gross inefficiency, and demonstrated poor business management and lack of judgment.

Fourteen major errors were made by the Department of Agriculture and the Naval Inspection Service in the 1954 Grain Bin Program. They are listed on pages 14 and 15 of the subcommittee report. The subcommittee has also been informed that 14 corrective measures have been taken by the Department of Agriculture and the Department of the Navy, as a result of the subcommittee's investigation and hearings on this matter. Those corrective measures are set forth on pages 16 and 17 of the report.

Mr. President, those employed by the Government of the United States are charged with a public trust. Those holding positions of responsibility are dealing not with money of their own, but with money of the American taxpayers. Inefficiency, carelessness, and waste cannot be tolerated any more than graft, corruption, and dishonesty. The Senate Permanent Subcommittee on Investigations will continue looking into matters of this kind. Wherever they are found, they will be exposed. It is hoped that such exposure will act as a deterrent to such carelessness in the future, and that the American taxpayers' dollar will thus be more efficiently expended.

I ask that the report be printed.

The PRESIDENT pro tempore. The report will be received and printed.

STUDY OF MINERALS, MATERIALS, FUELS, AND CERTAIN OTHER MATTERS—REPORT OF A COMMITTEE

Mr. MURRAY. Mr. President, from the Committee on Interior and Insular Affairs, I report favorably, without amendment, the resolution (S. Res. 183) authorizing the Committee on Interior and Insular Affairs to make a study of minerals, materials, and fuels and certain other matters within its jurisdiction. I ask unanimous consent that the resolution be referred today to the Committee on Rules and Administration.

The PRESIDENT pro tempore. Is there objection?

There being no objection, the resolution was referred to the Committee on Rules and Administration.

EXECUTIVE REPORTS OF COMMITTEES

As in executive session,

The following favorable reports of nominations were submitted:

By Mr. GEORGE, from the Committee on Foreign Relations:

Herbert V. Prochnow, of Illinois, to be a Deputy Under Secretary of State;

Isaac W. Carpenter, Jr., of Nebraska, to be an Assistant Secretary of State;

Wiley T. Buchanan, Jr., of the District of Columbia, to be Ambassador Extraordinary and Plenipotentiary to Luxembourg;

John D. Hickerson, of Texas, a Foreign Service officer of the class of career minister, to be Ambassador Extraordinary and Plenipotentiary to Finland;

Thomas C. Mann, of Texas, a Foreign Service officer of class 2, to be Ambassador Extraordinary and Plenipotentiary to El Salvador;

Robert H. Thayer, of New York, to be Envoy Extraordinary and Minister Plenipotentiary to Rumania;

Dr. Frederick J. Brady, of Maryland, to be the representative on the Executive Board of the World Health Organization;

John J. Muccio, of Rhode Island, to be Ambassador Extraordinary and Plenipotentiary to Iceland;

Rufus H. Fitzgerald, of Pennsylvania, to be a member of the United States Advisory Commission on Educational Exchange; and

Arthur A. Hauck, of Maine, to be a member of the United States Advisory Commission on Educational Exchange.

NOMINATION OF DR. THOMAS B. NOLAN TO BE DIRECTOR OF THE GEOLOGICAL SURVEY — EXECUTIVE REPORT OF A COMMITTEE

Mr. MALONE. Mr. President, from the Committee on Interior and Insular Affairs, I report favorably the nomination of Dr. Thomas B. Nolan, of Nevada, to be Director of the Geological Survey, taking the place of William E. Wrather, who is retiring. The nomination was approved this morning by the committee.

The PRESIDENT pro tempore. The nomination will be received and placed upon the Executive Calendar.

Mr. MALONE. Mr. President, I ask unanimous consent to have a biographical sketch of Thomas B. Nolan printed in the RECORD at this point as a part of my remarks.

There being no objection, the biographical sketch was ordered to be printed in the RECORD, as follows:

BIOGRAPHICAL SKETCH

Dr. Thomas B. Nolan was born in Greenfield, Mass., May 21, 1901. He attended Yale University, receiving his Ph. B. in metallurgy in 1921 and Ph. D. in geology in 1924. He has been on the staff of the Geological Survey since 1924, when he was appointed a junior geologist. He was appointed the Assistant Director in 1944.

Dr. Nolan, before becoming Assistant Director, was engaged in geologic work in the States of Nevada and Utah, including studies of the Gold Hill and Tonopah mining districts. His work on tungsten deposits led to his designation as the Survey's tungsten specialist. His work in this capacity played an important part in the country's ability to meet its greatly increased needs for tungsten during World War II. For his work in tungsten, Dr. Nolan was honored with the K. C. Li gold medal and $1,000 prize in 1954, an award administered by the Trustees of Columbia University and given for meritorious achievement in advancing the science of tungsten. In recent years Dr. Nolan has continued his geologic work, as time has permitted, at Eureka, Nev.

Dr. Nolan is a member of the National Academy of Sciences. He has been the Department of Interior representative on the Interdepartmental Committee on Scientific Research and Development since the committee was formed in 1947. He served as a member of the Scientific Advisory Committee on Specialized Personnel, an advisory group to Maj. Gen. L. B. Hershey, from the committee's organization in 1948 until its termination in 1953.

Dr. Nolan is a past president of the Society of Economic Geologists and a member of many scientific and professional organizations, including the Geological Society of America, American Academy of Arts and Sciences, Mining and Metallurgical Society of America, American Geophysical Union, American Society of Photogrammetry, Explorers Club of New York, and the Cosmos Club.

He was awarded the Spendiaroff Award at the Washington meeting of the XVI International Geological Congress in 1933.

Dr. Nolan resides with his wife, the former Mabelle Orleman, at 2219 California Street, NW., their legal residence is in Eureka, Nev. They have one son, Thomas B. Nolan, Jr., who is a freshman at Yale.

Mr. MALONE. Mr. President, Mr. Nolan has been a member of the staff of the Geological Survey since 1924. Since 1944 he has been assistant director. He has specialized in reports on minerals found throughout the country, and is well qualified to handle the job.

ENROLLED JOINT RESOLUTION PRESENTED

The Secretary of the Senate reported that on today, January 24, 1956, he presented to the President of the United States the enrolled joint resolution (S. J. Res. 12) to request the Secretary of State to arrange for the International Joint Commission, United States and Canada, to conduct a survey of the proposed Passamaquoddy tidal power project, and for other purposes.

BILLS INTRODUCED

Bills were introduced, read the first time, and, by unanimous consent, the second time, and referred as follows:

By Mr. SCOTT:

S. 3027. A bill to provide a system of graduated price support levels for cotton and wheat based upon amounts produced; to the Committee on Agriculture and Forestry.

S. 3028. A bill for the relief of Dionisios Vasiliou Tsiros; to the Committee on the Judiciary.

(See the remarks of Mr. SCOTT when he introduced the first above-mentioned bill, which appear under a separate heading.)

By Mr. FLANDERS:

S. 3029. A bill for the relief of Josephine Langton; to the Committee on the Judiciary.

By Mr. NEELY (by request):

S. 3030. A bill for the relief of Costantinos F. Agoris; to the Committee on the Judiciary.

By Mr. BYRD (for himself and Mr. ROBERTSON):

S. 3031. A bill to incorporate the George Washington Boyhood Home; to the Committee on the Judiciary.

By Mr. DUFF (for himself, Mr. MARTIN of Pennsylvania, Mr. ROBERTSON, Mr. BYRD, Mr. WILLIAMS, Mr. CASE of New Jersey, Mr. SMITH of New Jersey, Mr. BUTLER, Mr. BEALL, and Mr. KILGORE:

S. 3032. A bill granting the consent and approval of Congress to the Middle Atlantic Interstate Forest Fire Protection Compact; to the Committee on Agriculture and Forestry.

(See the remarks of Mr. DUFF when he introduced the above bill, which appear under a separate heading.)

By Mr. THYE (for himself and Mr. BRIDGES):

S. 3033. A bill to extend the duration of Public Law 815, 81st Congress, which provides for school construction assistance to local educational agencies in areas affected by Federal activities, and for other purposes; to the Committee on Labor and Public Welfare.

By Mr. CARLSON:

S. 3034. A bill to amend the Bankhead-Jones Farm Tenant Act to adjust the loan limitations of title II so as to provide more effective assistance to production and subsistence loan borrowers; and

S. 3035. A bill to amend the Bankhead-Jones Farm Tenant Act and to authorize the Secretary of Agriculture to make or insure loans to farmers and stockmen for the purpose of refinancing existing debts, and for other purposes; to the Committee on Agriculture and Forestry.

By Mr. MURRAY (for himself and Mr. MANSFIELD):

S. 3036. A bill to provide for the establishment of a new fish hatchery in the vicinity of Miles City, Mont.; to the Committee on Interstate and Foreign Commerce.

By Mr. THURMOND:

S. 3037. A bill to amend the Federal Property and Administrative Services Act of 1949, as amended, to prevent the allocation of procurement contracts to certain designated geographical areas, and for other purposes; to the Committee on Government Operations.

(See the remarks of Mr. THURMOND when he introduced the above bill, which appear under a separate heading.)

By Mr. HUMPHREY:

S. 3038. A bill to provide for the issuance of a special series of postage stamps commemorating the construction, at Minneapolis, Minn., of the first bridge across the Mississippi River; to the Committee on Post Office and Civil Service.

(See the remarks of Mr. HUMPHREY when he introduced the above bill, which appear under a separate heading.)

By Mr. NEUBERGER:

S. 3039. A bill to prevent the consumption of alcoholic beverages aboard aircraft used in air commerce and military aircraft; to the Committee on Interstate and Foreign Commerce.

(See the remarks of Mr. NEUBERGER when he introduced the above bill, which appear under a separate heading.)

By Mr. NEUBERGER (for himself and Mr. MORSE):

S. 3040. A bill for relief of Gertrud Charlotte Samuelis; to the Committee on the Judiciary.

By Mr. LANGER:

S. Res. 191. Resolution to authorize an investigation of the procedure in Federal condemnation cases; to the Committee on the Judiciary.

(See the remarks of Mr. LANGER when he submitted the above resolution, which appear under a separate heading.)

PROPOSED SYSTEM OF GRADUATED PRICE SUPPORT LEVELS FOR COTTON AND WHEAT

Mr. SCOTT. Mr. President, in an effort to write legislation that will meet the needs of this Nation's agricultural economy, the Senate Committee on Agriculture and Forestry has been in almost constant session since the 2d session of the 84th Congress began.

Today, Mr. President, I am proposing legislation, which, I think, embraces

principles which should be thoroughly explored by the committee.

With this in mind, I introduce, for appropriate reference, a bill which would provide a system of graduated price supports for cotton and wheat. Although the bill includes only cotton and wheat, I feel that the same approach to the other basic commodities can be easily worked out in the event the committee finds that this is the proper approach.

The proposed legislation would provide a system of price supports based on the same principle as our income tax laws. Under the system, the larger the farming operation, the less assistance it receives from the Government.

The PRESIDENT pro tempore. The bill will be received and appropriately referred.

The bill (S. 3027) to provide a system of graduated price-support levels for cotton and wheat based upon amounts produced, introduced by Mr. SCOTT, was received, read twice by its title, and referred to the Committee on Agriculture and Forestry.

MIDDLE ATLANTIC INTERSTATE FOREST FIRE PROTECTION COMPACT

Mr. DUFF. Mr. President, on behalf of myself, my colleague, the senior Senator from Pennsylvania [Mr. MARTIN], the junior Senator from Virginia [Mr. ROBERTSON], the senior Senator from Virginia [Mr. BYRD], the Senator from Delaware [Mr. WILLIAMS], the junior Senator from New Jersey [Mr. CASE], the senior Senator from New Jersey [Mr. SMITH], the senior Senator from Maryland [Mr. BUTLER], the junior Senator from Maryland [Mr. BEALL], and the Senator from West Virginia [Mr. KILGORE], I introduce, for appropriate reference, a bill granting the consent and approval of Congress to the Middle Atlantic Interstate Forest Fire Protection Compact.

The bill would grant approval of the Congress to a compact by six Middle Atlantic States (Delaware, Maryland, New Jersey, Pennsylvania, Virginia, and West Virginia) for a cooperative program in preventing and suppressing forest fires. This compact parallels the general pattern of the northeastern interstate forest-fire protection compact which the Congress approved in 1949 and the southeastern compact approved in 1954.

The bill would provide for individual State fire plans and an integrated regional fire plan. Compact administrators, one from each State, would guide the compact with the assistance of an advisory committee representing legislators, forestry commissions, and forest industry. A State requesting aid would be required to assume costs for States rendering aid. The bill would provide that the compact shall not affect any existing or future cooperative relationship or arrangement between any Federal agency and a member State or States.

Protection of the timber resource from fires is important to the economic and industrial stability of the Middle Atlantic region. The interstate compact proposed by this bill would be helpful in attaining greater protection against forest fires in the member States.

The PRESIDENT pro tempore. The bill will be received and appropriately referred.

The bill (S. 3032) granting the consent and approval of Congress to the Middle Atlantic Interstate Forest Fire Protection Compact, introduced by Mr. DUFF (for himself and other Senators), was received, read twice by its title, and referred to the Committee on Agriculture and Forestry.

AMENDMENT OF FEDERAL PROPERTY AND ADMINISTRATIVE SERVICES ACT, RELATING TO ALLOCATION OF PROCUREMENT CONTRACTS

Mr. THURMOND. Mr. President, I introduce for appropriate reference, a bill to amend the Federal Property and Administrative Services Act of 1949, as amended, to prevent the allocation of procurement contracts to certain designated geographical areas, and for other purposes.

I ask unanimous consent that the bill may be printed in the body of the RECORD, together with a letter of December 15, 1955, written by me to Defense Mobilization Director Arthur S. Flemming, and his reply, dated January 5, 1956. These two letters will show the necessity for introducing such proposed legislation to prevent the Government from channeling defense contracts to distress areas.

The PRESIDENT pro tempore. The bill will be received and appropriately referred; and, without objection, the bill and letters will be printed in the RECORD.

The bill (S. 3037) to amend the Federal Property and Administrative Services Act of 1949, as amended, to prevent the allocation of procurement contracts to certain designated geographical areas, and for other purposes, introduced by Mr. THURMOND, was received, read twice by its title, referred to the Committee on Government Operations, and ordered to be printed in the RECORD, as follows:

Be it enacted, etc., That (a) section 302 (c) of the Federal Property and Administrative Services Act of 1949, as amended (41 U. S. C. 252 (c)), is amended by adding at the end thereof the following new sentence: "No contract for the procurement of goods or services shall be negotiated without advertising because of any determination that any labor surplus exists within any geographical area, or because any geographical area has been designated a disaster area or an economically distressed area, and no program for the procurement of goods or services shall contain any provision for the allocation of all or any portion of the contracts to be awarded thereunder to contractors conducting business operations within any geographical area because of any such determination with respect to, or any such designation of, such area."

(b) Section 2 (c) of the Armed Services Procurement Act of 1947, as amended (41 U. S. C. 151 (c)), is amended by inserting at the end thereof the following new sentence: "No contract for the procurement of goods or services shall be negotiated without advertising because of any determination that any labor surplus exists within any geographical area, or because any geographical area has been designated a disaster area or an economically distressed area, and no program for the procurement of goods or services shall contain any provision for the allocation of all or any portion of the contracts to be awarded thereunder to contractors conducting business operations within any geographical area because of any such determination with respect to, or any such designation of such area."

The letters presented by Mr. THURMOND are as follows:

DECEMBER 15, 1955.

HON. ARTHUR S. FLEMMING,
Director, Office of Defense Mobilization,
Executive Office Building,
Washington, D. C.

DEAR MR. FLEMMING: It has been called to my attention that the Philadelphia Quartermaster Depot of the Army recently issued invitations to manufacturers to bid on contracts to supply the Army with large quantities of webbings and tapes of a type which are manufactured in South Carolina, as well as other States. In these invitations it was stated that unless the bidder represented a firm operating in a disaster area that the bid would not be considered for the contract award.

I had previously known of this practice of the Federal Government, under authority of Executive orders, setting aside certain percentages of contracts and assigning as much as 50 percent to labor surplus areas even when the low bid was filed by another manufacturer. However, this is the first instance which has come to my attention in which a 100-percent set-aside has been made in advance of accepting bids.

The practice of setting aside any part of a contract except to the low bidder is a dangerous and unfair procedure, in my opinion, but the setting aside of 100 percent of a contract to a labor surplus area or a disaster area is even more unfair. Such a procedure means that manufacturers outside disaster or labor surplus areas do not even have the privilege of competing, and, therefore, the Government agency seeking to procure supplies or materials eliminates possible low bidders by restricting procurement to select manufacturers. With some bidders eliminated, it is quite possible and probable that disaster area bidders would not be as conservative in their bids and the result would be that the Government would pay more than necessary for its purchases under such circumstances.

However, cost to the Government aside, this practice rewards one citizen at the expense of another.

If a manufacturer is able to produce supplies and materials at a lower cost or if he is willing to accept a smaller profit than others, he should be awarded a contract on which he bids, unless he is unable to meet the specifications required by the Government. A manufacturer should not be penalized for efficiency of operation which enables him to be the low bidder on Government procurements.

Several established Government departments and agencies assist communities various ways. Other departments and agencies assist communities in the event of natural disasters. At the present time a committee of the Senate is considering further assistance to disaster areas in the form of new disaster insurance. I believe the establishment of such policies is properly the province of the legislative branch of the Government.

Because of the reasons I have stated, I urge you to rescind your Defense Mobilization Order supplement of August 25, 1955, in which the following is stated: "* * * Procurement agencies shall use their best efforts to award procurement contracts to contractors located in disaster areas and to encourage prime contractors to award subcontracts to firms in those areas."

We cannot control the occurrence of natural disasters. But the Federal Government should not visit disasters by decree upon good

American citizens by refusing to permit them to bid on Government contracts.

Sincerely yours,

STROM THURMOND.

EXECUTIVE OFFICE OF THE PRESIDENT,
OFFICE OF DEFENSE MOBILIZATION,
Washington, D. C., January 5, 1956.

Hon. STROM THURMOND,
United States Senate,
Washington, D. C.

DEAR SENATOR THURMOND: This is in reply to your letter of December 15, 1955, in which you urged the rescission of the supplement of August 25, 1955, to our DMO VII–7 and point out that activities under the policy of that supplement result in discrimination against producers in your State and elsewhere.

I appreciate your concern in this matter, but I am sure you will agree that in the event of a major disaster in any portion of our country the common good requires rapid restoration of the industrial capacity and economic health of that area. Participation of both Government and private instrumentalities is necessary to achieve that common objective and it is likely that while the resulting activities are temporary they will affect in some degree many individuals and private concerns in other parts of the country.

In the mobilization area the Government has been engaged for some time in encouraging the development and maintenance of an industrial base adequate to produce goods and services necessary in time of war. A major disaster tears down important elements of that mobilization base and creates circumstances which threaten the availability of the manpower necessary to insure its operation. To assist in meeting those problems we have issued supplements to several of our outstanding mobilization base documents, including the procurement policy referred to in your letter. Others deal with tax amortization of emergency facilities, defense loans and machine-tool leasing. The floods in the northeastern United States and the new flood disaster occurring on the west coast since your letter was written have given rise to the special mobilization-base problems which those policies were designed to meet. Those supplements are effective, of course, only with respect to those areas found to be disaster areas under the Disaster Relief Act and will not be applicable after the findings under that statute are withdrawn. In the meantime, some temporary diminution of normal business opportunities in other parts of the country may result from such activities, but we believe that those disadvantages will be outweighed by the resulting national benefits.

If you should need other information with respect to those policies, please do not hesitate to call on me.

Sincerely yours,

ARTHUR S. FLEMMING,
Director.

ISSUANCE OF SPECIAL SERIES OF STAMPS COMMEMORATING THE CONSTUCTION OF FIRST BRIDGE ACROSS MISSISSIPPI RIVER AT MINNEAPOLIS, MINN.

Mr. HUMPHREY. Mr. President, 1956 is the 100th anniversary of the city of Minneapolis, Minn., gateway to the Northwest, the largest city of Minnesota and the center of much of its manufacturing, transportation, and food processing.

One hundred years ago Minnesota was a raw wilderness. Indeed, the entire Nation west of the Mississippi was wilderness. There was one bridge across the entire 1,100 mile length of the Mississippi River which connected the eastern half of the United States with the new west. This was at Minneapolis, between Saint Anthony Falls and the new city. This historic bridge contributed in great measure to the pioneer settlement of the Minnesota wheat regions and the great Dakota country. The Legislature of the Territory of Minnesota granted the charter in 1853 for the erection and maintenance of this bridge, which was begun in 1854. Not only did this bridge become the very first bridge to span the main channel of the Mississippi, but it was one of the first long suspension bridges anywhere in the United States.

At the completion of this bridge, there were no more than a dozen houses on the west side of the Mississippi, in what is now known as Minneapolis. Today there stands a city of well over half a million inhabitants.

The original bridge has been replaced, but its significance remains, as the great impetus to the early growth of Minneapolis.

Early in the fall of 1955, the city of Minneapolis requested the Postmaster General to authorize the printing of a commemorative stamp depicting the first span across the Mississippi River, in the year of the Minneapolis Centennial. There have been numerous discussions with the Post Office Department. One objection after another has been raised and disposed of.

In particular, the claim of the Rock Island-Davenport community to have had the first span across the Mississippi has been refuted according to the following sources:

For verification of the date of the Saint Anthony Falls-Minneapolis bridge we cite—

First. The Reverend Marion David Shutter, History of Minneapolis: Gateway to the Northwest; publisher, S. J. Prack Publishing Co., Chicago, 1923, volume I, pages 117 and 122–123.

Second. Compendium of History and Biography of Minneapolis and Hennepin County, Minn., by Maj. R. I. Holcomb and William H. Bingham, published by Henry Taylor & Co., Chicago, 1941, page 119.

Third. Dr. William E. Leonard, Early Days in Minneapolis, published in the Minnesota Historical Society Collections, volume 15, page 501. dated 1915.

All the above sources agree that the bridge was completed early in 1855 and in the winter of 1855–56 was opened to transportation on a regular basis.

The date of completion of the bridge across the Mississippi at Rock Island-Moline was April 21, 1856—substantially later than the Saint Anthony Falls-Minneapolis bridge was actually opened to traffic. The source is Chicago, Rock Island, and Pacific Railway Representative Employees, published by Biographical Publishing Co., Chicago, Ill., 1900.

The above information was furnished to me by the Library of Congress, and I take the time of the Senate to bring this to the attention of the Senate simply because I have been having a running debate with the Post Office Department as to the historical facts relating to the suspension bridge. It has been some time since I have spent so much of my energy and time on the study of history, but I felt it was an argument which could be won. I felt it was worthy of being won, and I am now presenting evidence which should make it crystal clear that, while the Post Office Department may know how to deliver the mail, it has flunked its course in history.

I furnished this information, in turn, to the Assistant Postmaster General, Mr. Albert J. Robertson, on November 15, 1955. In mid-December according to the Minneapolis Tribune staff correspondent, Mr. Charles Bailey, the Postmaster General still did not accept the fact that the Minneapolis-Saint Anthony Falls bridge was the first span across the Mississippi.

There can be no question as to the facts in the matter. Furthermore, I submit that the importance of this bridge and the resulting community of Minneapolis in the development of the entire Northwest is of such great historical importance that it is an extraordinarily suitable subject for a commemorative stamp.

Therefore, I take pleasure in introducing for appropriate reference, a bill to instruct the Postmaster General to issue in calendar year 1956, a commemorative stamp with a representation of the first bridge across the Mississippi at Minneapolis.

The PRESIDENT pro tempore. The bill will be received and appropriately referred.

The bill (S. 3038) to provide for the issuance of a special series of postage stamps commemorating the construction, at Minneapolis, Minn., of the first bridge across the Mississippi River, introduced by Mr. HUMPHREY, was received, read twice by its title, and referred to the Committee on Post Office and Civil Service.

PROHIBITION OF SERVICE OR CONSUMPTION OF ALCOHOLIC BEVERAGES ABOARD AIRCRAFT

Mr. NEUBERGER. Mr. President, many people in the State of Oregon have urged the enactment of a law forbidding service or consumption of alcoholic beverages aboard commercial and military airplanes. It is my understanding that, so far, the Civil Aeronautics Board has declined to promulgate an order against this peril to air safety.

It is obvious that any passenger or crew member, who is affected by alcohol, could threaten the operations of an aircraft in flight. Many lives might thus be needlessly endangered.

However, Mr. President, the banning of alcoholic beverages should not be confined merely to commercial and military planes. It should be forbidden aboard all aircraft. After all, every plane shares the airlanes with some other planes. We know what tragedy and catastrophe can occur in the air if planes collide, or on a landing field if a plane does not use a runway carefully and accurately.

We would think it silly if we ruled out alcohol on trucks and busses using the

highways, but permitted alcohol to be consumed in private cars rolling over the same highways. This would not make much sense.

For these reasons, Mr. President, I introduce, for appropriate reference, a bill to ban the consumption of alcoholic beverages on any civilian aircraft—commercial or private—operation of which is subject to regulation by the Civil Aeronautics Board, and on military aircraft. The sanction of drinking per se is not here at issue. It is a matter of safety. I think that safety dictates the outlawing of all alcoholic beverages on any flight. This is only fair to all the people who use the air for travel and to their loved ones. It also is in special fairness to the passengers of commercial planes who could be terribly endangered through the uncontrolled or reckless flight of a private plane, whose crew or travelers were indiscriminately consuming alcoholic beverages.

I ask unanimous consent that the bill be printed in the RECORD, at this point.

The PRESIDENT pro tempore. The bill will be received and appropriately referred; and, without objection, the bill will be printed in the RECORD.

The bill (S. 3039) to prevent the consumption of alcoholic beverages aboard aircraft used in air commerce and military aircraft, introduced by Mr. NEUBERGER, was received, read twice by its title, referred to the Committee on Interstate and Foreign Commerce, and ordered to be printed in the RECORD, as follows:

Be it enacted, etc., That section 601 (a) of the Civil Aeronautics Act of 1938 is amended by striking out the word "and" following the semicolon at the end of clause (6), by striking out the period at the end of clause (7) and inserting in lieu thereof a semicolon and the word "and," and by inserting after clause (7) the following new clause:

"(8) Such reasonable rules and regulations as may be necessary to prevent the consumption at any time of alcoholic beverages aboard any aircraft used in air commerce."

SEC. 2. The Secretary of Defense shall establish such regulations as may be necessary to prevent the consumption at any time of alcoholic beverages aboard military aircraft.

INVESTIGATION OF PROCEDURE IN FEDERAL CONDEMNATION CASES

Mr. LANGER. Mr. President, I submit, for appropriate reference, a resolution, and ask that it be read.

The PRESIDENT pro tempore. Without objection, the resolution may be read.

The legislative clerk read the resolution (S. Res. 191) as follows:

Resolved, That the Committee on the Judiciary of the Senate, or any duly authorized subcommittee thereof, is authorized and directed to make a full and complete study and investigation of (a) the number of condemnation cases now pending in the Lands Division of the Department of Justice and, (b) whether the adjudication of such cases is being expeditiously proceeded with, and if not, the reasons therefor and the measures which should be adopted to assure the expeditious disposition of such cases.

SEC. 2. For the purposes of this resolution the committee, from the date of the adoption of this resolution until January 31, 1957, inclusive, is authorized to (a) make such expenditures as it deems advisable, (b) employ upon a temporary basis technical, clerical, and other assistants and consultants, and (c) with the consent of the heads of the departments and agencies concerned and the Committee on Rules and Administration, to utilize the reimbursable services, information, facilities and personnel of any of the departments or agencies of the Government.

SEC. 3. The committee shall report its findings, together with such recommendations for legislation as it deems advisable, to the Senate at the earliest practicable date, but not later than January 31, 1957.

SEC. 4. The expenses of the committee under this resolution, which shall not exceed $———, shall be paid from the contingent fund of the Senate upon vouchers approved by the chairman of the committee.

Mr. LANGER. Mr. President, it is my information that thousands of condemnation cases are pending. In some cases land has been in process of condemnation for a great many years. I do not think it is right for the Federal Government, merely by making a deposit in court, to deprive a farmer or anyone else of the use of his property or the use of the money if the deposit is not sufficient. A great many times the deposit is placed in court and the farmer does not want to take it. The result is that it may be several years before he is able to find another location which is satisfactory to him. Often the price is not satisfactory.

I think the entire subject should be investigated, with the idea of enacting legislation with a view of expediting the procedure in Federal condemnation cases.

The PRESIDENT pro tempore. The resolution will be received and appropriately referred.

The resolution (S. Res. 191) was referred to the Committee on the Judiciary.

AMENDMENT OF SOCIAL SECURITY ACT—AMENDMENT

Mr. HENNINGS. Mr. President, on behalf of myself, and my colleague, the junior Senator from Missouri [Mr. SYMINGTON], I submit, for appropriate reference, an amendment, intended to be proposed by us, to the bill (H. R. 7225) to amend title II of the Social Security Act to provide disability insurance benefits for certain disabled individuals who have attained age 50, to reduce to age 62 the age on the basis of which benefits are payable to certain women, to provide for continuation of child's insurance benefits for children who are disabled before attaining age 18, to extend coverage, and for other purposes.

The proposed amendment would enable Missouri to continue to participate in the Federal aid-to-the-blind program on a permanent basis.

Prior to 1950, Missouri and Pennsylvania, alone, had been held ineligible for Federal assistance in meeting the financial requirements of their "peculiarly"—and I use the word designedly—humane and liberal aid-to-the-blind programs because, whereas, the Federal law sanctioned earnings by recipients up to a maximum of $600, Missouri allowed an income of $1100 annually.

However, in 1950, the law was amended (section 344 (b)) to exempt Missouri and Pennsylvania from the restriction imposed under the Federal law, thus qualifying them for Federal assistance in meeting the payments to those blind individuals who met the income limitation; that is, up until June 30, 1955. In the meantime, Missouri continued to bear the entire cost of the payments to those blind recipients whose income exceeded the $50 per month Federal income restriction.

This partial exemption operated so efficiently and to the mutual advantage of the State and the Federal Government, that it was subsequently extended to June 30, 1957. The purpose of this bill is to enable Missouri and Pennsylvania to continue to participate in the Federal program on a permanent basis without being unduly penalized for adhering to a more humane and more liberal standard in administering aid to its blind citizens.

It does not seem to me, nor to the people of my State, that earnings up to $1,100 annually are excessive. In our judgment, it is only just and proper that we should be permitted to retain this standard permanently, provided that State funds only are used for payments to those who do not qualify under the more restrictive Federal requirement for assistance.

At the present time, the Federal Government shares in the payments to three-fourths of the blind recipients in Missouri. Missouri bears the entire cost of assisting the remaining 25 percent who are not eligible under the Federal program. Of the total expenditure for aid to the blind, Missouri paid well over half; and, I might add, that not one Federal dollar was used to pay any individual who did not meet the $50 restriction of the Federal law.

I sincerely believe that the amendment which we proposed is humanitarian in principle and sound both from the standpoint of good administration and simple justice. It accords the States of Missouri and Pennsylvania no more than equal treatment with other States, conceivably less. I hope the Finance Committee will give the amendment prompt and favorable consideration.

The PRESIDENT pro tempore. The amendment will be received, appropriately referred, and printed.

The amendment was referred to the Committee on Finance, and ordered to be printed.

ADDITIONAL CLERICAL ASSISTANTS AND FUNDS FOR COMMITTEE ON GOVERNMENT OPERATIONS — REFERENCE OF RESOLUTION

Mr. CLEMENTS. Mr. President, I ask unanimous consent that Calendar No. 1519, Senate Resolution 188, to provide additional clerical assistants and funds for the Committee on Government Operations, be taken from the calendar and referred to the Committee on Rules and Administration.

The PRESIDENT pro tempore. Is there objection? The Chair hears none, and it is so ordered.

ADDRESSES, EDITORIALS, ARTICLES, ETC., PRINTED IN THE RECORD

On request, and by unanimous consent, addresses, editorials, articles, etc., were ordered to be printed in the RECORD, as follows:

By Mr. MARTIN of Pennsylvania:

Address delivered by Senator SALTONSTALL at the salute-to-Eisenhower banquet in Philadelphia, Pa., on January 20, 1956.

By Mr. LEHMAN:

Report on the Nation, delivered by him to the people of New York State on January 20, 1956.

ADDRESS BY SENATOR THURMOND BEFORE VIRGINIA STATE BAR ASSOCIATION

Mr. BYRD. Mr. President, I ask unanimous consent to have printed in the body of the RECORD a very able address delivered by the Senator from South Carolina [Mr. THURMOND] before the Virginia Bar Association at White Sulphur Springs, W. Va., on August 6, 1955.

Senator THURMOND's address is an outstanding contribution to the discussion of fundamental principles relating to the Constitution and the Supreme Court, and is very pertinent in view of recent decisions that have been made. It is worthy of the fullest consideration by every American who believes in our constitutional government of representative democracy.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

Meeting with you here tonight is a great pleasure and privilege. I consider it an unusual honor to have been invited to speak before such a distinguished association. The States of Virginia and South Carolina have always had common interests and common objectives. I hope this fraternity will grow closer with time. Certainly, in the United States Senate, I have felt a strong fraternity with the distinguished Senators representing you. No State is better represented in the Senate than Virginia, and I am happy to count Senator BYRD and Senator ROBERTSON as my friends.

The subject I wish to discuss tonight is one about which I have been deeply disturbed. I know that you, too, have been concerned with recent events involving the separation of powers of the three branches of the Federal Government and the division of rights between the Federal Government and the States.

I still believe in the United States Constitution as a living document, immutable except by the processes established when it was written to amend it legally. Believing this, I wish to cite several provisions of this vital instrument of the American Government.

To begin with, the Constitution provides in article I, section 1, that: "All legislative powers herein granted shall be vested in a Congress of the United States, which shall consist of a Senate and House of Representatives."

In view of recent developments in our judicial system, I feel it appropriate to read this section of the Constitution again as you and I have read and reread it many times in the past. I hope that members of the Federal judiciary will read it and reread it again in the future.

Section 8 of article I enumerates the powers of the Congress.

Section 9 of article I spells out specific prohibitions and limitations on the powers of the Congress.

Section 10 of article I defines limitations on the power of the States and, further, specifies additional limitations which require approval of the Congress prior to action by the States.

Even the clarity of these provisions did not satisfy many of the people when the Constitution was finally ratified by the nine requisite States to become effective in 1789. Several States ratified only after long debate and the adoption of recommendations that a Bill of Rights be added to make some of the provisions even clearer.

A total of 124 amendments were proposed by the States for inclusion in the Bill of Rights. Seventeen amendments were accepted by the House, two of which later were rejected by the Senate. The remaining 15 were reduced to 12 before final approval by the Congress. The States rejected 2 of the proposals and thereby the Bill of Rights was distilled to the original 10 amendments.

The first eight amendments listed certain rights specifically retained by the people. The ninth stated that the "enumeration in the Constitution of certain rights, shall not be construed to deny or disparage others retained by the people."

And the 10th amendment declared:

"The powers not delegated to the United States by the Constitution, nor prohibited by it to the States, are reserved to the States respectively, or to the people."

Although this amendment did not, of itself, add power to the States, or to the Federal Government, the 10th amendment did make clear the intent of the framers of the Constitution and the understanding of the States in ratifying the Constitution and the Bill of Rights.

James Madison has been quoted as saying:

"Interference with the power of the States was no constitutional criterion of the power of Congress. If the power was not given, Congress could not exercise it; if given, they might exercise it, although it should interfere with the laws, or even the constitutions of the States."

I have no argument with that conception of the power of the Congress. My contention is that legislative power, not granted even to the Congress, by the Constitution or by statute, has been assumed by the judiciary. By assumption of such power, the Supreme Court has not only seized power granted the legislative branch alone, but the Court has also invaded the specifically reserved rights of the States.

On occasion a President of the United States has attempted to usurp power vested in the Congress. The most recent example was the steel seizure case. On April 8, 1952, President Truman issued an executive order directing the Secretary of Commerce to seize and operate most of the steel mills of the country. His purpose was to avoid a nationwide strike of steelworkers during the Korean war.

President Truman issued the seizure order "by virtue of authority vested in me by the Constitution and laws of the United States, and as President of the United States and Commander in Chief of the Armed Forces of the United States."

By a 6 to 3 opinion the Supreme Court upheld an injunction of the district court restraining the seizure. Justice Black wrote the majority opinion in which he pointed out that no statute expressly authorized or implied authorization for the President to seize the steel mills; that in its consideration of the Taft-Hartley Act in 1947, the Congress refused to authorize Government seizure of property as a means of preventing work stoppages and settling labor disputes. He also declared that the power sought to be exercised was the lawmaking power, which the Constitution vests in the Congress alone. Further, he pointed out that such previous actions by the Chief Executive did not thereby divest the Congress of its exclusive lawmaking authority.

Thus the Supreme Court was quick to repel this latest attempt by a chief executive to exercise authority not vested in him by the Constitution or by statute.

But the Court's memory was short indeed when it considered the school segregation cases. The Court itself usurped the power of the Congress by its decision on May 17, 1954, and its decree of May 31, 1955.

By this time, you are probably wondering if I am avoiding mention of the 14th amendment upon which the appellants in the school cases depended for their argument that the States could not separate the races in the public schools.

I am not avoiding it. I want to discuss it with you tonight.

In the first hearing, the Supreme Court asked the appellees, including school districts in South Carolina and Virginia, to present evidence at the rehearing, which was held in December 1953, on the understanding of the 14th amendment at the time of its enactment. Information was required on the Congress which approved the amendment and the States which ratified it.

The preponderance of evidence presented in the briefs showed that the Congress which approved the amendment and, the States which ratified it, did not understand it as applying to segregation in the schools.

As the brief in the South Carolina case pointed out, the "debates of the 39th Congress on the 1st supplemental Freedman's bill, the Civil Rights Act of 1866 and the 14th amendment contain no evidence of any intention on the part of Congress to forbid school segregation."

The brief also pointed out that "of the 37 States to which the amendment was submitted, only 5 abolished or prohibited segregation in their schools when they ratified the amendment; and there is no evidence that they did so because they thought the amendment required such action rather than as a matter of local educational policy. Of these 5, 3 later established segregated school systems after the 14th amendment had become a part of the Constitution of the United States."

Nine States did not have segregated schools when the amendment was submitted to them.

Four States, in which segregated schools were maintained when the 14th amendment was ratified, refused to ratify the amendment, but there was no evidence in the proceedings of their legislatures that they did not do so because of any understanding that the amendment prohibited segregated schools.

Two States had segregated schools and have maintained them.

Nine Northern States were operating segregated schools and either continued to do so or reestablish them.

Eight seceded States continued to operate, or immediately reestablished, segregated schools after ratification of the amendment.

Of course, I have merely touched on the strong evidence that the 14th amendment was not understood at the time of its ratification to prohibit segregated schools. But, the evidence was well documented in the briefs presented to the court. Significantly, the evidence was not refuted.

However, the Court saw fit largely to disregard this evidence for which it had asked. Commenting on the evidence, the Court said on May 17, 1954:

"This discussion and our own investigation convince us that, although these sources cast some light, it is not enough to resolve the problem with which we are faced.

"At best, they are inconclusive. The most avid proponents of the postwar amendments undoubtedly intended them to remove all legal distinctions among 'all persons born or naturalized in the United States.'

"Their opponents, just as certainly, were antagonistic to both the letter and the spirit of the amendments and wished them to have the most limited effect. What others in Congress and the State legislatures had in mind cannot be determined with any degree of certainty."

I want you to note particularly the use of the Court's words "undoubtedly intended," in reference to what the proponents of the 14th amendment thought. The Court cast aside the real evidence presented as inconclusive, but, by some unstated power, arrived at the intent of dead partisans where no evidence existed.

Admitting that the question was not one of equalization of facilities and other "tangible" factors, the Court stated:

"Our decision, therefore, cannot turn merely on a comparison of these tangible factors in the Negro and white schools involved in each of the cases. We must look instead to the effect of segregation itself on public education."

This statement is clearly an admission that the decision was not rendered on the basis of any provision of the Constitution. Regardless of what the Court called inconclusive evidence, as to the understanding of the 14th amendment when it was adopted in 1868, the Court did not have to rely on that amendment alone in view of the clarity of the 10th amendment. When the Court found itself in doubt as to the intent of the 14th amendment—and its questions showed doubt existed—then the Court should have relied on other provisions of the Constitution not lacking in clarity.

However, the Court made its position still more untenable by its comments on the time elapsed since adoption of the 14th amendment and the *Plessy* v. *Ferguson* decision of 1896, by which the doctrine of "separate but equal" school facilities was established.

The Court said:

"We cannot turn the clock back to 1868 when the amendment was adopted, or even to 1896 when *Plessy* v. *Ferguson* was written. We must consider public education in the lights of its full development and its present place in American life throughout the Nation. Only in this way can it be determined if segregation in public schools deprives these plaintiffs of the equal protection of the laws."

In other words, the Court was no longer interested in the evidence it had requested, regardless of the understanding of the Congress which approved and the States which ratified the 14th amendment.

The doctrine of "separate but equal" was established on the Constitution, and even if the 14th amendment had not existed, the doctrine would have been fair and equitable to apply to the expenditure of public funds for public schools. No responsible official of a State government would deny the obligation of the State to provide equal facilities for the races. Virtually all of the Southern States have already fully complied with that doctrine.

In my own State of South Carolina more funds have been allocated for Negro schools in the past several years than for the construction of white schools. In less than 4 years, South Carolina has spent about $150 million on the construction of new schools, with approximately 60 percent being for Negroes. Since white pupils outnumber Negro pupils in South Carolina by 3 to 2, this means that approximately twice as much per capita has been spent for Negro pupils for school construction.

Long ago differences in teachers salaries were wiped out and salaries based on knowledge, training, and experience. My State is meeting the responsibility which goes with the constitutional right for State regulation of public schools. I know that Virginia and the other States are meeting their responsibility too.

But let us consider further how the Court arrived at its decision to destroy provisions of the constitutions and/or the laws of 17 States and the District of Columbia. It legislated by judicial fiat in a field which even the Congress had not invaded.

Thus, in this decree, the Court disregarded the distinctions made in the first and third articles of the Constitution between the powers of the Congress and the Judiciary. The same decree also overrode the 8th and 9th sections of article I of the Constitution and the 10th amendment, in which the rights of the States are enumerated.

Although the Court admitted that "education is perhaps the most important function of State and local governments," it failed to follow that thought to its logical conclusion. The conclusion would be that, in lieu of specific constitutional or statutory limitation, the States have the power to operate the kind of public schools they deem best, the equity of all pupils being protected.

Quoting from the decision in the Kansas case, the Court stated:

"A sense of inferiority affects the motivation of a child to learn. Segregation with the sanction of law, therefore, has a tendency to retard the educational and mental development of Negro children and to deprive them of some of the benefits they would receive in a racially integrated school system."

If this thesis had validity, the Court, also should have treated the question of whether an adverse effect would result from the mixing of children of the same age level of lower intelligence with those of higher intelligence. Certainly differences of inferiority and superiority would be emphasized greatly by close proximity. What would be the effect on the pupils of higher intelligence levels? Would they have to follow instruction geared to less intelligent pupils? Educators have long advocated that greater opportunities be provided for exceptional pupils. They have not recommended mixing them with less able pupils.

Still referring to the "sense of inferiority" of segregated pupils, the Court said:

"Whatever may have been the extent of psychological knowlege at the time of *Plessy* v. *Ferguson*, this finding is amply supported by modern authority." Then, in a footnote, it cited a group of psychologists. Disregarding the degree of objectivity exercised by these psychologists, I do question the authority of the Court to replace the Constitution with opinions expressed in textbooks.

On May 31 of this year, the school cases were remanded to the district courts, leaving to them the setting of time for compliance. On July 15 the case which arose in Clarendon County, S. C., was heard in Columbia before a three-judge Federal court composed of Judges John J. Parker, Armistead M. Dobie and George Bell Timmerman. Judges Parker and Timmerman had sat on the original court which had ruled that the doctrine of "separate but equal" school facilities for the races was not violative of the Constitution.

In his opening remarks at the hearing on July 15, Judge Parker said:

"Whatever may have been the views of this court as to the law when the case was originally before us, it is our duty now to accept the law as declared by the Supreme Court.

"Having said this, it is important that we point out exactly what the Supreme Court has decided and what it has not decided in this case. It has not decided that the Federal courts are to take over or regulate the public schools of the States. It has not decided that the States must mix persons of different races in the schools or must require them to attend schools or must deprive them of the right of choosing the schools they attend. What it has decided, and all that it has decided, is that a State may not deny to any person on account of race the right to attend any school that it maintains. This, under the decision of the Supreme Court, the State may not do directly or indirectly but, if the schools which it maintains are open to children of all races, no violation of the Constitution is involved even though the children of different races voluntarily attend different schools, as they attend different churches."

Judge Parker's words point clearly to a means of continued school segregation on a voluntary basis. Were it not for the agitators who have no regard for the Constitution and for the best interests of a majority of both races, I believe voluntary segregation would work satisfactorily.

However, I cannot tell you that I believe it will work. Already petitions have been filed in several districts of South Carolina, since this hearing, asking for the admission of Negro pupils to white schools, where facilities are equal or better for the Negroes. The same thing is happening in other States.

But permit me to quote Judge Parker further:

"Nothing in the Constitution or the decision of the Supreme Court takes away from the people freedom to choose the schools they attend. The Constitution in other words, does not require integration. It merely forbids discrimination. It does not forbid such segregation as occurs as the result of voluntary action. It merely forbids the use of governmental power to enforce segregation. The 14th amendment is a limitation upon the exercise of power by the State or State agencies not a limitation upon the freedom of individuals.

"The Supreme Court has pointed out that the solution of the problem in accord with its decisions is the primary responsibility of school authorities and that the function of the courts is to determine whether action of the school authorities constitutes 'good faith implementation of the governing constitutional principles.'"

Let me emphasize Judge Parker's statements that "the Constitution does not require integration," and that "it merely forbids the use of governmental power to enforce segregation." These words are extremely important to the officials of the States and the schools, as we consider means of maintaining our way of life under the Constitution.

The solution to the problem lies in the hands of the States. While the Congress never would have been able to amend the Constitution, or to pass legislation, to declare separate school facilities discriminatory, neither could it now enact legislation to overrule the action of the Court.

There are not enough people in Washington concerned with the same principles on which our Constitution was established to pass such regulatory measures.

Therefore, the States and school districts must construct laws and regulations within the principles stated by the Court. Not even the edict of the Court prevents the adoption of systems of classifying pupils other than that of race.

A friend has written me suggesting, facetiously, that I should introduce a bill making all legislation by the Supreme Court subject to review by the Congress. I agree this would be just as constitutional as what the Court itself has done.

I reject the contention of the propagandists who have convinced some sincere persons that the Supreme Court has spoken and everybody should bow to what the Court has declared the law of the land.

Those persons who sought to destroy the Constitution and the rights of the States did not meekly bow to the doctrine of separate but equal established under the Constitution by the *Plessy* v. *Ferguson* decision. Instead, for a half century they conducted a propaganda campaign against the Constitution and against the decision of a respected Court.

We might do well to adopt the tactics of our opponents. If propaganda and psychological evidence are effective for our opponents, they can be effective for us. Our worthy objective of preserving the Constitution justifies the method.

Not only must the States find substitutes for the constitutional practices which have been invalidated, they must also fight each case with every legal weapon at their disposal. They must, at the same time, hold to the provision of equal facilities for the races, in spite of the temptation to forget humane treatment for those who exert pressures of propaganda and the courts.

In the Congress I, for one, shall fight against every effort to enact legislation which I believe discriminatory against the greatest minority group in this Nation—the white people of the South—who have been subjected to abuse worthy of the dictators.

I also propose to consider carefully every nomination made by the Chief Executive to the courts and to other positions of power. If I find the appointee, by his actions and statements, to be disqualified for the trust he would assume, I shall vote against his confirmation. By this method the Senate can exert its rightful power in an effort to protect the Constitution against further inroads.

I deem it my duty, my solemn obligation, under my oath, to take such action to defend the Constitution of the United States.

The process of adaptation of the Constitution to changing times had attained a speed so great that in *Smith* v. *Allwright*, in 1944, the late Justice Roberts declared that Supreme Court decisions appeared to have taken on the attributes of restricted railroad tickets, valid only for the date of their issuance.

As attorneys you probably know that in the 18 years since 1937, 33 previously formulated principles of constitutional law have been discarded or overruled by the Supreme Court. In the preceding 137 years of this Nation under the Constitution, only 29 previously established principles were overruled.

From the beginning the lawyers of this country have had a strong hand in making it a great Nation. Of the 56 men who signed the Declaration of Independence, 24 were lawyers. Twenty-one of the thirty-nine delegates who drafted and signed the Constitution also were lawyers. A high percentage of the Members of the Congress and the State legislatures today are lawyers. No other profession has contributed so much to the establishment and the maintenance of our Government.

As your able and devoted forefathers fought the fights of liberty—on the battlefields and in the lawmaking bodies—I hope you will devote your legal talents to preserving the guaranties of the Constitution. We have seen in other lands what happens to the rights of the people when duly constituted govermnent is destroyed.

We cannot flinch at being charged with "impeding progress." The Supreme Court by its decree has impeded the progress made in 75 years of work to provide equal and adequate public education for the white and Negro children of the South. No accuser can point his finger in any other direction with as much accuracy.

FOREIGN POLICY DOCUMENTS

Mr. SMITH of New Jersey. Mr. President, during the months when the Congress was adjourned, several very important foreign policy conferences took place, and numerous important statements covering various phases of our foreign policy were delivered either by the President or by the Secretary of State.

It seems to me that these statements and communiqués might well be printed in the RECORD together, so that Senators may more easily refer to them and better understand our policies.

I understand that some Members of the Senate plan a fullfledged review of our foreign policy. This could be very helpful if conducted in a cooperative, friendly, and bipartisan manner. It is important that the various segments of our foreign policy be under constant review, evaluation, and study.

I hope that the series of statements which I wish to insert in the RECORD today will be helpful to all my colleagues, and especially to those who intend to review our foreign policy. Let me say that I collected these documents, with the approval of the Secretary of State and with the help of the State Department. They have been selected as the most important ones issued between the sessions of the 84th Congress.

So, Mr. President, I ask unanimous consent to have the following documents printed in the body of the RECORD.

UNITED STATES FOREIGN POLICY TOWARD EUROPE AND RUSSIA

In the field of United States foreign policy toward Russia and Europe, I submit:

First. The July 23 directive of the heads of government of the four powers to the foreign ministers, issued at the end of the first Geneva Conference.

Second. President Eisenhower's July 25 address to the Nation, after returning from the first Geneva Conference.

Third. The statement made by Secretary Dulles on July 26, 1955, on the first Geneva Conference.

Fourth. The Secretary of State's Report to the Nation on November 18, after the Foreign Ministers meeting. This is known as the Second Geneva Meeting.

Fifth. The Tripartite Declaration on Germany and European Security, issued on November 16, 1955, at the close of the Second Geneva Conference.

Sixth. An address by Secretary Dulles, delivered on December 8, in Chicago. The address is entitled "The Foundations for a Firm Peace."

Seventh. The Final Communiqué of December 16 of the Paris NATO Council Meeting.

NEAR EASTERN POLICY

With regard to United States policy in the Near East, I submit:

First. Secretary Dulles' August 26 address before the Council on Foreign Relations, having to do particularly with Arab-Israeli problems.

Second. Mr. Dulles' statement on October 4, concerning dangers of a Middle East arms race.

Third. President Eisenhower's November 9 statement concerning Near Eastern policy.

Fourth. The President's letter to Rabbi Abba Hillel Silver, regarding peace in the Near East.

ECONOMIC AID

On the subject of economic aid, I submit:

Secretary Dulles' December 20 statement; and the statement of the members of the United States delegation to the United Nations, as read by Mr. Dulles at his news conference on January 11, 1956.

There being no objection, the documents were ordered to be printed in the RECORD, as follows:

SEVENTH PLENARY MEETING, JULY 23

(EDITORIAL NOTE.—At this meeting the Heads of Government agreed on the definitive phraseology of the final directive to the Foreign Ministers. The directive was formally adopted at the Eighth Plenary Meeting.)

DIRECTIVE OF THE HEADS OF GOVERNMENT OF THE FOUR POWERS TO THE FOREIGN MINISTERS[1]

The Heads of Government of France, the United Kingdom, the U. S. S. R. and the United States of America, guided by the desire to contribute to the relaxation of international tension and to the consolidation of confidence between states, instruct their Foreign Ministers to continue the consideration of the following questions with regard to which an exchange of views has taken place at the Geneva Conference, and to propose effective means for their solution, taking account of the close link between the reunification of Germany and the problems of European security, and the fact that the successful settlement of each of these problems would serve the interests of consolidating peace.

1. European security and Germany

For the purpose of establishing European security with due regard to the legitimate interests of all nations and their inherent right to individual and collective self-defense, the Ministers are instructed to consider various proposal to this end, including the following: A security pact for Europe or for a part of Europe, including provisions for the assumption by member nations of an obligation not to resort to force and to deny assistance to an aggressor; limitation, control, and inspection in regard to armed forces and armaments; establishment between East and West of a zone in which the disposition of armed forces will be subject to mutual agreement; and also to consider other possible proposals pertaining to the solution of this problem.

The Heads of Government, recognizing their common responsibility for the settlement of the German question and the reunification of Germany, have agreed that the settlement of the German question and the reunification of Germany by means of free elections shall be carried out in conformity with the national interests of the German people and the interests of European security. The Foreign Ministers will make whatever arrangements they may consider desirable for the participation of, or for consultation with, other interested parties.

2. Disarmament

The Four Heads of Government,

Desirous of removing the threat of war and lessening the burden of armaments,

Convinced of the necessity, for secure peace and for the welfare of mankind, of achieving a system for the control and reduction of all armaments and armed forces under effective safeguards,

Recognizing that achievements in this field would release vast material resources to be devoted to the peaceful economic de-

[1] Text from Conference document CF/DOC/25, July 23, 1955.

velopment of nations, for raising their well-being, as well as for assistance to underdeveloped countries,

Agree:

(1) for these purposes to work together to develop an acceptable system for disarmament through the Subcommittee of the United Nations Disarmament Commission;

(2) to instruct their representatives in the Subcommittee in the discharge of their mandate from the United Nations to take account in their work of the views and proposals advanced by the Heads of Government at this Conference;

(3) to propose that the next meeting of the Subcommittee be held on August 29, 1955, at New York;

(4) to instruct the Foreign Ministers to take note of the proceedings in the Disarmament Commission, to take account of the views and proposals advanced by the Heads of Government at this Conference and to consider whether the four Governments can take any further useful initiative in the field of disarmament.

3. Development of contacts between East and West

The Foreign Ministers should by means of expert study measures, including those possible in organs and agencies of the United Nations, which could (a) bring about a progressive elimination of barriers which interfere with free communications and peaceful trade between people and (b) bring about such freer contacts and exchanges as are to the mutual advantage of the countries and peoples concerned.

4. The Foreign Ministers of the Four Powers will meet at Geneva during October to initiate their consideration of these questions and to determine the organization of their work.

TEXT OF THE ADDRESS OF THE PRESIDENT REPORTING TO THE NATION AFTER HIS RETURN FROM THE GENEVA CONFERENCE

Good evening friends, Secretary Dulles and I, with our associates, went to the Big Four Conference at Geneva resolved to represent as accurately as we could the aspirations of the American people for peace and the principles upon which this country believes that peace should be based.

In this task we had the bipartisan, indeed almost the unanimous, support of the Congress. This fact greatly strengthened our hand throughout the negotiations. Our grateful thanks go out to all your Senators and your Congressmen in the United States Congress. Aside from this, we had, during the past week, thousands of telegrams of encouragement and support from you as individuals. Along with these came similar telegrams from great organizations, church organizations, business, and great labor organizations.

All of these combined served to make us feel that possibly we were faithfully representing the views that you would have us represent. Now peace—the pursuit of peace—involves many perplexing questions. For example:

Justice to all nations, great and small;

Freedom and security for all these nations;

The prosperity of their several economies and a rising standard of living in the world;

Finally, opportunity for all of us to live in peace and in security.

Now, naturally, in the study of such questions as these, we don't proceed recklessly. We must go prudently and cautiously—both in reaching conclusions and in subsequent action. We cannot afford to be negligent or complacent. But, we must be hopeful. We must have faith in ourselves and in the justice of our cause. If we don't do this, we will allow our own pessimism and our own lack of faith to defeat the noblest purposes that we can pursue.

Now, because of the vital significance of all these subjects, they will be exhaustively surveyed by our Government over a period of many weeks. Tonight the most that I can give to you are a few personal impressions and opinions that may have some interest for you and certainly have some bearing on the outcome and on the progress of those negotiations.

Of course, an interesting subject that could be taken up, had I the time, would be the personalities of the several delegations, the relationship or apparent relationships of one to the other—the principal considerations that seem to motivate them. These would all have a bearing on this problem. But I forgo them and take up instead just two general opinions in which I am sure every American shares:

The first of these, that we must never be deluded into believing that 1 week of friendly, even fruitful, negotiation can wholly eliminate a problem arising out of the wide gulf that separates, so far, East and West. A gulf as wide and deep as the difference between individual liberty and regimentation, as wide and deep as the gulf that lies between the concept of man made in the image of his God and the concept of man as a mere instrument of the state. Now, if we think of those things we are apt to be possibly discouraged.

But I was also profoundly impressed with the need for all of us to avoid discouragement merely because our own proposals, our own approaches, and our own beliefs are not always immediately accepted by the other side.

On the night I left for Geneva, I appeared before the television to explain to you what we were seeking. I told you that we were going primarily to attempt to change the spirit in which these great negotiations and conferences were held. A transcript was made of that talk, and I should like now to read you one paragraph from it.

This is what I said with respect to our purpose: "We realize that one ingredient has been missing from all past conferences. This is an honest intent to conciliate, to understand, to be tolerant, to try to see the other fellow's viewpoint as well as we see our own. I say to you if we can change the spirit in which these conferences are conducted, we will have taken the greatest step toward peace, toward future prosperity and tranquillity that has ever been taken in all the history of mankind."

During last week in formal conferences, and in personal visits, these purposes have been pursued. So now there exists a better understanding, a closer unity among the nations of NATO.

There seems to be a growing realization by all that nuclear warfare, pursued to the ultimate, could be practically race suicide.

There is a realization that negotiations can be conducted without propaganda and threats and invective.

Finally, there is a sharp realization by the world that the United States will go to any length consistent with our concepts of decency and justice and right to attain peace. For this purpose, we will work cooperatively with the Soviets and any other people as long as there is sincerity of purpose and a genuine desire to go ahead.

In the course of carrying on these discussions there were a number of specific proposals, some of which were items on the official agenda. That agenda contained German reunification and European security, disarmament, and increased contacts of all kinds between the East and the West.

Most of these conference meetings were given wide publicity and even some of the specific suggestions made in those conferences likewise were publicized. In any event, I can assure you of one thing:

There were no secret agreements made, either understood agreements or written ones. Everything is put before you on the record.

Outside of these conference meetings there were numerous unofficial meetings—conversations with important members of the other delegations and, of course, very specifically with the Soviet delegation.

In these conversations a number of subjects were discussed and among them the Secretary of State and I specifically brought up, more than once, American convictions and American beliefs and American concern about such questions as the satellites of Eastern Europe and the activities of international communism. We made crystal clear what were American beliefs about such matters as these.

Now to take up for a moment the items on the official agenda.

Probably no question caused us as much trouble as that of German reunification and European security. At first we thought that these could be dealt with separately, but the American delegation concluded that they had to be dealt with as one subject. We held that Germany should be reunited under a government freely chosen by themselves, and under conditions that would provide security both for nations of the East and for nations of the West—in fact in a framework that provided European security.

In the matter of disarmament, the American Government believes that an effective disarmament system can be reached only if at its base there is an effective reciprocal inspection and overall supervision system, one in which we can have confidence and each side can know that the other side is carrying out his commitments. Now because of this belief, we joined with the French and the British in making several proposals. Some were global, some were local, some were sort of budgetary in character. But all were in furtherance of this one single objective, that is, to make inspection the basis of disarmament proposals.

One proposal suggested aerial photography, as between the Soviets and ourselves by unarmed peaceful planes, and to make this inspection just as thorough as this kind of reconnaissance can do. The principal purpose, of course, is to convince every one of Western sincerity in seeking peace. But another idea was this: if we could go ahead and establish this kind of an inspection as initiation of an inspection system we could possibly develop it into a broader one, and eventually build on it an effective and durable disarmament system.

In the matter of increasing contacts, many items were discussed. We talked about a freer flow of news across the curtains of all kinds. We talked about the circulation of books and particularly we talked about peaceful trade. But the subject that took most of our attention in this regard was the possibility of increased visits by the citizens of one country into the territory of another, doing this in such a way as to give each the fullest possible opportunity to learn about the people of the other nation. In this particular subject there was the greatest possible degree of agreement. As a matter of fact, it was agreement often repeated and enthusiastically supported by the words of the members of each side.

As a matter of fact, each side assured the other earnestly and often that it intended to pursue a new spirit of conciliation and cooperation in its contacts with the other. Now, of course, we are profoundly hopeful that these assurances will be faithfully carried out.

One evidence as to these assurances will, of course, be available soon in the language and the terminology in which we will find speeches and diplomatic exchanges couched. But the acid test should begin next October because then the next meeting occurs. It will be a meeting of the Foreign Ministers. Its principal purpose will

be to take the conclusions of this conference as to the subjects to be discussed there and the general proceedings to be observed in translating those generalities that we talked about into actual, specific agreements. Then is when real conciliation and some giving on each side will be definitely necessary.

Now, for myself, I do not belittle the obstacles lying ahead on the road to a secure and just peace. By no means do I underestimate the long and exhausting work that will be necessary before real results are achieved. I do not blink the fact that all of us must continue to sacrifice for what we believe to be best for the safety of ourselves and for the preservation of the things in which we believe.

But I do know that the people of the world want peace. Moreover, every other individual who was at Geneva likewise felt this longing of mankind. So, there is great pressure to advance constructively, not merely to reenact the dreary performances, the negative performances of the past.

We, all of us, individually and as a people now have possibly the most difficult assignment of our Nation's history. Likewise, we have the most shining opportunity ever possessed by Americans. May these truths inspire, never dismay us.

I believe that only with prayerful patience, intelligence, courage, and tolerance, never forgetting vigilance and prudence, can we keep alive the spark ignited at Geneva. But if we are successful in this, then we will make constantly brighter the lamp that will one day guide us to our goal—a just and lasting peace.

Thank you. Good night to each of you.

[No. 458, July 26, 1955]

GENEVA CONFERENCE

At his news conference today Secretary Dulles made the following statement:

"The Geneva 'Summit' Conference produced good results.

"First of all, I would put the fact that it registered a certain transformation in the relations between the Soviet Union and the Western Powers. They became less brittle. That should mean that, for the predictable future, we can subject our differences to the patient processes of diplomacy with less fear that war will come out of them. That, of course, does not mean that early and easy solutions are in sight. It does mean that the war danger has further receded.

"Another development at the Geneva Conference was the resourcefulness and initiative of the Western Powers. That was particularly evidenced by President Eisenhower's dramatic proposal that the United States and the Soviet Union should agree that peaceful planes would fly over each others territory to take photographs so that each could be sure that the other was not planning a massive surprise attack.

"This is the most dramatic, and at the same time most serious and sober, peace proposal that history records. The Soviets made no immediate reply, but that is not surprising for the proposal is one which no doubt they wish to take time to study. If, however, they have the genuine desire of peace which they indicated at Geneva, then I feel confident that positive results will come from President Eisenhower's proposal.

"The Western Powers also brought to the fore the problem of German reunification. This now is very much a matter of practical international statesmanship. German reunification is in the air and I am convinced that it will come about, not immediately, but surely. Of course, we recognized that it will come about more easily within a framework of European security. So the Western Powers accepted the Soviet request that European security be studied. In that connection we put forward a series of practical suggestions which will come before the October Foreign Ministers Conference. These can give the Soviet Union assurance that German reunification, far from endangering the Soviet Union, can take place under conditions which will provide safety to all.

"We had occasion to bring home to the Soviet rulers the importance which the United States Government and people attach to the right of the satellite nations to have governments of their own choosing. Also we made clear our grave objection to the revolutionary and subversive activities of international communism. We obtained no assurance, but we hope that developments will in fact tend to eliminate these causes of tension.

"The Conference in no way weakened the close ties and unity of purpose which exist between the three Western Powers which were present at Geneva. On the contrary, their unity emerges stronger than ever from this new testing to which it was subjected.

"The Conference did not press national viewpoints to a point where there would have been a breakdown, which would have dimmed the hopes of future peace. On the other hand, the Conference avoided the equal danger of creating an illusion that all was now so well that we could safely relax our efforts to build individual and collective self-defense.

"President Eisenhower played a great role at this Conference, one of which our Nation can always be proud. Also the people of the United States can themselves take pride in the contribution of each to an unprecedented peacetime demonstration of spiritual unity behind our determination to make peace both just and durable.

"In looking to the future we must not forget the sequence of events that brought us where we are today. The free world has been strong and unified. It must remain so for the long arduous months ahead in which we must expect disappointments as well as cherish hopes. There are certainly opportunities for the free world in the present situation, but there are also possible hazards. The task of statesmanlike diplomacy is to realize to the full the opportunities while avoiding the hazards."

REPORT TO THE NATION BY THE HONORABLE JOHN FOSTER DULLES, SECRETARY OF STATE

Following is the text of the report to the Nation by the Honorable John Foster Dulles, Secretary of State, upon the occasion of his return from the Foreign Ministers Conference at Geneva:

"For the last 3 weeks the British, the French, and ourselves have been negotiating with the Russians at Geneva. I got back yesterday and reported fully to the President in a talk which began last evening and was resumed this morning. Now I am reporting to you, the American people.

"As I expect most of you know, this Geneva meeting did not reach any agreements. As a result, many questions are in the air.

"Does this mean that the so-called spirit of Geneva is dead?

"Does it mean that the risk of war has increased?

"Will the so-called cold war be resumed in full vigor?

"Will the United States now have to change basically its military and mutual security programs?

"Does it mean an end to negotiating with the Soviet Union?

"I shall try to answer all of these questions.

"First of all, however, I would like to recall how this latest Geneva Conference came about.

"I go back to last spring. Until then Soviet Russia had been pursuing a menacing policy. That was Stalin's line. He believed it was possible to ride roughshod over the free nations.

"After Stalin died, that effort continued for a time. The Soviets made intense and blustering efforts to keep West Germany apart from the other Western European nations. Despite this, the Federal Republic of Germany last May joined NATO and the Brussels Treaty creating Western European Union.

"This Soviet failure was followed by a change in the Soviet demeanor. Stalin's successors professed, at least superficially, to desire cooperative relations with the free nations. And they made important concessions for this purpose.

"For example, they had for 8 years refused to sign the treaty which would give Austria her freedom. But last May they signed that treaty and pulled the Red Army out of Austria.

"They made their peace with Tito, who for 7 years had been the object of their most bitter attacks because he had taken Yugoslavia out of the Soviet bloc.

"They moderated their propaganda and their manners.

"They made it clear that they would like to sit down and talk with the Western nations.

"The United States responded, as it always will respond, to any prospect, however slight, of making peace more just and durable. That response was backed up with virtual unanimity and on a bipartisan basis. So, the United States joined with Britain and France to invite the Soviet leaders to the summit Conference at Geneva. There President Eisenhower met for 6 days with the heads of the other 3 governments, in an effort to create a better atmosphere and a new impulse toward the solution of the problems that divide us.

"That meeting indicated a desire on all sides to end the bitterness and harshness which could generate war. War, all recognized, would be a common disaster.

"In addition, the heads of government agreed that their foreign ministers should get together in October to negotiate about European security and the problem of Germany, about the limitation of armament and about the reduction of barriers between the Soviet bloc and the free world.

"The three Western leaders recognized that the value of the summit Conference would be largely determined by subsequent results. Thus, President Eisenhower, in the closing speech of the Conference, said, 'Only history will tell the true worth and real values of our session together. The follow-through from this beginning by our respective Governments will be decisive in the measure of this Conference.'

"Following the Summit Conference the United States, in cooperation with Britain, France, and the Federal Republic of Germany, prepared thoroughly for this Foreign Ministers Conference that was to come.

"We were fully aware of the complexity of the problems which we faced. The Summit Conference had shown deep differences on the issues of German unity and European security, disarmament, and freer contacts. To be acceptable, solutions of these problems must take account of legitimate interests on both sides—especially as to security.

"Our preparations for the meeting recognized this basic fact. The Western proposals provided the basis for real negotiatitons with the Soviet Union.

"In my initial statement to the Conference, I expressed the point of view I have just outlined. 'The United States,' I said, 'came to this meeting dedicated to exploring patiently and sincerely all possible approaches to realistic solutions of these problems.'

"Despite the effort, no specific agreements were reached.

"The explanation, as I see it, is this: The Soviet Union appears to want certain results in terms of European security, disarmament, and contacts of a sort. But it is not yet willing to pay the price needed to get these results. And when I say pay the price, I do not refer to bargaining terms. I mean the price in terms of doing what is inherently necessary to reach the results which we all say we want.

"Let me illustrate what I mean by telling you what happened at the Conference.

"I

"First of all, we talked about European security and Germany. The Soviet Union wanted security against the possible resurgence of German militarism. This was not unreasonable in the light of what the Russians had suffered from the German armies during World War II. The Western Powers were indeed prepared to meet the Soviet Union in this matter.

"We made security proposals of a serious and far-reaching nature. Perhaps the best proof of their merit is the fact that the Soviet delegation later came up with security proposals which copied many features of our own.

"But there was one basic and decisive difference. Our proposals were based upon the reunification of Germany. We do not believe that solid peace in Europe can be based on the injustice of a divided Germany. The Soviet proposals were based on preserving the Soviet puppet regime in East Germany and the indefinite division of Germany, at least unless Soviet control could be extended to all Germany.

"The Soviet Union at the Summit Conference had explicitly promised to consider the reunification of Germany by free elections and had explicitly recognized the close link between the reunification of Germany and European security.

"We tried hard, but in vain, to get the Soviet delegation to discuss seriously the problem of the reunification of Germany.

"When the Soviet Union came to face up to what that involved, it balked. Obviously, if Germany were reunified by free elections this would mean the end of the puppet regime which the Soviet Union has installed in East Germany. This in turn would almost surely have serious repercussions upon the other satellite countries of Eastern Europe. There the Soviet-controlled governments are facing rising pressure. Many within the satellite countries believe that the 'spirit of Geneva' means that they are entitled to more tolerance and to governments more responsive to the needs and aspirations of their own nation.

"So the Soviet Union took the position that while they were eager to get a treaty of European security they would not be willing to sacrifice their East German regime to get it. Despite what they had agreed to at the Summit Conference, they declared they would preserve their regime in East Germany, in clear defiance of the ardent wishes of the East Germans themselves.

"Some had thought that the Soviet Union might be willing to allow Germany to be reunified by free elections if reunified Germany would not enter the North Atlantic Treaty Organization. But in fact the Soviet delegation made it abundantly clear that it would not permit Germany to be reunified by free elections even on such terms.

"So we see that although the Soviet Union doubtless wants a European security system to which it is a party, it is not willing to provide an essential prerequisite, namely the reunification of Germany in freedom.

"II

"The second problem that we had to discuss was that of limitation of armament. Primary responsibility in this field is now with the United Nations Disarmament Subcommittee. But the foreign ministers were directed to help if they could.

"Both sides showed an eager desire to bring about limitation of armament. We want this both as an aid to peace and to permit economic resources to be devoted in greater measure to the benefit of mankind. But the Western nations are unwilling to agree to disarm unless we can be sure that both sides are carrying out the agreement. That is why we insist that disarmament be effectively supervised and controlled.

"Three times in this century the United States experience has shown that one-sided weakness in disarmament does not in fact preserve peace. The Untied States does not intend now to risk its very existence upon promises which may not be kept.

"The United States is, however, second to none in its desire for safeguarded reduction of armaments. It was to make that more possible that President Eisenhower, at the Summit Conference, proposed to the Soviet Union an exchange of blueprints of military establishments, and then aerial inspection to verify the blueprints and thereby improve the atmosphere by dispelling the fear of aggressive intentions on either side. That concept of President Eisenhower was rejected by the Soviets, although they did recognize for the first time that aerial inspection had a proper place in a control system.

"But the Soviet Union does not attach the importance which we do to inspection and control. It continued to urge agreements, even though there was no way to check adequately whether these agreements were being fulfilled.

"So our discussion of disarmament was inconclusive. We left further development of the subject to the United Nations Subcommittee on Disarmament.

"It seems that the Soviet Government feels as yet unable to allow inspection and control which, if it is adequate, would open up their society which is still largely based on secretiveness. So the Soviet Union, while wanting the immense benefits that could come from reduction of armament, is not willing to submit itself to the safeguards which would make this possible.

"III

"The third and final item of our agenda was the development of contacts between the East and the West. The Western Powers put forward 17 proposals of a concrete nature. Many of these would have involved the freer exchange of ideas, information, and news. All such proposals the Soviet delegation rejected. It was willing to have contacts which would enable it to garner technical know-how from other countries. It was willing to send and receive persons under conditions which it could closely control. But it reacted violently against anything that smacked of the elimination of barriers to a freer exchange of ideas. It abhorred the introduction into the Soviet bloc of thoughts which might be contrary to the official doctrine of the Soviet Communist Party.

"So we reached no agreement on this topic.

"The reason again is clear. We believe that human contacts are designed, not to serve governmental purposes, but to enable the members of the human family to have the understanding and knowledge of each other which is a foundation for durable peace. But after a generation of fanatic indoctrination, the Soviet rulers can hardly bring themselves to loosen their existing thought controls to permit of freer contacts with the free world.

"IV

"On all these matters dealt with at Geneva we tried to negotiate seriously with the Soviet Union. We wanted to reach constructive agreements if that could be done. But we were not prepared to reach agreements at the expense of the interests or security of the United States or its partners. Neither were we willing to make so-called agreements which were really meaningless. So when the Soviet Union showed itself unwilling to negotiate seriously on this basis we came away without agreement.

"It would have been easy to make some apparent agreements with the Soviet Union—but they would have been without real content. They would have given an illusion of a meeting of minds, where none in fact existed. The three Western Powers stood steadfastly against that kind of a performance. In doing so, they showed their confidence in their own strength and in the steadfastness of their own people. Thereby, this conference may have improved the prospects for real agreements in the future.

"V

"I now turn to the answers to the questions which I put at the beginning:

"(1) Does this second Geneva Conference end the so-called spirit of Geneva?

"The answer to that question depends upon what is meant by the spirit of Geneva. Some felt that the spirit of Geneva was some magic elixir which would of itself solve all of the great problems of the world. Obviously, it was not that. Any such view was doomed to disillusionment.

"That was never the view of the President nor myself. We constantly warned against that view. President Eisenhower, before he went to Geneva, said that that Conference would be a beginning and not an end. At Geneva he said that the value of the Conference could only be judged by what happened afterwards. And after he returned he told the American people that the acid test of the Summit Conference would begin when the Foreign Ministers met.

"That testing, so far as it has gone, has shown that the Soviet leaders would like to have at least the appearance of cooperative relations with the western nations. But it has shown that they are not yet willing to create the indispensable conditions for a secure peace. Also they have seriously set back the growth of any confidence the free world can justifiably place in Soviet promises. They did this by refusing to negotiate for the reunification of Germany, to which they had agreed in July.

"However, they seem not to want to revert to the earlier reliance on threats and invective. In that respect the spirit of Geneva still survives.

"(2) Has the outcome of the second Conference at Geneva increased the risk of general war?

"President Eisenhower said that he believed that the Summit Conference made it less likely that there would be open war between our countries. Nothing that happened at the Foreign Ministers Conference requires a change in that estimate. So that aspect of the Geneva spirit also remains.

"(3) Do the events of the last 3 weeks mean that the cold war will be resumed in its full vigor?

"The phrase cold war is a loose one.

"Of course, there are sharp differences between the objectives of the Soviet Government and our own. We believe in justice for all and in the right of nations to be free and the right of individuals to exercise their God-given capacity to think and to believe in accordance with the dictates of their mind and conscience. We shall not cease to pursue these objectives or ever seek a so-called peace which compromises them.

"However, these great purposes which have been characteristic of our Nation from its beginning can be and will be pursued by us without resort to violence or without resort to the use of hatred and perversion of truth which are characteristic of war. It is our

purpose to continue to seek friendship and understanding with the Russian people as a whole and to use truth as the instrument of our national policy.

"The cold war in the sense of peaceful competition will inevitably go on. The spirit of Geneva could not and did not change that fact. Moreover, we must assume that the Soviet Union will continue its efforts by means short of war to make its system prevail as it has done in the past. We can, however, hope that this competition will not entail all the same hostility and animosity which so defiled the relations between us in the past.

"(4) Will the United States now have radically to revise its programs for defense and mutual security?

"The answer to this is no. We have not lowered our guard on the basis of Soviet promises and did not do so because of the Summit Conference. Our security programs, which are bi-partisan in character, are designed to meet the peril as long at is may continue. We are on what we call a long haul basis. Our military strength must be based on the capability of the Soviet bloc and cannot vary with their smiles or frowns. We will reduce our own military strength only as the Soviets demonstrably reduce their own. Hence the outcome of the Geneva Conference does not require us to alter the general scope of our programs. Their general order of magnitude can remain as planned.

"Our steady policies have proved their worth. We believe in holding fast and reinforcing that which has proved good.

"(5) Does this last Geneva Conference mean an end to future negotiation with the Soviet Union?

"It need not be an end and neither the President nor I believe that it will be an end. It would of course be foolish to attempt new negotiations if everything remains as it was when this last Conference came to an end.

"We know, however, that conditions will change because change is the law of life.

"At this Geneva Conference the Soviet Union had to face up concretely to the cost of achieving the larger results which it says it wants in terms of European security, disarmament, and increased contacts between East and West.

"On this occasion no positive results were achieved. But I recall that President Eisenhower, after returning from Geneva, said that he was 'profoundly impressed with the need for all of us to avoid discouragement merely because our own proposals, our own approaches, and our own beliefs are not always immediately accepted by the other side.' And he pointed to the difficulty of bridging the wide and deep gulf between individual liberty and regimentation and between the concept of man made in the image of God, and the concept of man as the mere instrument of the state.

"That gulf has created obstacles so great that they could not be overcome at this recent Geneva Conference.

"That does not mean that our efforts at that Conference was wasted. The proposals we advanced were basically sound and respected the legitimate interest of all. When solutions come, they will have to take into account the principles which we sought to apply.

"The Soviets pride themselves on being realists. They have shown in the past that they will adapt their policies to facts and realities once they recognize them. We believe that the free nations, by maintaining and strengthening their unity, can make it apparent to the Soviet Union that solutions such as we proposed are in its real interest and will benefit them more than the local and temporary advantages to which they now seem to attach overriding importance.

"Of course the Soviets will not change their policies if they believe that the free world is going to fall apart. That is why continuation of the present partnership of the independent nations is indispensable to a peaceful solution of present problems.

"It is vital that all free nations, including ourselves, clearly understand this basic truth.

"I am happy to be able to make a good report about this partnership.

"In Paris, before the Geneva Conference, we had a useful session of the NATO Council. It was attended by virtually all of the Foreign Ministers of the 15 member countries. It served further to cement the unity represented by the Council.

"While in Europe I also consulted with leaders of the movement to develop still further the unity of Europe. This movement is again becoming vigorous. In my talks, I made clear that the initiative for further steps toward European integration must come from the Europeans themselves but that the United States stands ready and eager to help to realize this great idea.

"I went to Spain, Italy, and Yugoslavia. In each place I had a full and helpful discussion of the international scene. The result was, I think, to create better understanding and firmer ties of friendship.

"Finally, a most important fact is that at the Geneva Conference there were the closest personal and working relations between the British Foreign Minister, Mr. Macmillan, and the French Foreign Minister, Mr. Pinay, and myself. We also worked closely with the representative of the Federal Republic of Germany in matters that concerned it.

"This spirit of fellowship, which fortified our common effort in a common cause, is one of the important products of the Geneva Conference.

"The statement which I make to you tonight follows extended conference with President Eisenhower. He authorizes me to say that he fully shares the evaluation which I have made of the Geneva Conference and of its impact upon our national policies. That evaluation stems from the President's ruling and life purpose for a fair, just, and durable peace for the world, a purpose which I share and which, with him, I strive to implement.

"And now, in closing, let me read from my verbatim notes of our conference at Gettysburg this morning. As I was leaving, the President turned to me and said:

"'I know that no setback, no obstacle to progress, will ever deter this Government and our people from the great effort to establish a just and durable peace. Success may be long in coming, but there is no temporal force so capable of helping achieve it as the strength, the might, the spirit of 165 million free Americans. In striving toward this shining goal, this country will never admit defeat.'"

[No. 649, November 16, 1955]

TRIPARTITE DECLARATION ON GERMANY AND EUROPEAN SECURITY

Following is the text of a joint declaration by the Foreign Ministers of the United States, United Kingdom, and France on Germany and European Security issued at the close of the Geneva Conference at Geneva today:

"At Geneva, the Foreign Ministers of France, the United Kingdom, and the United States of America tried to reach agreement with the Soviet Foreign Minister on what the four heads of government in July agreed were the closely linked problems of German reunification and European security. To this end they made a proposal for the reunification of Germany by free elections in 1956 and for a treaty of assurance giving the Soviet Union far-reaching safeguards against aggression when Germany was reunified.

"Marshal Bulganin in July had agreed that the reunification of Germany was the common responsibility of the four powers and should be carried out by means of free elections. The Soviet Foreign Minister, however, despite the directive of the heads of government, made it plain that the Soviet Government refused to agree to the reunification of Germany since that would lead to the liquidation of the East German regime. He made counter proposals which would have involved the continued division of Germany as well as the eventual dissolution of the Western security system. It is for this reason that the negotiations have failed.

"The Foreign Ministers of France, the United Kingdom, and the United States of America are aware that this result must bring a sense of cruel disappointment to the German people, East and West of the zonal border which now unjustly divides them. However, the three Foreign Ministers believe that the Soviet Government will come to recognize that its own self-interest will be served by ending the injustice of a divided Germany. They believe that the Soviet Government will realize that so long as it persists in withholding unity from the German people, thus perpetuating the division of Europe, there can be no solid security in Europe, nor indeed in the world.

"The three Western powers will themselves not cease their efforts to end the injustice and wrong now being done by dividing the German people and will continue to stand ready to contribute to the security which can be enjoyed by all only when Germany is reunified."

THE FOUNDATION FOR A FIRM PEACE

(Address by John Foster Dulles, Secretary of State, before the Illinois Manufacturers' Association, Chicago, Ill., December 8, 1955)

We are, it seems, in a new phase of the struggle between international communism and freedom.

The first postwar decade was a phase of violence and threat of violence. There was the continued Soviet military occupation of northern Iran, the Communist guerrilla war in Greece, the Soviet blockade of Berlin, the Communist take-over of Czechoslovakia under the menace of armed invasion, the war against Korea, the war against Indochina, the warfare in the Formosa Straits, and the hostile threats against western Europe when the German Federal Republic acted to join the West.

Since last spring this phase of violence seems to have undergone an eclipse. But we should remember that one of the doctrines taught by Lenin and constantly emphasized by Stalin was the need for "zigzag." Repeatedly Stalin drove home the idea that it is as important to know when to retreat as when to attack, and that when blocked in one course it is necessary to find another.

Stalin is dead. But for 30 years his writings have been the Communist creed, and Stalinism in fact, though not in name, is still a potent influence in Russia. In prudence, therefore, we must act on the assumption that the present Soviet policies do not mark a change of purpose but a change of tactics.

We do not, however, want policies of violence to reappear. Therefore, it is useful to have clearly in mind what are the free-world policies which have caused the Soviet Union to shift from tactics of violence and intimidation as being unproductive.

The free nations have adopted and implemented two interrelated policies for collective security. The first policy is to give clear warning that armed aggression will be met by collective action. The second policy is to be prepared to implement this political warning with deterrent power.

THE POLITICAL WARNING SYSTEM

The first major political warning to the Soviet Union was expressed in the North Atlantic Treaty, a product of the Democrat-Republican cooperation of 1948 and 1949. By the North Atlantic Treaty, the parties told the Soviet rulers that, if they attacked any one, they would have to fight them all. If the Kaiser and Hitler had known in advance that their aggressions would surely bring against them the full power of the United States, they might never have begun their armed aggression. As it was, they did what despots readily do—they miscalculated. The North Atlantic Treaty left no room for such miscalculation. That, said Senator Vandenberg, was "the most practical deterrent to war which the wit of man has yet devised."

But the North Atlantic Treaty was not enough. With that alone, it might be inferred that we were relatively indifferent to what occurred elsewhere, notably in Asia. And, indeed, less than a year after the North Atlantic Treaty came into force, the Communists attacked the Republic of Korea.

But now, except for countries of South Asia which choose neutralism, the gaps in the political warning system have been closed. The United States with bipartisan cooperation has made mutual security treaties with the Philippines, Japan, the Republic of Korea, and with the Republic of China on Taiwan. We have entered into the ANZUS pact. We have joined with seven other nations to make the Southeast Asia Collective Defense Treaty. There is the Balkan alliance of Yugoslavia, Greece, and Turkey and the Baghdad Pact, which includes the northern tier of Turkey, Iraq, Iran, and Pakistan.

All of these treaties are made pursuant to what the United Nations Charter calls the inherent right of collective self-defense. Together they constitute a worldwide political warning system. They prevent the despots from miscalculating that they can use Red armies to conquer weaker nations, one by one.

THE DETERRENT OF RETALIATORY POWER

It is, however, not enough to have a political warning system. It must have backing if it is effectively to deter. That poses a difficult problem.

"With more than 20 nations strung along the 20,000 miles of Iron Curtain, it is not possible to build up static defensive forces which could make each nation impregnable to such a major and unpredictable assault as Russia could launch. To attempt this would be to have strength nowhere and bankruptcy everywhere. That, however, does not mean that we should abandon the whole idea of collective security and merely build our own defense area. * * * Fortunately, we do not have to choose between two disastrous alternatives. It is not necessary either to spread our strength all around the world in futile attempts to create everywhere a static defense, nor need we crawl back into our own hole in the vain hope of defending ourselves against all of the rest of the world. * * * As against the possibility of full-scale attack by the Soviet Union itself, there is only one effective defense, for us and for others. That is the capacity to counterattack. That is the ultimate deterrent. * * * The arsenal of retaliation should include all forms of counterattack with a maximum flexibility. * * * In such ways, the idea of collective security can be given sensible and effective content."

What I have just been saying is what I said 5 years ago.[1]

That program has now become a reality. We have developed, with our allies, a collective system of great power which can be flexibly used on whatever scale may be requisite to make aggression costly. Our capacity to retaliate must be, and is, massive in order to deter all forms of aggression. But if we have to use that capacity, such use would be selective and adapted to the occasion.

"To deter aggression, it is important to have the flexibility and the facilities which make various responses available. In many cases, any open assault by Communist forces could only result in starting a general war. But the free world must have the means for responding effectively on a selective basis when it chooses. It must not put itself in the position where the only response open to it is general war. The essential thing is that a potential aggressor should know in advance that he can and will be made to suffer for his aggression more than he can possibly gain by it. This calls for a system in which local defensive strength is reinforced by more mobile deterrent power. The method of doing so will vary according to the character of the various areas."

What I have been saying is from an article I wrote about 2 years ago.[2]

Our mutual-security arrangements help provide the local defense strength needed to preserve internal order against subversive tactics and to offer a resistance to aggression which would give counterattacking, highly mobile forces time to arrive.

Thus we have collective defense policies which, on the one hand, are calculated to deter armed aggression and which, on the other hand, we can, if need be, live with indefinitely.

The two elements I have described—on the one hand, a political warning system and, on the other hand, selective retaliatory power—constitute in combination a firm foundation for peace. If we want peace to continue, we must preserve that foundation intact.

We earnestly strive for some dependable system of limitation of armament. Until we succeed in such efforts, however, we and our allies must constantly maintain forces, weapons, and facilities necessary to deter armed aggression, large or small. That is an indispensable price of peace.

THE STRUGGLE FOR JUSTICE

But we dare not assume that the only danger is that of armed aggression and that, if armed aggression can be deterred, we can otherwise relax. There still exist grave injustices to be cured and grave dangers to be averted.

President Eisenhower, speaking last August, pointed out that "Eagerness to avoid war—if we think no deeper than this single desire—can produce outright or implicit agreement that injustices and wrongs of the present shall be perpetuated in the future. We must not participate in any such false agreement. Thereby, we would outrage our own conscience. In the eyes of those who suffer injustice, we would become partners with their oppressors. In the judgment of history we would have sold out the freedom of men for the pottage of a false peace. Moreover, we would assure future conflict."

And the President went on to point to the division of Germany and the domination of captive countries as an illustration of the injustices of which he spoke.

We shall not seek to cure these injustices by ourselves invoking force. But we can and will keep these injustices at the forefront of human consciousness and thus bring into play the force of world opinion which, working steadily, will have its way. For no nation, however powerful, wishes to incur, on a steadily mounting basis, the moral condemnation of the world.

This force was a potent factor in bringing Austria its freedom. Last May, after 7 years of delay, the Soviet Union signed the Austrian Treaty, the Red forces were withdrawn, and Austria was liberated.

We face a similar problem with respect to the reunification of Germany. The July meeting of the heads of government at Geneva had brought this problem to the forefront. There the four heads of government had explicitly agreed that "the reunification of Germany by means of free elections shall be carried out." However, at the second Geneva conference last month, the Soviet Union repudiated that agreement, despite Western offers which gave maximum assurances that a reunified Germany would not create insecurity for the Soviet Union and any of Germany's neighbors. Apparently the Soviets realized that all-German elections would surely remove from power the puppet regime which it has installed in East Germany. This, in turn, would have repercussions throughout the Soviet satellite world.

Therefore, the Soviet Union took the rigid position that it could accept no proposals for Germany, however reasonable, if they might enable the German people to get rid of those whom the Soviet has picked to rule in the Eastern Soviet Zone of Germany.

The result is that the West must continue to maintain the pressure of world opinion for the undoing of the present injustice which separates 17 million Germans from the great body of their fellows.

WESTERN UNITY

The Western European nations need also to continue to develop their own unity, not merely for defense but also for well being. It is the past divisions of Western Europe, and the rivalries of these nations, which has been the greatest cause of war and economic weakness.

The North Atlantic Treaty Organization serves greatly, not only to protect Europe but to provide a sense of unity and fellowship. I shall be sharing in that next week when Secretary Humphrey, Secretary Wilson, and I go to Paris for the December NATO Ministerial Council meeting. These meetings enable the Ministers of Foreign Affairs, of Finance, and of Defense to consult together and tighten the bonds which join the 15 NATO partners. These bonds are strong and tested. NATO is more than a mere military defense. Its members are constantly seeking and finding useful ways, other than military, to give expression to the closeness and warmth of their relationship.

But there is also need for unity on a more intimate basis among the continental European nations themselves. The six nations of France, Germany, Italy, Belgium, the Netherlands, and Luxembourg already have begun to create common institutions, notably the coal and steel community. I was glad to find on my last visit to Europe that the movement to develop along these lines is taking on new vitality. That movement must obtain its strength primarily from the peoples concerned. It is, however, a development in which the United States has a deep interest and which it is prepared to support if opportunity offers.

As this movement develops, it is bound to exert a powerful influence on the eastern European countries. If the western European countries find, in unity, increased prosperity, there will be increasing pressure in the satellite countries for independent governments responsive to the needs and aspirations of the people.

This may speed the day when the Soviet rulers will come to realize that to hold these eastern European nations in subjugation involves an obsolete reactionary practice, entailing costs, moral and material, far outweighing the seeming advantages.

THE LESS DEVELOPED COUNTRIES

New tasks also confront us in the less developed areas of the world. There, hundreds

[1] Where Are We, address made at New York, N. Y., on December 29, 1950, under auspices of American Association for the United Nations.

[2] Foreign Affairs, April 1954.

of millions of people lack what could and should be theirs.

These areas have always been a target of Soviet communism.

Today, as the Soviet rulers are balked in their effort to extend their influence by force, they have picked these areas as targets of their guile. The Soviet peoples seriously lack many of the commodities of everyday living. The satellite peoples are particularly exploited, and their standards of living have been seriously reduced. But the Soviet rulers find it easy to neglect these needs while professing concern for the welfare of those whom they call "colonial and dependent peoples" whose amalgamation into the Soviet Communist orbit has always been an open goal of Soviet policy.

The Soviet rulers, themselves exponents of a materialistic philosophy, have concentrated their educational efforts on training scientists. By now, the Soviet output of trained technical personnel is large. Also these technicians are always at the command of their government, to do whatever their government wants. They are thus available to go into the other areas, as a symbol of promises which are alluring.

We need not become panicky because Soviet communism now disports itself in this new garb. We need not assume, as some seem to assume, that the leaders in the Asian countries are unaware of danger and easily duped by false promises. These leaders have, indeed, had much political experience and have helped to win great political successes for their countries.

But the peoples of free countries which are not adequately developed do need the kind of help which matured industrial economies have historically provided for less developed economies. The flow of private capital partly meets that need. But government also has an important role to play.

We have indeed for several years had a governmental program for economic and technical assistance, much of which is directed to the less developed areas. That program is manned by a splendid corps of dedicated men and women. Congress has appropriated substantial funds to finance this program and to provide economic aid, much of which goes to the less developed areas. We expect to ask the Congress this coming year for as much money for this purpose as we think can usefully be spent, and we expect that the Congress will, as in the past, patriotically respond. Also we shall seek somewhat more flexibility than heretofore.

We are helping in other ways too. For example, our scientists, with the help of those from other free countries, had the imagination to see the immense possibilities in fissionable material. We were the first to crack the atom and to find the way to harness its vast power. We are in the lead in developing President Eisenhower's program of atoms for peace.

However, the coming years pose a challenge to our Nation and its people. A grudging response will not be enough. Nor will public money alone provide the answer. An effective response will call for a revival of the crusading spirit of our past.

We need to recapture the spirit which animated our missionaries, our doctors, our educators, and our merchants who, during the last century, went throughout the world carrying the benefits of a new way of life. For the most part these persons were not seeking to make money for themselves, although the profit motive was an honorable incentive. What they sought, and what they gained, was the unique joy that comes from creating and from sharing.

It would indeed be tragic if our people, and particularly our youth, now became so attracted by mercenary considerations, by the lure of the market place, that they lost the missionary spirit, the sense of destiny, which has been characteristic of our Nation since its beginning and which has made it great.

I frequently think of the scriptural promise that material things will be added unto those who seek first the kingdom of God and His righteousness. This Nation has from its earliest days been influenced by religious ideals. Our forebears believed in a Divine Creator who had endowed all men with certain inalienable rights. They believed in a moral law and in its concepts of justice, love, and righteousness. They had a sense of mission in the world, believing it their duty to help men everywhere to be and to do what God designed. They saw a great prospect and were filled with a great purpose.

Under the impulsion of that faith, there developed here an area of spiritual, intellectual, and economic vigor the like of which the world had never seen. It was no exclusive preserve. Indeed, sharing was a central theme. Millions were welcomed from other lands to share equally the opportunities of the founders and their heirs. Through missionary activities and the establishment of schools and churches American ideals were carried throughout the world. Our Government gave aid and comfort to those elsewhere who sought to increase human freedom.

Meanwhile, material things were added to us. Now we must take care lest those by-products of great endeavor seem so good that they become promoted to be the all-sufficient end.

That is the danger against which we must always be on guard. That is particularly the case today, when a huge materialistic state like the Soviet Union, thwarted in its efforts to aggrandize itself by force, coldly and cruelly calculates on how to exploit, for its selfish ends, the aspirations of the peoples of less-developed lands.

What the world needs to know at this juncture is that our Nation remains steadfast to its historic ideals and follows its traditional course of sharing the spiritual, intellectual, and material fruits of our free society, in helping the captives to become free and helping the free to remain free, not merely in a technical sense but free in the sense of genuine opportunity to pursue happiness, in the spirit of our Declaration of Independence.

And may we never forget that, as Lincoln said, that Declaration was not something exclusive to us, but there was "something in that Declaration giving liberty, not alone to the people of this country, but hope for the world for all future time. It was that which gave promise that in due time the weights should be lifted from the shoulders of all men, and that all should have an equal chance."

That was the spirit in which our Nation was conceived. May it also be the spirit in which we live.

FINAL NATO COMMUNIQUE

The North Atlantic Council held its regular December Ministerial Session in Paris on the 15th and 16th of December. Member governments were represented by Foreign, Defense, and Finance Ministers. Dr. Kristinn Gudmundsson, Foreign Minister of Iceland, acted as chairman.

I

The Council examined and assessed the present international situation.

It unanimously welcomed the vigor with which the three Western Ministers had presented to the Second Geneva Conference the proposals already outlined at previous meetings of the North Atlantic Council. These proposals aimed at the reunification of Germany through free elections; left the unified German Government free to choose its own foreign policy and offered a security pact to the U. S. S. R.

The Council noted with regret—

1. That the U. S. S. R. had repudiated the proposal to negotiate on the reunification of Germany through free elections, in spite of the directive agreed at the First Geneva Conference.

2. That the U. S. S. R. was opposed to any effective system for the control of armaments including the air inspection plan proposed by President Eisenhower.

3. That the U. S. S. R. had given proof of its fear and hostility with regard to the free exchange of information between the people of the Soviet Union and the free world.

The Council declared that the negative outcome of the Geneva Conference had in no way halted the efforts of the North Atlantic Powers to secure the reunification of Germany in freedom, such reunification continuing to be held by them as an essential condition for the establishment of a just and lasting peace.

The Council reaffirmed that they consider the Government of the Federal Republic as the only German Government freely and legitimately constituted and therefore entitled to speak for Germany as the representative of the German people in international affairs; it stressed once again that the security and welfare of Berlin should be considered as essential elements of the peace of the free world in the present international situation; it urged the importance of consulting further within NATO on the question of German reunification and on the situation in Berlin.

The Council also reviewed recent provocative moves and declarations by the Soviet Union regarding the Middle East and Asia. They recognized that these tactics, coupled with a continued increase in Soviet military capability created new problems and a new challenge to the free world.

II

Following a report by the Secretary General on the work and activities of the Organization in the last 8 months, the Council discussed future defense planning of NATO. It considered the Annual Review Report for 1955 and approved force goals for 1956, 1957, and 1958. The Council welcomed the German Federal Republic's participation for the first time in the NATO Annual Review. The Council adopted procedures designed to give new impulse and direction to the future defense planning of the alliance and to insure even closer cooperation in this field. The Council expressed the firm determination of all member governments to see the Atlantic forces equipped with the most modern weapons. The Council noted with satisfaction that substantial progress could be achieved in this respect as a result of the valuable assistance of the United States, the United Kingdom and Canada.

The Council devoted major attention to improving the arrangements for air defense, and warning in Europe. It accepted recommendations for the reorganization and closer coordination of the air defense in NATO European countries, so as to integrate further NATO activities in this vital field. The Council also received a report on a new type of communications system for air defense and warning. The United States offered to finance a pilot project for this new system.

III

The Council recognized that recent developments in the international situation made it more necessary than ever to have closer cooperation between the members of the alliance as envisaged in article 2 of the treaty. They decided to instruct the Permanent Council to examine and implement all measures conducive to this end.

IV

In concluding its work, the Council declared that the North Atlantic Treaty Organization remains the essential foundation of the security of the 15 associated nations. Such association is in direct contrast to the obsolete system under which isolated nations are in danger of being subjugated, one by one, by despotic groups such as the Soviet bloc.

[No. 517, August 26, 1955]

THE MIDDLE EAST

(Address by the Honorable John Foster Dulles, Secretary of State, before the Council on Foreign Relations, Council on Foreign Relations Building, New York City, Friday, August 26, 1955)

One of the first things I did as Secretary of State was to go to the Middle East. I wanted to see for myself that area so rich in culture and religious tradition, yet now so torn by strife and bitterness. So, in the spring of 1953, I visited Egypt, Israel, Jordan, Syria, Lebanon, Iraq, and Saudi Arabia. Upon my return I spoke of the impressions gathered on that trip and of the hopes which I held as a result of talks with leaders and people there.

Some of those hopes have become realities. At that time the Suez base was a center of controversy and of potential strife. Now, as a result of patient effort, in a spirit of conciliation, the problem of the Suez base has been successfully resolved.

Another problem which was then concerning many of the leaders in the Middle East was that of the security of the area. It was clear that effective defense depended upon collective measures and that such measures, to be dependable, needed to be a natural drawing together of those who felt a sense of common destiny in the face of what could be a common danger. Here, too, there has been some encouraging progress.

A third problem which called for attention was the need for water to irrigate land. I mentioned in my report the possibility that the rivers flowing through the Jordan Valley might be used to make this valley a source of livelihood rather than dispute. Since then Ambassador Eric Johnston has held talks with the governments of countries through which the River Jordan runs. They have shown an encouraging willingness to accept the principle of coordinated arrangements for the use of the waters. Plans for the development of the valley are well advanced. Ambassador Johnston is now on his fourth visit to the countries concerned in an effort to eliminate the small margins of difference which still exist.

A beginning has been made, as you see, in doing away with the obstacles that stand in the way of the aspirations of the Middle Eastern peoples. It is my hope—and that is the hope of which I would now speak—that the time has come when it is useful to think in terms of further steps toward stability, tranquility and progress in the Middle East.

THE ARAB-ISRAEL PROBLEM

What are the principal remaining problems? They are those which were unresolved by the armistices of 1949 which ended the fighting between Israelis and Arabs. Before taking up these problems specifically, I would first pay high tribute to what the United Nations has done to preserve tranquility and to serve humanity in the area. Despite these indispensable efforts, three problems remain that conspicuously require to be solved.

The first is the tragic plight of the 900,000 refugees who formerly lived in the territory that is now occupied by Israel.

The second is the pall of fear that hangs over the Arab and Israel people alike. The Arab countries fear that Israel will seek by violent means to expand at their expense. The Israelis fear that the Arabs will gradually marshal superior forces to be used to drive them into the sea, and they suffer from the economic measures now taken against them.

The third is the lack of fixed permanent boundaries between Israel and its Arab neighbors.

There are other important problems. But if these three principal problems could be dealt with, then the way would be paved for the solution of others.

These three problems seem capable of solution, and surely there is need.

Border clashes take an almost weekly toll of human lives and inflame an already dangerous mood of hatred. The sufferings of the Arab refugees are drawn out almost beyond the point of endurance. The fears which are at work, on each side, lead to a heavy burden of armament, which constitutes a serious drag on economic and social progress. Responsible leaders are finding it hard to turn their full attention and energies to the positive task of creating conditions of healthy growth.

Serious as the present situation is, there is a danger that unless it improves, it will get worse. One ill leads to another, and cause and effect are hard to sort out. The atmosphere, if it worsens, could becloud clear judgments, making appear attractive what would in fact be reckless.

Both sides suffer greatly from the present situation, and both are anxious for what they would regard as a just and equitable solution. But neither has been able to find that way.

This may be a situation where mutual friends could serve the common good. This is particularly true since the area may not, itself, possess all of the ingredients needed for the full and early building of a condition of security and well-being.

The United States, as a friend of both Israelis and Arabs, has given the situation deep and anxious thought and has come to certain conclusions, the expression of which may help men of good will within the area to fresh constructive efforts. I speak in this matter with the authority of President Eisenhower.

I

To end the plight of the 900,000 refugees requires that these uprooted people should, through resettlement and, to such an extent as may be feasible, repatriation, be enabled to resume a life of dignity and self-respect. To this end, there is need to create more arable land where refugees can find permanent homes and gain their own livelihood through their own work. Fortunately, there are practical projects for water development which can make this possible.

All this requires money.

Compensation is due from Israel to the refugees. However, it may be that Israel cannot, unaided, now make adequate compensation. If so, there might be an international loan to enable Israel to pay the compensation which is due and which would enable many of the refugees to find for themselves a better way of life.

President Eisenhower would recommend substantial participation by the United States in such a loan for such a purpose. Also he would recommend that the United States contribute to the realization of water development and irrigation projects which would, directly or indirectly, facilitate the resettlement of the refugees.

These projects would, of course, do much more than aid in the resettlement of refugees. They would enable the people throughout the area to enjoy a better life. Furthermore, a solution to the refugee problem would help in eliminating the problem of recurrent incidents which have plagued and embittered the settlements on both sides of the borders.

II

The second principal problem which I mentioned is that of fear. The nature of this fear is such that It is hardly within the capacity of the countries of the area, acting alone, to replace the fear with a sense of security. There, as in many other areas, security can be assured only by collective measures which commit decisive power to the deterring of aggression.

President Eisenhower has authorized me to say that given a solution of the other related problems, he would recommend that the United States join in formal treaty engagements to prevent or thwart any effort by either side to alter by force the boundaries between Israel and its Arab neighbors. I hope that other countries would be willing to join in such a security guarantee, and that it would be sponsored by the United Nations.

By such collective security measures the area could be relieved of the acute fears which both sides now profess. The families located near the boundaries could relax from the strain of feeding that violent death may suddenly strike them; the peoples of the area whose standards of living are already too low would no longer have to carry the burden of what threatens to become an armaments race if indeed it does not become a war; the political leadership of the area could devote itself to constructive tasks.

III

If there is to be a guarantee of borders, it would be normal that there should be prior agreement upon what the borders are. That is the third major problem. The existing lines separating Israel and the Arabs states were fixed by the Armistice Agreements of 1949. They were not designed to be permanent frontiers in every respect; in part at least, they reflected the status of the fighting at the moment.

The task of drawing permanent boundaries is admittedly one of difficulty. There is no single and sure guide, for each of two conflicting claims may seem to have merit. The difficulty is increased by the fact that even territory which is barren has acquired a sentimental significance. Surely the overall advantages of the measures here outlined would outweigh vastly any net disadvantages of the adjustments needed to convert armistice lines of danger into boundary lines of safety. In spite of conflicting claims and sentiments, I believe it is possible to find a way of reconciling the vital interests of all the parties. The United States would be willing to help in the search for a solution if the parties to the dispute should desire.

IV

If agreement can be reached on these basic problems of refugees, fear, and boundaries, it should prove possible to find solutions for other questions, largely economic, which presently fan the flames of hostility and resentment.

It should also be possible to reach agreement on the status of Jerusalem. The United States would give its support to a United Nations review of this problem.

CONCLUSION

I have not attempted to enumerate all the issues on which it would be desirable to have a settlement; nor have I tried to outline in detail the form which a settlement of any of the elements might take. I have tried to show that possibilities exist for an immeasurable improvement and that the possibilities do not require any nation taking action which would be against its interests whether those interests be measured in terms of material strength or in terms of national prestige and honor. I have also, I trust, made clear that the Government of the United States is disposed to enlarge those possibilities by contributions of its own, if this be desired by those concerned.

Both sides in this strife have a noble past, a heritage of rich contributions to civilization; both have fostered progress in science and the arts. Each side is predominantly representative of one of the world's great religions. Both sides desire to achieve a good life for their people and to share, and contribute to, the advancements of this century.

At a time when a great effort is being made to ease the tension which has long prevailed between the Soviet and western worlds, can we not hope that a similar spirit should prevail in the Middle East? That is our plea. The spirit of conciliation and of good neighbor brings rich rewards to the people and to the nations. If doing that involves some burdens, they are burdens which the United States would share, just as we would share the satisfaction which would result to all peoples if happiness, contentment, and good will could drive hatred and misery away from peoples whom we hold in high respect and honor.

[No. 588, October 4, 1955]

DANGERS OF MIDDLE EAST ARMS RACE

At his news conference today Secretary of State John Foster Dulles made the following statement:

"At my press conference the last of August (August 30) I was asked about possible Soviet bloc shipments of arms to Arab countries. I made two observations. The first was that the Arab countries were independent governments and free to do whatever they wished in the matter. My second observation was that from the standpoint of United States relations with the Soviet Union, such delivery of arms would not contribute to relaxing tensions.

"Those two observations stand today. I might add this:

"It is difficult to be critical of countries which, feeling themselves endangered, seek the arms which they sincerely believe they need for defense. On the other hand, I doubt very much that, under the conditions which prevail in the area, it is possible for any country to get security through an arms race. Also it is not easy or pleasant to speculate on the probable motives of the Soviet bloc leaders.

"In my talk about this matter of August 26, I spoke of the fear which dominated the area and said that I felt that it could be dissipated only by collective measures designed to deter aggression by anyone. I proposed a security guaranty sponsored by the United Nations. That, I said, would relieve the acute fears which both sides now profess.

"It is still my hope that such a solution may be found."

STATEMENT BY THE PRESIDENT

LOWRY AIR FORCE BASE,
Denver, November 9, 1955.

All Americans have been following with deep concern the latest developments in the Near East. The recent outbreak of hostilities has led to a sharp increase in tensions. These events inevitably retard our search for world peace. Insecurity in one region is bound to affect the world as a whole.

While we continue willing to consider request for arms needed for legitimate self-defense, we do not intend to contribute to an arms competition in the Near East because we do not think such a race would be in the true interest of any of the participants. The policy which we believed would best promote the interests and the security of the peoples of the area was expressed in the Tripartite Declaration of May 25, 1950. This still remains our policy.

I stated last year that our goal in the Near East, as elsewhere, is a just peace. Nothing has taken place since which invalidates our fundamental policies, policies based on friendship for all of the peoples of the area.

We believe that true security must be based upon a just and reasonable settlement. The Secretary of State outlined on August 26 the economic and security contributions which this country was prepared to make toward such a solution. On that occasion I authorized Mr. Dulles to state that, given a solution of the other related problems, I would recommend that the United States join in formal treaty engagements to prevent or thwart any effort by either side to alter by force the boundaries between Israel and its Arab neighbors.

Recent developments have made it all the more imperative that a settlement be found. The United States will continue to play its full part and will support firmly the United Nations, which has already contributed so markedly to minimize violence in the area. I hope that other nations of the world will cooperate in this endeavor, thereby contributing significantly to world peace.

HOTEL GETTYSBURG,
Gettysburg, Pa., November 15, 1955.

The White House today made public the following exchange of correspondence between the President and Rabbi Abba Hillel Silver.

The President's message is as follows:

"Rabbi ABBA HILLEL SILVER,
Commodore Hotel,
New York, N. Y.:

"I am glad to comply with your request to send a message to the meeting which you are addressing this evening, as I know of your great concern about the recent developments in the Near East which disturbs all of us.

"A threat to peace in the Near East is a threat to world peace. As I said the other day, while we continue willing to consider requests for arms needed for legitimate self-defense, we do not intend to contribute to an arms competition in the Near East. We will continue to be guided by the policies of the Tripartite Declaration of May 25, 1950. We believe this policy best promotes the interest and security of the peoples of the area.

"We believe the true and lasting security in the area must be based upon a just and reasonable settlement. It seems to me that current problems are capable of resolution by peaceful means. There is no reason why a settlement of these problems cannot be found, and when realized I would be prepared to recommend that the United States join in formal treaty engagements to prevent or thwart any effort by either side to alter by force the boundaries upon which Israel and its immediate neighbors agree.

"The need for a peaceful settlement becomes daily more imperative. The United States will play its full part in working toward such a settlement and will support firmly the United Nations in its efforts to prevent violence in the area. By firm friendship toward Israel and all other nations in the Near East, we shall continue to contribute to the peace of the world.

"DWIGHT D. EISENHOWER."

Rabbi Silver's letter to the President is as follows:

"MY DEAR MR. PRESIDENT: I have been profoundly disturbed by the recent events in the Near East which have aroused deep apprehension in Israel and among peace-loving people everywhere. I am to address on November 15 a mass rally at Madison Square Garden in the city of New York in which many civic, religious, and labor organizations will participate to express the vital concern over the situation. I know that they would welcome a word from you as coming not only from the Chief Executive of our beloved country but as the foremost spokesman of international justice, freedom, and peace in the world today. Personally I would greatly appreciate such a message.

"With warmest regards and with all good wishes for your complete recovery and well-being,

"ABBA HILLEL SILVER."

[No. 701, December 20, 1955]

ECONOMIC ASSISTANCE

At his news conference today Secretary of State John Foster Dulles made the following statement:

"The United States seeks no monopoly in rendering economic assistance. We welcome any grant of economic aid which invigorates less developed countries and makes them more free and more independent. This has been United States policy for many years. Since World War II we have given substantial economic aid to many free nations. Not one of them has, on that account, lost any particle of freedom or independence.

"If the Soviet Union were to follow our example, that would be gratifying. Imitation is the sincerest flattery. But there is likely to be a question as to whether the Soviet really seeks to promote the vigorous independence of free nations. That question arises because of the long Soviet record in absorbing other countries. Also, the Soviet Union is not, like the United States, a country which has economic surpluses. The Soviet Union is a deficit area. Most of the Russian people are without things which we regard as necessities of life. The captive peoples of Eastern Europe, who once enjoyed high standards of living, have been economically squeezed by the Soviet Union so that their present living standards are deplorable.

"It would seem unnatural for the Soviet rulers to provide economic aid to other peoples when the peoples they already rule are themselves in dire need.

"We hope that Soviet economic aid is not offered as a Trojan horse to penetrate, and then take over, independent countries.

"The leaders of countries which are receiving Soviet offers are, of course, aware of this political danger. They are for the most part statesmen of experience. They have won political successes in making their own countries independent and I believe they can be counted upon to be alert to defend that independence."

[No. 14, January 11, 1956]

Secretary of State John Foster Dulles at his news conference today read the following statement sent to him on December 9, 1955, by the members of the United States delegation to the 10th session of the United Nations General Assembly concerning United States foreign economic policy:

"Impelled by a unanimous feeling that economic and social questions are assuming increasing importance on the international scene, the United States delegation to the 10th General Assembly has joined in framing this statement.

"The present period in history may one day be recognized as a major turning point in the struggle between communism and freedom. It appears to be clearly a shift in the cold war, in which economic and social problems have moved to the forefront.

"Members of the United States delegation during this General Assembly session have observed the effectiveness of Soviet tactics under these new conditions. This can be seen both in the way the Soviet bloc delegates work in various United Nations meetings, and also in the voting that occurs in many committees. As we observed maneuvers, we were conscious that the Soviet Union, elsewhere in the world, was using economic and social collaboration as a means for jumping military as well as political barriers. Examples of this can be found in India, Egypt, and Burma.

"We believe that the United States must counter these Soviet efforts. We can succeed, not by outbidding communism in sheer amounts of economic aid, but by making newly independent and newly articulate peoples feel that they can best satisfy their wants by becoming and remaining part of the community of free nations.

"We welcome more emphasis on economic and educational endeavors, for we have a proven experience in these fields.

"We are in a contest in the field of economic development of underdeveloped countries which is bitterly competitive. Defeat in this contest could be as disastrous as defeat in an armaments race.

"We could lose this economic contest unless the country as a whole wakes up to all its implications.

"The members of the delegation signing the statement were:

"Ambassador Henry Cabot Lodge, Jr., Permanent Representative to the United Nations, chairman of the delegation; the Honorable Brooks Hays, Member of Congress; the Honorable Chester E. Merrow, Member of Congress; the Honorable John O. Pastore, United States Senator; Mr. Colgate Whitehead Darden, Jr.; Mr. Robert L. Brokenburr; Mr. Laird Bell; Mr. Jacob Blaustein; Ambassador James J. Wadsworth, Deputy Representative to the United Nations; Mrs. Oswald B. Lord."

UKRAINIAN INDEPENDENCE DAY

Mr. MARTIN of Pennsylvania. Mr. President, on last Sunday, January 22, loyal American citizens of Ukrainian birth or ancestry observed the 38th anniversary of the proclamation of Ukrainian independence. This is a most significant anniversary in the struggle of oppressed and persecuted people who have kept alive the spirit of their national independence in the face of Russian imperialist tyranny and Communist terrorism.

Ukraine is a nation of 40 million, the largest non-Russian nation held captive behind the Iron Curtain. For 35 years its people have been enslaved under the iron yoke of communism. They have endured mass murder, wholesale deportations, brutal torture in slave labor camps, the destruction of their churches. Yet they have never abandoned hope of eventual liberation and the reestablishment of their land as a free, sovereign, and independent Republic.

This 38th anniversary is an appropriate occasion to make known to the courageous people of Ukraine that we Americans are wholeheartedly dedicated to the cause of human freedom, and that we join them in prayer that Ukraine will soon again be free and independent.

INVESTIGATION BY JUDICIARY SUBCOMMITTEE OF ILLICIT NARCOTICS TRAFFIC

Mr. KILGORE. Mr. President, I ask unanimous consent to have printed in the body of the RECORD various editorials and articles relative to the excellent inquiry which is being conducted into the illicit narcotics traffic by the Senate Judiciary Subcommittee on Improvements in the Federal Criminal Code of which the junior Senator from Texas [Mr. DANIEL] is chairman.

I might say, before introducing the specific editorials, that I have received many compliments and my attention has been drawn to editorials in newspapers throughout the country, praising the manner in which this investigation has been conducted. One editorial aptly put it, I think, by saying "Senator DANIEL and his colleagues have dealt with a sensational subject in an unsensational way."

The subcommittee has reflected great credit upon the Senate, and I believe that the Senator from Texas, the other members of the subcommittee, and his staff, are to be highly commended.

The first editorial which I should like to have printed at this point is from the Washington Post, of Monday, January 16, and is entitled "Dope and Democracy."

The second editorial appeared in the Franklin Banner-Tribune, Franklin, La., on January 10, entitled "We Agree With the United States Senator."

The third item is an article by Columnist Drew Pearson and is entitled "Senator DANIEL Wars on Dope Smuggling," from the Birmingham (Ala.) News of December 20, 1955.

The fourth is an editorial from the Beaumont (Tex.) Journal of December 23, 1955, entitled "DANIEL Deserves Praise."

The fifth is an editorial entitled "The Weak Spot," which appeared in the Boston Record of November 26, 1955.

The sixth is an editorial from the Sandusky (Ohio) Register-Star-News of December 3, 1955, entitled "The Terrible Toll of Dope."

The seventh item is an editorial which appeared in the San Angelo (Tex.) Standard of November 2, 1955, entitled "Conference on Dope."

The eighth item is an editorial entitled "Pushers' Penalty," which appeared in the Baltimore News-Post of January 12, 1956.

The ninth is an editorial from the Knoxville Journal of November 27, 1955, entitled "Narcotics Seen as Weapon of Reds."

The 10th is an editorial published in the San Antonio News of November 3, 1955, on "Teen-Age Dope Addiction—It Is Happening Here."

Finally, from the San Bernardino (Calif.) Sun, an editorial entitled "Menace of Narcotics" which appeared November 17, 1955.

There being no objection, the editorials and article were ordered to be printed in the RECORD, as follows:

[From the Washington Post and Times Herald of January 16, 1956]

DOPE AND DEMOCRACY

The preliminary report of the subcommittee headed by Senator PRICE DANIEL that has been investigating the extent of the illicit dope traffic in these United States is an altogether frightening document. It confirms the stories that the number of American dope addicts has been steadily multiplying since the end of the Second World War and that schoolchildren and other adolescents account for a startling proportion of the neophytes.

On the basis of testimony gathered at hearings in 13 cities, the subcommittee estimates the number of chronic dope addicts at 60,000. About half of these are known to the Federal authorities and names are being added to their lists at the rate of more than 1,000 a month. Apparently this vicious and growing trade is still confined to the larger centers of population. The subcommittee finds that nine-tenths of it is concentrated in 42 American cities. The same cities, according to the investigators, account for a little less than half of the crime in the country. Thus, the relationship between the increased use of drugs and the increased incidence of crime since the war years seems pretty clearly established. The impelling motive in many cases is to obtain funds for the purchase of dope, something that may cost the addict as much as $100 a day.

One serious and disheartening aspect of the problem is the failure of international efforts to control the manufacture and distribution of heroin and other opiates. Here the United Nations has made far less progress than was made by the League of Nations in the period between the wars. Up to now, only 14 nations besides the United States have ratified the protocol that would attack the evil at its source by limiting the cultivation of poppies. Among the nations that have shown the greatest reluctance to accept the protocol are Turkey, Iran, and our neighbor, Mexico. These, with Red China and Lebanon, are identified by the subcommittee as the chief areas of supply for our dope smugglers and racketeers.

The subcommittee proposes various stringent legislative remedies for this evil. Some of them, like resolutions calling for the return of the United Nations Division of Narcotic Drugs from Geneva to New York, and a special treaty of cooperation between Mexico and the United States, lie, of course, beyond the statute-making powers of Congress. Others, such as demands for speedier trials and increased penalties for major and minor narcotics racketeers, increased powers for Federal narcotics agents, and compulsory registration of narcotics addicts, seem to us eminently reasonable and necessary. One or two, such as the admissibility into Federal courts of evidence obtained by wiretapping, and statutory sanction for the death penalty in especially flagrant cases, are more questionable in point of wisdom, although it would be hard, indeed, to refute the subcommittee's assertion that promotion of the drug habit—constituting, as it does morally, a species of high treason—is a far greater social danger than an isolated case of murder. Here, as in the problem of internal subversion, we are between the horns of the great dilemma of our time: how to eradicate a grave and obvious menace without further vitiating our national liberties.

[From the Franklin (La.) Banner-Tribune of January 10, 1956]

WE AGREE WITH THE UNITED STATES SENATOR

United States Senator PRICE DANIEL, Democrat, of Texas, headed a Senate judiciary subcommittee which investigated illegal narcotics traffic in some 11 cities throughout the Nation.

He reported that drug addiction is responsible for nearly 50 percent of all crimes in major cities and for 25 percent of all those reported in the Nation.

There has been an alarming increase in dope traffic since the end of the last world war and DANIEL has called for legislation under which the death penalty could be applied to smugglers and peddlers of heroin in extreme cases.

Of the 60,000 addicts in the United States at the present time some 13 percent are under 21 years of age, and the list is growing in an illicit business that grosses more than a half billion dollars a year.

We agree with the Texas Senator's recommendation about the death penalty for extreme cases and more stringent regulations all the way across the board on the sale and use of narcotics. Adults who sell dope to teen-agers and children would do better with outright murder because they commit these youngsters in the prime of life to the category of The Living Dead.

More investigative personnel are needed and the Federal and State laws should be tougher. Dope can destroy this Nation with more devastating and lasting effect than an atom bomb dropped on every city and hamlet in the land.

[From the Birmingham (Ala.) News of December 20, 1955]

SENATOR DANIEL WARS ON DOPE SMUGGLING

(By Drew Pearson)

WASHINGTON, December 20.—When I reported recently that Democrats, with a few exceptions, had shirked their much-ballyhooed job of investigation this summer, I think I was unfair to two Senators.

I overlooked the fact that Senators PRICE DANIEL, of Texas, and PAUL DOUGLAS, of Illinois, both Democrats, have been doing an extremely important and able job of investigating—DANIEL into narcotics and DOUGLAS into the racketeering of labor's welfare funds.

Senator DANIEL examined a total of 357 witnesses, trying to find a solution for the narcotics racket, and in 7 months wore out stenographer after stenographer in gathering 8,199 pages of testimony. Yet he was able to save $20,000 out of the $50,000 given him by the Senate to do the job.

I want to report on the fine job done by Senator DOUGLAS in a later column. Meanwhile, here are some of the highlights of one of the worst crime cancers in the United States, plus Senator DANIEL's recommendations:

With 80 percent of United States addicts dependent on heroin sneaked in from foreign countries, DANIEL will demand the death penalty for professional dope smugglers. He also will urge that Congress expand the Customs Service, to permit more complete inspection of persons entering the United States of America. Under Eisenhower, the Customs Service has been reduced, and smuggling has risen. With over 65 million people crossing the Mexican border each year, our Latin-American neighbor is a major problem. Though top Mexican officials want to cooperate, many low-ranking functionaries either ignore the problem entirely or make it worse by taking bribes. As a result, "shooting galleries" thrive in places like Tiajuana, and most of the addicts who cross over for injections also bring back large supplies for future use or profit. A girl addict from Nuevo Laredo testified that she brought in $52,000 worth of heroin in a single year, hidden on her body. Professional smugglers also operate across the border, smuggling in 95 percent of the marijuana used in the United States, as well as raw opium, heroin, morphine, and cocaine. Border-hopping Mexican wetbacks, incidentally, are not deeply engaged in the dope traffic.

SOME CHIEF NEEDS

Detection: Chief needs are stiffer penalties for possession of dope and strengthening of the Federal Bureau of Narcotics. Today it has fewer narcotic agents for the entire United States than the FBI has in the city of New York. Federal law-enforcement officers are hampered by their inability to get warrants after dark unless they have absolute proof that their suspect possesses dope. DANIEL wants to change this.

In one case, a professional dope trafficker voluntarily surrendered a suitcase full of heroin to Federal officers who had been tipped off after dark and couldn't get a warrant. Later the man was freed by a Federal judge who called his arrest improper. DANIEL will also urge that protection, possibly including free drugs, be given to addicts who volunteer information on peddlers. At present addicts are afraid to talk for fear someone will slip deadly cyanide poison into one of their dope capsules.

RADICAL CHANGE

Treatment: DANIEL will recommend a radical change in the handling of addicts. Today they are treated like common criminals, given short jail sentences, only to be found later back in their old haunts. Instead, Uncle Sam should give the courts power to commit addicts to hospitals compulsorily, the power to keep them there, and the ability to supervise their rehabilitation in society. At present, addicts are admitted on a strictly voluntary basis to the two Federal narcotics hospitals in Lexington, Ky., and Fort Worth, Tex. Of the few who enter, only 25 percent stay for the full 135-day treatment, and when they leave they get only $3 in cash and a rail ticket back home. DANIEL wants Federal narcotics patients to get the same treatment as Federal convicts, who get $25 and a new suit of clothes, plus kindly supervision from parole officers and aid in finding jobs.

"It is a disgraceful situation," says DANIEL * * * to convince his fellow lawmakers, he is making a movie of the pitiful addicts, to be shown to all Senators and Representatives.

HEADLINES AND FOOTNOTES

Certain big bankers have come up with a novel, if somewhat heartless, solution for the farm problem. They have concluded that Secretary of Agriculture Benson's most bothersome surplus is the surplus of farmers. The great National City Bank of New York suggested in its December economic report: "There are still too many farms and farmers." This is the same bank formerly headed by Under Secretary of the Treasury Randolph Burgess. Bashful Herb Block, Pulitzer prize-winning cartoonist, again punctures the phonies with his sharp wit in his new book, Here and Now. Adlai Stevenson, risking a break with the South, will campaign against the State of Mississippi. He'll attack Mississippi's abuse of human rights, such as the kidnap-murder of the Negro boy, Emmitt Till. Jack Kroll, the CIO's longtime political action director, has told friends he'll soon bow out as a leader of the merged CIO-AFL.

Secretary of Defense Wilson ordered the Navy to give up its attempt to smash the Air Force's jet speed record. Reason: He wants to crack down on interservice rivalry. Spain's dictator Franco has been grumbling to visitors that it would be a mistake to introduce democracy to Morocco across the Mediterranean.

President Eisenhower is considering two alternatives as a substitute for his pre-illness press conference. He will either accept questions from reporters in writing or will authorize Vice President NIXON to meet the press in his place. Secretary of State Dulles has been griping to the White House about Secretary of Agriculture Benson's plans to dump farm surplus overseas. Dulles complains this is upsetting foreign markets and giving our diplomats new headaches.

[From the Beaumont (Tex.) Journal of December 23, 1955]

DANIEL DESERVES PRAISE

Columnist Drew Pearson, who more often reprimands than praises, does well to laud Senator PRICE DANIEL for his able and courageous investigation of the narcotics racket this past summer.

Senator DANIEL deserves everything good said about him for the probe that put much of the dope racket on the table and opened the eyes of the public to its dangers to society in schools and homes. Additionally, the Texas Senator's recommendations for stiffer penalties for professional dope smugglers makes sense, as does his stand for fairer and more decent treatment of addicts.

Also, if the Senator, as Columnist Pearson says, was able to carry on such an intensive investigation and at the same time save $20,000 of the $50,000 given him by the Senate to do the job, he merits a salute from the taxpayers. Economy in government is so rare these days that anyone who achieves it deserves the approbation of the public.

Senator DANIEL has done a highly creditable job in investigating the narcotics racket, just as he has in many other things. Whether his recommendations will, as they deserve to be, made into law, the probe will certainly enhance his chances for being elected governor of his home State if he decides he wants to make the race.

[From the Boston Record of November 26, 1955]

THE WEAK SPOT

Testifying at a Chicago hearing of a United States Senate subcommittee investigating the narcotics traffic, State Attorney John Gutknecht put a lot of blame for the dope evil on sentimental judges.

He was referring to those jurists who permit guilty narcotics peddlers to get off with relatively light sentences.

In his testimony, he put a finger on a deplorably weak spot in our law enforcement, one which is not confined to any city or State nor to the narcotics laws alone.

This weak spot is the too-lenient treatment of vicious felons, not only by some judges but by all too many parole boards as well.

Police records in virtually every city in the country are studded with the case histories of criminals who have been turned loose only to prey upon society—even in some instances going as far as murder.

Obviously, in each such case, the laws which the people have enacted for their protection, and the law enforcement machinery for which the people pay, are nullified and the money and effort wasted.

And every time a criminal gets off easy, delinquent youngsters tempted to a life of crime are further encouraged to break the laws.

There are, of course, many occasions when justice should be tempered with mercy.

But there have been all too many occasions in which so much unjustified mercy has been shown that justice has been obliterated.

Our penal laws, prisons, and parole systems exist primarily for the protection of society, not the benefit of the criminal.

The increase in the narcotics traffic, in juvenile crime, and the number of criminals who fail to go straight after being turned loose are alarming evidence that this protection at present is inadequate and that something should be done about it.

[From the Sandusky (Ohio) Register-Star-News of December 3, 1955]

THE TERRIBLE TOLL OF DOPE

Some months ago a prowler broke into the home of an East Side widow at night, slugged her sister, broke furniture and windows, tore a chandelier from the ceiling, and escaped before police arrived. From what they heard and saw, they were sure that the man was crazed while under the influence of narcotics. The crime has never been cleared up.

There are hundreds of habitual dope users in Cleveland. They commit thousands of crimes, of a wide range from petty thievery, purse snatching, and vandalism to prostitu-

tion, rape, and murder. The offenses are committed while the addict is under the influence or while he or she is trying to get the necessary money to satisfy the inhuman craving the vice inflicts. Many of the incidents, like that of the prowler, get little or no news attention because of their frequency.

Many readers therefore were amazed at the revelations of the awful cost of narcotics addiction given in Friday's Senate subcommittee hearings here.

Cleveland Police Chief Story testified he estimated that 40 percent of crime here can be traced to narcotics. Addict witnesses told of spending $20 to $200 a day—repeat, a day—on dope. Ohio's attorney general, C. William O'Neill, estimated that there are 15,000 addicts in Ohio and that they have been spending $75 million on narcotics. The subcommittee chairman, Senator PRICE DANIEL, estimated that there are at least 60,000 known addicts in this country. In England, he was told, there are about 400 known addicts.

At that, things are better in the United States than they reportedly were in 1900, before open sale of morphine was prohibited. In those days, when our population was just over 75 million, or less than half of that today, there were 400,000 addicts, according to DANIEL.

We think that, just as there was a tremendous reduction from the 1900 figure, there can be a tremendous slash in the present ranks of addicts. This can be accomplished by greater legal penalties for the sale, possession, and use of narcotics, as Ohio recently tightened its laws.

It can be done by dealing realistically, not emotionally, with addicts who claim they have reformed but actually have not.

And, most of all, it can be done by an aroused public interest in what addiction means to the individual, to families, and to the Nation.

A Cleveland police expert on the problem estimated at Friday's hearings that 90 to 95 percent of known local addicts were Negroes. In southern areas, Senator DANIEL said, the majority of addicts were white. Whatever the emotional and social reasons for this, parents and school, welfare, religious, and civic leaders must do more to counterattack this epidemic blight.

Young people, Negroes and white, must constantly be warned of the terrible price that the kick from marihuana can lead to.

There must also be more effective ways of reclaiming addicts who sincerely want to reform—and too often find they are shunned and deprived of gainful employment because of their past.

The witnesses who told their pitiful stories before the subcommittee—stories repeated in kind all over the Nation—should alert even the most aloof. Reclamation of even one of the thousands of dope users is a worthwhile brotherly goal.—Cleveland Plain Dealer.

[From the San Angelo (Tex.) Standard of November 2, 1955]

CONFERENCE ON DOPE

Wisely Senator PRICE DANIEL plans to seek a high-level conference of United States and Mexican officials on curbing the flow of illicit narcotics across the border. Testimony at recent hearings in Texas indicates that about 90 percent of the heroin and 98 percent of the marihuana entering this State comes from Mexico. This smuggling is done by expert professionals. The long stretch of border and the smallness of the dope parcels make them hard to intercept.

Various Mexican officials have indicated willingness to cooperate with our country in trying to suppress this smuggling. The meeting suggested by Senator DANIEL might work out enforcement methods that at least would better the present situation. To be effective, these methods will have to go back of the border. They will have to reach to the hemp patches and poppy patches in isolated spots in Mexico and to the importation of opium and heroin into Mexico for smuggling into this country.

Racketeers in this country are as responsible as anyone for the dope smuggling. We can be thankful that Mexico seems willing to work with the United States in trying to curb this traffic. Both countries will gain from any progress that can be made in lessening this evil.—Dallas News.

[From the Baltimore News-Post of January 12, 1956]

PUSHERS' PENALTY

Declaring itself "shocked at the extent and far-reaching effects of the illicit drug traffic," a Senate Judiciary subcommittee has recommended the death penalty for "unregenerate" dope peddlers.

"Peddlers are selling murder, robbery, and rape and should be dealt with accordingly. Their offense * * * in truth and in fact is murder on the installment plan," the subcommittee concluded.

The Hearst newspapers have been saying the same thing editorially for years.

Recent disclosures of a dope smuggler's "haven and heaven" at Los Angeles harbor; of rising importation of narcotics across the Mexican border; of totally inadequate numbers of enforcement officers at all points and of the comparative lenience of existing laws, add weight to the subcommittee's statement.

Death for repeated dope peddling is opposed by some well-meaning humanitarians and penologists.

They contend that it would prove no deterrent at all.

Against that view we have cited the dramatic drop in kidnaping cases since that crime was made a capital offense.

The formality itself of making dope peddling a capital offense may not at once impress the vile and mercenary salesman of "murder on the installment plan."

The mere enactment of the Lindbergh law did not drive kidnapers immediately out of business.

But when the first convictions and executions followed, when death did become the last reckoning, kidnaping dropped to virtual rarity.

So would dope peddling after the first few persistent peddlers of the white death have been dealt the same treatment.

The Senate subcommittee is to be commended for a realistic and urgently needed recommendation.

It deserves strong support in both Congress and the State legislatures.

[From the Knoxville Journal of November 27, 1955]

NARCOTICS SEEN AS WEAPON OF REDS

(By Paul Harvey)

Senator PRICE DANIEL, of Texas, in Los Angeles investigating narcotics, heard 1 witness offer to get him "all he wanted * * * and be back in 20 minutes."

Senator DANIEL sputtered, "Do you mean to tell me you think you could get all the narcotics you could pay for within 10 minutes of this courthouse?"

Witness Don Seelbinder, 22, drug addict, replied, "I know I could."

The young man went on to say, "It's easy to buy junk in Los Angeles. A man at Temple and Figueroa Streets will sell me an ounce of heroin for $275."

Narcotics Commissioner Harry Anslinger thinks much of our crime is directly related to the fact that an addict will do anything to get money to buy illicit drugs. Getting the drugs is no problem; just getting the money.

So a wet-eared kid whose jag is wearing off clubs a hack driver to death for a 10 spot start toward that $275.

But Senator DANIEL is looking beyond the domestic crime which it breeds. He says, "We will develop here the actual existence of a Communist plot, activated through Red China, to push heroin into other countries.

"This invasion by narcotics is aimed particularly at the United States."

He says this way the Reds get money they need and at the same time undermine our institutions and demoralize our people.

Well * * * the Senator is certain to be accused of being overzealous, of looking under the bed, by those who have not watched the Communist conspiracy use this very means to subjugate the minds of two-thirds of Southeast Asia.

Why not the United States next?

"The Communists have learned," says Senator DANIEL, "that if they can get a soldier or a citizen on heroin they have one less enemy to defeat by other means."

Somewhere between the acute anxiety of the Senator and the total nonchalance of the ultraconfident there is an appropriate meeting ground for our lawmakers.

I recommend such a meeting promptly. Here's why:

Now that the forces of totalitarianism and the disciples of freedom have reached an atomic standoff, there will necessarily be a change of weapons.

If you consider Senator DANIEL's suspicions extreme you would be stunned by some of the more quiet conjecture that's been making the rounds in Washington.

Men of stature are frankly anxious that the Russians might revert to some sinister kind of sickness to gradually reduce the resistance of the United States.

We know it is not impossible.

And if their diabolical plot were revealed they have a whole stack of trumped-up, forced confessions signed by Americans stating that we employed germ warfare first.

Any survivor of the Katyn massacre would know by now that the Bolsheviks will do anything they can get away with.

That explains the redoubled efforts of our Pentagon to emphasize research in chemical and bacteriological warfare. Because a few Senators looking under the bed have demanded we keep one jump ahead.

[From the San Antonio News of November 3, 1955]

TEEN-AGE DOPE ADDICTION—IT IS HAPPENING HERE

Police reports of five teen-age youths of Edgewood High School involved within a week in the horrors of the dope racket should send a chill of apprehension down the spine of every parent in San Antonio.

These are not isolated incidents, not something to be shrugged off as a blighted-area phenomenon, not a worry that will go away if we close our eyes or turn our backs to it. Listen to Capt. G. E. Matheny:

Heroin and marihuana usage among students is "worse this year than ever before * * *. It's like a disease that keeps spreading, and I don't know where it is going to stop."

The Senate Judiciary Subcommittee investigating narcotics traffic pinned down these hard facts: Texas is sixth among the States in dope troubles. San Antonio is among the Nation's 20 worst communities. More than half this city's crimes can be traced to dope.

Senator PRICE DANIEL's subcommittee is scheduled to return to San Antonio for further investigation. It is welcome. Let those

who lament the resulting bad publicity explain how else the people can be made aware of this urgent problem, how else they can be moved to demand and to pay for better narcotics control, how else lawmakers can be shown what is needed in the way of stricter statutes and more adequate appropriations for law enforcement.

It is foolish to doubt that our community's youth is in grave danger. Impressionable, venturesome, gang-spirited, restless youths are the easiest mark for the dope peddler. The pusher, whether through greed for high profits or desperation for funds to feed his own ravenous habit, will not pass up the school trade—unless the calculated risks are made prohibitive. We must make those risks prohibitive.

The DANIEL hearings pointed up the pressing need for stiffer, surer penalties for dope peddling and using. The testimony also emphasized the necessity for strengthening the narcotics-control arm of law-enforcement agencies at every level of government.

And we might add that delinquency is a silly-soft word for teen-age dope crimes. A firmer official hand must be placed on such offenders; but, as a corollary, help must be given—fully and immediately—to any dope-trapped youth who turns to governmental or social-welfare agencies for help.

What can the average parent, the common citizen, do to combat this menace to the well-being of the community's youth? Plenty:

Give generously to the United Fund, which is largely devoted to character-building youth activities and to relief for families in crime-breeding environment.

Demand that local government provide something like an adequate recreation program that will reach into every neighborhood—and be willing to pay the taxes necessary to run it.

Take a stronger personal interest in school programs and educational problems, as the school officials vainly beg so many indifferent parents to do.

Keep a closer check on your child's activities, associates, behavior, and don't be afraid to seek expert help if you think it is needed.

Support those who are working for better law enforcement and better laws to enforce.

Don't think "it can't happen here." It is happening here. And don't think it can't happen to your boy or girl. It happens to someone's every day.

[From the San Bernardino (Calif.) Sun of November 17, 1955]

MENACE OF NARCOTICS

An ugly story of the growing narcotics traffic in southern California, and particularly in Los Angeles County, has been unfolded at the hearings conducted by Senator PRICE DANIEL in Los Angeles this week.

Statements have been made that Los Angeles peddlers have succeeded in making that city second only to New York City in the amount of narcotics reaching addicts, or those on the road to becoming addicted.

Naturally the exact source of supply is not known to law-enforcement officers, or it could be cut off, but indications are that about one-third of the illegal narcotics is received from Mexico, the remainder from Asia and eastern United States.

Senator DANIEL explained that the inquiry into narcotics traffic is not a slap at Mexico, explaining:

"This is a two-way deal—if people in the United States buy and handle narcotics we are equally to blame. What we want to emphasize is that this is a two-way problem, and we must have the cooperation of the Mexican Government to solve this."

Adolfo Dominguez, consul general of Mexico, attended the hearings as representative of his government, and has indicated a willingness to assist the United States in its efforts to stamp out the narcotics evil.

As for Communist China, the story was different. Senator DANIEL declared that the Chinese Communists are using narcotics, not only for money, but in a plot to demoralize the free world. He said heroin from Red China is being sent to Korea, Japan, and the United States. He indicated the greatest supply of narcotics reaching the United States has its origin in China.

And that dope can demoralize people, none can deny. William H. Parker, Los Angeles chief of police, told Senator DANIEL that narcotics play a part in approximately 50 percent of all major criminal activities. He added it is obvious that a heroin addict who is attempting to support a $50-a-day habit is rarely in a financial position to do so without resorting to other criminal activities.

Even though, according to Sheriff Eugene Biscailuz, there is some encouragement in the improved situation as regarding juveniles, there is some cause for grave concern. The sheriff said that in the past 2 years narcotics arrests in the 18-19-year-old group declined, but showed an increase in the 20 to 29 age bracket.

Sheriff Biscailuz' testimony bore out contentions that Los Angeles County is a growing hotbed of narcotics activities, explaining that in the 30 months ending in June 1954, there were 13,924 felony narcotics arrests in California, of which 8,932, or 64.3 percent, were in Los Angeles County.

This is not good news for San Bernardino County, since it borders Los Angeles County to the east. There is no reason to presume that an invisible county boundary confines narcotics traffickers to Los Angeles County. There is no indication that narcotics traffic in this county begins to approach the scale it flourishes in Los Angeles, but it does seem that there would be considerable.

As for the remedy, the first step would be to choke off narcotics at their source, sharply reducing the supply reaching peddlers. The next, according to witnesses, would be to provide far more severe penalties for dope handlers. Ray E. Vader, a United States customs agent at San Diego, wants the death penalty for persons thrice convicted of smuggling and selling narcotics.

This sounds rather drastic but there is a tragic situation with which to deal. The illegal traffic in narcotics is a scourge and calls for stern handling by Federal, State, county, and local officers.

THE PROBLEM OF ALCOHOLISM

Mr. CARLSON. Mr. President, I wish to call to the attention of the Senate some very interesting figures regarding the increase of alcoholism in the Nation in comparison with my own State of Kansas.

A study has just been published by Dr. Mark Keller and Vera Efren in the Quarterly Journal on Alcohol Studies.

Kansas is the only State in the Union where the rate of alcoholism has not increased in the period from 1940 to 1953. During the 13-year period, the national rate—the number of problem drinkers per 100,000 population—has gone up 44 percent. Kansas, the study says, is the outstanding exception. Its incident rate has actually dropped 4 percent.

This study shows that not even the abandonment of prohibition in Kansas, in 1949, has brought any substantial change in its rate of alcoholism. As a matter of fact the study shows that Kansas in 1940 ranked 26th among the States in the number of alcoholics. Its total was estimated at 4,240 problem drinkers per 100,000 population.

Thirteen years later, despite the abandonment of prohibition, the State was in 45th place, with an estimated 4,070 alcoholics. During the same period when Kansas actually dropped 4 percent, such States as Maine showed an increase of 107 percent, as did North Dakota; Iowa 22 percent, Oklahoma 18 percent and California 100 percent.

Alcoholism is one of the real problems confronting the Nation at the present time, and the people of Kansas can well be proud of their record, which in my opinion is based on their traditional insistence on sobriety. Our churches and many organizations are continually carrying on a campaign of temperance and it is getting results.

I ask unanimous consent to have printed, as a part of these remarks, an article based on a study which appeared in a recent issue of the Quarterly Journal on Alcohol Studies.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

KANSAS IS ONLY STATE IN UNION WHERE ALCOHOLISM HAS NOT SHOWN AN INCREASE

(By Rene J. Cappon)

KANSAS CITY.—Kansas is enjoying a remarkably favorable position in the country with respect to alcoholism, a study by two Yale scientists showed today.

It is the only State in the Union where the rate of alcoholism has not increased in the period from 1940 to 1953.

During the 13-year period, the national rate—the number of problem drinkers per 100,000 population—has gone up 44 percent. Kansas, the study says, is the outstanding exception. Its incident rate has actually dropped 4 percent.

The study, by Dr. Mark Keller and Vera Efren, was published in the Quarterly Journal on Alcohol Studies.

"Not even the abandonment of prohibition in Kansas in 1949, has brought any substantial change in its rate of alcoholism," the authors said.

They did not, however, venture a conclusion from this fact. They said the effect of prohibition on alcoholism, and the possible relationship of alcoholism to drinking rates, remain to be analyzed.

In 1940, the Keller-Efren tabulations show, Kansas ranked 26th among the States and the District of Columbia in the number of alcoholics. Its total was estimated at 4,240 problem drinkers per 100,000 population.

Thirteen years later, despite the abandonment of prohibition, the State was in 45th place, with an estimated 4,070 alcoholics.

During that same period, such States as Maine showed an increase of 107 percent, as did North Dakota; Iowa 22 percent, Oklahoma 18 percent, and California 100 percent.

In 1953, the latest year for which figures are available, the District of Columbia was leading the Nation in the incidence of alcoholism, with a whopping 7,800 problem drinkers per 100,000 population. California was second with 7,060, and Connecticut third with 6,380.

Only Iowa, Alabama, Idaho, and South Carolina had rates lower than Kansas in 1953.

The figures used in the study are projections of the so-called Jellinek formula, based on mortality rates from cirrhosis of the liver. It's considered reasonably valid, though a margin of error must be allowed for the statistics derived from it.

A field survey by Kansas Commission on Alcoholism actually came up with results lower than the Jellinek formula estimates. The commission figured a 1953 rate of 15.8 percent compared to the Jellinek estimate of 13.4 percent.

Other field surveys in the Nation, the Yale study indicates have tallied more closely with the Jellinek method. But in any event the divergence found in Kansas, whatever the reason, would seem to have small effect in computing the State's position nationally, since the Jellinek formula was used throughout.

The precise reason for Kansas superiority in its alcoholism rate is something of a mystery. It cannot be explained by any difference between urban and rural States, since predominantly agricultural States like Montana, Indiana, and Minnesota show substantially higher incidence.

Nor does there seem to be much of a clue in liquor consumption as such. Kansas, in the early fifties, consistently gulped about 1 percent of the distilled spirits consumed in the United States, fluctuating from 25th to 29th among the States in this category.

In the absence of concrete evidence, the possibility cannot be ruled out that many years of prohibition created special drinking, or nondrinking, patterns in Kansas with a bearing on alcoholism.

Further, the abandonment of prohibition in Kansas is perhaps too recent to be reflected in the Yale figures, even if a direct relation between prohibition and alcoholism should be established later.

TEN YEARS OF CARE

Mr. CARLSON. Mr. President, this week we observe the 10th anniversary of CARE, a great humanitarian relief program. The official full name of CARE is the Cooperative for American Remittances Everywhere.

During those 10 years the American people have helped to bring hope on a person-to-person basis to millions of people in despair in 54 countries throughout the world. Person to person means that a CARE package from an individual or group of individuals is delivered overseas with the name of the American donor on the package. It is a package of aid from one human being to another. The donor knows he has sent a personal package, and the recipient knows who sent it. CARE has been a channel for direct individual assistance.

In the past 10 years, 19 million thank-you letters and personally signed receipts for CARE packages have been returned to the United States.

Expressions of thanks have been received from leaders of all nations where CARE has operated. The people of the world recognize the generous spirit and the personal interest of the people of America, expressed through CARE. It has become recognized as one of the outstanding relief agencies of our country, and it has had the cooperation of many fine people.

THE PROBLEM OF FARM SURPLUSES

Mr. CAPEHART. Mr. President, I rise again to call the attention of the Senate, of the entire Congress, and of the administration to the troublesome farm surpluses which constitute one of the major problems confronting us today. As we all know the surpluses are owned and controlled by the Government itself, and it is only the Government which can dispose of them.

In my opinion, we cannot hope to have a large increase in farm prices until we get rid of the surpluses, or at least until there is worked out a plan to get rid of the surpluses within a reasonable length of time.

This problem is a responsibility of Congress, as well as of the administration, and the American farmers expect Congress to do something about it.

On January 17 I appeared before the Committee on Agriculture and Forestry in support of S. 2852, introduced by me and many other Senators. It is a bill which seeks to get rid of farm surpluses.

I ask unanimous consent that the statement which I made before the committee be printed in the RECORD at this point as a part of my remarks.

There being no objection, the statement was ordered to be printed in the RECORD, as follows:

STATEMENT BY SENATOR CAPEHART

Mr. Chairman, I consider it a privilege, but nonetheless a grave responsibility, to have the opportunity to testify before your committee today in support of S. 2852, introduced by me, for myself and several other Senators, to create an International Food Community Board, and for other purposes.

This bill would provide for the creation of a Board to dispose of surplus agricultural commodities, in an orderly manner, to needy people, in this and other free nations, and thereby relieve our agricultural economy of the disastrous effects on farm prices resulting from the existing Government surpluses.

We would give these commodities only to peoples who are not able to buy them and we would achieve the distribution in a manner so as not to in any way disturb existing markets and channels of distribution for agricultural products.

Later in these remarks, I will explain in some detail the provisions of the bill. Now I want to show its need.

Certainly there is no occasion for me to call attention to this committee to the fact that the United States is now enjoying is greatest peacetime prosperity in history—with one important exception. Personal income exceeded $300 million in 1955. Dividends to stockholders were almost $11 billion in 1955. Our population increased to a new all-time high of 165 million. But farm income was at the disproportionately low level of 29 billion dollars.

I am not here today to speak of the great general prosperity of the Nation, but rather to try to do something about the one important exception—the desperate plight of the American farmer. We must raise farm income to the levels of the general high prosperity of this Nation. This is not only essential to the millions of farmers in the United States, but it is good business for the United States, as well as good Government.

Farmers are huge purchasers of farm implements, trucks, automobiles, building materials, clothes, and countless other basic items of our industrial economy.

This Government has long recognized that the prosperity of our economy is in direct relation to the purchasing power of its consumers. Industry has just as great a stake in raising the level of the purchasing power of farmer-consumers as does anybody else.

Secondly, the fiscal obligations of this Government require large amounts of revenue in the form of taxes. Low-farm incomes cost the Government staggering sums in the taxes farmers are not paying on the income they are not making.

It is elementary economics that price is based on supply and demand; but not on the total demand or the total supply; more usually it is based on the top 5 percent of supply or demand.

When supplies are only 95 percent of demand, we have a tight market with rising prices. But when supplies are 105 percent of demand, we have surpluses and a soft and declining market. It is the 5 percent at the top that regulates prices.

It is my firm conviction that the single most direct cause of the current unreasonably low-farm prices is the huge inventories of Government-owned or pledged farm surpluses that currently overhang the market.

The $7.3 billion of Government-owned or pledged farm surplus inventories hang over the farm commodity market like a sharp sword loosely dangling over the farmer's economic head, have depressed farm prices and are keeping them low.

Two points, Mr. Chairman, are essential to restoring normalcy in farm prices: (1) We must remove the existing farm surpluses from continuing to depress farm prices; and (2) we must adopt means to insure that for the future farm production will be kept at levels reasonably consistent with consumption of agricultural products.

I am certain that no one even remotely concerned with the desperate problem of the farmer will dispute this position. Many proposals are now being made to limit production to the level of consumption, particularly the soil-bank proposal made by President Eisenhower in his state of the Union message.

I am certain that the Nation's farmers were more than pleased with the President's fine farm program contained in his message to the Congress on January 9, 1956.

The President recognized the presence of these surpluses as the main farm problem, saying: "Of the many difficulties that aggravate the farm problem, mountainous surpluses overshadow everything else."

The President went on to say: "Farmers, the intended beneficiaries of the support program, today find themselves in ever-growing danger from the mounting accumulations. Were it not for the Government's bulging stocks, farmers would be getting far more for their products today."

And I know we must all agree with the President's statement that: "The attack on the surplus must go forward in full recognition of the fact that farm products are not actually marketed when delivered to and held by the Government. A Government warehouse is not a market. Even the most storable commodities cannot be added forever to Government granaries, nor can they be indefinitely held. Ultimately the stockpiles must be used."

President Eisenhower wants to do something to dispose of these surpluses. He referred to a start being made by the Secretary of Agriculture, saying: "Because the problem continues to be so serious and stubborn, the Secretary of Agriculture is appointing an Agricultural Surplus Disposal Administrator, who will report directly to the Secretary. The duties of the Administrator will relate to all activities of the Department associated with the utilization of Commodity Credit Corporation stocks and of our current abundant production.

Existing laws limit the Secretary of Agriculture in the disposal of farm surpluses, but S. 2852 would give the President a truly effective means with which to dispose of surpluses that are not wanted and do no good to anyone. We must get rid of the surpluses now, if we are to increase farm prices.

But there still remains, Mr. Chairman, the equally important, and equally vital, need to do something about the existing surpluses. We cannot solve the problem merely by long-range programs to limit production. Most people interested in the farm economy agree on the depressing effect of these surpluses, but I am consistently told that there is just nothing further that we can do about it above existing disposal programs.

We are told that to sell these surpluses abroad at prices below existing market prices will divert trade from other countries and bring disaster to the farm economies of other friendly nations. This, of course, we must not do. And we are told that to seek to dispose of additional supplies on the domestic market would further depress prices, and, of course, this we will not do.

In the free world, however, there are millions of underfed and underclothed people who desperately need the surplus commodities that have created so unfortunate an economic problem for us. Those people are underfed and underclothed because they do not have the money to buy adequate food or clothing and, therefore, it would be necessary to give these commodities to them if we are to make use of them. This we are told would be a giveaway program.

Criticism of my program to create an International Food Community Board to feed and clothe needy people of this and other friendly nations, with our surplus agricultural commodities, is that we are giving something away. I propose to meet that criticism head-on.

I have never considered it unwise, undesirable, or wrong to give something away when it was both good business as well as being a charitable Christian act. I can demonstrate to you now that my program is, in fact, good business for the United States.

First, although there has been criticism that this administration has not done enough to relieve the farm problem, the investment of this Government in programs primarily for the stabilization of farm prices and income, in years 1954 and 1955, has been $2,263,000,000. This compares with a total expenditure for such programs in the prior 4 years of $1,747,000,000.

These farm surpluses are not something new. They began to accumulate in the fiscal year ending June 30, 1949, at which time the CCC inventory of wheat was over 227 million bushels. It is now about four times that amount. By June 30, 1950, the CCC inventory of corn was over 332 million bushels. It is now about double that amount.

The periods of greatest accumulation of these surplus inventories were the fiscal years ending June 30, 1949, 1950, and 1951 and again 1954 and 1955.

I say that it is not good business for the United States to continue to spend billions of dollars to inadequately and inefficiently support farm prices because we are unwilling to be realistic and give, to needy peoples of this and other friendly Nations, that portion of our farm surplus that is depressing farm prices.

Second, now, Mr. Chairman, there is nothing new about what I propose and some of my friends in industry who dislike giving away agricultural surpluses owned by the Government forget that just a few years ago the Government adopted a somewhat similar program for the benefit of industry.

At the end of World War II, the United States owned billions of dollars of surplus—and I emphasize that we then referred to them as surplus—industrial facilities. The cost to the Government of those facilities ran into the billions, and in the post-war period their replacement cost was even greater. Those facilities were referred to as surplus because it was then thought by some that the post-war demand for steel, aluminum, rubber, and many other industrial items would be substantially below their war-time demand and there would be no demand for the production of those facilities. This reasoning, of course, did not anticipate the great industrial expansion of the American economy in the post-war years.

In 1952 General Services Administration prepared a document entitled "Surplus Industrial Real Property and Related Property, Sales and Transfers as of September 30, 1952" listing surplus properties previously disposed of. This is very interesting reading. And, of course, we now have the benefit of hindsight to measure the extent of the give-away in those transactions.

Let me give you a few examples. One aluminum company purchased four plants at Newark, Ohio, Troutdale, Oreg., Spokane, Wash., and Trentwood, Wash., for $41 million which had cost the Government $150 million. At the time of the sale the replacement cost was undoubtedly much higher. And the recent financial statements of the buyer make clear that the plants were really not surplus, but have been fully and profitably utilized ever since their purchase.

Another aluminum company purchased so-called surplus Government plants at Jones Mill, Ark.; Hurricane Creek, Ark.; Phoenix, Ariz., and Chicago, Ill., for $48 million that had cost the Government $144 million. This company not only found that production from these plants was not surplus, but with the profits from full-scale operations in those plants it has since constructed new additional facilities on its own.

I might add that in virtually all of these sales the plants were sold on very liberal credit with but little, and sometimes even no, down-payment.

If we continue looking through this book, Mr. Chairman, we find an oil refinery at Catlettsburg, Ky., sold for $2.3 million which had cost the Government $16.4 million; steel properties in Utah that cost the Government $191 million being sold for $47 million; and another steel mill in Utah that cost the Government $12 million being sold for $1 million.

We also find an aircraft factory in San Diego, Calif., that cost the Government $9.7 million being sold for $1 million; a chemical plant in Sterlington, La., that cost $17.6 million being sold for $5.8 million; a steel mill at Daingerfield, Tex., that cost the Government $24 million being sold for $5 million, and then the Government loaned the purchaser $73.5 million for expansion. The list of those sales is long and involves billions of dollars.

It would be an interesting, although perhaps an academic study, to compute the billions and billions of dollars of profits that have been made in the past 10 years on the purchase in 1945–48 of surplus steel mills, aluminum plants, synthetic rubber plants, airplane factories, chemical plants—and on down the list.

I am not prepared to be critical of that surplus disposal program, although I have previously expressed the view that the prices at which those plants were sold were too low. On the other hand, the acquisition of those plants by private enterprise has put thousands of people to work at good wages. Those people have bought homes, automobiles, clothing, food, and other commodities in excess of the quantities which we might expect would have been sold to them had they been less gainfully employed. This, in turn, has created additional employment in the construction industry, the automobile industry, the clothing industry and so on down the line.

And those companies have paid income taxes on the profits they made out of these facilities.

I am not sure but what this Government and our people have not gained through having those plants operated by private enterprise more than the billions of dollars we lost in their disposal.

The point I am trying to make is that while I oppose giving something away for nothing as much as any Member of the Senate, we should not permit blind adherence to a principle to stop us from doing something that is good business for this Government.

Third, we might draw an analogy to what may possibly be referred to as the biggest give-away program of all time. In the post-war years, the American taxpayers gave about $55 billion of military and economic aid to friendly foreign nations. This was properly justified largely on the premise that our help was needed to restore the economies of many friendly nations to that level of prosperity where seeds of communistic unrest necessarily die. And, in part, the program was justified because we could not expect continued prosperity in the United States if there was poverty throughout the rest of the world.

I have no doubt that substantial good came from those grants, but I have no less doubt that billions of our dollars were wasted in that $56 billion program. That program is now justifiable only on the basis that it was good business for the United States to give away $56 billion to friendly foreign nations because in the long run we would profit by our having done so.

I should like now also to remind industry in the United States that it received the major benefit flowing from the foreign economic and military-aid program. Eleven billion of the $56 billion thus expended was spent for agricultural products, but the great bulk of the grants in that program were spent right here in the United States for manufactured goods. The foreign-aid program created a demand for manufactured goods in excess of that which industry could expect from normal consumption. It provided a stimulus to American industries which certainly accounted, to a significant extent, for the post-war stability and growth of many American industries. I know that industry will not want now to deny the farmer an opportunity to receive that same type of assistance toward needed economic-stability.

Fourth, I have already referred, Mr. Chairman, to the fact that it is good business for this Government to restore a reasonable level of farm prices. We would thereby not only reduce the demands on the Treasury for funds required to maintain the farm-support program, but we would also create revenue for the Treasury in the taxes the farmers would pay on the profits they would earn on fair farm prices. Isn't it better to conserve the dollars in the Treasury—and to create a source of new dollars for the Treasury—than to conserve excess and unneeded surpluses of agricultural products in warehouses?

Lastly, I again call attention to the fact that we propose to give away only what we can't sell, and to give it only to people who cannot afford to buy; thus we will not disturb existing markets, we will be doing a Christian act that is, in fact, good business for us.

I would summarize my program thus: There is a portion of our existing agricultural surplus that is a necessary reserve against future emergencies. There is an additional portion of this surplus that can be disposed of under existing law at adequate prices. But above those quantities, existing agricultural surpluses are not an asset, but a liability. I propose only to dispose of that liability.

On December 2, 1955, I released an 8-point farm program, the points of which are:

1. Increase farm prices by eliminating the great agricultural surpluses now depressing food markets through furnishing food to hungry people throughout the world, this to be done in a manner that furnishes food to people who otherwise could not purchase those commodities. Every effort should be made to accomplish the purpose without displacing existing market demands for food commodities. It is time that we recognize the principle that providing food to the hungry, underprivileged people of the world by equitable distribution of our overabundance is more important than the maintenance of the present maladjusted distribution of food in the markets of the world.

2. The establishment of an International Food Community Fund patterned after the Community Chest funds which are so effective throughout the United States. The purpose of this agency would be the distribution to needy peoples of the world, including those of the United States, of excess surplus food commodities of the United States until such time as supply and demand are in reasonable balance.

3. The establishment of rigid production controls to keep production within the reasonable limits of consumption until existing excess surpluses have been utilized; such production controls are necessary to achieve fair prices for farm commodities.

4. The establishment of a soil bank plan as an additional measure of limiting production. In most of the agricultural areas of the United States it is impossible to create substantially new acreage. The fertility of our soil is an important national asset that should not be wasted when its production is not presently needed.

5. That the Congress recommend that the President call a conference of food producers, processors, manufacturers, and distributors to seek means for enabling the farmer to receive a larger portion of the amount the American consumer pays for food.

6. The establishment of a Government research laboratory to find new and improved uses for farm products in industry with the objective that greater quantities and increased numbers of products of the farm can be utilized as raw materials of industrial production.

7. The promulgation of a plan to advertise farm products to promote their increased consumption such as has been utilized in the citrus fruit industry and would be financed by producers' contributions on a percentage of sales basis. Modern mass production in industry has been made possible through extensive promotional advertising—it is time we adopted those methods to increase consumption of farm products.

8. Take out of production land owned by the Government both for the growing of grains and for grazing purposes.

S. 2852 is designed to accomplish points 1 and 2 of my program. Other points in this program are either included in other bills now pending before your committee, can be accomplished without new legislation, or merely require increased appropriations.

Throughout this session of Congress I shall continue to press for all eight points in my program, either by amendments to pending bills or, where necessary, by introducing new bills.

The farm problem is, without a doubt, the most serious domestic problem facing this Government today. It is the one black spot in our otherwise prosperous economy. We cannot, and I know this Congress will not, leave the farmer so far behind in the enjoyment of our current high level of prosperity.

There are many proposals, most of them meritorious, designed to bring future farm production within the limits of anticipated consumption. I will support vigorously adequate and feasible proposals to accomplish that result. But that is only half of the job. We must first distribute the existing farm surplus that hangs over the farm market as a dead weight depressing farm prices. This is vital to any restoration of farm prices to normal levels.

Now I would like to discuss in some detail the provisions of S. 2852.

Section 1 of the bill provides that the act may be known as the International Food Community Board Act of 1956.

Section 2 makes clear that the purpose of the bill is to accomplish the distribution of surplus agricultural commodities, in an orderly manner, to needy peoples at home and in friendly nations abroad. This is to be done to relieve the agricultural economy of the United States of the harmful effect of these unwelcome surpluses that hang over the markets, and at the same time to provide food and clothing for underprivileged people.

To administer this program, there would be established by section 3 of the bill the International Food Community Board. Its members, including a chairman and a vice chairman, would be appointed by the President from among the heads of departments in the executive branch of the Government.

This committee might consider it desirable to provide that two or even three members of this board be selected from outside the Government—men who could give this program their full time. I would think, however, that the board should certainly include the Secretary of Agriculture, and either the Secretary of State or the Director of the International Cooperation Administration, or both of them. Their departments are best equipped to help achieve the objectives of the program, and the Board would have to work closely with their agencies.

Section 3 also provides that to the extent possible this board is to function through existing agencies and with existing employees of the Federal Government. The primary purpose of these provisions is to avoid a substantial cost to the Government of administering the program. I would hope that this program could be administered with a minimum of administrative expense, and I feel certain this can be done with the full use of existing agencies.

The International Cooperation Administration, for example, now has agents throughout the world who should be well equipped to advise the board on what plans in their respective areas could best achieve the purposes of this program. And we would want to coordinate this program in with their foreign aid programs. Similarly, the Secretary of Agriculture has administrative people located in almost every part of the United States whose advice and help should be used.

I would not object to amending the bill to provide for some outside members of the board. Perhaps the chairman should be one who can give the program his full time, but I would in any event like to see the maximum utilization of existing Government agencies in the accomplishment of the program.

Section 4 provides for the creation of State or regional liaison committees to assist the Board in the disposal of these surplus commodities within the United States. I would expect these committees to assume the major responsibility for making known to charitable organizations within their respective areas, including orphanages, old peoples' homes, sanitariums, and the like, the availability of the program. These committees would also help the Board to find and to process suitable applicants for surplus commodities. The committees could serve at home in much the same manner that I would expect the Foreign Service and the International Cooperation Administration to serve the Board abroad.

Section 5 specifies the duties of the Board in disposing of these excess agricultural surpluses. It provides that the President should estimate the quantities of existing surplus commodities necessary to provide an adequate national reserve for emergency purposes; and that he should also estimate the quantities of these surplus commodities that can be sold or otherwise disposed of under existing programs. The President is given the right to revise the estimates from time to time and his revisions would result in corresponding revisions in the program. Only the excess surpluses over and above those estimates would be included in this program.

The Board is urged to distribute the remaining surplus commodities within a 3-year period. But the Board is required to dispose of those commodities in a manner "which will not materially displace, disrupt, or interrupt existing commercial markets." We do not propose that the Board give these surplus commodities to any recipient who is now purchasing similar commodities or who is financially able to do so.

If there were a surplus of shoes, it would do no good to give me a pair. For I already have a pair of shoes and when they wear out I will be able to buy a new pair. But if we can give a pair to a little girl without shoes, or whose shoes are worn out, and whose father cannot buy her a new pair, we have done a good thing without disrupting the market for new shoes. This bill will not permit the surpluses to be given to anyone who would otherwise have purchased similar goods.

On the other hand, there are many charitable organizations whose limited budgets do not permit them to purchase all of their actual requirements of commodities in our surplus stocks. In such cases, the bill requires the Board, or the distribution organization, to obtain a written obligation requiring such institutions to continue to purchase these commodities at the levels of their current budgets and distribution to them. Our surpluses would be only above and after their current levels of purchases.

The bill provides, and I think this is an important provision, that to the maximum extent possible, the distribution of these surpluses should be through nonprofit organizations. I would hope that many public spirited citizens could be interested in helping to achieve this distribution through nonprofit organizations.

We all know of the splendid work CARE has done in distributing packaged foods to needy peoples. I am hopeful that similar bulk distribution could be achieved under this program through similar nonprofit organizations. I have in mind that such nonprofit organizations would collect through public subscription their costs of administering the program.

I believe that in many foreign countries nonprofit organizations can function more quickly, more directly, and more effectively in the distribution of food and clothing to needy people than could ever be achieved through local governments. I would therefore hope that we could avoid any distribution through local governments and utilize primarily nonprofit organizations of charitably minded or public spirited people.

The bill further directs the Board promptly to store in foreign countries the commodities ultimately to be distributed abroad. I have in mind that it will take some months to set up a suitable organization to process and arrange for the ultimate distribution of these commodities. But to the extent that the Board determines that stated quantities of these commodities are ultimately to be distributed abroad those commodities should now be exported from the United States so that they do not continue to depress domestic farm markets. Storage costs

will probably be no greater abroad, but more important we must immediately remove these excess surpluses from over the head of the domestic market.

The bill further provides, however, that commodities thus stored abroad should continue to be under the exclusive jurisdiction of the United States until they are allocated for actual distribution to consumers; but they may not be returned to the United States except in an emergency.

Section 6 of the bill directs the Commodity Credit Corporation to deliver to the Board such surplus commodities as are to be distributed under the program without reimbursement. This, of course, means the surplus over and above what the President estimates as is necessary reserve for emergency purposes or can be sold under existing programs.

This provision presents a bookkeeping problem to the Government on which arguments can be made on both sides, but which I hope will not affect the achievement of the program. The bill might very well provide for full reimbursement to CCC for these commodities, but this would require large appropriations by the Congress to the Board. On the other hand, if these transfers are without reimbursement they will result in a bookkeeping deficit to CCC.

I would hope that the American people would never charge that bookkeeping deficit—and it is only a bookkeeping deficit—against the cost of the farm support program. For in large part, this is an economic program the consequences of which extend far beyond the farm economy. But in any event, this is a mere intragovernmental bookkeeping problem that should be resolved in the most expeditious manner.

The provisions of section 7 relate to agreements by the Board with distributing organizations. The bill contemplates that the actual distribution of these surpluses to needy peoples will be undertaken largely by nonprofit private organizations. We must have in mind that wheat must be milled into flour before it can be used by the needy. Cotton must be woven into cloth and made into sheets and towels before it can be used in underprivileged hospitals around the world. Most of these agricultural surplus commodities must be processed before their ultimate distribution.

I feel that most, if not all, processing, as well as the actual distribution of the commodities, should be done by private nonprofit organizations. I would also hope that the costs of the necessary processing and distribution could largely be defrayed by public subscription, at home and abroad, to these private organizations.

The bill would authorize the Board to permit these private organizations to contract with processors to process these commodities in exchange for the byproducts; with the limitation that the fair value of the byproducts cannot exceed the reasonable value of the processing. We would hope also that shipping companies might donate the use of otherwise unused cargo space to transport some of these commodities abroad. We must also contemplate that some needy recipients—such as hospitals and other institutions—could pay a modest charge for goods that they would be unable to buy at the full normal price. The bill, therefore, provides that these nonprofit organizations can charge an amount for the goods distributed by them under this program not in excess of their actual costs for the commodity, its processing, and its transportation, but not including administrative overhead. I feel that these organizations should defray their own administrative expenses from their own funds.

The bill also gives the Board authority to sell these commodities whenever it can do so consistent with the objectives of the program. The Board is not required to get the fair value of the commodity. Frankly, I doubt that there will be many occasions when the Board will be able to sell surplus commodities available to it having in mind that it is to receive only the surpluses not otherwise capable of being disposed of through existing programs. The bill would also authorize the Board, in exceptional cases, to defray the cost of processing and the cost of transportation. Funds for this purpose must, of course, be appropriated, except that any income received for the sale of commodities could be utilized to defray those obligations.

There is also provision in the bill permitting the Board to barter surplus commodities for raw materials needed for our national stockpile or for goods and services for Armed Forces personnel. And the Board might sell commodities for foreign currencies which it would then discount with the Export-Import Bank of Washington. The bank might then use those foreign funds for its general lending purposes.

Finally, Mr. Chairman, the bill provides that the act shall expire June 30, 1960. I do not propose that we hereby set up a permanent disposal board. I am most hopeful that we will adopt means of bringing future production more nearly in line with consumption so that there will be no future excess farm surpluses. This bill is designed only to distribute the existing excess surpluses.

The farm question is not a political matter, but is so vital an economic problem, to so large a segment of our economy, that it demands bipartisan consideration and bipartisan support. I urge this committee to report favorably to the Senate my bill to create an International Food Community Board.

Mr. CAPEHART. Mr. President, I again wish to suggest that, in my opinion, Congress ought to give the President and the administration a mandate and express the conviction that farm surpluses should be gotten rid of, either by sale, by barter, by exchange for foreign currency, or by giving them away to the poor people of the United States and of the world.

If there are any laws which interfere with the fast disposal of the farm surpluses, the administration ought to come before Congress and ask that such laws either be repealed or amended. We expect the administration to do what is necessary to get rid of the surpluses.

However, in my opinion, Congress, as the board of directors of the Government, has its own responsibility in the matter. We should either pass immediately S. 2852, or similar legislation, and thus notify the administration that, speaking for the American people, we expect the Government to take drastic action in order to dispose of the farm surpluses. The surpluses are no longer an asset, but a liability. As a businessman I have always believed it is essential to get rid of a liability.

I know the Committee on Agriculture and Forestry is meeting every day. I am not criticizing the committee. However, I am saying that Congress has a responsibility. We should accept the responsibility and we should give a mandate to the administration to get rid of the farm surpluses.

PROSPECTIVE REPORT ON IMPACT OF THE PEACEFUL USES OF ATOMIC ENERGY

Mr. ANDERSON. Mr. President, as most of our Members are aware, at the beginning of next week a highly important report will be submitted to the Joint Congressional Committee on Atomic Energy. This is the report by the panel on the Impact of the Peaceful Uses of Atomic Energy. I have not yet seen the panel's report; I do not know what it is going to say. I will not know until the report is formally presented to the joint committee on January 31, but I do know that nine outstanding private citizens and an able staff have been hard at work ever since the joint committee created the panel last March.

Because of the caliber of the men who are going to give us this report, and because of the qualifications of the 327 scientists, businessmen, and leaders in farm, labor, academic, and professional life who have given generously of their time and thought to the many problems on which the panel asked their advice, I am confident that whatever the report will have to say will be of outstanding interest to the United States and to all other nations of the free world.

The panel was appointed by the joint committee because it recognized that the country now is in a transitional period in regard to atomic energy. Under the Atomic Energy Act of 1954, we are moving out of a period of Government monopoly of atomic energy; and we are moving into a period in which the Government begins to share the atom, in all its many peaceful uses, with the American people in all their many livelihoods.

The joint committee asked the panel to study whether this transition is well begun, and whether the laws and administration of those laws are such as to make possible the full and early benefits of all peaceful uses, and what impact these peaceful uses will have on our way of life, our economy, our industry, and our natural resources, and including the effect on employment.

Next week, we shall know what the panel's findings and recommendations are. From the makeup of the panel, I am sure, that whatever its findings, the report will be a real stimulus to fruitful discussions in this session of the Congress. The nine panel members are:

Robert McKinney, chairman. Mr. McKinney is editor and publisher of the Santa Fe New Mexican, and a former Assistant Secretary of the Interior.

Ernest R. Breech, chairman of the Ford Motor Co.

George R. Brown, chairman of the Texas Eastern Transmission Co., and a former member of the President's Materials Policy Commission.

Sutherland C. Dows, president and chairman of the Iowa Electric Light & Power Co.

John R. Dunning, physicist, and dean of engineering at Columbia University.

T. Keith Glennan, president of the Case Institute of Technology, and a former member of the Atomic Energy Commission.

Samuel B. Morris, general manager and chief engineer of the Los Angeles Department of Water and Power; former member of the Materials Resources Planning Board and the President's Water Resources Policy Commission.

Walter Reuther, president of the United Auto Workers, and vice president of the AFL-CIO.

Frank M. Folsom, president of the Radio Corporation of America.

The work in assembling the monumental collection of material on which the report is based was carried out by an able panel staff, of which Herbert I. Miller is executive director; and Walter A. Hamilton, executive secretary.

I commend to the Congress a careful study of the report when it becomes available.

TRIBUTE TO COL. C. M. BOYER

Mr. THURMOND. Mr. President, recently the Reserve officers of our armed services received with regret the news that Col. C. M. (Count) Boyer, United States Army Reserve, retired, will resign this year from his duties as executive director of the Reserve Officers Association.

As a former president of the ROA, I have had the pleasure of working very closely with Colonel Boyer on many occasions. Like others who know him intimately, I have found him to be an outstanding American citizen soldier who, through his advocacy of a strong combat-ready Reserve, has made immeasurable contributions toward keeping our Nation prepared against enemy attack.

This great citizen soldier has served his country as a Reserve officer for more than 30 years, and he has worked with the ROA for 10 years. During the 4 years he has served as executive director of the ROA Colonel Boyer has reflected the views of Reserve officers on Capitol Hill, at the Pentagon, and at the White House. His success in fulfilling his many responsibilities can be measured to some degree by the high respect in which he is held by legislators, Government officials, and officers of our military services.

I regret to see Colonel Boyer retire, but I feel that his is a well-deserved retirement. It is a comfort to know that he will be retained by the ROA as a consultant on Reserve affairs.

At this point I ask unanimous consent to have printed in the RECORD an article from the Army Times of January 14, 1956, entitled "Boyer To End Active Decade With ROA Next April or June."

There being no objection, the article was ordered to be printed in the RECORD, as follows:

BOYER TO END ACTIVE DECADE WITH ROA NEXT APRIL OR JUNE

WASHINGTON.—Col. Charles M. Boyer, longtime executive director of the Reserve Officers Association, has announced he will retire either in mid-April or in June, after the next ROA national convention.

He will be succeeded by Brig. Gen. Harold R. Duffie (retired), ex-commanding general of the New Orleans Port of Embarkation and presently an ROA assistant executive director.

Colonel Boyer, who will be 69 next month, jokingly told the Times he was retiring because "I just don't have enough time for my tennis. I'd like to be playing three or four times a week," he said, "but as it is I can only get out on weekends." (He is a former Southern Veterans tennis champion and today is one of the Army-Navy Country Club's most outstanding players.)

During his 10 years with ROA, eight of which he has spent as executive director, Colonel Boyer has been a familiar figure on Capitol Hill, the Pentagon and at the White House. He has been instrumental in the passage of much of the significant Reserve legislation since World War II.

He lists as laws "ROA has been primarily responsible for during the past ten years" the inactive duty training bill for Army and Air Reserves; the Reserve retired law; disability retirement for individuals with less than 30 days' active duty, or while engaged in inactive duty training; the Armed Forces Reserve Act of 1952; the Reserve Officers Personnel Act of 1954 and the Reserve Forces Act of 1955.

Colonel Boyer has had over 30 years' service as a practicing citizen-soldier with the Army Reserve. He is a former commanding officer of the 524th Coast Artillery Regiment in his native Atlanta, Ga.

With the advent of World War II and call to active duty, he served at Fort Barrancas, Fla., Pensacola, Atlanta; and as commanding officer of antiaircraft artillery, Harbor Defense, Long Island, Fort Wright, N. Y.

Due to his vast knowledge of Reserve affairs, he was transferred to Washington for duty in the Chief of Staff's office as assistant to the Executive for Reserve and ROTC affairs. In this capacity he worked closely with Gen. George C. Marshall, then Chief of Staff.

At the close of the war, Colonel Boyer accepted the bid of ROA's trustees to join the association as assistant executive director. Several years later he was named executive director.

Colonel Boyer is a graduate of William Jewel College, Liberty, Mo., where he was a four-letter athlete.

"The past 10 years have been hectic ones," he said, "but I have had a lot of satisfaction from all of our accomplishments.

"ROA is in the best financial shape in its history. Membership is on a decided increase and the organization enjoys the highest prestige with the Pentagon, the White House, Congress and the public that any organization could ask for.

"General Duffie has a challenge to carry ROA to even greater heights."

General Duffie is a native of Boston. He enlisted in the Army in 1913 and during 41 years of service rose through the ranks from private to brigadier general.

He served on the Mexican Border in 1916, in France during World War I and in England and France again during World War II. Following the war he was commanding officer of Camp Kilmer, N. J., and then commanding general of the Transportation Center at Fort Eustis, Va.

INSURANCE AGAINST FLOOD DAMAGE

Mr. NEUBERGER. Mr. President, during the past months, the whole Nation has been shocked by reports of the terrible damage suffered by areas which have been struck by floods, hurricanes, and other disasters—first on two separate occasions in New England and more recently on the west coast, in California, and in my own State of Oregon.

During the weeks preceding the resumption of the congressional session, valuable studies of insurance or other possible alleviation of the heavy losses caused by such disasters have been carried on, under the leadership of the distinguished junior Senator from New York, by the Senate Committee on Banking and Currency. I know that all of us whose home States are always in danger of disasters, such as those of the last year, can confidently expect that these studies will result in the adoption of a forward-looking Federal disaster insurance program this year.

The need for Federal action in this field was again emphasized last week, when the American Insurance Association issued its report on a study of flood damage in the Northeastern United States. The conclusions of this report uphold the conclusions reached in an earlier 1952 study made for the American Insurance Association, that flood insurance is a problem beyond the scope of any feasible commercial insurance plan. When, after repeated study, the private industry most directly familiar with a widespread need concludes that it cannot feasibily meet that need, that is the very occasion when the American people have a right to turn to their elected government for constructive action.

Mr. President, I ask unanimous consent to include in the CONGRESSIONAL RECORD an article from the New York Times for Sunday, January 22, 1956, discussing the report on flood insurance of the American Insurance Association.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

FLOOD INSURANCE HELD UNFEASIBLE—SURVEY OF 1955 DISASTERS CONFIRMS VIEW, ADDS THAT WORSE ONES MAY OCCUR

(By Gene Smith)

Insurance against flood damage is not feasible.

The insurance industry has long felt that this was the only position it could adopt. Now it knows. An intensive study of the damage caused by last August and October's floods in the Northeastern States has confirmed a 1952 report on the disastrous floods in Kansas the year before.

The 1952 report, which was approved by the National Association of Insurance Agents, concluded that "insurance against the peril of flood cannot successfully be written."

Last week the American Insurance Association issued the combined report of its flood committee and a 29 page Report on Floods and Flood Damage of 1955 in the Northeastern United States. Like the 1952 version, this report was prepared by the engineering firm of Parsons, Brinckerhoff, Hall & Macdonald.

UPHOLDS 1952 VERDICT

Like the 1952 report, it also concluded that there is no basis for altering the traditional industry position on the impracticability of covering flood damage.

"On the contrary," A. I. A. reported, "the further study that has been given this subject has supported and strengthened this conclusion."

The engineers' report is even more pessimistic, warning that "the Northeastern States have not yet experienced the greatest possible floods due to rainfall."

"The maximum possible rainfall exceeds by a considerable amount any measured precipitation measured in the past," it continues. "The greatest storm tides have probably been approached on several occasions at certain locations on the coast of

southern New England. Other Atlantic coastal regions have not yet experienced the greatest possible storm tides."

Some inkling of the severity of the problem is seen in the conflicting damage reports that are carried in the study. The Corps of Engineers placed direct and indirect damage at $1,600,000,000, while the Federal Civil Defense Administration estimated direct damage alone at $445 million.

The engineering firm, combining these and other estimates, arrived at the compromise figure into these percentages: Industrial properties, 35 percent; commercial, 14; public utilities, 19; public facilities, 20; residential property, 9; and agricultural and miscellaneous, 3 percent.

Parsons, Brinckerhoff was originally commissioned by AIA to study the August 1955 floods in Massachusetts, Rhode Island, Connecticut, New York, New Jersey, and Pennsylvania. Before the study could be completed the October floods came. The study was extended to include these also.

As the report was being completed, the first of the Pacific coast floods occurred. On the chance that unique meteorological or other positive factors not previously considered might be involved in the Far West, the engineers were again requested to enlarge their study.

HURRICANES DIVERTED

Although the third phase has not been completed, indications are that it will offer nothing to change the overall conclusions. The completed study notes that the northeastern floods were caused by tropical hurricanes diverted from their previous normal paths by unusual meteorological conditions.

"Such storms have been considerably more frequent on the north Atlantic seaboard since 1938 than in the preceding hundred years," the engineers reported. "Whether the situation is a result of permanent change in climatic conditions or is only in the nature of a temporary weather cycle is a moot question among meteorologists, and probably will not be definitely answered for many years."

The possibility of such a cyclic change should not be overlooked, they added. This is especially true in the light of final tabulations which show a total of 24,654 residential dwellings in the 6 States were damaged or destroyed in the August floods alone.

Frank A. Christensen, president of the America Fore Group, in a year-end report last week, said:

INSURANCE NO ANSWER

"It is still our considered opinion that flood insurance in any form, whether undertaken by private companies or through an agency of the Government, would not provide the answer to the age-old problem. In any case, flood control and a system of relief and rehabilitation will have to be pursued intelligently and effectively."

The AIA's committee concurs with the following statement regarding the engineering report:

"A realistic approach to the problem of flood damage would still seem to be an orderly plan for relief and for rehabilitation of essential services, plus a long-range flood-control program in which Federal, State and local governments could cooperate to reduce the probability of damage by flood.

"It would be inappropriate for the insurance business to volunteer recommendations to the Congress of the United States regarding the course it should follow in dealing with the problem of flood damage, but it is not inappropriate to repeat the offer previously made by capital stock insurance companies and their local agents to cooperate fully by making available their facilities in connection with any flood damage or indemnity program which might be enacted by the Congress or of any State or other competent authority."

PROPOSAL FOR A FAMILY ALLOWANCE PROGRAM

Mr. NEUBERGER. Mr. President, I contributed to the Crosier Missionary magazine for February 1956 an article setting forth the case for my Senate resolution urging a study of Canada's famous family allowances program for children.

My article, entitled "Social Security for America's Children," makes the case for instituting this beneficial program in our own country.

I have been pleased to write this article for the Crosier Missionary, which is published in the city of Onamia, Minn., under the editorship of the Reverend Benno Mischke, O. S. C.

I prophesy that the day will come when family allowances will be as much a part of America's Social Security system as old-age and survivors' benefits. After all, let us not forget that, 20 years ago, social security itself was considered something drastic and revolutionary. Now social security is accepted by 99 percent of the American people as a program wise and necessary in concept.

Mr. President, I ask unanimous consent that the article may be printed in the RECORD at this point as a part of my remarks.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

SOCIAL SECURITY FOR AMERICA'S CHILDREN?

(By RICHARD L. NEUBERGER, United States Senator from Oregon)

In the United States we have worked out various programs for giving aid and comfort to people in their later years. These programs take such form as old-age assistance, social security, and disability benefits. Public opinion demanded this protection, so men and women would have some safeguards against poverty and neglect when they become too old to work steadily.

Ironically, this richest of all nations has no comparable program for its children. This is not true of the country which is our closest neighbor. For the past 10 years Canada has had in operation a system known as Family Allowances. It began as a controversial experiment. Today it is accepted by Canada's four major political parties, and no responsible leader of government even has remotely suggested that Family Allowances should be abandoned. Indeed, prominent Canadians compete with each other to promote ideas for the extension of this program which has meant so much to Canada's children and their parents.

Because of the success of family allowances in Canada, I have introduced a resolution in the United States Senate calling for a full-scale study of what has been accomplished in this field by the vast northern nation which Rudyard Kipling once described as "Our Lady of the Snows." It seems to me that the welfare of America's boys and girls demands such a study, particularly inasmuch as 89 percent of the children in the United States are dependent for food, shelter, clothing, and medical care on only 33 percent of the wage-earners.

Furthermore, I believe the best way to solve the riddle of juvenile delinquency is to keep the mother in the home. When the mother must leave the hearth to help nourish and sustain her children, vandalism is encouraged. It is far better, in my opinion, for children to be at the apronstring than at the latchstring. Suppressing so-called comic books is a feeble blow at juvenile delinquency compared with keeping the mother with her youngsters. Family allowances will enable the mother to stay at home by making it less necessary for the mother to get a job.

What are family allowances and how will they operate?

The family allowance program in Canada consists of a series of monthly payments to parents of children under 16 years of age. The size of the payments varies with the age of each child. This is the schedule of allowances:

	Per month
Children under 6	$5
Children aged 6 to 10	6
Children aged 10 to 13	7
Children aged 13 to 16	8

The payments are made to the mother. All Canadian mothers receive the allowances regularly on the 20th of every month. No "means" test decides which youngsters shall receive the benefits. The money goes to the children of lumber workers in British Columbia, to the children of truck drivers in Manitoba, to the children of Mounties on patrol in the Yukon, to the children of industrialists in Toronto, to the children of Eskimos in the Northwest Territories. There is no stigma attached to the allowances. They are universal. They go to all Canadian families.

What are the allowances used for? Canadian law merely requires that they must be spent for "the health and welfare of the child." And they are so spent.

In 1951, after the family allowance project had been in operation for 6 years, Laval University, of Quebec, conducted a searching study into the ways in which the funds had been spent. The university's researchers established that the allowances had been used most frequently for the following purposes:

1. Children's clothing.
2. Insurance policies for children.
3. Medical care and medicines for children.
4. More nutritious food for children.
5. Children's savings accounts in banks.
6. Toys for children.

A few months ago the following statement was made to me in a letter from Canada's Minister of Health and Welfare, the Hon. Paul Martin, who has supervised so effectively an orderly program for handling the Salk anti-polio vaccine in that nation.

The success or failure of family allowances in Canada is no longer a matter of debate in this country. The program is accepted by all political parties, by the labor parties, by social workers, and by the population at large. * * * We have received many letters from parents and reports from social workers to the effect that receipt of family allowances has been of great value to a large number of families, the great majority of whom devote the allowances to increasing the welfare and health of the child in the numerous ways which that may be done.

Abundant evidence exists in Canada that family allowances have had a favorable impact on such vital problems as juvenile delinquency, child health, infant mortality, and general education, and have at the same time broadened the market for many consumers' goods.

What pertinence does the Canadian experience have for our own country? Why should we contemplate family allowances here?

To begin with, children are the most precious wealth of any nation. Money, natural resources, political power, diplomatic strength, military might—these things cannot be compared to a country's boys and girls, because they are wholly dependent on the health, morale, and attitudes of the next generation of citizens.

America is growing its biggest crop of children. The excess of births over deaths in this country is now running at the rate of 2,600,000 annually, or more than 200,000 every

month. During 1954 the total number of births of new Americans passed the 4 million mark. Never before in our history had this occurred. In other words, America is enjoying a boom in babies. Could any boom be finer?

We want these babies to grow up to be happy, healthy, and prosperous. Their standard of living will contribute materially to this. Until they are grown, the standard of living of their parents will determine their own.

What is wrong about assisting this segment of the population to furnish adequate food, shelter, and clothing for America's children.

I realize that some persons will shun a proposal even to study an important new social program of this sort. Yet we must be aware that every new idea has had its bitter critics. There were men who ridiculed as folly the spending of a meager $2,500 in public funds to send Lewis and Clark to the Pacific Coast with our country's flag. Let us not forget that social security itself was condemned less than 20 years ago as a cruel hoax. Tories in Congress charged that "the liberty of all the people of the United States is in jeopardy" when Theodore Roosevelt advocated a Pure Food and Drug Act in 1908 to safeguard the substances which the men, women, and children of the land were putting into their stomachs.

Happily there has been a vast majority of Americans in nearly every era who have said with the poet James Russell Lowell:

"New occasions teach new duties
Time makes ancient good uncouth."

That sort of vision is needed now when we consider the question of family allowances. But I can, of course, anticipate the kind of opposition which we shall hear. I should like to answer several of these charges in advance so that people can be ready to study the issue dispassionately and with an understanding of the facts.

First. It will be said, of course, that family allowances are socialism, creeping or otherwise.

Canada has has family allowances for 10 years now, and during those 10 years American big business has hurried to invest its money across the border in Canada. While the family allowance program has been in effect, the value of United States investments in Canada has rocketed from $4,900,000,000 to approximately $9 billion. This gain of nearly 100 percent demonstrates two factors conclusively: First, that Canada's economy has been sound and prosperous while family allowances have been in effect; and, second, that this program has not discouraged American capitalists from risking huge amounts of capital in Canada.

Second. It will be claimed that the family allowances will not be spent for their principal purpose, which is the health and welfare of America's children.

I challenge any such assumption. Canada has had comparatively few instances in which legal action was required to bring about compliance with the Family Allowances Act. In 1952 one of Canada's celebrated Mounties, George J. Archer, superintendent of the Royal Canadian Mounted Police, said to me:

"We feel that the family allowances law is obeyed in the great majority of instances, because even the worst scoundrel in other things has a sense of obligation where his children are concerned.

"After all, compliance with the act rests with the mothers of the country and their feelings of motherhood. Can any reliance be more dependable than this?"

Third. It will be claimed that there should be a means test, that the allowances should go only to families who are in need.

In my opinion, this would defeat the entire purpose of the program. My wife and I have seen Canadian mothers proudly spending their family allowances checks for clothing, for doctors' bills, for nutritious children's foods, for music or ballet lessons, for electric toy trains, and for dolls. The lines which often form in front of children's shoe stores in cities like Edmonton or Winnipeg are symbols of family allowance days. This candid spending of the funds never would take place if there were a means test. The allowances would be used furtively and with a sense of shame, if at all.

It is likely that the army of investigators needed to police the system, if a means test were instituted, actually would cost more money than the relatively small number of checks going to families who do not need them. In Canada, the total cost of administering the family allowances system amounts to only about 2 percent of the total funds disbursed. Administrative charges would be many times this proportion if a means test were applied.

Family allowances should be paid as a matter of right and not because of poverty. We have visited well-to-do families in Canada where the allowance checks were scrupulously dedicated to the welfare of the children. The family of a utility executive was collecting a fund to let his three daughters travel in Europe after their graduations from secondary school. A banker intended to buy annuities for his son. A high-ranking officer in the Mounted Police planned to use the collected family allowances checks to help put his boy through military school.

Fourth. It will be claimed that families with children should be assisted through higher income-tax exemptions for children rather than by family allowances.

This is an argument with some validity, but it fails to recognize the fact that it would prove of relatively little help to those who need assistance most—the families in the lower income brackets who already pay only meager or no income taxes because of the skimpiness of their incomes. Exemptions benefit most those with larger incomes in the higher tax brackets.

In addition, a cut in taxes puts no compulsion on the family to concentrate the increased income on items of special value and importance to the children. Family allowances, however, are in a different category. They are earmarked for the boys and girls of the family. The mother receives the check with the understanding that she is to spend it for the health and welfare of the child. Practically all mothers heed this stipulation. This is why the consumption of milk, baby foods, and children's shoes increased immediately in Canada when family allowances were enacted. No such phenomenon would have occurred had there simply been a general tax reduction.

In bringing the great question of family allowances to the attention of Congress, it seemed to me the best procedure was to sponsor a study of Canada's successful system rather than to introduce a bill immediately for a similar program in the United States. We can profit by Canada's experience. In addition, knowledge of what Canada has accomplished will serve to alert American public opinion to the arguments and the need for a program of family allowances on our side of the international boundary.

This approach was justified when my resolution attracted the wholehearted backing of seven illustrious cosponsors—Senators PAUL H. DOUGLAS, of Illinois; ESTES KEFAUVER, of Tennessee; HERBERT H. LEHMAN, of New York; WAYNE L. MORSE, of Oregon; JOHN F. KENNEDY, of Massachusetts; HUBERT H. HUMPHREY, of Minnesota; and PATRICK MCNAMARA, of Michigan.

The number of the resolution is Senate Resolution 109, and it has been referred by the Presiding Officer to the Senate Committee on Labor and Education, whose chairman is Senator LISTER HILL, of Alabama. Letters and telegrams to Senator HILL and, particularly, to your own Senators and Congressman will help to secure favorable action. There is no reason why the resolution should not be passed, if the public will support it. Only apathy could bring about its defeat. The sum called for to study the Canadian family allowances program is a mere $26,000. Compare this with the $250,000 investigations which have become so common.

In the last analysis, the future is reliant wholly on a country's children. Their welfare, their health, their mental and moral outlook, their spiritual well-being, their nutrition, their schooling, their recreation—these things are paramount. I am convinced, from what I have seen and observed in Canada, the family allowances can contribute beneficially toward such goals.

Family allowances must be the next great step forward in social security for the United States—security at the beginning of life's hazardous trail, as well as at its end.

Mr. NEUBERGER. Mr. President, I thank the distinguished Senator from Illinois [Mr. DOUGLAS] for yielding to me. I wish to compliment him upon his vigilant championing of the public interest in the case of the natural gas bill.

Mr. DOUGLAS. Mr. President, I appreciate what the Senator from Oregon says. It so happens that 30 years ago I wrote a book on the subject of family allowances. I am interested to see this subject revived in such capable hands after the passage of so long a period.

Mr. NEUBERGER. I shall be delighted, when this subject comes before the Senate, to have the benefit of the expert observations and wisdom of the Senator from Illinois.

SENATORS COURAGEOUS

During the delivery of Mr. DOUGLAS' speech later today,

Mr. SYMINGTON. Mr. President, in the St. Louis Post-Dispatch of January 6, 1956, appeared an editorial entitled "Senators Courageous."

It is about the book Profiles in Courage, written by the distinguished junior Senator from Massachusetts [Mr. KENNEDY].

Those of us from both sides of the aisle who know the record of our author-colleague, both in the war and during the past year, know that his own profile well illustrates the title of his great book.

Mr. President, I ask unanimous consent to have this editorial printed at this point in the RECORD.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

SENATORS COURAGEOUS

If Senator KENNEDY of Massachusetts had made a vivid, moving speech on the opening day of this session of Congress embodying the essence of his new book, Profiles in Courage, and citing examples, the Washington correspondents would have reported it extensively.

By now many editorials would have been written and printed in warm commendation of the young Senator's speech. Thousands of citizens, eager to go more deeply into the subject of courage in politics, would be reading his book.

Senator KENNEDY's interest in courage among political leaders began when he first

read about John Quincy Adams. Son of the second President, J. Q. Adams was a loyal Federalist and an opponent of Jefferson who defeated the first Adams in 1800. When Jefferson in a great and farsighted act of statesmanship, purchased the Louisiana Territory, the Federalists denounced it from the housetops. But one Federalist Senator did not go along—John Quincy Adams of Massachusetts. He strongly backed Jefferson and thus angered many constituents. When Jefferson called for an embargo on British imports because the Crown was seizing our ships and impressing our seamen, Adams again strongly supported Jefferson. The Senator was condemned by New England commercial interests and newspapers as a "deserter," "a party scavenger," "a renegade" who "associated with the assassins of his father's character."

But Adams, although bitterly turned on by friends, remained unshaken by the outpouring of hate. After he had been defeated for the Senate, his integrity was rewarded when he was elected sixth President in 1824.

"How many John Quincy Adamses have there been?" young Senator KENNEDY asked himself. And when the World War II naval hero entered his long hospitalization, after a spinal operation in October 1954, he began to read American political history intensively to see. Profiles in Courage, is the result and not many times has convalescence been better used.

Three others among JOHN KENNEDY'S selection of courageous Senators staked political careers on their unpopular efforts to prevent the breakup of the Union over slavery—Daniel Webster of Massachusetts, Thomas Hart Benton of Missouri, and Sam Houston of Texas. Seeking to keep the Lone Star State out of the Confederacy, Texas' soldier-Senator said: "I know neither North nor South; I know only the Union."

Next comes a completely forgotten Senator, Edmund G. Ross of Kansas. He went to Congress to oppose President Johnson on Reconstruction policies and wound up casting the vote that saved Johnson from removal following impeachment by the politically hostile House. Ross saw that Johnson was not getting a fair trial and voted according to his conscience. Doing so, Ross said: "I look down into my open grave." For Ross knew that Kansans would scream for his head, as they did.

Then there was Lucius Q. C. Lamar of Mississippi, an ex-Confederate officer, who set his State aflame by calling for a policy of moderation and adjustment with the North. Finally Senator KENNEDY tells of the courage of two recent Senators—the unswerving George W. Norris of Nebraska and Robert A. Taft of Ohio. He does not say each Senator was right in his position, but he salutes willingness to risk denunciation, as when Taft, in 1946, opposed the Nuernberg war crimes trials as "a blot on the American record we shall long regret."

These of course do not exhaust the list of men of courage in the history of the Senate and the junior Member from Massachusetts cites others as he goes—Henderson of Missouri, Trumbull of Illinois, Grimes of Iowa. And he names some governors, too, Hughes in New York and Altgeld in Illinois.

Inspiring as it is to read these stories of courage in men who sat in elective office and felt the wrath of embittered constituents, it is hardly less moving to read Senator KENNEDY'S own description of the pressures that beat down on Members of Congress and his own analysis of courage in public office today. As he says:

"Only the very courageous will be able to keep alive the spirit of individualism and dissent which gave birth to this Nation, nourished it as an infant and carried it through its severest tests upon the attainment of its maturity."

We hope Profiles in Courage becomes a national best seller, especially in Washington—and among administrators as well as lawmakers.

Mr. DOUGLAS. Mr. President, the sentiments expressed by the Senator from Missouri are, I am sure, those of every Member of this body.

The PRESIDENT pro tempore. The routine morning business is concluded, and the Chair lays before the Senate the unfinished business.

AMENDMENT OF THE NATURAL GAS ACT, AS AMENDED

The Senate resumed the consideration of the bill (S. 1853) to amend the Natural Gas Act, as amended.

The PRESIDENT pro tempore. The Chair recognizes the Senator from Illinois.

Mr. DOUGLAS. Mr. President, in accordance with the agreement reached last night, I am very glad to yield temporarily to the Senator from Kansas [Mr. CARLSON] with the understanding that I shall not lose my rights to the floor.

Mr. CARLSON. Mr. President, I wish to express my sincere appreciation to the distinguished senior Senator from Illinois for giving me an opportunity to make a brief statement, with the understanding that he will resume the floor after I have concluded my remarks.

The PRESIDENT pro tempore. The Senator from Kansas is recognized.

Mr. CARLSON. Mr. President, I should like to conclude my statement without yielding, in order that I may keep its context uninterrupted. I shall be glad to yield after I have concluded my remarks.

Mr. President, of the many complex issues now before Congress, few if any call for a more immediate—or a sounder—solution than that posed by the recent attempt, through a Supreme Court decision, to convert the production of natural gas into a public utility.

Natural gas currently accounts for about a fourth of our Nation's energy supply. Some 25 million homes, in all parts of the country, already enjoy its benefits. Yet the demand for this clean, convenient, efficient, and relatively low-cost fuel still continues to grow. In many of our largest cities, hundreds of thousands of would-be consumers are on waiting lists for natural gas when and if it becomes available.

In 1954 the total field price of the gas used by the Nation's 25 million residential consumers amounted to less than $180 million. This was $7.20 a year for the average consumer, or 60 cents a month. Now before the Senate there is pending proposed legislation, popularly known as the Harris bill, which would, if enacted, preclude any substantial increase in these figures.

Of even greater importance, volume wise, is the amount of gas used industrially and commercially: Nearly four times as much as is used by residential consumers. It is here that gas meets its strongest competition from coal and oil. Nevertheless, an adequate supply of natural gas, or the absence of such a supply, can also have a tremendous effect on industrial development. For many industries natural gas is very much the preferred fuel. For many other industries, primarily those in the petrochemical field, it is also a very vital raw material.

Coming as I do from a gas-producing State, it seems to me that several questions arise as to the need for Federal control of the production of natural gas.

Are Federal utility controls over the production of natural gas the answer to our problem? Does the history of the natural gas industry reveal any clear and imperative need for such controls over gas at the wellhead? Is there an inordinately large concentration of gas production in the hands of a few large companies? Is it fair or desirable to single out this one competitively produced commodity, during peacetime, for utility price-fixing at its point of production? Will such price-fixing stimulate the search for more natural gas and will it increase the amount of gas going into interstate commerce?

My study of this problem has convinced me that the answers to all these questions are indisputably in the negative. I am further convinced that Senate passage of the Harris bill, as amended and approved by the House, is clearly in the public interest. I am convinced that unless this bill is passed, all nonproducing areas, will sooner or later experience serious shortages of natural gas.

Before going into the reasons for these views, let us take a quick look at just what the Harris bill is.

In the first place, the Harris bill sets up new consumer safeguards against the possibility of unreasonable prices. It is not a decontrol bill. It does remove gas producers from direct utility control, but it does place the ceiling of a reasonable market price on the amount an interstate pipeline may pay producers for their gas and then pass it on to consumers.

The Federal Power Commission is given the authority to determine what this reasonable market price is.

In short, the Harris bill restores competitive and risk-taking conditions at the field level. To the consumer protection afforded by this competition, it adds another protective device—that of a reasonable market price as determined by the Federal Power Commission. It was exactly this sort of added protection which was urged by consumer representatives in both the House and Senate hearings.

The events which have led up to the pressing necessity for passage of the Harris bill are unprecedented in our Nation's history.

First of all, it must be understood that the overall natural gas industry is divided into three distinct segments—production, transmission, and distribution. At one end of the line is the producer, the company or individual that puts risk capital into the search for natural gas. When and if he finds gas, the producer sells it to an interstate pipeline which transports it across State

lines to a consuming area. Here a distributing company takes delivery and then pipes the gas to the burner-tip of the consumer.

Two of these segments—transmission and distribution—are now subject to regulation. They enjoy the right of eminent domain. Their competition is limited by Federal authority in the case of interstate pipelines, and by State or municipal authority in the case of distributors. Because these two phases of the business are, in a sense, legal monopolies, they have their prices fixed by public agencies. In return, however, they are granted what amounts to a virtually guaranteed return on their investment, which usually is about 6 percent.

In brief, then, transmission and distribution companies enjoy both a minimum of competition, and a minimum of risk.

In the case of producers, however, the situation is quite different. No governmental agency shields the producer from competition. He must compete vigorously with other producers for leases. Nor does any agency protect him from risk. If he hits a dry hole, it is his own bad luck. He has no right of eminent domain, no assured market, no guaranteed return on his investment. To him go none of the benefits of a public utility, nor does any governmental agency, under our laws, have the right to grant him any of these benefits.

That being the case, how is it, then, that the producer of natural gas has fallen under the shadow of Federal utility control?

The answer lies in some ambiguous language in the Natural Gas Act of 1938. That law was passed to fill a regulatory gap. Up until then, gas producers were subject—as they still are—to the regulatory functions of the various State conservation agencies. Distributing companies were subject to State or municipal regulation. But because the interstate pipelines operated in interstate commerce, neither State nor municipal authorities could regulate their activities.

Congress filled that gap in 1938 with the Natural Gas Act. It gave the Federal Power Commission jurisdiction over natural gas companies selling gas in interstate commerce for resale, which was clearly the function of the transmission companies. At the same time, however, Congress made it clear—or thought it did—that the Federal Power Commission was not to assume jurisdiction over the production or gathering of natural gas.

Section 1 (b) of the act provided that the provisions of the law "shall not apply to any other transportation or sale of natural gas or to the local distribution of natural gas or to the facilities used for such distribution or to the production or gathering of natural gas."

In 11 separate cases, up to and including the Phillips case, the Federal Power Commission recognized this clear-cut exemption, and ruled that it had no jurisdiction over independent gas producers; that is, those not affiliated with an interstate pipeline.

On June 7, 1954, however, the Supreme Court, in the Phillips case, handed down a split decision which rewrote the law. It ruled, in effect, that independent gas producers were making sales of gas in interstate commerce for resale and hence were subject to the jurisdiction of the Federal Power Commission.

In so ruling, the five-man majority of the Supreme Court ignored the intent of Congress, as clearly revealed in the legislative history of the Natural Gas Act. By judicial fiat, it rendered null and void the exemption from Federal utility control which the act plainly granted to the production and gathering of natural gas.

In effect, then, the Supreme Court rewrote the law. Its reason for its startling new interpretation was that Congress passed the Natural Gas Act in order to protect consumers, and that such protection demanded Federal control over producers and gatherers of gas, as well as over those who merely transport the gas.

The law, of course, as passed by Congress, reads quite differently, but ignoring that fact for the moment, let us see if such Federal protection was actually necessary. In other words, what happened to the field price of gas in the 16 years between 1938 and 1954, when producers were entirely free of Federal control? And what happened to the residential retail price—the price that consumers had to pay at their burner-tips?

In 1938, the average wellhead price, according to Bureau of Mines figures, was 4.9 cents for each thousand cubic feet of gas. In 1953, the year just before the Phillips decision, the price was 9.2 cents per thousand cubic feet. During this same period, the cost-of-living index—the Consumers Price Index—went up 90 percent. The field price of gas, however, went up a little less than 90 percent. In other words, the gas producer was getting less money—in terms of real purchasing power—for his gas in 1953 than he was in 1938.

What happened, without controls, to the price the consumer had to pay? In city after city, natural gas replaced manufactured gas. Since the latter costs several times as much to make as natural gas costs, even after being transported hundreds of miles to the city gates, substantial savings were made possible at the retail level. During the 16 years when the cost of living was going up 90 percent, the retail cost of gas for residential consumers increased only 7 percent. If that was unreasonable, then what this Nation needs is more prices that are similarly unreasonable.

A fact unknown to many people is that the field price of gas is a very small factor in the ultimate price paid by the residential consumer. It currently amounts to only about 10 cents out of every dollar the consumer pays. Even if the Federal Government confiscated every gas well in the Nation and gave the gas away free, so long as it lasted, the average consumer would save only about 2 cents a day.

Most of the money the residential consumer pays—about 90 percent—goes to pay, not for the gas, but for the service of transporting and distributing it. And the more gas the pipeline and distributor can buy and sell, the larger the volume, the cheaper the gas becomes on a unit basis.

The greatest ultimate benefit for everyone concerned—producer, transporter, distributor, and consumer—can best be derived from large-scale sales over a long period of time.

Just as it is obvious that the risk-taking and competitive business of producing gas has none of the characteristics of a public utility, it is equally clear that there is no semblance whatever of monopolistic conditions in this phase of the overall industry. Recent figures show that there are more than 8,000 independent gas producers actively engaged in selling gas in interstate commerce. No single one of these producers sells as much as 5 percent of the gas used in this country. Of America's 452 leading industries, 382 show a greater concentration of control over output than does natural-gas production.

In 1949, the Department of Commerce released a study on this very matter. It revealed that in gas production, the first 8 companies accounted for 28 percent of the output. In copper, the first 8 companies accounted for 91 percent of the output; in iron ore, the first 8 companies accounted for 77 percent; in lead, 70 percent; in zinc, 60 percent.

Of the extractive industries, only bituminous coal, with a figure of 24 percent, ranked lower on the concentration scale than natural gas.

What about some of the other industries? In cigarettes, the first 8 companies in this Nation accounted for 99.7 percent of the output; in steel works and rolling mills, 62.8 percent; in wholesale meat packing, 53.6 percent. And as we all well know, the first three companies in the automobile industry account for more than 90 percent of the total output.

It is plain as the nose on one's face that if natural gas production is a monopoly, so are most of the other great industries of the Nation. If natural-gas production is to be made a Federal public utility on that basis, then so should most of the other great industries.

To make the production of natural gas a Federal public utility would set a precedent which could later be applied, with equal justification, to almost any business or industry that turns out consumer products. As the old Chinaman once said, the longest journey begins with but a single step.

But will imposing utility controls on the production of gas increase the available supply? Will it mean lower prices? The long-range results, I am convinced, will be exactly the opposite.

We can already see signs of the coming trend. In 1953, for example, the large interstate pipelines were able to sign up reserves of new gas amounting to 6.4 trillion cubic feet. The following year, when the Phillips case decision dropped like a bombshell, these pipelines were able to sign up only 2.3 trillion cubic feet of new gas—less than the amount of their annual marketed production. Such a trend spells shortages in the years ahead.

The Supreme Court's unfortunate decision is also reflected in the gas fields themselves. Late figures show that in 1955 oil-well completions increased about 8 percent. Gas-well completions, however, declined about 12 percent. Here, too, we can see the foreshadowing of coming shortages.

The fact of the matter is, of course, that of today's marketed production of natural gas, one-half is consumed in the producing States. Unless the Harris bill is passed, we must surely expect to see the amount consumed in the producing States go up and up and up. We can expect, too, to see a further drift of industry to the States where there is plenty of fuel available.

Under utility controls, with producers being allowed only 6 percent or thereabouts on their investment—and being allowed this only on their successful ventures—only the high-cost gas will find its way into interstate commerce. A producer will naturally make every attempt to see his low-cost gas inside the producing State, where he can get a competitive price for it. To sell it in interstate commerce would, from his point of view, be exceedingly foolish.

As the volume of gas going through the pipelines declines, the unit cost of transporting and distributing that gas will increase. This will obviously result in much higher prices for consumers, regardless of Federal price fixing.

The one logical solution to this chaotic situation is passage of the Harris bill. This bill reinforces our traditional competitive principles by removing the gas producers from direct utility control. At the same time, however, as I have already indicated, it provides a further consumer protection—in addition to that already afforded by competition—by allowing the Federal Power Commission to determine the reasonable market price a pipeline may pay and then pass on to the consumer.

The Harris bill also answers objections raised in past years to escalation clauses. Neither in new nor in existing contracts will the so-called favored-nation escalation clauses be allowed to result in anything other than the reasonable market price being passed on to the consumer. This provision, in effect, obviates all objections to escalation clauses. The only types of escalation clauses which will not be subject to FPC jurisdiction will be those designed to take into account tax increases and those which provide for fixed, periodic increases clearly stated at the time the original contract is made. This latter type of clause is commonly used for the benefit of the interstate pipeline, which prefers to pay less for its gas in the early life of a contract, when the pipeline's fixed costs are at their highest point. As the pipeline's fixed costs decline because of depreciation, the pipeline can afford to pay more for the gas—usually without raising the price to its distributor customers.

The Harris bill is not a decontrol bill. It seems clear to me that it is an eminently fair bill to everyone concerned—fair to producers, to transporters, to distributors, and, most of all, fair to the consuming public.

Its immediate passage will assure us of much more gas, and at much less cost, than Federal utility controls possibly could.

Mr. President, I have in my hand a resolution adopted by the League of Kansas Municipalities at its annual meeting in Hutchinson, Kans., on September 13, 1955. The resolution reads as follows:

LEAGUE RESOLUTION NO. L-7—MEMORIALIZING CONGRESS TO AMEND THE NATURAL GAS ACT

Whereas the Supreme Court of the United States has recently ruled that sales of natural gas by independent producers and gatherers made in the field in which the gas is produced are subject to regulation by the Federal Power Commission under the terms of the Natural Gas Act when the gas is ultimately transported to and sold in other States; and

Whereas the League of Kansas Municipalities has, from its inception in 1910, concerned itself with the problems of its member cities in supplying themselves with an adequate supply of natural gas at reasonable rates and it has carried on studies, conducted research, issued brochures, news releases, reports and recommendations to its member cities, and to all municipalities of Kansas, concerning the availability, regulation and cost of natural gas to the ultimate consumer; and

Whereas the ultimate consumer has a tremendous investment in gas consuming devices for the utilization of this fuel, the protection of which is a prime responsibility of municipal governing bodies; and

Whereas the production of natural gas is a highly competitive business and its conservation is of vital concern to the various States wherein it is found; and

Whereas the State of Kansas has for 20 years regulated the production of natural gas to the end that wasteful practices be prohibited and this great natural resource conserved by the discouragement of early abandonment, the drilling of marginal wells, and the orderly production of natural gas to insure maximum recovery thereof; and

Whereas the regulation of the price of gas sold by independent producers and gatherers is contrary to the public interest, including the interests of consumers in the municipalities who are members of this League, in the following particulars: (1) such regulation will result in curtailing the development of new sources of supply of gas because it will lessen the incentive of producers to explore for and produce natural gas, will interfere with and impede State conservation measures and thereby result in waste of gas and will ultimately increase the cost of gas to the consumer; (2) Federal regulation is unnecessary in that field prices represent only a small portion of the cost of gas to consumers and in any event such prices are competitive with other fuel prices; (3) Federal regulation cannot be justified except on a socialistic basis which could lead to the regulation of the price of all commodities, including oil, coal, and other products of nature, and which would further centralize regulatory authority in the Federal Government and thereby usurp the powers and functions of the State;

Whereas there was introduced in the 84th Congress, 1st session, H. R. 6645, commonly known as the Harris bill, which bill had for its purpose the removal from the field of Federal regulation sales of natural gas by independent producers and gatherers made in the field; and

Whereas H. R. 6645 was unanimously supported by each of the six Congressmen from Kansas; and

Whereas both United States Senators from Kansas have publicly endorsed H. R. 6645: Now, therefore, be it

Resolved, by the 47th Annual Convention of the League of Kansas Municipalities in convention assembled at Hutchinson, Kans., that United States Senator ANDREW F. SCHOEPPEL, United States Senator FRANK CARLSON, and Representatives AVERY, SCRIVNER, GEORGE, REES, HOPE, and SMITH, be commended and congratulated for their support of H. R. 6645; be it further

Resolved, That the Congress of the United States be memorialized to pass H. R. 6645, known as the Harris bill, or legislation of similar import, so as to amend the Natural Gas Act, to restore to the several States their historic function of regulation and conservation of natural gas, and remove from the field of Federal regulation sales of natural gas by independent producers and gatherers made in the field, even though such gas is ultimately sold in interstate commerce; be it further

Resolved, That the executive director of the League of Kansas Municipalities be instructed to furnish a copy of this resolution to each Member of the United States Senate and the House of Representatives.

Passed this 13th day of September 1955.

THE LEAGUE OF KANSAS MUNICIPALITIES,
By GLEN DAVIS, *President*.

Attest:

ALLEN E. RUTBAW,
Executive Director.

Mr. LONG. Mr. President, will the Senator yield?

Mr. CARLSON. I am happy to yield.

Mr. LONG. I wish to congratulate the Senator on a very concise, clear, and enlightening statement on the subject before the Senate. I believe the presentation he has made will help us better to understand the pending bill. I know it has added to my understanding of the general subject matter. I commend the statement to all our colleagues.

I see that the Senator from Arkansas [Mr. FULBRIGHT] is still on the floor. He came to me a moment ago, when he was about to leave, and asked me to express his high regard for the presentation which the Senator from Kansas has made.

Mr. CARLSON. I wish to state to the distinguished Senator from Louisiana that I appreciate very much his comment. What we are considering is a difficult problem. I tried to present it as fairly as I could.

Mr. FULBRIGHT. Mr. President, will the Senator from Kansas yield?

Mr. CARLSON. I yield to the Senator from Arkansas.

Mr. FULBRIGHT. I thought the Senator from Kansas might proceed for a longer time than he actually did, and I had to leave for an engagement. I desired to compliment the Senator from Kansas on a very statesmanlike presentation, and to clarify a point upon which many people seem to be confused, namely, that in the opinion of the Senator from Kansas the pending bill if passed, would be for the long-term benefit of consumers.

Mr. CARLSON. I wish to state to the distinguished Senator from Arkansas that that is my firm belief. Represent-

ing in part, as I do, an area in which there is production, gathering, and distribution of gas, that is my opinion. If we in Kansas had wanted to be selfish, we could have insisted that the gas be kept in Kansas for use in our State. Instead, we are sending it all over the Nation.

Mr. FULBRIGHT. I am glad to have the statement of the Senator from Kansas, because there seems to be great misunderstanding on the subject. I thank the Senator for his statement.

Mr. CARLSON. I appreciate the Senator's kind remarks.

I wish to express my sincere thanks to the distinguished Senator from Illinois for his courtesy in letting me take up this time.

Mr. DOUGLAS. The Senator from Kansas is always courteous, and I was happy to yield to him.

Mr. President, before resuming my speech I ask unanimous consent that there may be inserted at the conclusion of my remarks today a copy of the telegram I addressed on January 13 to the 35 largest oil producers in the country, together with the replies I have received from those companies to date.

The PRESIDING OFFICER (Mr. FREAR in the chair). Without objection, it is so ordered.

(See exhibit A.)

Mr. DOUGLAS. Mr. President, at the conclusion of the session of the Senate on yesterday I was pointing out that the gathering lines and transmission lines are very costly affairs. I used as my source a publication by the Federal Power Commission entitled "The Natural Gas Company Cost Units, FPC, S–54," which was published some 10 years ago. I pointed out that even by the time that bulletin had been published the estimates printed had become obsolete, and the actual costs as of 1945–46 were appreciably higher than the amounts listed in the pamphlet itself.

Furthermore, I pointed out that although the Federal Power Commission has not officially published more up-to-date data, it informs me that it estimates that current pipeline construction costs are running from $2,500 to $3,000 per inch per mile. Using this estimate, I estimate the current construction costs to be approximately as follows:

A 4-inch-diameter pipe will have a cost per mile of $10,000.

An 8-inch-diameter pipe will have a cost per mile of $20,000.

A 12-inch-diameter pipe will have a cost per mile of $31,200.

A 16-inch-diameter pipe will have a cost per mile of $43,200.

A 20-inch-diameter pipe will have a cost per mile of $56,000.

A 24-inch-diameter pipe will have a cost per mile of $69,600.

A 30-inch-diameter pipe will have a cost per mile of $90,000.

A 36-inch-diameter pipe will have a cost per mile of $108,000.

The cost per inch of diameter per mile rises slightly as the diameter of the pipeline increases.

I went on from this point to show the huge investments in the transmission systems and the field systems made by the 14 major pipeline companies, and demonstrated that they had approximately $301 million invested in their field systems and very close to $3,300,000,000 invested in their transmission systems, with very high average costs per mile of pipeline.

I pointed out that, because of their very cost, these pipelines could not be moved around like garden hoses, but that they were, so to speak, located, and had to remain located, where they were.

What do these pipelines find when they seek to purchase gas from the producers which adjoin the lines? They do not find the 8,000 producers to whom the witness for Standard Oil referred in his testimony. That figure has been repeated many times on the floor of the Senate. They find, along a given pipeline, a very limited number of producers. I have only to turn to the testimony introduced by Dr. Boatwright himself, printed on page 184 of the hearings, which shows that the largest four sellers, in 9 of the 13 instances of the big pipelines, furnished more than 50 percent of the gas; that in one case, Cities Service, the first four furnished 61 percent of the gas; in the case of Southern Natural Gas, the first four furnished 75 percent of the gas. In the case of Texas Gas Transmission, they furnished 86 percent of the gas; and in the case of Michigan-Wisconsin, one gatherer, the Phillips Co., furnished all the gas. There were not 8,000 producers or gatherers there, but only one.

The point is that competition along the pipeline is limited. The large number of producers, chiefly in the Appalachian field, which is an obsolete field anyway, has nothing whatsoever to do with the supply of gas furnished to the big pipelines extending into the Southwest. I ask, What protection is there for the consumers of Wisconsin and Michigan so far as competition is concerned. There is no competition, but complete, 100 percent monopoly.

We should never forget—although at times the effort seems to be made to have us forget—that consumers, because of the investments which they have made in gas furnaces, in heaters and ranges, and other appliances, cannot scrap those household appliances and turn to alternative fuels. They are tied to local companies. The local companies are tied to the pipeline companies. The pipeline companies are tied to producers and gatherers; and in the case of the Phillips Co., tied to only one gatherer. Therefore the consumers of gas in Milwaukee and Detroit are tied to a 100 percent monopoly in the field. The situation differs only by degree with other pipelines and fields.

Mr. President, I have shown that there is a concentration of holdings along the various pipelines, and that once the pipelines are laid and the gathering lines are laid, they cannot be shifted into a new field or to other producers, and that therefore there is an indissoluble tie which binds producers and pipelines together.

What is the competition in these fields? Is it between sellers, between buyers, or between both? We say that the competition in the gas fields is overwhelmingly between the buyers seeking gas supplies. For the next period of my discussion that is the point which I shall be able to prove.

COMPETITION IN GAS FIELDS IS BETWEEN BUYERS SEEKING GAS SUPPLIES

The behavior of field prices in the Southwest in recent years is a matter of public record and is not a matter of dispute. Everyone is aware of the fact that the average prices paid by pipeline companies have more than doubled since 1946.

I believe I have already introduced into the RECORD a table showing the figures which I have illustrated on the chart in the rear of the Chamber. The chart shows, whereas the average price was approximately 4⅓ cents per thousand cubic feet in 1946, so far as field prices were concerned, the price had risen by 1954 to 10.4 cents. Of course it was higher in 1955. However, the increase in the 8 years from 1946 to 1954 was approximately 140 percent, or from a relative 100 to a relative 240.

Despite all the claims of free and vigorous competition among six or eight thousand producers, there can be no question that there has been a sellers' market in the gas fields.

I shall introduce later evidence on the 1955 price and on present contract prices. I shall also introduce evidence on expected future prices. That evidence will nail down this point even more tightly.

The situation of a sellers' market and competition between buyers prevailed even as far back as 1947.

The late R. H. Hargrove, then vice president of United Gas Pipeline Co., testified in Docket No. G–580 before the Federal Power Commission that:

> The sellers are a strong group. There are a great many independents, small companies, which could not be regarded as strong. But the sellers market is now pretty well dominated by the larger oil companies.

Mr. Hargrove later became one of the promoters and also president of Texas Eastern Gas Transmission Co.

General Thompson, a member of the Texas Railroad Commission, testified that the competition in the gas fields was between the buyers competing for a supply of gas during his appearance before the House Interstate and Foreign Commerce Committee. I refer Senators to the hearings on the companion Harris bill in the House, at page 109 of the hearings. The questioning was by Representative HESELTON, of Massachusetts, who, incidentally, has played a very fine part in this whole fight. The questions are by Representative HESELTON, and the answers are by General Thompson:

> Question. Do you consider that there is any real competition so far as natural gas is concerned?
>
> Answer. Oh, yes.
>
> Question. Competition between whom?
>
> Answer. Between the various purchasers trying to get the gas from the various sellers.

In other words, there was competition between buyers, not competition between sellers.

Dr. Boatwright, of Standard Oil Company of Indiana, one of the strongest proponents of the Harris bill, who testified before the Senate committee, described the competitive pricing situation in the gas fields in these words—Senate hearings, page 150:

The new pipeline seeking to commit reserves will go and offer a higher price than the present buyer and hope in that manner to get the reserves committed to his line. Then the old buyer will find it necessary to meet that offer, or he will lose the new sources that are being developed by some of his present suppliers. He doesn't lose that which is committed, he loses the new supplies being developed.

He may not lose what is committed, but he must buy the new installments of gas. We will show that in most cases he must renegotiate the price at which the original purchase was made.

In proceedings before the Federal Power Commission, there is ample evidence that the market in natural gas in the fields is a sellers market. I should like to call attention to the evidence dealing with certain specific situations in this regard. Mr. Joseph Bowes, president of Oklahoma Natural Gas Co., testified in a proceeding before the Federal Power Commission as follows:

Question. Would you state, Mr. Bowes, what the costs of your gas have been over the last few years?

Answer. In 1945 until about 1949, the price was almost steady at 5 cents. It may have fluctuated a little bit above, at times a little below, depending on how much gas of our own we produce. From 1950 to 1952, it was approximately 6 cents and since that time it has gone up to where it is now at an average price of 9.9 cents.

Later, Mr. Bowes was asked the following question:

Question. Mr. Bowes, in your testimony I believe you stated that competition for gas has raised the price of gas. Is this competition between buyers competing for a supply of gas or is it competition between the sellers?

Answer. Well, primarily the competition for gas, the price of gas, has been brought about by the building of transcontinental pipelines into the South looking for gas and the tremendous market that they have up there which they can't catch up with.

They are all bidding against each other, and naturally any company in the gas business, whether you are in the transcontinental end of it or local, you meet the effect of that continued bidding for gas even though it is on the gulf coast, you meet it somewhere.

In other words, Mr. Bowes was saying that the competition was on the part of the buyers.

In the same proceeding, Mr. E. A. Brown, vice president in charge of gas buying for Lone Star Gas Co., a large integrated transmission and distribution utility operating in the State of Texas and also in the State of Oklahoma, testified as follows:

Question. What has been the recent trend in field prices for gas purchased by Lone Star?

Answer. In the last several years it has been a trend of continual and continuous increases for gas bought both in Oklahoma and Texas.

These increases have come about from operations of favored nation clauses and from increased competition for supplies of gas.

Another official of Oklahoma Natural, Mr. C. C. Ingram, superintendent of gas purchase and reserves for the company, testified in the same vein. The questions and answers that follow reveal what pipeline companies have been faced with in recent years in buying natural gas reserves:

Question. In view of the continuing gas buying requirements of Oklahoma Natural, what is your opinion as to the effect of the payment of 12 cents for gas purchased by Cities Service Gas Co. from the Signal Gas Co. at the Fat Fox plant? What effect would this have on the price paid by Oklahoma Natural?

Answer. It is my opinion that this increased price will cause an increase in the prices paid for gas by Oklahoma Natural.

Question. How do you arrive at this conclusion?

Answer. Well, as soon as a higher price is established in an area, the producers and people that negotiate the contract for the producers immediately raise their demand rates some 3 to 5 cents higher than the established price and they maintain constant pressure throughout the negotiation for an increased price above your established price, and eventually if they have no other sale of their gas, they will settle for nothing less than the price being paid in the area.

Now keeping in mind that I am talking especially of reserves of some important size. There are some minor reserves that may be bought at a lesser price in the area, but they would be very minor.

Mr. David Searls, who testified before the Senate and House committees, presented to the Federal Power Commission last January 11 the position of the American Petroleum Institute, Mid Continent Gas & Oil Association, and eight other oil and gas trade organizations in FPC docket G–142. Mr. Searls urged upon the Commission that it should accept the prices named in all producer pipeline company contracts where they are negotiated at arm's length, as representing per se the just and reasonable rate under the Natural Gas Act. Then he described the competitive situation in the buying of gas. Mr. Searls said that the new companies must come to the Southwest areas and see what the going price is for natural gas. He then stated:

Undoubtedly, they would find that the price may be 12½ or 13 cents. Well, can a new company come in and buy gas at that going price when it wants 300 million cubic feet a day or 400 million cubic feet a day and wants to obtain that natural gas within a reasonable time? No.

In other words, in order to get the new gas, it is necessary to pay not only the going rate, but to pay more than the going rate. Mr. Searls went on to say:

It—

The pipeline company—

has got to blast its way into the market, and the way to blast itself into the market is to offer a premium, to offer a higher price for gas. That is competition. That is what we are taught by all principles of economics, that competition requires that.

That is one reason the price of gas has gone up. There has been this demand for it, new buyers coming into the market. Those new buyers coming into the market to get large quantities of gas have had to pay higher prices. That is the law of supply and demand, which is the basis for competition.

The same trade associations filed a statement in FPC Docket R–137, when the Commission was considering rules with respect to the escalation clauses in gas purchase contracts. In demonstrating "price behavior" where demand exceeded supply, the trade associations referred to the situation in one Texas producing area in these terms:

In 1947 El Paso could negotiate new gas contracts at 3.85 cents. From 1949 to 1951, new prices ranged from 5.54 to 6.95 cents. Then the pressure of increasing demand and new companies entering the region drove prices up, until El Paso was contracting in 1953 for the output of the Spraberry field at 10.52 cents—almost twice the amount of the lower prices in the preceding year.

In other words, prices doubled in the field within a year.

Again with respect to the east Texas price situation the associations stated as follows:

In 1950, another company entered the market. This was Texas Gas, which now accounts for more purchasers in the Carthage field than does Tennessee * * * Texas Gas entered the market at 6.61 cents, but was forced by the pressure of increasing demand and competition from the other transmission companies to raise its price to 9.50 cents in 1952–53. At the same time, United began to pay 8.50 even to suppliers previously receiving low prices and 9.50 cents for new gas. Texas Eastern doubled its prices to 11.70 and 12.70 cents on the newer sales, and paid about 10 cents on some of the older contracts.

The manager of production and supply for Cities Service Gas Co., Mr. Russell W. Hofsess, also testified in a proceeding before the Federal Power Commission with respect to obtaining gas reserves as follows:

Question. Let me ask you this. Hasn't the price of gas gone up considerably in recent years in this area?

Answer. Yes, sir; there is considerable competition between the companies taking gas in this particular area down through the last 6- or 7-year period, and one company has purchased some gas, another comes back and raises the price again.

Mr. Hofsess further testified:

Prices to be paid as shown in the adjustment for gas from recently negotiated contracts are appreciably higher than gas which it is replacing or displacing and results in a corresponding increase in the total cost of gas purchased. The extremely favorable position which sellers of newly available gas are now in because of the demand for gas and the keen competition between purchasers of gas in areas in which the Cities Service Gas Co. secures its supply makes it necessary to take volumes of gas as they are available at extremely competitive prices in order to negotiate contracts for the gas and to have the added reserves available to support requirements during subsequent years.

The testimony of O. F. Flumerfelt, president of Iroquois Natural Gas Co., of Buffalo, N. Y., who went down to the Southwest to purchase gas for his company to be transported by Tennessee Gas Transmission Co., also demonstrated the existence of a sellers' market. In this case, Mr. Flumerfelt testified in a proceeding before the Commission in May of 1954—Docket No. G–1969—that in

buying gas from Shell Oil Co. in the Sheridan field, he had to buy it by "blind bidding." Mr. Flumerfelt testified under oath:

I had to give a proposal along with other competitors for this gas who gave their proposals. I had no knowledge of what the other proposals would be and when all of the proposals were in, Shell called a meeting of the operators and went over these proposals to decide which would be the most favorable to accept.

Mr. Flumerfelt testified that he wanted to buy 75 million cubic feet a day at the time but was not able to buy more than 50 million cubic feet. When questioned as to why he was not hopeful of being successful in negotiating for larger volumes, he replied:

Because of the demands for reserves of this character by other parties who are buying gas in that locality and need it. I am referring, particularly, to the competition that we have by purchasers buying for Illinois, Indiana, Michigan, and Wisconsin. They have a somewhat shorter haul than Iroquois does.

I am aware of the fact that the testimony given by Mr. Flumerfelt under oath in a proceeding before the Federal Power Commission which was unrelated to the question of legislation amending the Natural Gas Act has been disputed by an official of Shell Oil Co. who wrote a letter to the Senate committee. Nevertheless, I believe a fair appraisal of the circumstances and facts clearly indicates the true situation in the acquisition of such gas in the Sheridan field was as related by Mr. Flumerfelt.

In the Colorado interstate rate case before the Federal Power Commission, Mr. Ralph E. Davis, the geologist to whom I referred earlier, testified concerning the acquisition of gas by pipeline companies, as follows:

Question. Is it becoming harder for buyers to get suppliers every day?

Answer. It is very much harder even in Louisiana where the gas discoveries are the best in the country.

Question. Are you talking about offshore or onshore?

Answer. Both. Even their gas is more difficult to buy. It is harder to buy than it is to sell it.

In the same proceeding Mr. Davis related his actual experience in the acquisition of gas on behalf of Permian Basin Pipeline Co., which is extremely revealing, Mr. Davis said:

I have negotiated the purchase of gas, if you want to take a moment or two on it. About 3 years ago when the Permian Basin Pipeline Co. was trying to build a pretty substantial pipeline system in the Permian Basin in west Texas, and they had made negotiations for gas at the price of 10 cents for certain gas, but my problem which was coming up to me was to write a report that could be properly written so they had enough gas to permit them to finance this deal, and they just did not have enough gas. I couldn't write a report that I could expect insurance companies to be interested in. They wanted enough life in the proposition to practically assure the bonds. * * * But getting right down to my point, the management of the Permian Basin sent me to Bartlesville to negotiate with Boots Adams, who was then president of Phillips Petroleum, now he is chairman, and Phillips had a great big block of gas down on the southwest side of the Permian Basin.

I digress long enough to say that Phillips is the largest seller of natural gas to pipelines.

I continue the quotation from the testimony of Mr. Davis:

If we could get that gas then we could think about a 20-year bond issue. So I fought with Adams and finally wound up with 15 cents. In other words, they got what he wanted and why? I didn't know where I could find another block of gas like it. I am not so dumb a fellow that I would go and give him 15 cents if I could get it for 10 or 12.

* * * * *

Question. How high was he at the start?

Answer. I think he thought that was an awfully high figure and that was what he started at, and he didn't budge.

Further evidence that the competition in the gas fields is between buyers competing for the available supply of gas reserves is shown by the testimony of Mr. Roger D. Stanwood, who is assistant to the vice president in charge of gas supply for Transcontinental Gas Pipe Line Corp., in a recent case before the Federal Power Commission. Mr. Stanwood was asked whether he found competitive situations existing in the south Louisiana area, and he replied:

The competition for purchasing gas in the south Louisiana, and by "south Louisiana" I mean the area previously identified, has been extremely competitive in, say, the postwar period. United Fuel Gas Co. and its transporter, Gulf Interstate, have purchased substantial volumes of gas in the area; American Louisiana Gas Co., an entirely new project, as is United Fuel Gas, have also purchased substantial volumes in the area; Tennessee Gas Transmission Co. has recently made application for certification to serve a part of that same area. Each of these companies being identified, have negotiated for higher prices being paid than Transcontinental.

In addition, there is a competitive local pipeline, being the Olin Interstate Natural Gas Co., who purchase gas for supplies to the Baton Rouge industrial market.

Also United Gas Pipe Line Co. has purchased substantial volumes for its supply of gas.

I call special attention to the next sentence:

And to the best of my knowledge, their last negotiation will call for a price of 20 cents, I believe this fall.

He was further questioned:

Question. Mr. Stanwood, when you use the term "competitive," you mean competition as between purchasing pipelines, not as between producing companies, isn't that true, in this sense that you are using it?

Answer. There is always competition for the acquisitions of gas supply. But each pipeline has to determine its ability to pay gas based on its ability to sell gas.

Question. You didn't use the term "competitive" with relation to competition as between producing companies, you used it as competition between purchasing pipeline companies; is that correct?

Answer. That is correct.

Mr. President, I believe the evidence which I have brought forth from the testimony of a wide variety of persons who are skilled and versed in the industry and who have purchased gas, is conclusive that the market in the gas fields is a sellers' market. It is not a free market. It is not a market in which there are willing buyers and willing sellers, neither set of parties being under economic compulsion to buy or sell, but each having sufficient bargaining power to withdraw and deal on equal terms with other buyers and sellers. It is not that kind of market. Instead, it is a market in which the big sellers hold the upper hand.

RATABLE TAKE MINIMIZES COMPETITION

Mr. President, I now wish to discuss the question of ratable take, which certainly minimizes and decreases competition.

In many producing areas, State conservation commissions have sought to protect the correlative rights of producers in a gas field through the imposition of ratable take or proration regulations. The conservation commissions make orders by which market demand is allocated among all the wells in a producing field. Where this occurs, the competitive factors in the purchase and sale of natural gas are minimized. Where the total production of a field is geared to gas market demand, buyers are unable to bargain with individual producers in the field on an equal footing. All producers are required to produce their reserves ratably and pipeline buyers must take their gas requirements ratably from the producers in the field in accordance with the proration order of the conservation commission.

The proration orders work in this fashion: If a pipeline company has an estimated monthly market demand of 500,000 thousand cubic feet, and the producers in the field with whom it has contracts have an allowed production of only 400,000 thousand cubic feet, the pipeline buyer must purchase the additional 100,000 thousand cubic feet from other producers or from other buyers who have allowables in excess of their market demand. Under these circumstances, the pipeline company can only accept the terms dictated by the producers with the excess allowables.

The effect of this is that there is intensive bidding for the excess allowables, which would not be the case if there were a free market. The high prices which result are then used as reasons to invoke the escalator and renegotiation clauses in existing contracts. Thus, one of the effects of "ratable take" and "proration" regulations is to create highly competitive bidding among buyers for a limited supply of "excess allowables." These artificially high prices are used to raise other prices down the line. If the Fulbright bill is passed, with its "reasonable market price" standard, these high prices will almost certainly become the so-called reasonable market price.

More stringent regulations in this direction have been taken recently by the Department of Conservation of the State of Louisiana. This was reported by the Oil and Gas Journal of November 28, 1955, to be the "most sweeping move ever taken to control gas production." The

order, which became effective on January 1 of this year, provides for statewide ratable taking of gas with the objective of preventing overproduction of wells by producers and making it necessary for the pipeline companies to take their requirements from all of the producers in the field ratably, based upon their market demands. Texas, which prescribed "proration" in the Panhandle field and in the Hugoton field several years ago, is extending its system to other fields. Under these regulations the market demand will be divided among the wells in a field so that there will be equal withdrawals from the wells based upon their deliverability. These "ratable take" orders place the output of gas under controls similar to those which have been established by the oil-producing States, in order to prevent the production of oil in excess of the so-called market demands.

What I have said is not in itself a criticism of the actions of the conservation commissions. They allocate the total production of a gas field among the producers who have wells in such fields in order that correlative rights may be protected and to assure producers who have been unable to secure a market outlet the opportunity to minimize the drainage of their share of the gas in the common reservoir. Certainly this may very well be the proper thing to do for conservation reasons. But it can hardly be disputed that such regulations do lessen the competitive factors normally found in the open market trading of commodities. The buyers of cotton, coal, cheese, milk, beer, and copper are not required by State law to buy any fixed proportion of their requirements from all producers in a State or specific area.

In connection with this phase of the problem of natural-gas production there has been considerable agitation among producers for posted gas prices comparable to the posted prices in the oil fields. It seems obvious that if any such proposal is placed in effect; the posted prices would automatically gravitate to the highest price then being paid in the field, thus providing another deterrent to free competition.

Mr. President, I commented briefly yesterday on the fact that the gas and oil companies have been the driving forces behind the rulings of the various State conservation commissions to restrict the output of gas. In other words, the big companies have invoked governmental power to restrict the output, and the effect of restricting the output has been, naturally, to increase the price. In other words, the opposition of the big companies is not to governmental action. They favor governmental action when it will help them. They are opposed to governmental action only when it will protect the consumer.

As I have earlier remarked, when the output is restricted in order to benefit the producers, that is conservation; when prices are restricted to protect the consumer, that is called, by the big producers, confiscation.

MINIMUM WELLHEAD PRICES IMPEDE COMPETITION

Another impediment to a free competitive market in a natural-gas field is the system of minimum wellhead prices established by the conservation commissions of Kansas and Oklahoma a few years ago. There is not only restriction of output, but in two of the States there is fixation of minimum prices, namely, in the States of Oklahoma and Kansas.

Oklahoma initiated minimum wellhead prices on the basis of a minimum of 7 cents per thousand cubic feet. Kansas followed with an 8-cent price. Oklahoma then topped this with a price of 9.8262 cents. And effective January 1, 1954, the State of Kansas raised the ante to 11 cents per thousand cubic feet. All such action was, of course, in the name of conservation, but in essence it is price fixing.

Under a recent decision of the United States Supreme Court—*Natural Gas Pipeline Company of America* v. *Corporation Commission of State of Oklahoma* (75 Supreme Court 576)—the authority to fix wellhead prices for sales of natural gas in interstate commerce for resale was held to be invalid since such interstate sales are subject to exclusive regulation by the Federal Power Commission under the Natural Gas Act. In this case the Supreme Court ruled:

> Oklahoma has attempted to fix a minimum price to be paid for natural gas, after its production and gathering has ended, by a company which transports the gas for resale in interstate commerce. We held in *Phillips Petroleum Company* v. *Wisconsin* (347 U. S. 672) that such a sale and transportation cannot be regulated by a State but are subject to the exclusive regulation of the Federal Power Commission. The Phillips case therefore controls this one.

This seems to indicate that if Congress were to amend the Natural Gas Act and deprive the Federal Power Commission, as a Federal agency, of the authority to regulate the price at which the gas entered the pipeline for resale in interstate commerce, it would then be possible for the States to fix minimum prices at the wellhead for the sale of natural gas.

If the Fulbright bill is enacted it would reestablish the validity of such minimum price orders with respect to sales of natural gas in interstate commerce for resale.

Mr. PASTORE. Mr. President, will the Senator yield?

Mr. DOUGLAS. I yield.

Mr. PASTORE. On the very point which has been illustrated by the Senator from Illinois, I should like to suggest that section 2 of the pending bill states specifically that the gas shall not be considered as being in interstate commerce until such times as it shall be delivered to transportation facilities.

Subsection (11) of section 2 reads:

> "Sale in interstate commerce of natural gas for resale" means only such sale in interstate commerce of natural gas for resale as occurs after the commencement of the transportation of such natural gas in interstate commerce as defined in paragraph (10), but does not include any sale which occurs in or within the vicinity of the field or fields where produced at or prior to the commencement of such transportation in interstate commerce of the natural gas.

Therefore, under section 2 of the pending bill, what it is proposed to do is to move the jurisdiction of the Federal Power Commission from the wellhead to the point where the gas is actually being put in interstate commerce. Therefore it becomes, from that point back to the wellhead, a matter of local jurisdiction, and therefore minimum prices would apply, under State law. I do not think there can be any question about that.

Mr. DOUGLAS. I think the Senator from Rhode Island is correct, and the result the Senator points out, as I shall try to prove, would be very dangerous.

Serious efforts have been made by producers and royalty owners in the State of Texas to secure minimum price orders similar to those prescribed by the conservation commissions of Louisiana and Oklahoma. So far their efforts have not succeeded. One of the arguments being used against their attempt is that enactment of such State legislation would damage the chances of getting Congress to exempt producers from Federal regulation.

Once there were such an exemption, that argument would not hold, and we would see the enactment of State minimum prices. I want to emphasize that these would merely fix a floor and would not fix a ceiling. Above the floor, the favored nations clauses and the renegotiation clauses and the hard bargains on new contracts would still apply.

If the Fulbright bill should become law and if Texas and Louisiana were also to enact minimum price orders, the four States of Kansas, Oklahoma, Louisiana, and Texas, which control 80 percent of the Nation's gas reserves within their borders, would be in a position to control to a substantial extent natural gas rates throughout the country for the benefit of the producers doing business within their borders. The constitutional principles upon which this great Government was founded would be violated if any such situation should come to pass, for the commerce clause of the Constitution of the United States provides that Congress shall have the power to regulate commerce among the several States.

Mr. PASTORE. Mr. President, will the Senator yield?

Mr. DOUGLAS. I yield.

Mr. PASTORE. Is not that another element which destroys the argument that there is competition within the production field? If the State has the right to impose minimum prices, under the guise of conservation, or whatever one may want to call it, what is left of the argument that there is competition?

Mr. DOUGLAS. That is one of the extraordinary inconsistencies in this whole argument. Within the States, the gas producers are in favor of States restricting the amount of gas to be sold, thus boosting prices. They do not, however, object to States fixing minimum prices at which the gas may be sold.

Mr. MONRONEY. Mr. President, will the Senator from Illinois yield at that point?

Mr. DOUGLAS. I yield.

Mr. MONRONEY. The States do not fix the amount of gas to be sold based on any other reason than proper conservation. We take pride in the fact that when trillions of cubic feet of gas were being blown into the air, action was taken to stop this prodigal waste of gas. At great expense to the producers of oil, they were forced to utilize the gas. With regard to the question of minimum prices, I say, yes, we did have a law providing for a minimum price.

Mr. DOUGLAS. Is not one in effect now?

Mr. MONRONEY. It has been held to be unconstitutional.

Mr. DOUGLAS. But if the Fulbright bill should pass, in all probability the fixing of minimum prices would be held to be constitutional.

Mr. MONRONEY. I should rather doubt that, but I would have to leave that question for lawyers to decide. I have found no feeling among lawyers in my State to indicate that would follow. I think anyone who reads the bill and understands the constitutional provisions could not help realizing that the price of gas is still being regulated by the Federal Power Commission, whether the utility cost or reasonable market value basis is used.

I did not want to leave unchallenged the perhaps unintentional conclusion that the States regulated the production of gas and its conservation merely to boost prices.

Mr. DOUGLAS. If the Senator from Oklahoma had been present earlier, he would know that I made it clear——

Mr. MONRONEY. I had a committee meeting to attend.

Mr. DOUGLAS. I said that whether or not the decisions were wise, or based on conservation grounds, the effect was to increase prices, and that therefore the gas companies favored State action if the effect was to increase prices, and they favored State action for minimum prices in the field. It is only Federal action to fix maximum prices to protect the consumer that they oppose.

Mr. MONRONEY. Mr. President, will the Senator yield further?

Mr. DOUGLAS. I yield.

Mr. MONRONEY. I thought the Senator was referring to pipelines when he favored or supported a minimum price by State law.

Mr. DOUGLAS. I am speaking of the producers.

Mr. MONRONEY. I thought the Senator was referring to pipelines when he said "gas companies." Pipelines buy gas at the cheapest possible price.

Mr. DOUGLAS. I was speaking of producers.

Mr. MONRONEY. I shall not argue the point except to say that, in view of the contracts signed 20 years ago which provided for a price of 2 or 3 cents per thousand cubic feet, States did enact minimum-price legislation for the purpose of conservation, and to keep the fuel from being used to displace coal in heavy industrial use. The primary reason for the passage of such legislation was conservation.

Mr. PASTORE. Mr. President, will the Senator from Illinois yield to me?

The PRESIDING OFFICER (Mr. MCNAMARA in the chair). Does the Senator from Illinois yield to the Senator from Rhode Island?

Mr. DOUGLAS. I yield.

Mr. PASTORE. I think we have reached a point in the debate where we cannot let pass any further statements about the meaning of the bill—for instance, statements to the effect that the States would have authority to fix the price of gas at the wellhead, if the bill should become law. That point must be clarified at this time, because I think it relates to a very important part of the bill.

As a lawyer and a member of the committee and a Member of the Senate, I defy anyone to dispute the fact that the proper interpretation of subsections (10) and (11) of section 2 of the bill is that they actually limit the point at which the Federal Power Commission has jurisdiction. That has been so stated in very clear language; it has been stated that the jurisdiction of the Federal Power Commission does not begin until such time as the gas is delivered into the interstate transportation facilities, after—and now I shall read from the bill:

> After the completion in or within the vicinity of the field or fields where produced of all production, gathering, processing, treating, compressing, and delivering of such natural gas into the transportation facilities of a person engaged in transporting, in such transportation facilities, natural gas in interstate commerce beyond the vicinity of the field or fields where produced.

That means that the line of jurisdiction has been moved from the wellhead to the point where the gas is put into interstate commerce. Therefore, everything back of that point to the wellhead is under local jurisdiction. How can that conclusion be escaped?

Mr. DOUGLAS. The bill really goes even further than that, does it not? Under it, the price can be regulated only at the city gate.

Mr. MONRONEY. Mr. President, will the Senator from Illinois now yield to me?

Mr. DOUGLAS. Yes; I am glad to yield to the Senator from Oklahoma.

Mr. MONRONEY. I wish to answer the distinguished junior Senator from Rhode Island [Mr. PASTORE].

The language he just read refers to the point of sale. Gas is sold at many points. In the case of small wells, and also in the case of big wells, gas is sometimes sold at the mouth of the well. It is sometimes sold at the end of a gathering line or at the tailgate of a natural-gas plant. But the place where the market value of gas in interstate commerce is fixed is where it enters the long line.

Mr. PASTORE. No, Mr. President; subsections (10) and (11) of section 2 give jurisdictional definitions; they cannot be regarded as doing anything else.

Mr. MONRONEY. They relate to the historic method of gathering gas. We would be idiots indeed if we tried to change the historic pattern and if we said, "You must buy from the individual well, regardless of whether it produces 1,000 cubic feet or 200,000 cubic feet a day." We should not attempt to change the historic pattern of permitting the pipelines to buy the gas they want in the most convenient and equitable way they can buy it, and thus to get the gas in the quantities they need. Any language other than that, from which the Senator from Rhode Island is trying to find a very new and novel change to be wrought in the bill, would be uneconomical and unnatural and would not result in supplying the gas necessary to feed the long lines.

Mr. PASTORE. Mr. President, if the Senator from Illinois will yield further to me——

Mr. DOUGLAS. I yield.

Mr. PASTORE. Let me say that the Senator from Oklahoma does not answer the question I have raised. Instead, what he says would merely serve to confuse the issue.

I have asked this question: Under subsections (10) and (11) of section 2, is it not clear that the jurisdiction of the Federal Power Commission begins with the pipeline, at the point where the gas is put into interstate transportation; and therefore everything back of that point, to the well, becomes subject to local jurisdiction?

Can the Senator from Oklahoma not answer that question either "Yes" or "No"?

Mr. MONRONEY. But the gas has a sale value only when it enters the long line. I know the Senator from Rhode Island would not wish to have Federal jurisdiction extended so as to control intrastate commerce.

Mr. PASTORE. Of course not.

Mr. MONRONEY. Certainly even the distinguished opponents of the bill would not wish to have Federal jurisdiction and power stretched so far as to apply to gas moving in a pipeline serving only the State of Oklahoma.

Mr. PASTORE. Of course not. All we are saying is that once the bill becomes law, the States may set the minimum price, if they wish to. That is as clear as the nose on one's face.

Mr. MONRONEY. No minimum price could be set on gas in interstate commerce.

Mr. PASTORE. But interstate commerce does not reach down to the wellhead; that is just the point.

Mr. MONRONEY. Then the Federal Government has nothing to say about it.

Mr. PASTORE. That is exactly what we are saying.

Mr. MONRONEY. But when it is interstate gas, purchased by a long line, it is subject to the jurisdiction of the Federal Power Commission, the same group which today has control under the strange construction of the Supreme Court.

Mr. PASTORE. Mr. President, if the Senator from Illinois will yield further to me——

Mr. DOUGLAS. I yield.

Mr. PASTORE. Furthermore, I think it behooves the proponents of the bill to write into it—if that is what they mean—a provision that the jurisdiction of the Federal Power Commission shall be such that no State can impose a minimum price on gas that is sold in interstate commerce. But this bill does

not do that, and I challenge any one of the proponents of the bill to prove that it does do it.

Mr. MONRONEY. If the Senator from Rhode Island will read the bill——

Mr. PASTORE. Mr. President, I have read the bill so often that it is coming out of my ears. [Laughter.]

Mr. MONRONEY. And if the Senator from Rhode Island will also reread the very able statement by the distinguished author of the bill, the Senator from Arkansas [Mr. FULBRIGHT], the Senator from Rhode Island will find the answers clearly defined and far more cogently stated than they have been in any argument I have heard from either the distinguished senior Senator from Illinois—I say this while making my apologies to him—or from my distinguished colleague, the acting chairman of the Committee on Interstate and Foreign Commerce.

Mr. PASTORE. Mr. President, let me say that I am waiting very patiently and with great anxiety and interest to hear the answer by the distinguished Senator from Oklahoma to the question I have asked.

Mr. MONRONEY. If the Senator from Rhode Island will read the answers given by the distinguished lawyers who have discussed the bill, he will find the answer.

Mr. PASTORE. Who are those lawyers?

Mr. MONRONEY. The distinguished author of the bill [Mr. FULBRIGHT], and the distinguished Senator from the State of Texas [Mr. DANIEL], who I think know more about the actual legal phases of oil and gas sale than does any other Member of the Senate, I say with all due apologies to other Senators. Both of them have dwelt at length upon this point.

Yet the distinguished opponents of the bill like to presume that they have found a deep-dyed conspiracy to have the bill interpreted as meaning other than what it really means. I cannot agree that the distinguished Senator from Arkansas [Mr. FULBRIGHT] or myself or the other 11 members of the Committee on Interstate and Foreign Commerce would under any circumstances try to deceive either this body or the public in any degree whatsoever.

Mr. PASTORE. Mr. President, will the Senator from Illinois yield further to me, so that I may answer the Senator from Oklahoma?

Mr. DOUGLAS. I yield.

Mr. PASTORE. It is not a question of deception, Mr. President. The question is one of reading the language appearing on page 5 of the bill.

If we must wait for the distinguished Senator from Arkansas [Mr. FULBRIGHT] to answer my question, or if we must wait for the distinguished junior Senator from Texas [Mr. DANIEL] to answer my question, then I repeat that I wait patiently and with great anxiety for the answer.

Mr. MONRONEY. I suggest that, in the meantime, there be a rereading of that which previously has been said.

Mr. PASTORE. Mr. President, if it will make the Senator from Oklahoma any happier, I will read it another 15 times. But doing so will not change the clear wording of the bill.

Mr. MONRONEY. I am speaking, not only of the bill, but also of the debate on the bill by those distinguished attorneys.

Mr. DOUGLAS. Mr. President, I have enjoyed the colloquy betwen the Senator from Rhode Island and the Senator from Oklahoma.

The issue really is this: Kansas and Oklahoma have passed minimum price laws governing the sale of gas, the Oklahoma price being, when I last knew of it, a little less than 10 cents, and the Kansas price being 11 cents.

In the Phillips case, the Supreme Court ruled that the 1938 act required the Federal Power Commission, as an agent of the Federal Government, to take jurisdiction over such a price. It was because the Supreme Court had made that decision in the Phillips case that in the Natural Gas Pipeline case the Court ruled that the States did not have such authority. But once the jurisdiction of the Federal Power Commission is restricted by the Fulbright bill, then the Supreme Court's ruling will no longer apply, because the law which justified its action will have disappeared, and it will have disappeared on the very point stated by the Senator from Rhode Island, namely, that the sale of gas—whether at the wellhead or from the gathering system as it enters the interstate pipeline—will, under the Harris-Fulbright bill, no longer be subject to the jurisdiction of the Federal Power Commission; and therefore, under the opinion of the Supreme Court, it would seem probable—in fact, overwhelmingly so—that, despite the decisions of the 1920's, it would revert to the States.

Mr. PASTORE. Mr. President, will the Senator from Illinois yield?

Mr. DOUGLAS. I am glad to yield.

Mr. PASTORE. As a matter of fact, did the court not say distinctly that ordinarily the State would have the right to control minimum prices, except for the Phillips case; and this bill would do nothing more than repeal the opinion in the Phillips case. Is that correct?

Mr. DOUGLAS. I think that is the substance of the decision. It is interesting that the dissent so summarized the decision of the Court.

Mr. PASTORE. Naturally; and this bill would do nothing more than override the decision in the Phillips case.

Mr. DOUGLAS. That is correct.

Mr. PASTORE. That is why the bill is here.

Mr. DOUGLAS. That is correct.

Mr. PASTORE. The Phillips case was actually the obstacle to the State's imposing a minimum price on gas which goes into interstate commerce.

Mr. DOUGLAS. That is correct.

If the Fullbright bill should pass, we would have State regulations of minimum prices, which would be a violation of the intent of the Founding Fathers in the commerce clause of the Constitution. The result would be that sales for resale in interstate commerce which are made by producers to pipeline companies would be defined as not being in interstate commerce. The States in which most of the natural gas is produced would have complete authority to fix the initial price of the gas entering the interstate line.

Mr. MONRONEY. Mr. President, will the Senator yield?

Mr. DOUGLAS. I yield.

Mr. MONRONEY. As I have previously stated, and as the authors of the bill have stated, the bill would have no effect on the minimum price feature.

I ask the distinguished Senator if he would not agree that if the States chose to enact an extraction tax of any amount, they would have, under their authority even in accordance with the Supreme Court's Natural Gas Act, the Fulbright bill, or any other provision, the right to impose whatever severance tax they desired to impose?

Mr. DOUGLAS. The Senator from Oklahoma is not going to get away with confusing a severance tax with a minimum price. A severance tax is a tax levied on output for the benefit of the community. A minimum price is a price fixed upon sales, to benefit the seller in this case. The two things are entirely different.

Mr. MONRONEY. We are talking about the same thing. I merely wish to point out that in order to provide gas as cheaply as possible in interstate commerce, the State of Oklahoma enacted an extraction tax of only one-half cent a thousand cubic feet.

Mr. DOUGLAS. I am not objecting to a severance tax.

Mr. MONRONEY. We exact a tax of half a cent a thousand cubic feet for the exhaustion of our natural resource. Yet the State of New York, which exhausts no natural resource, and screams for the same position which the distinguished Senator advocates in opposition to the bill, exacts a tax of 12.8 cents from the consumer. When we are looking at the cost of gas to the consumer, we must remember that the minimum price is ruled out by law. We do not think that is right, but we submit to it. The situation would not be changed by the pending bill. I predict that the States will not sit idly by, under the type of regulation we would have under the Senator's proposal and continue a tax which is only one-twenty-fifth of the tax which the State of New York charges on our product, production of which involves the exhaustion of a natural resource.

Mr. DOUGLAS. I do not believe that any Senator who opposes the bill has objected to a severance tax as such. Severance taxes are levied upon output, and the total amount of such taxes goes into the State treasury and is spent, presumably, for the benefit of the people of the particular State. They represent 100 percent public revenue.

However, the minimum State prices to which I have referred—just under 10 cents in Oklahoma and 11 cents in Kansas—do not go into the treasury of the State. They are paid to the private producer, and they are higher than many of the minimum prices which had previously been paid, and are designed to increase the income of the producer. That was their sole purpose.

Mr. PASTORE. Mr. President, will the Senator yield?

Mr. DOUGLAS. I yield.

Mr. PASTORE. Is it not true, moreover, that if the State of New York, like the State of Rhode Island or the State of Massachusetts, imposes a sales tax or some other tax, the money is not being taken out of the pockets of the producers in Oklahoma? It is being taken out of the pockets of taxpayers in the particular State or city—to do what? To support their schools, their fire departments, their sewers, their transit systems, and so forth. How far are we going to distort these arguments?

Mr. MONRONEY. We have schools in Oklahoma which are badly in need of support.

Mr. PASTORE. Does not the severance tax help to support those schools?

Mr. MONRONEY. To the extent of one-half cent a thousand cubic feet.

Mr. PASTORE. There is a great deal of gas in Oklahoma. A fast nickel is better than a slow dime.

Mr. MONRONEY. We hope to have even more gas. What I am saying is that, to encourage low prices to the consumers of Rhode Island, Oklahoma foregoes the normal extraction tax and collects a tax of only half a cent a thousand cubic feet, while in New York State a tax of 12.8 cents is collected. Yet we hear the proponents of the bill crying for the New York consumers when the tax in New York amounts to more than the entire cost of the raw gas.

Do Senators think we are going to sit idly by in Oklahoma, exhausting our natural resources, when we have held the tax low in order to help the consumers in the East, while in New York there is a tax of 12.8 cents? We do not think the city of New York should free-load on the gas producers of Oklahoma and at the expense of our school system in Oklahoma.

Mr. SYMINGTON. Mr. President, will the Senator from Illinois yield to me?

Mr. DOUGLAS. Mr. President, some 40 years ago William Jennings Bryan negotiated a series of treaties which provided for a cooling-off period of 1 year. I think such a cooling-off period may be appropriate in the proceedings at this time.

I therefore yield to the Senator from Missouri for 1 minute in order that he may make a statement. However, I do so on condition that his remarks may be printed elsewhere than at this point; that I shall not lose my right to the floor; and that our discussion may be resumed thereafter.

The PRESIDING OFFICER. Without objection, it is so ordered.

(At this point Mr. DOUGLAS yielded to Mr. SYMINGTON who asked and obtained permission to have printed in the RECORD an editorial entitled "Senators Courageous," which appears in today's RECORD before the beginning of the speech of Mr. DOUGLAS.)

Mr. SYMINGTON. Mr. President, I thank the distinguished Senator from Illinois for his typically gracious courtesy in yielding to me.

Mr. DOUGLAS. Mr. President, I wish to comment on the remarks of the Senator from Oklahoma [Mr. MONRONEY], who says, in effect, "If this bill fails of enactment we will impose such a high severance tax that the people in the North and West will pay through the nose after all."

This is in keeping with the threats and blackjack tactics which the people from those regions have used during the past 6 years, in the attempt to jam this bill through.

Mr. MONRONEY. Mr. President, will the Senator yield?

Mr. DOUGLAS. No; I will not yield at the moment. I will yield later.

Mr. MONRONEY. The Senator accuses me of using blackjack tactics. He has always been very considerate. A few moments ago he asked for a cooling-off period of 1 minute. Instead, I think he heated up during that minute. [Laughter.]

In Oklahoma we are foregoing a logical tax in order to help to keep rates low to consumers. But what use is it if rates are to continue to increase by governmental action through saddling taxes on the consumer in the East? If the eastern cities or States fail to protect their consumers, why should Oklahoma neglect to collect an adequate tax to support its own schools?

Mr. DOUGLAS. What the Senator from Oklahoma is saying has been the threat expressed by many producers and representatives in that area, namely: "If the bill is not passed, we will not give you any gas. We will slap on a tax, and you will have to pay a higher rate. If we cannot get the whip hand over you by national law, we will get the whip hand over you by State law." I do not believe that Oklahoma should secede from the Union in that respect.

What I have indicated will be the situation if the Fulbright bill becomes law and sales for resale in interstate commerce which are made by producers to pipeline companies are defined as not being in interstate commerce. The States in which most of the natural gas is produced would have complete authority to fix the initial price of the gas entering the interstate lines. Surely Congress would not wish to issue this kind of a blank check to the major oil companies of this country. In the hearings on the Kerr bill in the 81st Congress, the Federal Power Commission supplied information showing the effect of the then 7- and 8-cent minimum price orders of the Kansas and Oklahoma commissions based upon sales of natural gas in 1947 in the Kansas and Oklahoma Hugoton field. According to this information the minimum price orders—and those orders were in effect 6 years ago—had the effect of increasing the cost of gas to the pipeline companies by nearly $8½ million on an annual basis. The more recent prices of 9.8262 cents and 11 cents per thousand cubic feet when applied to the volumes of gas being produced in the Hugoton field of Kansas and Oklahoma in the year 1954 show that the effect of such orders has been to increase the annual cost of gas to the pipeline companies by approximately $30 million over the contract prices. In one rate-increase case, that of Cities Service Gas Co., which is now pending before the Federal Power Commission, the evidence shows that with respect to the gas purchased in the Kansas Hugoton field, the difference between the contract prices and the minimum price prescribed by the Kansas commission of 11 cents amounts to $4,183,000 on an annual basis. In other words, that is the added cost which consumers in Oklahoma, Kansas, Missouri, and Nebraska, served by just one pipeline company, were paying for gas by reason of the Kansas minimum price order, until that order was declared unconstitutional. The recipients of these millions are for the most part the major oil companies. Subsidiaries of Standard Oil Company of Indiana and Socony-Mobil Oil Co. get 81 percent of the $4,183,000. Seven other producers, all large corporations, account for the balance.

There has been much testimony in the hearings before the Senate and House committees concerning the sanctity of contracts and the unfairness of letting the Federal Government set aside the pricing provisions of contracts between producers and pipeline companies, thereby depriving the producers of benefits which they felt had been secured through advantageous contract provisions.

I remember that the Senator from Louisiana [Mr. LONG] made a very eloquent plea in that direction a few days ago. But these minimum price orders abrogated all contract prices which had been agreed upon between producers and the pipeline companies. The producers asked the State governments to abrogate the contract prices.

The producers say they are against the basic principle of utility price fixing, yet they fought to secure a price-fixing order from their State conservation commissions regardless of their signatures on the gas purchase contracts. I wonder what happened in the States of Oklahoma and Kansas to the slogans "free enterprise" and "free competition," which are the battle cries of proponents of the legislation. The answer is simple: these slogans were sold down the river for higher profits.

The producers say they follow the principle of free enterprise when they get the State government to help the producer, but say it is socialism when the Federal Government tries to protect the consumer.

INCREASES IN FIELD PRICES HAVE ALREADY INCREASED COST OF GAS TO ULTIMATE CONSUMERS—INCREASES IN FIELD COST OF GAS TO PIPELINE COMPANIES

I shall now try to develop a line of thought and argument to show, first,

that the increases in the field prices have increased the cost of the ultimate consumer and, second, that contracts in existence for gas which has not been delivered will increase the price of gas still further in the future. Let me begin with the increase in the field cost of gas to pipeline companies.

Commencing in 1949, natural-gas pipeline companies began to file applications with the Federal Power Commission for substantial increases in their resale rates. There appear to have been three major causes for these increases: First, increased cost of labor, materials, and taxes; second, increased costs incident to adding system capacity which was more costly per unit than existing capacity; and, third, increased costs due to the higher prices paid for the purchase of natural gas in the field from nonpipeline producers. The greatest of these were the increases in the cost of gas purchased from such producers—Commissioner Nelson Lee Smith, during a panel discussion at the Practicing Law Institute on June 7, 1954, presented data from a study of 20 major natural-gas companies which showed that in the period 1948 to 1953, inclusive, the average increase in purchased-gas costs was 4.52 cents per thousand cubic feet, which represented 84 percent of the average increase in wholesale revenues secured by these 20 companies during the same period.

In other words, in the proceedings before the Federal Power Commission in the past 2 or 3 years the producers have been advancing the very same standards which Messrs. HARRIS and FULBRIGHT include in their bill, namely, the use of the existing market prices to determine what the market prices should be.

In order to demonstrate the great increase which has occurred in the unit cost of gas to interstate pipeline companies, I have had prepared from data furnished the Federal Power Commission by the pipeline companies, table No. V–1. I ask unanimous consent that the table be printed in the RECORD, at this point.

There being no objection, the table was ordered to be printed in the RECORD, as follows:

TABLE V–1.—*Average cost of natural gas purchased from nonaffiliated producers in Southwest by 17 major natural gas pipeline companies*

Name of company	Cents per M c. f.								1954 or pending rate-increase filing	Increase—rate filing or 1954 over 1946	Percentage increase

Source other than as noted: FPC Form No. 2.

Mr. DOUGLAS. Mr. President, in addition, during the past 2 or 3 years applications for rate increases have been based on claims of pipeline companies for the market value, instead of the cost, plus a fair return of the gas they themselves produce from owned or subsidiary-owned reserves. This table shows the average annual cost of gas to 17 major pipeline companies buying gas in the Southwest States commencing with the year 1946 and ending with the year 1954, as reflected by their reports to the Federal Power Commission or by the figures furnished by the companies in their most recent applications to the Federal Power Commission for rate increases.

These 17 companies, in 1954, purchased approximately 4,140,000,000 thousand cubic feet of natural gas from independent producers, which is approximately 92.7 percent of the total volume bought by all companies in the Southwest, and 88 percent of the total volume purchased by all pipeline companies, subject to the jurisdiction of the Federal Power Commission in that year from nonaffiliated producers. Thus, I believe the table reflects a reasonably accurate representation of the increased cost of gas purchased in the Southwest from independent producers. It will be noted from this table that in the case of most companies the cost of gas gradually increased from 1946 until 1951, and that thereafter the magnitude of the annual increases became much greater. The percentage increase for each company is shown in the right hand column. The increases range from 20.87 percent in the case of Texas-Illinois Natural Gas Co. to 274.15 percent for El Paso Natural Gas Co. The principal market of this latter company is California.

Mr. MONRONEY. Mr. President, will the Senator yield?

Mr. DOUGLAS. I yield.

Mr. MONRONEY. It is a bit amusing to me that the lower price per thousand cubic feet for natural gas in the Southwest, which ranges between 7 and 10 cents, is always the target of the sharp barbs of the distinguished senior Senator from Illinois, whereas the 16-cent price for gas in the Appalachian field has been completely overlooked.

In fairness to those of us who come from the Southwest, I believe it should be stated that the reason the nationwide average is 10½ cents is that a great deal of cheap gas flows into the lines and that that cheap gas brings down the 50 percent to 75 percent higher gas price in the Appalachian Field.

In the usual fair development of the case, which the distinguished senior Senator from Illinois always pursues, I believe it might be material not always to make the Southwestern gas producers the whipping boys. After all, if gas is selling for 2 cents a thousand cubic feet and goes up to 6 cents a thousand cubic feet, there is an increase of 300 percent, but only a 4-cent increase in the price.

Mr. DOUGLAS. The remark of the Senator from Oklahoma is highly amusing, because he ignores the fact that the Southwest furnishes 90 percent of the gas sold to pipeline companies, whereas the Appalachian region furnishes only 3.3 percent.

Mr. MONRONEY. Mr. President, will the Senator from Illinois yield?

Mr. DOUGLAS. No, not at this time. I wish to finish my sentence, and then I shall yield.

Everyone knows that the Appalachian field, which I think is the earliest field, is relatively played out; it is more or less passé. The great volume of gas comes from the Southwest. I have talked about the Southwest because that is the place which furnishes gas to the rest of the country. These figures do not include the Appalachian region. They cover the Southwest, and show an increase of 140 percent from 1946 to 1954. They show that the increases in price were particularly rapid after the passage of the Kerr bill. In this connection, I wish to say that I prophesied on the floor of the Senate that if the Kerr bill went into ef-

fect—and it did go into effect because of the refusal of the Federal Power Commission to act—within a few years the price of gas in the Southwest would go up by 5 cents per thousand cubic feet. As of last year it has gone up by 4.2 cents, and now it is close to 5 cents. So I was 84 percent correct last year, and I am about 100 percent correct today. When I say that the price will go up to 10 cents if the Harris-Fulbright bill is passed, I think my statement is backed by a record of prophecy which has been pretty well fulfilled.

I now yield to the Senator from Oklahoma.

Mr. MONRONEY. The Senator from Illinois, I think, has still missed some of his statistics in referring to 3 percent in the Appalachian region. If he checks his figures, I think he will find that the integrated companies which supply Pittsburgh and many points in Ohio, and many companies operating in West Virginia and Virginia, are still taking a far larger quantity than the figures of the Senator would show.

Furthermore, I find it a little difficult to accept the 1940 to 1946 cut-off period, to which the Senator continually refers, which, in the gas-producing industry, takes us back to the days of 30-cent wheat, 5-cent hogs, and nickel cotton, in spite of the many protests raised by the Senator against rolling other prices back to those depression levels. But it is a fact that, historically, the price of gas in the adjusted and relatively free competitive market in 1926 was 9½ cents. Now, 30 years later, it has gone up about a half cent, on the national average. Of course, we can throw back to the 4-cent days when gas was flared in the air and there were no facilities for taking it in interstate commerce. But I cannot agree with that any more than I can agree that 30 cents for a bushel of wheat was the proper price.

Mr. DOUGLAS. Mr. President, chart No. 1, which is in the rear of the Chamber, covers the same period as that shown in table No. V–1 and shows the weighted average cost of gas in cents per thousand cubic feet purchased by the 17 companies from the independent producers. In 1946 the weighted average cost of gas to these companies was 4.328 cents per thousand cubic feet. Based upon the most recent available data, which primarily applies to the year 1954, the weighted average cost is 10.363 cents per thousand cubic feet—an increase of 6.035 cents or 139.44 percent.

What has been the financial impact on the natural-gas pipeline companies of the higher cost of gas purchased from nonaffiliated producers? Again using the 17 major companies purchasing natural gas in the Southwest, I have had prepared table No. V–2, which follows, and which I ask unanimous consent to have printed in the RECORD at this point in my remarks.

There being no objection, the table was ordered to be printed in the RECORD, as follows:

TABLE V–2.—*Increase in cost of natural gas purchased by 17 major natural-gas pipeline companies in Southwest from nonaffiliated producers based on prices paid in 1948 and most recent known prices*

Name of company	Average price paid		Increase	Percentage increase	Volume purchased, 1954, or as shown by rate filing (thousand cubic feet)	Annual increase in cost of purchased gas

Source: Other than as noted, FPC Form No. 2.

Mr. DOUGLAS. Mr. President, this table reflects a computation of the increase in the cost of gas for the 17 companies based on the prices and volumes purchased in the year 1954, or as shown in the most recent applications to the Federal Power Commission for a rate increase, as compared with their weighted-average cost of gas in the year 1948. As will be noted from this table, the annual increase in the cost of gas to the 17 companies is in the aggregate running at the rate of $216,209,573.

I believe the Senate and the public will agree, after examining this table, that these increases in the cost of purchased gas which have already occurred in the past 5 or 6 years are not exactly chickenfeed.

INCREASES IN FIELD COSTS HAVE BOOSTED PIPELINE RESALE RATES

I turn now to the effect of this huge increase in the field cost of gas to pipeline companies upon the resale rates of such companies which are subject to the jurisdiction of the Federal Power Commission. In this connection, it should be noted that most of the interstate pipeline companies sell some portion of the gas they handle directly for consumption. Also, some companies make intrastate sales for resale. The proportions of these two classes of business differ materially between the 17 pipeline companies previously referred to. On the average 70 percent of the volume of gas which the 17 companies sell is sold for resale to distributing utilities.

Between July 1, 1949, and December 1, 1955, a period of 6 years and 5 months, natural gas pipeline companies—as distinguished from nontransporting or independent producers—have filed 170 requests with the Federal Power Commission for increases in their resale rates aggregating $520,025,300 on annual basis. This great sum is indeed startling in relation to the fact that the Commission during the years 1939–1952 succeeded in reducing pipeline-company rates only $43,345,000 as shown by table No. I–1.

The disposition made by the Federal Power Commission of the rate-increase applications is as follows:

	Number	Amount
Total filed	170	$520,025,300
Disallowed and withdrawn	------	164,553,000
Placed in effect without suspension	(47)	16,093,000
Placed in effect after suspension	------	199,150,600
Total disposed of	91	379,796,600
Pending Dec. 1, 1955	32	140,228,900

Incidentally, my prediction in 1950 that the increases in rates would amount in a few years to over $200 million annually if producers' rates were not regulated has been abundantly confirmed. The increases granted to date have been $215 million a year, while claims for another annual boost of $140 million are still pending.

Table No. V–3 has been prepared to show the rate increases which 14 of the 17 pipeline companies previously referred to have requested of the Federal Power Commission during the same period of 6 years and 5 months and to also show the disposition of such rate-increase applications.

I ask unanimous consent that this table be printed in the RECORD at this point in my remarks. I think it throws light upon what has happened.

There being no objection, the table was ordered to be printed in the RECORD, as follows:

TABLE V–3.—*Rate increase applications filed by 14 interstate pipeline companies with the Federal Power Commission and their disposition (July 1, 1949, to Dec. 1, 1955)*

	Effective date	Amount filed for	Disposition		
			Allowed	Disallowed or withdrawn	Pending

[1] Sales for industrial use only.
[2] Withdrawn.
[3] Filing date.

Mr. DOUGLAS. Mr. President, it will be noted that Arkansas-Louisiana Gas Co., Lone Star Gas Co., and Trunkline Gas Co. have been omitted from the tabulation. The explanation for this is that Arkansas-Louisiana and Lone Star have only very minor sales of gas subject to the Federal Power Commission's jurisdiction, almost all of their gas sales being made at retail in the States of production. Trunkline Gas Co. is a subsidiary of Panhandle Eastern Pipeline Co. and its rates for the sale of gas to Panhandle are based on a cost-of-service formula. The revenue received by Trunkline is dependent upon its operating and other costs plus a return of 6 percent. Under this formula, all increases in its cost of purchased gas automatically are passed on to Panhandle.

Mr. KENNEDY. Mr. President, will the Senator yield?

Mr. DOUGLAS. I yield.

Mr. KENNEDY. Perhaps I am about to ask the Senator a question on which he may already have touched. Will the Senator give some idea of what effect an increase of 2 or 3 cents in the price of natural gas in the field would have upon the price the consumer eventually would have to pay? Obviously, it would be several times 2 or 3 cents. Will the Senator explain the reason for that?

Mr. DOUGLAS. Of course, an increase of 2 or 3 cents in the field would be passed on to the consumer. Slightly more than 6 billion thousand cubic feet were consumed in 1955. An increase of 1 cent would, therefore, cause an increase in price of $60 million; an increase of 2 cents would mean a total increase of $120 million; an increase of 3 cents would mean an increase of $180 million.

However, as I am contending, probably the increase, very quickly would be 10 cents, or a total increase of $600 million.

The Senator from Massachusetts also asked, I think, whether an increase of 2 or 3 cents in the field would reflect itself in a final increase of more than this amount. If there were strict regulation, it ought not to do so, except as other elements of increased costs might enter into the adjustments made by the Federal Power Commission or the State regulatory commissions.

Mr. KENNEDY. Even if there were an increase of 5 cents in New England, on a total bill of $3, the proponents of the pending measure make the point that, after all, that would be a very slight fraction, with reference to the overall figures. Nevertheless, unless the price were increased geometrically, it would be a very small increase on the overall bill, and one that might be justified if it encouraged the discovery of additional sources of gas, I was wondering if the Senator would deal with that argument.

Mr. DOUGLAS. I think the proponents of the bill have been unfair in selecting only a few of the high cost residential cities, such as Philadelphia, New York, Providence, and Boston. The rates in those cities are not typical, for a number of reasons which I tried to show yesterday, and which I shall now try to summarize.

In the first place, until recently, those cities largely used manufactured gas, and in them there has been very little heating of homes by gas. Coal or oil is still used as the predominant fuel for the heating of homes. Therefore, the additional consumption of gas per household tends to be relatively low. Gas is used for cooking, and in some cases for heating water, but not for house heating.

As the Senator from Massachusetts well knows, it costs a large sum of money to connect a given house with the gas main running along the street. The cost of connection has averaged $200, but I have been told that it is now running close to $500. So it is necessary initially to hike the charge for residential gas to a high price, until the distributor can move into a volume of house heating and thus bring the rates down.

Taking the country as a whole, the average residential price for gas is not $1.50 or $2.01 or $3.64, but is about 80 cents, as is shown on the first chart in the rear of the chamber.

But only about a third of the gas consumed in cities is used for residential purposes. A considerable amount is used by commercial establishments, notably by hotels and restaurants. The major portion of the gas, however, goes to industry. Most of it, not all of it, is sold during the summer months, when the residential demand for gas falls to almost nothing. So in order to sell gas during the summer months, the local distributing companies make very favorable rates to industries, rates averaging around 22 or 23 cents a thousand cubic feet.

The result is that if residential sales, commercial sales, and industrial sales are considered together, the average price received for a thousand cubic feet of gas is about 44.4 cents. If that amount is split, we find that 10.7 cents, or 23 percent, goes to the producers, and the transmission companies take another 14 cents. So the average price delivered to the city gates is a little less than 25 cents.

To this amount the distributing companies add, on the average, approximately 19 cents. Thus their retail markup is about 43 or 44 percent of the consumer's total dollar.

I am no apologist, the Lord knows, for the local distributing companies. I think that in some cases they have perpetuated higher prices. But I think the people from the Southwest have introduced an extraneous issue and have chosen unfair examples, but have not taken into account the average revenues for all purposes. If they had, the situation would be different.

The argument has been advanced, not by the Senator from Massachusetts [Mr. KENNEDY], but by General Thompson—we identified the statement yesterday—that the increase would be only a few cents from the individual consumer, the implication being, Why should we pay much attention to it? The Senator from Massachusetts does not hold that view. But that is the argument.

The increases will not be 2 or 3 cents, but, as I shall show, will be about 10 cents a thousand cubic feet, in my judgment. A large proportion of the increased cost would not be unloaded upon the interruptible industrial gas users, because then they would turn to coal or oil. So the residential consumers will have to bear not only the 10-cent increase on the gas which they consume, but also most of the 10-cent increase to the industrial users. Thus the increase to the residential consumers will be in all probability appreciably higher, percentagewise or in cents per thousand cubic feet, than the increase gained in the field, the net result being that the residential consumers will bear the major portion of the burden.

If the increase should be 10 cents per thousand cubic feet, that would amount to $600 million. The major portion of that increase would not be borne by industry; it would be carried by the residential consumers. Twenty-one million families are using natural gas, so the average increase per family would not be far from $20 or $30 a year. Twenty or thirty dollars a year per family is an appreciable amount. When it is multiplied by 21 million, the result is a sum of tremendous magnitude.

The real task of defending the consumer is the task of saving a few cents per family here and there. The weakness of the consumer is that with respect to any particular item or any particular issue, the amount which a given head of a family will lose is so small that it does not justify his buying a book on the subject or coming to Washington to lobby for or against it. So the consumer interests of the great mass of American people are left unprotected as a result of the powerfully concentrated interests having a tremendous driving power.

Of the producers in the American gas industry, only 35 of them sell 70 percent of the gas, and, therefore, presumably will obtain 70 percent of the benefits. They will be taking 40 cents or 50 cents a week out of the pockets of each of the 21 million families of the United States, and that amount will go to Standard, to Phillips, to Gulf, to Texas, to Atlantic, to Shell, and to all the other big companies.

Mr. LEHMAN. Mr. President, will the Senator yield?

Mr. DOUGLAS. I yield.

Mr. LEHMAN. Even assuming, as the Senator from Massachusetts [Mr. KENNEDY] has stated, that the increase is only a very small percentage of the charge made by the distributing company to the householder, is it not a fact that the figures which the Senator from Illinois already has adduced demonstrate that if the increase is as little as 10 cents, it will add to the consumer's bill $600 million a year?

Mr. DOUGLAS. To all consumers, yes. My point is that the major portion of the increased prices would fall upon residential consumers. It would not be possible to unload all of these added prices upon the interruptible industrial rates, because the industries would turn to oil or coal. Therefore, to recover

their costs, the companies would have to make more than a 10 cent increase in rates charged to residential consumers.

Mr. LEHMAN. I have no figures to demonstrate whether in the past the charges of the public utility companies, the distributing companies for manufactured gas, have been reasonable or not. My judgment is that many charges have been made which are not justified; but whatever the fact may be, is it not true that, whatever the increased charge at the well for the gas may prove to be, that will be an increase which will inevitably be borne by the consumer of gas, mainly the residential consumer of gas?

Mr. DOUGLAS. That is correct.

Mr. LEHMAN. There is no way for him to evade that increase, because the consumer is a captive. He cannot change his method of using gas within his household, whether it be for cooking or heating purposes.

Mr. DOUGLAS. That is correct.

Mr. LEHMAN. Is it not a fact that, as I believe the Senator from Illinois himself has pointed out, this additional charge, even though it may be small when compared to the total distributing charge, would merely be adding insult to injury, and that the consumer could not possibly avoid paying that charge?

Mr. DOUGLAS. The Senator from New York is completely correct.

The 14 companies listed on the table have applied to the Commission for rate increases totaling $384,700,800, of which $170,604,800 has already been allowed by the Commission. Increases pending as of December 1, 1955, amount to $94,-175,500. Requested increases in the amount of $119,920,500 have either been disallowed or withdrawn. The total increases, either granted or pending, amount to $214,096,000. This amount includes some duplication, as I previously mentioned, because of sales between several of the listed pipeline companies. However, the proportion of such duplication is much less than in the overall statistics for rate-increase requests referred to previously.

It will be also noted from the table that all but 2 of the companies have filed more than 1 rate increase with the Commission, and several companies have filed 4, 5, 6, or more rate increases during this period.

As most of the 14 companies secure a portion of their gas supply from their own reserves or from an affiliated producing company, as well as by purchase from other pipeline companies, it is difficult to directly relate the dollar increase in the field cost of gas of the 14 companies to the rate increases granted such companies or those which are presently pending. I have previously pointed to the fact that increases in pipeline-company rates were brought about by 3 principal factors, the dominant factor being the increased cost of gas purchased from nontransporting producers. This is quite evident when the increased cost of gas to the pipeline companies is compared with the increases in resale rates which have been granted by the Commission or are presently pending. For comparative purposes, the total increase of $216,209,573 in the cost of gas to 14 major pipeline companies purchasing gas in the Southwest, which occurred since 1948, should be adjusted to exclude the portion of the gas purchased which is resold to direct industrial customers. These adjustments are set forth on table V–4.

Mr. President, I ask unanimous consent that the table be printed in the RECORD at this point in my remarks.

There being no objection, the table was ordered to be printed in the RECORD, as follows:

TABLE V–4.—*Increases in field cost of gas to pipeline companies and portion applicable to resale business*

Name of company	Annual increased cost of purchased gas	Percent of total sales to sales for resale	Annual increased cost for sales for resale
Arkansas-Louisiana Gas Co	$11, 566, 107	5. 33	$616, 474
Cities Service Gas Co	8, 165, 445	65. 35	533, 612
Colorado Interstate Gas Co	6, 284, 647	78. 10	4, 908, 309
El Paso Natural Gas Co	36, 207. 209	86. 17	31, 199, 751
Lone Star Gas Co	7, 475, 214	4. 08	304, 989
Michigan-Wisconsin Pipeline Co	2, 282, 702	100. 00	2, 282, 702
Natural Gas Pipeline Company of America	2, 993, 820	99. 21	2, 970, 169
Northern Natural Gas Co	12, 334, 577	80. 44	9, 921, 934
Panhandle Eastern Pipeline Co	6, 470. 366	88. 38	5, 718, 509
Southern Natural Gas Co	7, 314, 416	68. 86	5, 036, 707
Tennessee Gas Transmission Co	38, 744, 504	99. 78	38, 659, 266
Texas Eastern Transmission Corp	8, 403, 135	100. 00	8, 403, 135
Texas Illinois Natural Gas Pipeline Co	2, 803, 051	100. 00	2, 803, 051
Texas Gas Transmission Corp	2, 822, 699	94. 42	2, 665, 192
Transcontinental Gas Pipe Line Corp	7, 772, 450	98. 72	7, 672, 963
Trunkline Gas Co	3, 172, 809	99. 80	3, 166, 463
United Gas Pipe Line Co	51, 396, 422	46. 68	23, 991, 850
Total	216, 209, 573	69. 42	150, 855, 076

Mr. DOUGLAS. Mr. President, from this tabulation, it appears that the increased cost of gas purchased from nontransporting producers which is applicable to sales for resale in interstate commerce amounts to $150,855,076, compared with rate increases granted to or presently pending for the 14 companies, amounting to $214,096,000. While this would indicate that increases in the cost of gas purchased from nontransporting producers account for 70 percent of the rate increases, the true proportion is greater because of duplications which inflate the dollar amounts of rate increases granted or pending. For example, Natural Gas Pipeline Co. of America purchases a large portion of its gas supply from Colorado Interstate Gas Co. Colorado Interstate's pending rate cases include proposed increases in rates to Natural Gas Pipeline Co. of $7,824,000. Thus, duplication of this amount is included in the combined total of the allowed and pending rate increases of the two companies. Other major and minor duplications exist with respect to most of the other listed companies.

Another factor which is responsible for a portion of the rate increases granted, and now pending at the Federal Power Commission, is the inclusion in operating expenses of the pipeline companies of a value for the gas which these companies and their affiliates produce. Chairman Kuykendall of the Commission has furnished me with information showing that pending and allowed rate increases for 9 of the 14 companies listed on table V–3 are based in part on the substitution of the commodity value or average field price of gas for the cost of production, including a fair return. Based solely upon allowing the commodity value in place of cost plus a fair return, the aggregate annual rate increases for seven of these companies amount to $30,389,812. Data were not available for two other listed companies which have filed rate increases based in whole or in part on an allowance for the commodity value of the gas produced from owned reserves.

From the evidence at hand, it is quite clear that increases in the cost of gas purchased by pipeline companies from the so-called independent producers are responsible for the major share of the increases which pipeline companies have been granted by the Federal Power Commission and those which are presently pending. Another important factor is the change of ratemaking policy by the Commission with respect to gas reserves owned by pipeline companies.

Enactment of the Fulbright bill would, in effect, confirm all of these pending rate increases of pipeline companies, amounting to about $94 million on an annual basis. Moreover, it would make possible future rate increases as the price of gas in the field continued its upward spiral in the absence of effective Federal regulation.

Before passing to my next subject, let me point out that one of the most significant facts revealed by the statistics furnished by the Federal Power Commission, as to rate increases filed by interstate pipeline companies, is that between January 1, 1955, and December 1, 1955, natural-gas pipline companies filed field rate increases which aggregated only $19,735,400. This amount represents a substantial reduction in the annual rate of increases filed during the years 1951 through 1954, which ran at the rate of $100 million or more per year.

I believe that it is rather obvious that the slowdown in the filing of requested rate increase by the pipeline companies has been due to the Phillips decision and its authorization of regulation by the

Federal Power Commission of gas producers.

Thus, it is reasonable to conclude that regulation of producers, as thus far exercised by the Commission—and it has not done so except in the last year or so—has had a pronounced effect upon rate increases filed by producers and pipeline companies.

INCREASES IN PIPELINE RATES REFLECTED IN INCREASED RATES TO ULTIMATE CONSUMERS OF GAS, WHILE AVERAGE COSTS OF ELECTRICITY ARE DOWN

At this time, Mr. President, I wish to point out that, just as the increased amounts received by the producers caused the pipeline companies to pay more, so will the increases in the amounts the pipeline companies pay force the distributors to pay more and force the ultimate consumers to pay more.

The distributing utilities which have purchased natural gas from pipeline companies under rate schedules providing for higher rates, in the past few years have absorbed these increased costs, either in whole or in part, or passed them on, through increases in local retail rates for residences, commercial establishments, and factories. The manner in which these individual distribution companies met the increased costs of purchased gas differs from company to company, but the satistics of the country as a whole and for many of the States reflect substantial increases in the average revenue paid by the natural-gas consumer since 1948.

I have previously commented upon the action of the Federal Power Commission in reducing the rate of pipeline companies in the early or middle 1940's; and I have indicated that these rate reductions were reflected in lower rates to the ultimate consumer. It will be recalled that Congress passed the Natural Gas Act because it was convinced that existing natural gas rates were excessive, and that gas consumers were entitled to relief. Thus, in the period from 1940 to 1945, the average revenue per term of natural gas sold by all gas utilities in the United States for consumption decreased from 3.2627 cents to 3.0178 cents or, in terms of thousand cubic feet, approximately 2.58 cents.

The rough rule of conversion, as the distinguished Presiding Officer [Mr. BIBLE] knows, is that there will be 10 therms per thousand cubic feet. The more precise conversion figure is, I believe, 9.66.

Chart No. 2 shows the trend of the average cost to consumers of natural gas for the entire United States at the retail level for the years 1945 to 1954, inclusive, for residential, commercial, and industrial service. The average cast for all sales, including a rather small volume of gas sold principally to governmental authorities, is also shown. The decline in residential gas costs, which I just mentioned, continued through the year 1948. The chart shows a dip in the upper figure. In 1949, the rise in cost to the consumers commenced. The costs chart reflects a steady increase during the period in the average unit cost for natural gas for the commercial and industrial classifications.

The average unit cost for residential service has increased approximately 17.6 cents per thousand cubic feet in the period 1945–54. Increases in the average rates for commercial and industrial service during the same period were approximately 20.3 cents per thousand cubic feet and 7.2 cents per thousand cubic feet, respectively. The larger increases in the average cost of natural gas to residential and commercial consumers illustrate the fact, to which I shall refer later in more detail, that increases in the field cost of gas have a pyramiding effect upon the residential and commercial users. The distribution companies are unable to pass on to the industrial customers their proportionate share of such increased cost of gas, since to do so would result in the loss of that business to coal or oil. I submit that the historical figures I have introduced, showing a very slight increase in the cost of gas for industrial sales, but a very marked increase in the cost of gas for residential sales, confirm the statement I made in colloquy with the Senator from Massachusetts [Mr. KENNEDY], namely, that the consumers will have to bear some of the burden of the price increase in the field upon the gas consumed by industrial plants in the consuming centers.

For the purpose of arguing that natural-gas rate increases have not been out of line, comparisons have been made by the exponents of the bill or those favorable to the bill, in testimony before the Interstate Commerce Committee and in the public press, between the cost of natural gas for residential use, on the one hand, with the cost of living, the cost of manufactured gas, and the cost of fuel oil and of coal. While I consider that such comparisons are not relevant to the issue, it appears to have been overlooked that in the home the chief competitor of gas for cooking, water heating, and refrigeration is electricity. Electricity is also competitive, but to a much lesser degree, for space heating. That is particularly true in the Northwest, but it is not so in most areas of the country, where electricity is the chief competitor of gas for cooking, water heating, and refrigeration.

Chart No. 3 compares the trend of the average revenue received by utilities from the sale of gas for residential use in the United States for the years 1945–54 with the average revenue received per kilowatt-hour from the sale of electricity for residential service. It should be noted that in this period, the average cost per therm for natural gas decreased from 6.3 cents in 1945 to 6.06 cents in 1948, and then increased to 8.06 cents per therm in 1954. To get a rough figure per Mcf, one can multiply the cost per therm by 10. Meanwhile, the average cost of electricity per kilowatt-hour decreased from 3.47 cents in 1945 to 2.80 cents in 1954. In other words, during that period the residential cost of electricity was going down, but the residential cost of gas was going up.

While these data clearly indicate that the average householder in the United States has been able to buy electricity at a progressively lower unit cost each year since 1945, and that the average unit cost of natural gas for residential use has rapidly increased since 1948, I would not want this chart to be interpreted as showing that residential electric tariff rates, as such, have declined 19 percent. As a matter of fact, FPC studies of the typical electric bills in cities of 50,000 or over in population, show that there has been practically no change in the monthly bills of residential customers between 1945 and 1953, based on typical increased kilowatt-hour consumption.

Thus, the decline in the average unit cost of electricity to the residential customer has come from increased consumption which has permitted the customer to purchase a portion of his electric requirements at a lower rate per kilowatt-hour.

Most residential gas rate schedules have similar graduated rates by which the unit cost progressively decreases as the consumption increases. The national statistics show that the average annual consumption of natural gas per residential customer increased from 682 therms in 1945 to 950 therms in 1951. This would be expected, in view of the increase in the use of gas for residential space heating and other household purposes. However, the average annual consumption dropped in 1952 to 903 therms, and in 1953 to 871 therms. The explanation of this drop in average usage is due, I believe, to the fact that several million manufactured-gas customers were transferred to natural-gas service in the years 1951, 1952, and 1953, principally on the eastern seaboard. These customers had an average annual usage of gas which was less than the average usage of existing natural-gas customers, and such usage was not appreciably increased after conversion. One of the chief reasons why it did not increase may have been the high rates. Moreover, the rates which these customers paid for natural gas were generally higher than the average natural-gas rates paid for the entire United States. Thus, the sharp increase in the average cost of gas to the residential consumer which started in 1951, as shown by the chart, is somewhat accentuated. However, I should like to point out that with increases in the consumption of gas over the period as a whole from 1951, one would have expected that the average price paid would have decreased. Instead, it increased, although the average price paid for electricity by the consumer decreased, in terms of the cost or the price per unit.

Similar data were obtained for the States of California, Oklahoma, Texas, Ohio, West Virginia and Michigan where there has been a minimum changeover of distribution systems from artificial to natural gas in the period 1945–53. These data show that a gradual decline occurred in the average cost of gas per therm in these States until 1950 and 1951 when an upward trend commenced. In California, the average cost per therm had increased in 1954 over 1950 by 15 percent; in Oklahoma by 30 percent; in

Texas by 13 percent; in Ohio by 12 percent; in West Virginia by 23 percent; and in Michigan by 15 percent. At the same time, the average annual unit consumption per residential customer in these States also increased. These percentage increases in average cost per therm may be compared with the national average increase of 24 percent.

These statistics indicate that natural-gas rates in many localities have increased in the past 4 years in such magnitude as to have overcome and offset the normal decrease in the average cost of gas per therm due to increased residential consumption. At the same time, the average cost of electricity, the most potent competitor of gas for the residential market, has been steadily declining. It is no wonder that distribution companies are opposing this legislation, which would heap still heavier burdens upon the consumer.

Mr. FULBRIGHT. Mr. President, will the Senator yield for a question?

Mr. DOUGLAS. I am glad to yield.

Mr. FULBRIGHT. I understand that a few moments ago the question was raised as to the effect upon State minimum price laws if the bill should be passed. That is a very technical question. It is the position of myself and other sponsors of the bill that such minimum price laws would not be effective in the face of the bill, and that the Federal Government would still occupy the field. For example, with regard to escalation clauses, the proposed regulation indicates an intention on the part of Congress to occupy the field for certain purposes. The question is very involved and technical. I mention the subject to the Senator from Rhode Island [Mr. PASTORE], who, I believe, raised the question in the first instance.

Mr. DOUGLAS. I raised the objection, but the Senator from Rhode Island commented upon it.

Mr. FULBRIGHT. I was not present when the discussion began. I doubt whether I or any of the other proponents would be properly prepared to make a full legislative history at this moment. However, it is the intention of the Senator from Arkansas, at a later and more appropriate time, when it will not interfere with the speech of the Senator from Illinois, to develop this subject very fully, and to state, without any equivocation, the understanding and belief of the proponents of the bill as to what its effect would be with regards to State minimum price laws.

Mr. DOUGLAS. Is it not true that the Supreme Court would have to render final judgment on this question?

Mr. FULBRIGHT. That is not unusual. That is true in every case.

We believe that our interpretation is a very reasonable one, and that, inasmuch as the Federal Government occupies a certain field, particularly in the sections relating to escalation clauses, or indicates an intention to do so, State minimum price laws would not be applicable in such cases.

Mr. PASTORE. Mr. President, will the Senator yield?

Mr. DOUGLAS. I yield.

Mr. PASTORE. I quite agree with the Senator from Arkansas that now is not the proper moment to enter into an involved debate as to the interpretation of subsections 10 and 11 of section 2 of the pending bill. However, I invite the attention of the Senator from Arkansas to the fact that subsections 10 and 11 of section 2 are words of limitation on jurisdiction. Insofar as the Federal Power Commission's jurisdiction is over the producers, there is only one limitation, and that is with respect to existing contracts which have to do with the obligation of the pipeline companies under existing escalation clauses to pay more than the "reasonable market price," as spelled out in the bill.

We definitely take the position that with that single exception—which I hardly think would be sustained in any court of law—this is, in fact, a decontrol bill, and that subsections 10 and 11 of section 2 are nothing more than a limitation of the jurisdiction of the Federal Power Commission over producers. I think that point ought to be developed, because I firmly believe that if it is the clear intention of the proponents of the bill not to make this a decontrol bill, other language should be used to clarify the situation.

Mr. FULBRIGHT. Mr. President, will the Senator from Illinois yield?

Mr. DOUGLAS. I yield.

Mr. FULBRIGHT. I do not wish to pursue the subject further at this time. I say that the proponents—at least, speaking for myself—do not consider this to be a decontrol bill, but rather a control bill with a different technique from that advocated by the opposition.

Mr. DOUGLAS. Would the Senator from Arkansas say that it is a more effective control measure than the existing law?

Mr. FULBRIGHT. It is a more effective control measure.

Mr. DOUGLAS. In other words, this bill is for the purpose of protecting the consumer?

Mr. FULBRIGHT. Precisely. That is what I said in the beginning.

Mr. DOUGLAS. That is a very charming position for the Senator from Arkansas to take. This is the first time I ever heard of the gas producers of Oklahoma, Texas, Kansas, and Louisiana spending enormous sums of money to protect the consumer. It is very charming of the Senator from Arkansas.

Mr. FULBRIGHT. The Senator from Illinois has often shown a complete absence of understanding of the gas business, or he would not take such a position. I can conceive that he has had no occasion to understand the economics of the gas-producing business, but what I have stated is the fact. I so stated in my opening remarks a week ago today. If the Senator had taken the trouble to read that statement, I am sure he would not be under any misapprehension as to the character of the bill.

Mr. DOUGLAS. It is very interesting that the Senator from Arkansas contends that this bill is meant to protect the consumer and prevent prices from increasing. Other proponents of the bill say that it means a very appreciable increase in prices in the field. That is a subject which is being discussed in the gas-producing centers. I am sure the Senator from Arkansas is sincere, but his associates have a different opinion of the bill from that which he has expressed.

Mr. FULBRIGHT. I do not recall hearing any spokesmen on the floor of the Senate say that the purpose of the bill is merely to raise the price to the producer.

Mr. DOUGLAS. Not on the floor; in the "boiler room."

Mr. FULBRIGHT. There are many misapprehensions. I read in great city newspapers that this is a decontrol bill, which certainly it is not. The Washington Post is just as badly informed about the bill as are the people to whom the Senator from Illinois refers. Thank goodness, the Sun-Times of Chicago understands what the bill is.

Mr. DOUGLAS. I thank the Senator from Arkansas.

Mr. President, I have been speaking for some time on the increases in the price of gas which have already occurred in the field, which have been passed on in part to the pipeline companies, which in turn have passed them on to the distribution companies, which in turn have passed them on to consumers. That is the past history. I think it was Shakespeare, in The Tempest, who said, "The past is prologue." As I come down Pennsylvania Avenue each morning I see that sentence on the Archives Building.

The first slogan is, "Study the Past," which we have done. The next quotation is from The Tempest—"The Past Is Prologue." Or, in slang, that means, "You ain't seen nothing yet." That is Shakespeare in modern dress, a la Orson Welles.

Existing contracts in the field, and many not yet fully executed, contain "sleepers" and clauses which would lead very quickly to a great increase in price. We can prove that by what is happening in the field.

ESCALATION CLAUSES IN GAS PURCHASE CONTRACTS LIMIT COMPETITION

The almost universal inclusion in gas purchase contracts of "favored nation," "renegotiation," and other escalation clauses presents a clear example of the domination and control by producers over the sale of gas in the producing fields. These clauses, which did not become prevalent until about 1947, place onerous burdens upon pipeline companies and effectively limit and impede competition among buyers and sellers. The escalation clauses are of several different types, but all of them are designed to jack-up the price of gas in the producing fields. They are one-way-street clauses.

Let me first describe the favored-nation type clauses. There are two principal types of such clauses, but with some variations in their terms and applicability. The type of clause known in the industry as the "two-party favored-

nation clause" provides that if the pipeline company buying gas from producer A in a field, area, or Texas Railroad Commission District contracts to buy gas from B in the same field, area, or district at a price higher than it is already paying producer A, it must then thereafter pay producer A the same price it agrees to pay producer B.

A more vicious type of favored-nation clause—so well analyzed by the Senator from Rhode Island [Mr. PASTORE]—is known as the "third-party favored-nation clause." In this type of clause the pipeline buyer agrees to pay its suppliers within a certain field, area, or Texas Railroad Commission district the highest price paid by any other buyer to producers in the same field, area, or district, or the average of the 2 or 3 highest prices being paid in such field, area, or district.

Another type of escalation clause which is almost universally included in gas-purchase contracts is the renegotiation, redetermination, or better market clause. These clauses generally provide that at stated intervals—2, 3, 4, or 5 years—there shall be a renegotiation or redetermination of the contract price based upon the current prices then being paid in the field. If the buyer and seller cannot agree, then the price is fixed by arbitration. However, the arbitrators are bound to take the average of the 2 or 3 highest prices being paid by pipeline companies in the field, area, or Railroad Commission district as the basis of the renegotiated price.

RENEGOTIATION CLAUSES LIKE THIRD-PARTY MOST-FAVORED-NATION CLAUSES

In practice, the renegotiated contracts tend to be worse than they seem on their face. Very frequently a pipeline company, in order to get additional gas, will go to a producer with whom it already has a contract and ask him for additional gas. The producer is then likely to say to the pipeline company: "Yes, we will give you a new contract, provided you renegotiate our original contract."

The pipeline may then say, "Well, the period for renegotiation has not come up yet. It will be 2 or 3 years before that time arrives."

The producer can then say, "Well, that may be, but you want to get some additional gas, and unless you renegotiate the price provided in the original contract we will not give you the additional gas."

If the pipeline needs the additional gas, as commonly it does, the original contract is renegotiated.

Therefore, in practice, the renegotiation clauses, which seem fair, can be used as levers to force up the price of gas previously contracted for to the level of the new gas, if the new gas is to be obtained.

This point is very important, and I do not believe it has been adequately covered in the literature on the subject or in the analysis of the problem.

The price cannot be negotiated downward; it can only be negotiated upward. Lest there be some question about this assertion, let me quote from a recent FPC hearing. In docket No. G 4331, part 1, pages 121–122, between Union Oil Company of California and the Louisiana Land & Exploration Co. and others, the following colloquy took place between Mr. John P. Bracken, of the Philadelphia United Gas Improvement Co. and Mr. Jack F. Gale, senior gas contract representative in the gas supply department of Transcontinental Gas Pipe Line Corp.:

Mr. BRACKEN. As I recall in the gas business down in this particular area (North Elkton field, Louisiana) any renegotiation is an upward renegotiation. There is no such thing as a downward renegotiation.

Mr. GALE. As a general rule.

I think it is quite clear, Mr. President, that there is general agreement that these renegotiation clauses in gas contracts can mean only that negotiation proceeds upward. It is something that is not denied, but quite readily admitted by anyone with knowledge of the subject.

We have discussed the so-called step escalation clauses, which provide for automatic increases at stated intervals. We on our side have no objection to those clauses provided they are for small amounts. But they are used to cover up the most-favored-nation clauses and the renegotiation clauses.

Another type of escalation clause, although not too common, is an escalation based upon rate increases granted by the Federal Power Commission to the pipeline company. These are sometimes called "spiral clauses." If the Federal Power Commission grants a rate increase to the pipeline company based on an increase in its cost for purchased gas, labor, and materials, the producer gets the same percentage increase on his sales to the pipeline company. This, of course, further boosts the pipeline company rate increase.

ESCALATION CLAUSES MEAN CONSTANT INCREASES IN FIELD PRICES

The existence of these various types of escalator clauses in gas purchase contracts has provided several avenues by which producers can secure, in the absence of regulation, increase after increase in their profits at the expense of the consumer. To express the fast action of these clauses and their effect upon the field prices paid by pipeline companies, there has come into use in industry and regulatory circles the word "trigger," which means that when a higher contract price becomes effective in a field, area, or railroad commission district, a chain reaction is set off as the escalation clauses in existing contracts begin to operate.

The spiraling of gas prices in the field through the operation of these escalation clauses is clearly revealed in the rate increase proceedings of producers which are now going on before the Federal Power Commission. In one pending case involving Sun Oil Co., Sohio Petroleum Co., Maracaibo Oil Exploration Corp., and E. J. Hudson, the higher rate applied for increases the cost of gas to Transcontinental Gas Pipeline Corp. from 9.79715 cents to 17 cents per thousand cubic feet, an increase of 74 percent. The "triggering" of the "favored nation" clause in the Sun and Sohio contracts occurred, according to the Commission in its opinion dated October 24, 1955, because of the purchase of gas by Transcontinental from the Hassie Hunt Trust at a price of 16 cents per thousand cubic feet, plus 1 cent per thousand cubic feet for the Louisiana severance tax. In most areas in the Southwest a new purchase of gas by a pipeline company at a higher price than is currently being paid sets off a new wave of price increases as the various contracts are "triggered."

The "favored nation" clauses and also the other clauses—particularly the "renegotiation" clauses—are intended to keep the contract price of gas in step with the prices negotiated in the most recent contracts. General Thompson, of the Texas Railroad Commission, testified before the House Interstate and Foreign Commerce Committee that all of these clauses are designed to increase the price. General Thompson is a very frank man; he states his mind, and does not try to conceal his thoughts. So far as I have been able to ascertain, none of the clauses have any provision for a reduction in price even if some other producer sells his gas for less than the existing market price.

The question has been asked why are these pipeline companies willing to sign these gas purchase contracts which contain the "favored nation" clauses and the other clauses which in a large measure are responsible for the drastic increases in the field cost of gas. I think the answer is quite clear. They could not do otherwise if they are to obtain a supply of gas. The producers hold the whip hand in the bargaining. They play the fiddle and the pipeline companies are forced to dance the tune. This is demonstrated by evidence before the Federal Power Commission involving Arkansas Louisiana Gas Co., where its vice president and director, J. C. Hamilton, testified in Docket No. G–2307 on May 11, 1954, with respect to the various contracts his company had entered into with producers, which contained "favored nation" clauses:

Mr. BRUNNER. Mr. Hamilton, from the very beginning of this hearing, from time to time, various contracts have been referred to that contained so-called favored-nation clauses. Those are both in the initial contract submitted in the course of this proceeding and also the new contracts that recently came in. * * *

I wonder if you will, in your own words, state for the record the reason for accepting conditions of the type and character, or provisions contained in the various contracts with reference to favored-nation clauses, and what impact those clauses, both under initial supply submitted and on the new supply submitted, might have upon the cost of gas as considered and submitted in this proceeding?

The answer by Mr. Hamilton was:

Answer. Generally speaking, Mr. Brunner, the reason those favored-nation clauses were included in the contract was because we could not get the gas without them. In other words, they have come to be within the last 6 or 7 years, a requirement of every producer when he is selling gas.

In other words, in addition to the sliding scale of prices that is in most of those contracts, the producer requires you to undertake in the contracts that if you pay prices higher than contained in the contract at some future time, then you will pay him the higher prices in lieu of the prices carried in the contracts.

Now, of course, that has been brought about by competition for the gas supplies in the particular area that we operate in, and in other areas, too, for that matter.

Question. In essence are you saying with regard to these favored-nation clauses that you had to accept them if you desired to purchase gas in such fields?

Answer. Yes. That is true. In other words, we were in competition with other pipeline companies for the purchase of these gas supplies and we had to pay the going price for it.

Further evidence of this same nature is shown by recent testimony before the Federal Power Commission in docket Nos. G–2569 and G–2570 by Mr. C. C. Ingram, vice president of Oklahoma Natural Gas Co., who is in charge of purchasing gas for that company. Mr. Ingram was questioned on December 15, 1954, as to why it was necessary for Oklahoma Natural Gas Co. to accept the inclusion of "favored nation" clauses in its gas purchase contracts. Mr. Ingram testified:

Question. You mentioned a few minutes ago the favored-nation clauses and the insistence by producers on their inclusion in gas purchase contracts. Speaking only now as to Oklahoma Natural, why was it necessary for Oklahoma to accept the inclusion of such clauses in their gas purchase contracts?

Answer. I would say that you have to have those in there for the same reason we had to pay 10 cents.

Question. Well, didn't Oklahoma Natural recognize that by the inclusion of such clauses a very dangerous situation was being created as to potential increases in their cost of purchased gas?

Now, Mr. President, listen to the reply. Mind you, this testimony comes from a pipeline company in the Oklahoma area surrounded by the big producers. It required a great deal of courage for this pipeline company to testify as I am about to show it did. The reply was:

Well, you have to weigh that danger against the danger of not having any gas supply, and you come to the conclusion that you have to accept that rather than to not have gas at all.

Both of these companies are large natural gas companies, each with assets of over $100 million. Both of the companies own some gas reserves. Both conduct their production, transmission, and distribution operations in the gas producing States. Yet they found that producers control the price of gas. If they needed more gas it was necessary to sign contracts containing "favored nation" and other escalation clauses. The same thing applies when they provide for renegotiation of existing contracts.

In addition to the effect upon prices of natural gas in the field, these clauses also drastically limit the area of competition among producers. It is known that one pipeline company, Tennessee Gas Transmission Co., refused to sell additional volumes to certain of its customers because if they were to purchase such gas from producers and pay the current prices then being demanded such action would "trigger" the "favored nation" clauses in their existing gas purchase contracts. This action would bring about a multimillion dollar increase in their cost of gas. This would have led to the filing of their fifth application to the Federal Power Commission for a rate increase. Instead, they prevailed upon certain of their customers to purchase the gas in the field directly from the producers, with Tennessee transporting it to their markets. In this way Tennessee was able to defer an increase in its overall cost of gas supply. This worked, but not for long. Tennessee's contracts were finally "triggered" and on November 1, 1955, its cost of gas increased approximately $8 million a year. It promptly filed a rate increase application with the Federal Power Commission.

Favored nation and renegotiation clauses create a situation in which free competition and the alleged arms-length bargaining between producers and pipelines does not and cannot exist. Such clauses operate effectively to restrict the pipeline companies from making advantageous purchases for additional reserves within the field, area, or railroad commission district.

If the pipeline company agrees to pay the current market price demanded by the producers, which is always higher than the existing contract prices, this immediately sets off another round of increases and adds further to their total cost of purchased gas.

Once a pipeline company agrees to the higher price with one producer, there can be no real negotiation as to any lesser initial price with other producers since they insist on the inclusion in these new gas purchase contracts of the second or third party favored nation clauses. From evidence in proceedings before the Federal Power Commission, it is known that certain pipeline companies have avoided the purchase of additional volumes of gas in certain Texas Railroad Commission districts because of favored nation clauses in their existing contracts. Instead, they have turned to southwestern Louisiana and for particular blocks of gas have paid much higher prices than they were currently paying in Texas. They knew that if they paid a higher price for additional gas from Texas sources their overall cost of gas would increase tremendously through the operation of favored nation and renegotiation clauses. Transcontinental Gas Pipeline Corp., which paid approximately 10.5 cents per thousand cubic feet for gas in 1954, is now contracting for gas at 16 cents, plus 1 cent for the Louisiana severance tax. Other pipelines are in similar predicaments. Because they do not wish to incur the tremendous increase in their overall cost of gas by triggering favored nation clauses in contracts, they are compelled to go to other areas and purchase gas at much higher prices. The big producers who own the reserves in these other areas know the bind in which the pipelines find themselves and are taking advantage of it.

The existence of these clauses in gas purchase contracts is proof positive of the fact that there is no real and effective competition in the purchase of gas in the field such as is normally found in a free and open market. Regulation is the only sensible answer.

Mr. President, this is Benjamin Franklin Week, so I think it is appropriate for me to read a quotation from Poor Richard's Almanac in which Franklin summed up the situation pretty well. He wrote in that almanac:

Necessity never made a good bargain.

WIDESPREAD ESCALATION CLAUSES IN CONTRACTS SUBMITTED TO THE FEDERAL POWER COMMISSION IN 1953

Mr. President, it has been objected that our discussion has been purely theoretical, that we have discussed what might happen, but have not shown what does happen.

Now, Mr. President, I wish to submit quantitative proof of the widespread use of renegotiation clauses, step escalation, most-favored-nation clauses, and other forms of escalation clauses in the contracts made between nonaffiliated gas producers and interstate pipelines. These clauses, in every case have the effect of raising the price of natural gas during the life of a contract and, in the case of most-favored-nation clauses, of triggering general price increases throughout entire areas.

I shall submit various sets of data. The data which I shall submit first are for the year 1953. I shall subsequently submit for the RECORD similar data for the period January 1, 1954, through June 30, 1955. These contracts represent contracts submitted by natural-gas pipeline companies to the FPC as evidence that the pipeline companies had supplies of gas adequate to gain certificates of convenience and necessity for the purpose of expanding their business. In addition, I have examined 491 contracts, which are all the contracts under which 3 pipeline companies buy almost the entire amount of their gas. All in all, the data I shall submit are the result of examining some 2,100 contracts. This, I think, has been done for the first time in the history of the discussion of this issue.

The data are divided into two major groups. First, there is a list of all the contracts submitted by pipeline companies in the year 1953. This list includes data from 247 contracts. I ask unanimous consent that this list of contracts may be printed in the RECORD at this point in my remarks; together with the tabular classifications of most provisions of this contract.

There being no objection, the material was ordered to be printed in the RECORD.

Data on contracts made by interstate pipeline companies for the purchase of gas from nonaffiliated producers based on certificate filings, Jan. 1 to Dec. 31, 1953

Name of company (1)	Date of contract (2)	Producing areas (3)	Term of contract (years) (4)	Contract rate adjusted to 16.7#-¢/M c. f. (5)	Additions to contract rate for taxes (6)	Estimated annual volumes purchased, M c. f. at 16.7# (7)	Favored-nation clauses (8)

1954 AND 1955 CONTRACTS ALSO EXAMINED

Mr. DOUGLAS. Mr. President, second, there are tabulations based on the data found in some 1,356 contracts which were submitted by pipeline companies in the entire year 1954 and the first 6 months of 1955. As these lists are many pages in length, and because the pattern is substantially the same as in the 1953 contracts, I shall not ask that they be printed in the RECORD, but I shall gladly make them available to any Senator who wishes to examine them.

I shall ask my assistant to take them in his arms and place them on the desk of the junior Senator from Arkansas [Mr. FULBRIGHT], who unfortunately is absent from the Chamber, so that the Senator from Arkansas may look at the figures and tell me whether my analysis is correct.

In each case, these tabulations have been prepared by the FPC at my request. June 30, 1955, was the latest date for which complete information was available. Members of the Senate may procure copies for themselves from the FPC if they desire to do so.

These lists of contracts, Mr. President, are not all the contracts negotiated in the gas industry during the 2½-year period to which I have referred. They are lists of current contracts which pipeline companies submitted to the FPC for the purpose of gaining certificates of convenience and necessity. I want to make that point quite clear. But they do include all contracts negotiated in this period which have been submitted to the FPC in support of certificate applications.

Let us examine these contracts to establish certain points of fact. First, to what extent do these contracts contain step-escalation clauses which grant increases in price at regular and stated intervals? Second, to what extent do they contain most-favored-nation clauses whose effect is to trigger prices in an entire field or area to the highest price paid in the field or area? As my colleagues know, two-party or second-party most-favored-nation clauses mean that if a pipeline company, under a new or renegotiated contract, or under step-escalation or other escalation clauses, pays producer B more than it is paying producer A, then A's price automatically is increased to the price the pipeline pays B. In the case of a third-party most-favored-nation clause, producer A's price increases to the highest price paid in the area or entire field by any pipeline company, not merely the one with which it has a contract.

VIRTUALLY NO FIXED-PRICE CONTRACTS

It is important to examine these contracts for at least three reasons. First, spokesmen for the big companies in the gas industry have claimed that this bill is necessary because the producers must enter into long-term (usually 20 years) contracts at fixed prices.

The point is, however, that very few contracts are for fixed prices. Almost all contracts have step-escalation provisions if they do not have most-favored-nation provisions or renegotiation provisions. Provided the step-escalation clauses are for small increases over periods of several years, they are not the serious threat to the consumer that the most-favored-nation and the price redetermination clauses are, although it should be noted that the steps have been getting higher and higher and there are now more and more annual steps rather than 5- or 10-year steps. Step-escalation clauses, however, are the minimum condition of escalation in the vast majority of contracts. The fact that they do exist, and together with most-favored-nation or renegotiation provisions, exist almost universally, means that the big producers have no real claim that they must make long-term contracts at fixed prices. This is simply not so, as I shall show.

WIDESPREAD USE OF MOST-FAVORED-NATION CLAUSES

As we have said, we do not object to step escalation provisions, provided they are for small amounts.

These lists of contracts are important, in the second place, for they show the widespread use of most-favored-nation clauses which "trigger" prices to higher and higher levels. Without protection from the FPC, the widespread existence of these "trigger" provisions show that if this bill is passed, an average price of 20 cents to producers will most certainly prevail in not too long a time. An average price at 20 cents will come about automatically within the near future unless the Commission is allowed and encouraged to proceed substantially as it is supposed to proceed at the present time.

OLD CONTRACTS HAVE BEEN RENEGOTIATED

In the third place, these lists of contracts are important for they show that even in older contracts most-favored-nation clauses either existed originally, or now exist in them because of renegotiation. This is an important point, for when I raised the issue of most-favored-nation clauses with my friend and colleague, the Senator from Oklahoma [Mr. MONRONEY], last week, he replied that although most-favored-nation clauses are more or less universally included in recent contracts that a great deal of gas was still purchased under old contracts at very low fixed prices, and the net result was that the two types more or less balanced out each other. I believe that this is not entirely so or primarily so. There are a number of reasons why—which I shall argue here and for which I shall submit proof in a few moments.

First. Pipeline companies must have new gas to meet the increasing demands for gas. By and large the bulk of this gas is purchased from the big producers who are the only ones able to supply sufficient quantities. The pipelines already have contracts with these producers. When the pipelines seek new gas to satisfy new demand, the producer is able to say to them, "We will supply the gas only if you will renegotiate these old contracts which you now have at lower prices." As there is far more demand for gas than existing supplies, and as competition exists largely only between pipeline companies seeking gas, the old contracts are renegotiated when pipelines seek new gas to meet increased demand. These new, or renegotiated, contracts are at much higher prices and almost universally contain most-favored-nation clauses.

Second. Pipeline companies use up gas year by year and must purchase new gas merely to replenish the yearly supply they sell. Here is another opportunity for the big producers to demand renegotiation of old fixed-price contracts which are converted to new high-priced contracts with most-favored-nation clauses.

Third. There have been large increases in the average price of natural gas in recent years. I have already submitted tables from the Federal Power Commission showing these increases. These increases could only have come about for either of two reasons:

(a) Either a great proportion of contracts under which gas is purchased have most-favored-nation clauses.

(b) Or, if the number of contracts with most-favored-nation clauses does not make up the greatest portion of contracts under which sales are made, those contracts with most-favored-nation clauses are the ones by which the greatest quantities of gas are purchased.

In fact, I believe I can show that both (a) and (b) are true.

SEVENTY-ONE PERCENT OF 1953 CONTRACTS HAVE MOST-FAVORED-NATION CLAUSES

Let us first examine the list of contracts submitted in 1953 to the FPC by pipeline companies. There are 247 contracts on this list. Eight of these on the list were merely amendments to existing contracts. That leaves 239. Of these, 24 were for very short periods or short-term contracts. In fairness, I shall exclude these from the analysis. I wish to mention in passing, however, that many of them were at extremely high prices. One 19-month contract had a price at 20–23 cents per thousand cubic feet. Another for the life of the lease was at 23.19 cents. Two 5-year contracts were at 20.88 cents and at 19.72 cents, and one 15-month contract was at 20.88 cents per thousand cubic feet.

That leaves 215 long-term contracts. It is proper, therefore, to confine our analysis of this first group to these 215 contracts.

Of these 215 contracts, only 2 of them, or 1 percent, had no escalation of any kind; 27 percent, or 59 contracts, had step-escalation clauses but did not contain most-favored-nation clauses, although most of them included other types of escalation clauses which in practice have the same result as most-favored-nation clauses. Those were renegotiation provisions. Two contracts, or 1 percent, had most-favored-nation clauses as the only type of escalation which could be determined from the terms of the contract. However, and this is the important point, 152 contracts, or 71 percent of their number, contained both step-escalation and most-favored-nation clauses. These contracts were submitted to the Federal Power Commission in 1953 as proof of existing pipeline supplies. About half

were negotiated in 1953. The bulk of the remainder were negotiated in 1952, and a few in 1951 and before. Therefore, when I say that step-escalation is almost universal, these 211 of 215 contracts containing them prove that point. Thus, spokesmen for the producers are not altogether exact when they tell us that contracts are for fixed prices. When I say that escalation provisions are almost universal in existing contracts, I am telling the sober and overwhelming truth. Further, when I say that the base prices in existing contracts are already out of date, I am not dealing in imaginary conclusions. Further, when I say that most of these contracts contain provisions whose effect is to send their prices to the highest prices paid by the buyer or the highest prices in the area, I believe I am telling the truth based on the statistical evidence.

Seventy-two percent of the contracts contain the most-favored-nations clause, and a very large percentage of the remaining contracts provide for renegotiation.

In 1953 the average price of natural gas at the wellhead was 9.2 cents. Let us now ask the question, how many of these 215 contracts contain specific contractual provisions for prices above the 1953 figure of 9.2 cents? Of the 215 contracts, 197 of them contain specific minimum figures to which prices will rise. One must remember that in those 154 contracts which contain most-favored-nation clauses, the specific contractual prices contained in escalation clauses can and will be superseded at the moment the pipeline with whom they have contracts pay another producer a higher price, in the case of second person most-favored-nation contracts, or the moment any pipeline in the area pays a higher price to another producer, in the case of third person most-favored-nation clauses. Thus, in these contracts prices will rise above those specified in the contracts, even if one takes the highest price of the specific renegotiation or step escalation provision.

Nonetheless, of the 197 contracts in which specific step escalation prices were spelled out, only 2 of them provided for eventual prices less than 10 cents; 135 provided for prices from 10–15 cents; 32 for prices from 15–20 cents; 7 for prices from 20–25 cents; 16 for prices from 25–30 cents; and 5 of them for prices at the wellhead in excess of 30 cents.

Now, these are contractual provisions in 1953 contracts to which prices will rise under their provisions. As a matter of fact, the amount of the increases which will take place have been seriously understated, because there have not been included the specific amounts to which prices may be driven by the most-favored nations and the renegotiation clauses.

When I said that if this bill is passed one can expect a 10-cent increase in the average price of gas at the wellhead, or a new average price of 20 cents, I was not making an undocumented statement. When I said that a good many contracts were already at 20 cents, I was speaking from fact. And when I said that prices could well rise, and in fact would rise, to prices much higher than 20 cents, I was not merely speculating. As one may see from these 1953 contracts, contractual escalation clauses provided in some cases for amounts in excess of 25 cents, and in others in excess of 30 cents at the wellhead. And of course, these specific prices are those which would come about in the ordinary course of events, even if the most-favored-nation and renegotiation clauses were not put into effect. But the fact is that most of these contracts include most-favored-nation clauses, so that the highest, or marginal, price in an area becomes the average price, and prices will then rise still more.

I now ask unanimous consent to introduce into the RECORD a list of the prices contained in the 1953 contracts to which, under various escalation provisions, prices may rise without any changes whatsoever in the contracts.

The PRESIDING OFFICER (Mr. PASTORE in the chair). Is there objection?

There being no objection, the table was ordered to be printed in the RECORD, as follows:

Price:	*Number of contracts*
Less than 10 cents	2
10 cents to 14.9 cents	135
15 cents to 19.9 cents	32
20 cents to 24.9 cents	7
25 cents to 29.9 cents	16
30 cents and above	5
	197

WIDESPREAD USE OF MOST-FAVORED-NATION AND OTHER ESCALATION PROVISIONS IN CONTRACTS SUBMITTED TO THE FEDERAL POWER COMMISSION FOR JANUARY 1, 1954, THROUGH JUNE 30, 1955

Mr. DOUGLAS. Mr. President, I have the same data for 1954 and the first 6 months of 1955 as I submitted for 1953. The total number of contracts was 1,356.

They lie on the desk of the Senator from Arkansas, who, I hope, will come to the floor and tell me whether or not my tabulation is correct.

Of the 1,356 contracts only 111, or 8.2 percent, had no escalation provisions. However, of the 111, 46 were short term, 45 were for the life of the lease at 27.5 cents per thousand cubic feet, 10 were for the life of the lease at 25 cents per thousand cubic feet, and 1 was for the life of the lease at 23.5 cents per thousand cubic feet. One carried a price set by the State, and 3 were 10-year leases, which period is from half to two-thirds the normal contract period. Thus, even those which we shall exclude because they are short-term contracts, leaving 1,250 for our analysis, had extremely high prices, even though some of them had no escalation clauses. Also excluded were a few contracts for very small amounts of distress gas.

Only 5 contracts, or four-tenths of 1 percent of the remainder, had no type of escalation clause. Eighteen of the 1,250 contracts, or just over 1 percent, contained most-favored-nation clauses only. Four hundred and fifty-seven, or about one-third, contained other types of escalation clauses only, most of which were step-escalation clauses. However, 75, or one-sixth of the 457, had price redetermination clauses whose effect is the same as most-favored-nation clauses which trigger up the price of gas. But, the vast majority of these contracts, or 770 of 1,250 contracts, or 62 percent of their number, had both favored-nation clauses and other escalation provisions.

SIXTY-NINE PERCENT OF 1954–1955 CONTRACTS HAVE MOST-FAVORED-NATION CLAUSES

Thus, of the 1,250 contracts, 770 had both most-favored-nation and other escalation clauses, 18 has favored-nation clauses only, 75 contained price redetermination clauses which have the same, or worse, effects as do most-favored-nation clauses. The total, therefore, of contracts in this period with most-favored-nation clauses, or their equivalent, was 69 percent. This compares with 71 percent of the 1953 contracts with such clauses, which I have already submitted.

OLD CONTRACTS HAVE MOST-FAVORED-NATION CLAUSES

We went one step further, because, in addition to the 1,356 contracts negotiated after January 1, 1953, the data from the Federal Power Commission provided us with a rare opportunity to look at the terms of all the contracts of one pipeline company, namely, Lone Star Gas Co. Previously, this company did only an intrastate business, and therefore was not required to get a certificate of convenience and necessity from the Federal Power Commission; but it recently entered the interstate market, and it was required to submit to the Federal Power Commission the entire list of contracts under which it buys gas for interstate commerce. In all, it submitted 910 contracts. Of these, 161 are dated in the year 1950 or before. Some of them go back to the 1920's.

To determine the question raised by my friend and colleague, the Senator from Oklahoma [Mr. MONRONEY]—and I only wish that he were on the floor at this time—namely, that new contracts had most-favored-nation clauses, but that old ones, by and large, did not. I analyzed the 161 contracts dated in 1950 or before to see to what extent they contained most-favored-nation clauses as of the time they were submitted to the Federal Power Commission in 1954–55.

The results are extremely interesting. I divided the 161 contracts into 4 groups by years. These are given below:

Number of Lone Star contracts negotiated in 1950, and before, which contain most-favored-nation clauses

Date originally negotiated	Number of contracts	Number with most-favored-nation clauses	Number without most-favored-nation clauses	Percent with most-favored-nation clauses
1936 and before	13	4	9	30
1936–40	20	17	3	85
1941–45	43	42	1	98
1945–50	85	63	22	74
Total	161	126	35	78

This shows, Mr. President, that for this pipeline company the contracts entered into before 1951, and dating back to the 1920's, have a larger percentage of most-favored-nation clauses than were contained even in more recent contracts submitted by all pipeline companies filing with the Federal Power Commission. I believe it is probable that many of these contracts did not originally have such clauses. But what this analysis does show is that either (a) old contracts have most-favored-nation clauses in the same or higher proportion as do new contracts, or (b) most of the old contracts have been renegotiated to include most-favored-nation clauses.

I know that Lone Star Gas Co. is not an exceptional company in this respect. Transcontinental Gas Pipeline Corp. as of December 1, 1955, had 66 contracts under which the bulk of its gas was purchased. Of these 66 contracts, 4 were short-term contracts. Of the remaining 62 long-term contracts, 60 or 97 percent had most-favored-nation or price-redetermination clauses. Tennessee Gas Transmission Co., as of July 1, 1954, had 264 contracts, of which 255 had most-favored-nation or price-redetermination clauses.

Furthermore, Mr. President, virtually every long-term contract negotiated in recent years, including the 2,100 I have analyzed and others filed before 1953, contains a clause permitting the renegotiation of the contract, in addition to whatever escalation and favored-nation clauses it contains.

Therefore, Mr. President, I submit with great respect to the Senator from Oklahoma [Mr. MONRONEY] that there is little difference between old and new contracts, in terms of most-favored-nation clauses, for the old contracts either contained them, or, as is probable, have been renegotiated to contain them.

I believe that my analysis of over 2,100 contracts—and, if I may say so, I think that is really unprecedented in the history of testimony on this subject—supports my contention that the going rate in the field is constantly triggered to higher and higher prices because of most-favored-nation and other escalation provisions, such as renegotiation. Without adequate protection for the consumer, which the Harris bill does not contain, prices will rise within a relatively short period of time from the passage of this bill, to at least an average price of 20 cents per thousand cubic feet. And this would raise gas prices by at least $600 million a year, most of which would be loaded on to the residential customer.

WHAT WILL HAPPEN TO GAS PRICES IF CONGRESS EXEMPTS PRODUCERS FROM REGULATION—FIELD PRICES WILL CONTINUE TO INCREASE UNLESS RESTRAINED BY REGULATION

Mr. President, the proponents of the Harris-Fulbright bill are now denying that the big producers are claiming appreciably higher field prices, or that consumers are in any danger of big increases in their bills. The plain facts refute this, and show—instead—that they are, for, on the basis of claims submitted by producers before the Federal Power Commission and statements made by producers and officials of producing States, it is evident that field prices of natural gas will continue their climb to higher and higher levels unless restrained by effective regulation under the Natural Gas Act.

I have previously pointed to the absence of effective competition in the gas fields and to the concentration of production and gas-reserve ownership within the hands of a relatively small group of major oil companies, large gas producers, and pipeline companies. I have also shown that the demand for natural gas is exceeding supply, and that the evidence indicates that the future ratio of additional discoveries to annual consumption is uncertain.

We have also seen that the average cost of gas at the wellhead in the Southwest has increased from approximately 5 cents per thousand cubic feet in 1947, to nearly 11 cents in 1954, with prices in new contracts ranging from 17 to 24 cents. We have analyzed over 2,100 contracts, most of which were made in the 2½-year period from January 1, 1953, to July 1, 1955; and we showed how field prices are moving up, under pressure of new contracts and escalation clauses. These increases have occurred in the absence of Federal control, because of the Federal Power Commission's inexcusable refusal to take jurisdiction.

What basis is there to assume that the cost of gas in the field will not continue to spiral upwards if this bill becomes law? The proposed legislation before us will not serve to prevent price increases. The key provisions of the bill make it mandatory for the Federal Power Commission to allow producers the current market price. That is what they have been receiving without regulation in the past, and that is what they will continue to seek in the future. All evidence from what has happened to field prices shows that in the absence of regulation, the market price will continue to climb.

PRODUCERS SEEK AND EXPECT HIGHER PRICES IN FUTURE

Mr. President, the producers make no bones about their desire and intention to seek higher prices. They feel that they are entitled to charge for natural gas all that the traffic will bear. That is the basic reason why they have included in their gas-purchase contracts, favored-nation, renegotiation, and other types of escalation clauses. They know that natural gas is in short supply in relation to demand, and that short supply will bring about constantly higher prices. These contract provisions will enable producers who have sold and who are now selling their gas, to reap the benefits of future price increases. Here is specific evidence to support these assertions.

This was made very clear in testimony before the Federal Power Commission by Mr. Howard B. Shelton, vice president and general manager of Sohio Petroleum Production Co., a subsidiary of Standard Oil Company of Ohio. Mr. Shelton testified on September 15, 1955, in Docket No. G-8488, that his company had never entered into a 20-year contract without a favored-nations provision, and would not dispense with such provision unless he could make a contract commencing at a sales price of 25 cents per thousand cubic feet with escalation of 2 to 5 cents each year or 5 years, so that during the last 5-year period of the contract, the company would be selling its gas at 35 cents to 45 cents per thousand cubic feet. Mr. Shelton testified that if he could not get his price, which ultimately in the last 5-year term of the contract would amount to a 45-cent price, then he would insist upon some renegotiation provisions or favored-nation provisions in the gas-sales contract.

Producers who before the Federal Power Commission are seeking rate increases in current proceedings are maintaining that their gas should be valued in the field on an equivalent heating basis with crude oil, or upon the basis of the current prices of heating oils in the market areas less the transportation cost of gas from the field to market. The junior Senator from Louisiana [Mr. LONG] seemed to make this same argument on the Senate floor during the debate.

Thus, in a rate proceeding involving Sun Oil Co., evidence was produced by witnesses for the company showing that in the Egan field in south Louisiana, crude oil was selling for $2.97 a barrel and that on an equivalent heating value basis, the gas which Sun Oil Co. produced in the Egan field and sold to the Transcontinental Gas Pipe Line Corp. was worth 53½ cents per thousand cubic feet.

Mr. President, I present for the RECORD at this point a photostatic copy of the comparison which the Sun Oil Co. made in support of its contention.

There being no objection, the statement was ordered to be printed in the RECORD, as follows:

Value comparison of Egan crude oil and Egan natural gas on heat content basis

[Place of comparison: Egan Field, La.]

	Time of comparison		
	December 1954	March 1955	October 1955
Egan crude oil:			
Heat content, B. t. u. per gallon	138,020	138,080	137,960
Average price per barrel	$2.97	$2.97	$2.97
Average price per million B. t. u.'s	$0.512	$0.512	$0.513
Egan natural gas:			
Heat content, B. t. u. per cubic foot	1,042	1,042	1,042
Calculated equivalent value of gas per M c. f. on heat-content basis	$0.534	$0.534	$0.535

Mr. DOUGLAS. I notice that the very able junior Senator from Oklahoma [Mr. MONRONEY] is now occupying the chair. I ask my assistant to take to the desk of the Presiding Officer the five volumes of contracts which I have just submitted in evidence, so that during his leisure moments in the coming hours he may inspect them. I have introduced an

analysis of these contracts showing that approximately 70 percent of them have most-favored-nation clauses, and that many others have renegotiation provisions.

The PRESIDING OFFICER (Mr. MONRONEY in the chair). The present occupant of the chair will say to the distinguished Senator from Illinois that he would never think of reading something while the distinguished Senator had the floor. If the present occupant of the chair may have the permission of the Senator from Illinois to take these volumes to his office later, he will not then be missing the discussion which the Senator from Illinois is presenting. The present occupant of the chair would then find it possible to pursue his examination of the volumes.

Mr. DOUGLAS. The Senator from Illinois will be very glad to lend the 2,100 contracts to the Senator from Oklahoma, so that when he goes to bed tonight he may have it beside his bed. If he awakens during the midnight hours he can go over them and see the very large proportion which contain renegotiation clauses and most-favored-nation clauses.

The PRESIDING OFFICER. The present occupant of the chair enjoys reading "whodunits" before going to bed. He will be very happy to pursue the examination of these contracts with that thought in mind.

Mr. DOUGLAS. Let me make it clear that the Sun Oil Co. is not requesting the Federal Power Commission to allow it 53½ cents per thousand cubic feet. But it is asking the Commission for a rate of 17 cents per thousand cubic feet, which is an increase of 7.2 cents above the present contract rate of 9.8 cents. The evidence which is presented by producers to the Federal Power Commission in support of rate increases and the arguments of the proponents of this bill provide clear evidence of the intention of the big gas producers to seek higher and higher prices for natural gas, and this heating equivalent argument can be the basis for many high present and future demands.

A somewhat more modest claim for higher field prices was made by Mr. Thomas D. Bailey, of Oklahoma City, Okla., a producer of gas and oil, who recommended to the Federal Power Commission in its docket No. R-142 that it should adopt the competitive fuel price method in fixing rates of gas producers. Mr. Bailey was quite candid in stating:

> Of course, this would necessitate increasing of present field prices to 25 cents or more per million B. t. u. (approximately 1,000 cubic feet), at the present time, which amounts to almost tripling present average prices received at the wellhead for gas produced in the United States.

Other evidence that producers expect prices of natural gas to increase in the future is clear from the statement made by Mr. Richard J. Gonzales, director and economist for Humble Oil & Refining Co., who told the American Power Conference at Chicago, Ill., on March 25, 1954, that strong demand under existing circumstances will continue to produce upward trends in prices of natural gas until a competitive balance is obtained. He said:

> The circumstances which resulted in ridiculously low prices were temporary and no longer exist.

He also said:

> Present costs of coal and oil to consumers and other factors indicate that average field prices of about 20 cents per thousand cubic feet on new contracts may be required * * * to balance supply and demand.

Remember this was almost 2 years ago. Since then the amount of gas shipped in interstate commerce has increased by approximately 1 billion thousand cubic feet.

A number of public officials in the producing States also say that gas is presently underpriced and that there should be further increases. Gen. Ernest O. Thompson, chairman of the Texas Railroad Commission, is reported by the Oil and Gas Journal to have told the Independent Natural Gas Association in September 1953:

> A fair estimate of the going price for gas reserves in Texas today is probably 12 to 15 cents per thousand cubic feet and this ought to rise by another 5 cents per thousand.
>
> Such increase—

The General said—

> would amount to about 25 cents a month, or less than 1 cent a day to the household consumer.

The question of the authenticity of this quotation arose yesterday. I had originally ascribed the statement to Dr. Boatwright. I believe either the Senator from Arkansas [Mr. FULBRIGHT] or the Senator from Oklahoma [Mr. MONRONEY] said he could not remember that anyone ever made the statement, but we have found the quotation. General Thompson had made the statement in the Oil and Gas Journal. So it should not be credited to Dr. Boatwright. However, I was correct in the statement that a leading member of the oil industry had made the statement.

General Thompson is also reported to have urged the transmission companies to continue the program of renegotiating contracts to establish higher field prices for gas. Remember these were his figures over 2 years ago.

One of the industry trade magazines, Gas Age, editorialized on February 10 of 1955 as follows:

> As we see it, gas is generally underpriced at the well, at the city gate, and at the burner tip.

The objective of producers and producing-State officials to continue the principle of what the traffic will bear, without regard to any interest but their own, is nothing new in the natural-gas industry. Back in 1946, when representatives of producers appeared before the Federal Power Commission in its investigation of the natural-gas industry, they made it clear that they wanted all they could get for their gas. Thus, Mr. R. C. Kay, president of the Panhandle Producers and Royalty Owners Association, said that he was "just like any other land or royalty owner. Every increase in price I receive would be considered an adequate price as of that date. But we would still be looking for a higher price. As far as the closest we can say to a fair price we might say is the highest price currently being paid in the field for gas of like quality."

Dr. E. DeGolyer, geologist, petroleum engineer, and director of Republic Natural Gas Co. and Texas Eastern Transmission Corp., in the same proceeding made the following comment about the attitude of the gas producers toward the prices they receive. When asked as to what, in his opinion, would be an adequate field price, he replied:

> When you say how much, I really don't know. I suppose if I were getting 2 cents, I would look upon 4 cents as something highly to be desired and I suspect, human nature being what it is, if I were getting 4 cents, I would be looking for 8 cents or even Colonel Thompson's 10 cents.

Let me say in this connection that I have great faith in Dr. DeGolyer's competence and integrity as a geologist. I have repeatedly heard him testify, or read testimony in which he stated facts which were not in favor of the particular interest he was representing at the time. So I do not wish to have it thought for a moment that the quotation which I have given is any reflection upon Dr. DeGolyer's character, which, in scientific matters, I think is extremely high.

While the prices which Dr. DeGolyer mentioned 10 years ago have long since become passé as resembling current prices in the gas fields, he does express very well the vigorous desire of the typical oilman for higher prices and greater profits. Some insight into the continuing business practices in the gas industry is found in the testimony of Mr. Howard B. Shelton of Sohio Petroleum Co., to which I referred earlier. Mr. Shelton testified only a few months ago in the proceedings to which I earlier referred, in this fashion:

> Question. And it would be your efforts under the conditions which prevail to obtain for your company the highest and most salable contract with respect to price that you would be able to obtain?
>
> Answer. Yes, sir.
>
> Question. And if you found the other party in a bind and in need for gas, if you knew that, why, you would take advantage of that, too?
>
> Answer. You are trying to create a condition?
>
> Question. No; I am creating a hypothetical condition that if you found the fellow was under the gun, so to speak, for a gas supply, and you had that gas supply, and he was trying to buy it from you and you, knowing that, you would take as much advantage of that as you could?
>
> Answer. I would.

I wish to put the issue squarely. Is it in the national interest that the big producers of natural gas should be given the right to charge what the traffic will bear and thereby take enormous sums from 21 million residential consumers of natural gas who have no practical means to defend themselves? Since natural gas is a public utility and since competition does not operate to keep prices down,

regulation is the only effective protection for the people. Under this regulation, the producers should and would be given a fair and adequate return on their investment. They would simply be denied the right to make unconscionable profits. This is the issue alone which we of the Senate must now decide.

CURRENT "TRIGGER" CONTRACTS: LARGE VOLUMES AT HIGH PRICES WHICH IN ABSENCE OF REGULATION WILL BOOST AVERAGE PRICES IMMEDIATELY TO NEW HIGH LEVELS

In the preceding section, Mr. President, I gave examples of the prices which producers of natural gas seek and expect. These included prices at 17, 20, 25, and 45 cents, and mentioned even 53½ cents per thousand cubic feet at the wellhead as theoretically justified.

For myself, I have kept my predictions to a conservative level of 20 cents per thousand cubic feet if this bill is passed. And I believe, even without the support which the evidence from the oil and gas producers has given my argument, that I can prove that this increase to 20 cents per thousand cubic feet—or an increase of 10 cents per thousand cubic feet—would certainly be upon us not too long after this bill passes, if indeed it should pass.

We all know that in 1954 natural gas in interstate commerce sold for a weighted average price of 10.1 cents and that the preliminary figure for 1955 is 10.7 cents. Obviously a great many individual contracts were at prices both above and below the weighted average.

We also know that in 1954, the 17 major pipeline companies which bought 92 percent of the total volume of gas purchased by all pipeline companies in the Southwest, and 88 percent of the gas purchased in the country paid 10.3 cents per thousand cubic feet. This 1954 price paid by the pipelines represented an increase of 6.03 cents per thousand cubic feet over the weighted average these same companies paid in 1946, or an increase from 4.32 cents to 10.36 cents. This was a 140 percent increase.

That was a very steep increase in the price of natural gas at the wellhead. Far from being the few pennies that the proponents of this bill would have us believe, the average price paid in 1954 by these 17 companies meant that the annual increase in the cost of gas to them was running at the rate of $216 million. That is not exactly chickenfeed, Mr. President. At present volumes, each 1 cent of further increase in gas at the wellhead will cost the consumer $60 million annually, and a 10-cent increase will cost $600 million.

INCREASES MORE THAN TIPS TO WAITERS

The arithmetic for that analysis is simple. In 1955 6 billion thousand cubic feet were sold by utilities. An increase of 1 cent, therefore, would amount to an increase of $60 million in the charges and the amounts paid. That is for a 1-cent increase. An increase of 10 cents would therefore mean an increase of $600 million a year.

It amounts to far more than the normal tip which the junior Senator from Texas [Mr. DANIEL] or any other Senator, tips a waiter at lunch.

These increases in the average price of gas since 1946 could only have come about because new contracts are at very much higher prices than the old ones. They have come about, also, because old contracts have been renegotiated or otherwise escalated upward. The steepest increases have occurred recently when the most-favored-nation clauses and renegotiation clauses have been operating.

Now, Mr. President, I believe that if this bill should be passed, the new average price would rise in a fairly short length of time to at least 20 cents per thousand cubic feet at the wellhead. I base that conclusion on the following additional reasons.

Of some 247 contracts submitted to the Federal Power Commission by pipeline companies in 1953, 71 percent of the long-term contracts contained most-favored-nation clauses. In some 1,600 additional contracts submitted in 1954 and the first half of 1955, 69 percent had most-favored-nation clauses. For the contracts some individual pipeline companies have with producers, the percentage with these clauses is even higher.

In addition, renegotiation clauses in these and other contracts made in the last 4 or 5 years are almost universal. Renegotiation is really the same thing as the third-party most-favored-nation clauses. The new price is usually based on the 3 or 4 highest prices in the field or area. Its only saving grace is that renegotiation supposedly occurs less automatically than increases under most-favored-nation clauses and, supposedly, can only occur at stated intervals, usually 5 years, but now often in 4 or 3 or 2 years.

Although the opportunity for increases under renegotiation provisions is in theory less frequent than for increases under most-favored-nation clauses, economic pressures are now such that renegotiation takes place virtually every time a pipeline seeks a new supply of gas to meet an increased demand or to replace its yearly depleted supply. Because of this, renegotiation now takes place much faster than the mere contractual provisions state. The result is that many, many gas contracts made by pipelines 4 to 5 years ago have been renegotiated on the basis of the new highest prices in the field or area. And those which have not been renegotiated soon will be.

Thus, although some—like the Senator from Oklahoma [Mr. MONRONEY]—are not as much troubled as I am by the second-party most-favored-nation clauses or by the fact that 70 percent, at least, of the contracts now contain some form of favored-nation provisions, it is impossible to get around the fact that renegotiation is now universal. And renegotiation inflates prices farther than second-party most-favored-nation clauses and is just as harmful as the outrageous third-party most-favored-nation clauses. Renegotiation, which increases prices to the average of the 3 or 4 highest prices in an area, is now in almost all contracts, and will take prices, before too long, to the highest price in most areas.

"TRIGGER" CONTRACTS

Mr. President, let me give some examples of high-priced large-volume contracts, which act as a "trigger" for the remaining low-priced contracts, and, in the absence of regulation, will result in rapid increases in field-price averages.

I have in my hand copies of exhibits Nos. 2 and 16, Docket No. 6-8288, submitted at the end of November 1955—only 2 months ago—in the matter of Sun Oil Co. et al., before the Federal Power Commission.

These are lists of current comparable contracts in the contract pricing area where Sun Oil is buying gas in Louisiana.

As I have previously mentioned, the Sun Oil Co. wanted to increase its rate from 9.8 cents to 17 cents. This would give them an annual increase of $284,432. That rate was suspended, and the Sun Oil Co., in order to justify its rate, came forward with the rates which were being paid to the other producers in that area, or what would be called the reasonable market price if the pending bill should ever become law.

These contracts are very interesting. They are not for piddling or trifling amounts of gas, nor for piddling or trifling amounts of money.

An examination of them will show that almost all major oil companies—certainly most of the big ones—are selling in the pricing area. I read off the names of Stanolind, Superior Oil, Shell Oil, Union Oil of California, Atlantic Refining Co., H. L. Hunt, Phillips Petroleum, Humble Oil, Magnolia Oil, the Texas Co., Cities Service, Sinclair Oil, and others.

I ask unanimous consent that the contracts be included in the RECORD at this point in my remarks.

The PRESIDING OFFICER. Does the Senator wish to read the contracts or to insert them in the RECORD?

Mr. DOUGLAS. I ask unanimous consent to have them printed in the RECORD at this point. Then I shall comment on them.

The PRESIDING OFFICER. Is there objection?

There being no objection, the contracts were ordered to be printed in the RECORD, as follows:

Current comparable contracts in contract pricing area, Sun Oil Co., Docket No. G–8288

Item No.	Map reference	Seller	FPC reference (seller's R. S. unless indicated as docket)	Field	Parish	Date of contract	Contract quantity (Mcf. per day)	Delivery pressure (P. s. i. g.)	Delivery point	Contract price (cents per Mcf.)

ANALYSIS OF "TRIGGER" CONTRACTS

Mr. DOUGLAS. Mr. President, most of these companies are on the list of the 35 biggest producers who produce 70 percent of the gas in interstate commerce. These exhibits also show the names of a number of the 17 big pipeline companies who transmit 88 percent of the gas in the country. There are names like United Gas Pipeline Co., Southern Natural Gas Co., Transcontinental Gas Pipe Line Co., Texas Eastern Gas Transmission Co., and Tennessee Gas Transmission Co. Therefore, these contracts are between and among some of the biggest producers and the biggest pipelines in the country.

I have added up the volumes contracted for in these "current" comparable contracts—of course Sun Oil's contracts do not appear—and multiplied these volumes by the price so as to get a fair and weighted price per thousand cubic feet. I believe that no charge of selecting 1 or 2 priced contracts for small volumes can be made, and I shall introduce the figures in a moment to show that.

I have used only "current" contract prices—not some future price to which every one of these contracts will go. When volumes were for minimums and maximums—as in a few cases—I have taken the volume half way between the two when the present daily volume was not given. Further, I have taken only the 20-year or long-term contracts. My data will be on the conservative side, for in 1 or 2 high-priced contracts it was not possible to determine the volumes, and I have left them out. Further, as these are long-term contracts, the prices in every case will escalate to higher levels by step escalation, or most-favored-nation, or renegotiation clauses, and in most of them, by all three. However, I am using only the prices at which gas sold when these contracts were submitted—and that, too, makes my computations conservative.

In all, there are 82 contracts. A good many, of course, are between the same individuals and were made on the same date for the same consideration, and really represent a single large purchase of gas.

Of these, their number and price were distributed as follows:

Number:	Price (cents)
1	11.26
2	14.5
1	15.75
43	17
5	17.4
1	17.5
5	18
9	19.25
8	21
7	21.2

In fairness, Mr. President, it should be pointed out that the price includes a 1-cent Louisiana serverance tax. We do not object to severance taxes. In fact, I think it might be a good thing for the States in the Southwest to have to pay more such taxes in order to raise revenue. The tax is absorbed by the purchaser and is passed on by the pipeline to its customers.

In order that the substantial and representative character of these contracts may be fully appreciated, let us see what volumes are being purchased under them.

I have here a table which I should prefer to insert in the RECORD and then to comment upon it.

I ask unanimous consent to have the table printed in the RECORD at this point in my remarks.

There being no objection, the table was ordered to be printed in the RECORD, as follows:

Number of contracts	Price per M c. f.	Total volume M c. f. (rounded)	Total amount
	Cents		
1	11.26	546,900,000	$61,560,940
2	14.5	47,700,000	6,916,500
1	15.75	19,600,000	3,087,000
43	17	2,280,700,000	387,719,000
5	17.4	698,800,000	120,551,000
1	17.5	134,000,000	23,450,000
5	18	702,000,000	126,360,000
9	19.25	219,400,000	42,234,500
8	21	2,387,100,000	501,291,000
7	21.2	901,500,000	191,118,000
Total (82)	[1] 18.45	7,937,700,000	1,464,287,940
Yearly basis (82)	18.45	396,870,000	73,214,407

[1] Weighted average.

THE DANIEL BOONES OF THE INDUSTRY

Mr. DOUGLAS. Mr. President, here are 82 contracts which average 18.45 cents per thousand cubic feet for a yearly volume of 396 million thousand cubic feet or a yearly cost at the present weighted average of $73,214,407.

As the contracts run for 20 years, even if prices do not rise 1 cent and even if the volumes are not increased as some of the contracts allow, the volume of gas under contract is 7.9 billion thousand cubic feet worth $1.46 billion. Under these 82 contracts, the volume of gas under 20-year contract is 130 percent of the 6 billion thousand cubic feet which was sold by pipelines and utilities in 1955. Spread out on a yearly basis, it is one-fifteenth or 6.6 percent of the gas which was sold by utilities and pipelines last year. Therefore, it represents a sizable block of gas.

The volumes and amounts here are not small and are not unrepresentative. Obviously, there are other existing and current contracts at lower prices which somewhat offset these. Nonetheless, these prices and these contracts are the Daniel Boones of the natural-gas industry—they lead the way. As Daniel Boone pierced the Appalachian Mountains and came into Kentucky, so these contracts lead the way into that bright and promised land which lies before the gas producers if this bill is passed and the siren song of the proponents of the bill proves to be effective.

Under renegotiation and most-favored-nation and redetermination and other escalation clauses they will soon be the prevailing and average prices for the industry. And the fact that most of the big producers and half of the major pipelines are buying gas under these contracts at these prices shows that they cannot help but become the prevailing and average prices on the next round of renegotiation and most-favored-nation increases.

Some of the specific contracts are certainly interesting.

Six of the seven contracts at 21.2 cents per thousand cubic feet were purchases by United Gas Pipe Line Co. The sellers included among others, the Texas Co., Humble Oil Co., and H. L. Hunt. These 6 contracts are for a total volume of 893.7 million thousand cubic feet or a yearly volume of 44.6 million thousand cubic feet. Before June 1, 1955, they were at 13.5 cents per thousand cubic feet. On June 1, 1955, they escalated to 14.5 cents. Then on November 1, 1955, they escalated again to 21.2 cents per thousand cubic feet. Thus, in a matter of 6 months, these contracts increased in price by 8.7 cents or by 64 percent.

That, Mr. President, is an example of just how fast escalation and renegotiation can operate. These are the "trigger" contracts. These are the Daniel Boones of the natural-gas industry, leading the way for the others who will soon follow.

The fact that annual prices in 1955 were at 10.7 cents is no protection whatsoever against swift and fast escalation to unconscionable prices if this bill passes. When I review the picture of what is happening in such "market price" spiraling, I am amazed by the moderation of my own prediction of a 20-cent field price average.

I believe it was Warren Hastings who said he was amazed at his own moderation. I am amazed at my moderation in fixing a 20-cent limit on natural gas in the future.

In the light of the statements of the producers themselves, who state that 20 cents, 25 cents, 45 cents, and even higher, is a fair price for gas at the wellhead, in the light of the almost universal pressure of renegotiation and other forms of upward pressure on contract prices, and in the light of the facts revealed by the Sun Oil exhibits for the Louisiana field, 20 cents per thousand cubic feet cannot be far away. Contracts like these are the ones to keep our eyes on. Here are the "triggers" pointing at the consumers' pocketbooks. Here are the Daniel Boones. Here are the predecessors of higher and higher gas prices.

RESIDENTIAL GAS CONSUMER HAS NO EFFECTIVE ESCAPE FROM MONOPOLY PRICES

Mr. President, let me return to a theme which should be familiar by this time, but which evidently has not been fully appreciated by the advocates of the bill; namely, that as the price of natural gas goes up, the residential gas consumers will have no escape from the monopoly prices.

It is clearly recognized by the industry that unless consumers have a close substitute for a product or commodity and can readily turn to such substitute when prices get too high, the prices which the consumer may be forced to pay may be very high. This well-known economic fact was spelled out by the American Petroleum Institute, Independent Petroleum Association of America, Mid-Continent Oil and Gas Association, and seven other oil and gas trade organizations in a joint statement filed with the Federal Power Commission in Docket No. R–137. In that statement they commented as to

what would happen with respect to advances in prices of commodities in situations where the demand outruns supply. In their brief on page 44 they said:

> However, in most markets there would be some ceiling on rising prices (both initial and any subsequent rises), based on the amount the customer is willing to pay in relation to the price of competing products. If there is no close substitute for the product, then this ceiling may be very high. Fortunately for the consumer, this is not the case in the natural-gas market since coal and heat oil offer direct active competition.

The statement describes precisely the bind in which the residential gas consumer finds himself for the reason that he has already made an expensive investment in a range, water heater, gas furnace, or other appliance which will burn neither coal nor oil. There is no close substitute. The captive residential consumer has no effective means by which he can escape the incidence of unreasonable prices for natural gas. He cannot turn to other fuels without junking his expensive gas appliances.

On the first day of my address, last Friday, I introduced figures to show that the average investment per household in gas furnaces is $515; for gas ranges, $175; for water heaters, $165; and for gas refrigerators, $250.

The most common combination of a gas furnace, a gas range, and a gas water heater costs well over $800. I am leaving out the item of gas refrigeration.

Moreover, in many sections of the country the newer houses themselves and the chimneys, are designed primarily for the burning of natural gas.

The proposal which is offered to the residential consumer by proponents of this legislation that he is perfectly able to protect himself against rising gas prices by turning to competitive fuels is akin to telling the man marooned on a desert island that if he does not like salt water to drink he can swim 2,000 miles to the mainland for a drink of fresh water. It is ridiculous to tell 21 million natural-gas customers—21 million American families—that they can invest another 10 or 12 billion dollars in coal, oil, or electric appliances if they do not like the treatment they are obtaining from the natural-gas industry.

Mr. HUMPHREY. Mr. President, will the Senator from Illinois yield?

Mr. DOUGLAS. I yield to the Senator from Minnesota.

Mr. HUMPHREY. Mr. President, I wish to say to the Senator from Illinois that it is with the deepest regret that I have not been able to be present to hear his splendid presentation. I do not always read the CONGRESSIONAL RECORD every day, because I do not have the time, in which situation I am sure other Members of the Senate find themselves, but I have been reading the debate of the Senator from Illinois. It is with a great sense of thankfulness and appreciation that I speak as I do now, because the Senator has enlightened and helped me considerably.

I want the Senator to know that I have been attending meetings of the Committee on Agriculture and Forestry from 10 o'clock in the morning until about this time every day, with an interruption or two so I could be on the floor. Otherwise, I would have been present to hear the Senator's address.

We are trying to report from the committee an agricultural bill by next week. I am sure the Senator from Illinois is interested in such a bill, and that he will vote with me for an agricultural bill, if it is a good bill, just as I am going to vote with him on the gas bill.

Mr. DOUGLAS. I thank the Senator from Minnesota. All the Senator from Illinois has been doing has been to try to hold the fort until the big guns can come up. The Senator from Illinois hopes that the Senator from Minnesota, with his customary brilliance, will take the floor and discuss the pending bill. I am sure he will do so in a far abler manner than the Senator from Illinois has been able to do it.

Mr. HUMPHREY. Mr. President, will the Senator yield?

Mr. DOUGLAS. I yield.

Mr. HUMPHREY. I may say, while the analogy may not be too appropriate, that in this instance, as in other instances, the Senator from Illinois is, indeed, the atom cannon, and it is he who delivers the major blow. The rest of us come along, sort of in his wake, trying to do our part. I shall have a statement to present, and I hope it will be worthy of the Senate's consideration, and of the approval of the Senator from Illinois, because if it should receive his approval I will know it to be a very sound statement.

Mr. DOUGLAS. The whole country appreciates the Senator from Minnesota, and I am sure his contribution to the debate will be illuminating.

ORDER FOR RECESS UNTIL TOMORROW

Mr. CLEMENTS. Mr. President, will the Senator from Illinois yield?

Mr. DOUGLAS. I yield.

Mr. CLEMENTS. Mr. President, I ask unanimous consent that when the Senate completes its business today, it stand in recess until 12 o'clock noon tomorrow.

The PRESIDING OFFICER. Without objection, it is so ordered.

ORDER OF BUSINESS

Mr. CLEMENTS. Mr. President, will the Senator from Illinois yield further for a question?

The PRESIDING OFFICER (Mr. MONRONEY in the chair). Does the Senator from Illinois yield further to the Senator from Kentucky?

Mr. DOUGLAS. I yield.

Mr. CLEMENTS. Can the Senator from Illinois give to the acting majority leader some idea as to the extent of the remarks he intends to make on the bill?

Mr. DOUGLAS. The Senator from Illinois will say that he has read approximately 130 or 140 pages of the manuscript which he has prepared. While there are some 50 or 60 pages remaining, it is the intention of the Senator from Illinois not to hold the floor later than tomorrow. He hopes to be recognized when the Senate convenes tomorrow, but he certainly thinks he will complete his address tomorrow, and the address may not take all of tomorrow afternoon.

Mr. CLEMENTS. Do I understand, then, that, unless there should be some unusual, extraordinary happenings tomorrow, which cannot be foreseen at the present time, the Senator from Illinois will conclude his remarks on the bill tomorrow?

Mr. DOUGLAS. That is correct.

Mr. CLEMENTS. Mr. President, I ask unanimous consent that when the Senate convenes tomorrow, after the usual morning hour, and after the completion of debate and action on the two treaties which have been scheduled to come before the Senate immediately after the morning business is concluded, the Senator from Illinois may have the floor at that time.

Mr. CURTIS. Mr. President, reserving the right to object, let me point out that that would foreclose any other Senator from having the floor, following the debate and action of the treaties; would it not?

Mr. CLEMENTS. Let me say to my friend, the Senator from Nebraska, that if I were not about to make another unanimous-consent request, the answer to his question would be in the affirmative. However, the next unanimous-consent request the acting majority leader will make will, he believes, completely satisfy the Senator from Nebraska.

Mr. CURTIS. Then at this time I withhold any objection.

The PRESIDING OFFICER (Mr. NEUBERGER in the chair). Is there objection to the unanimous-consent request of the Senator from Kentucky? Hearing none, it is so ordered.

Mr. CLEMENTS. Mr. President, I now ask unanimous consent that at some stage in his remarks tomorrow, the Senator from Illinois may yield to the Senator from Nebraska [Mr. CURTIS], in order to permit him to address the Senate for an indefinite period—I know not how long he wishes to speak; I understand he would like to have from 30 to 50 minutes—and with the understanding that the Senator from Illinois will not lose his right to the floor.

The PRESIDING OFFICER. Is there objection? Without objection, it is so ordered.

Mr. CURTIS rose.

Mr. CLEMENTS. Did the Senator from Nebraska intend to object?

Mr. CURTIS. I wonder whether the Senator from Illinois is able to state at what time he might be able to yield to me?

Mr. DOUGLAS. I shall be glad to discuss that matter privately with the Senator from Nebraska, and to be as accommodating as possible.

Mr. CLEMENTS. Mr. President, it is fair to say, is it not, that the Senator from Illinois and the Senator from Nebraska will have no difficulty in agreeing on the time?

Mr. DOUGLAS. To date, we never have disagreed on personal matters, although sometimes we disagree on issues before the Senate. But on personal matters, I think we can reach agreement. Let me say, Mr. President, that I am in a very accommodating mood, this evening, as regards personal matters, al-

though I am adamant as a rock insofar as principles are concerned.

Mr. CLEMENTS. Mr. President, knowing the Senator from Illinois and the Senator from Nebraska as I do, there is no question in my mind that they will reach an agreement which will be very pleasing to the Senator from Nebraska, and, I am sure, will be a relief to the Senator from Illinois.

Mr. President, I understand that no objection was made to the request I made.

The PRESIDING OFFICER. That is correct; there was no objection, and the order has been entered.

AMENDMENT OF THE NATURAL GAS ACT, AS AMENDED

The Senate resumed the consideration of the bill (S. 1853) to amend the Natural Gas Act, as amended.

SUBSTITUTE EXEMPTING 5,360 PRODUCERS

Mr. DOUGLAS. Mr. President, I send to the desk an amendment, which I have prepared, in the form or nature of a substitute for the pending so-called Harris-Fulbright bill. I ask unanimous consent that the amendment may be printed at this point in today's RECORD. I wish to have the amendment lie on the desk, and be distributed to all Members of the Senate.

The PRESIDING OFFICER. The amendment will be received, printed, and lie on the table, and, without objection, will be printed in the RECORD.

The amendment, in the nature of a substitute intended to be proposed by Mr. DOUGLAS, is as follows:

Strike out all after the enacting clause and insert:

"That subsection (b) of section 1 of the Natural Gas Act, as amended, is hereby amended by striking out the period at the end thereof and adding the following: 'or to any transportation or sale of natural gas for resale in interstate commerce which occurs at or prior to the completion of production or gathering during any calendar year by any person if (1) during the preceding calendar year the total sales of natural gas for resale in interstate commerce by such person, alone or in the aggregate with affiliated producers and gatherers, did not exceed 2 billion cubic feet computed at 14$^{65}/_{100}$ pounds per square inch absolute at 60 degrees Fahrenheit, and (2) such person is not a natural-gas company by reason of other transportation or sale of natural gas for resale in interstate commerce and is not affiliated with a natural-gas company.'

"SEC. 2. Section 2 of such act is amended by inserting '(a)' after the section number and by adding at the end thereof the following new subsection:

"'(b) For the purpose of this act, a person shall be deemed to be affiliated with a producer or gatherer if such person directly or indirectly controls, is controlled by or is under common control with such producer or gatherer by reason of voting stock interest, common officers, directors, or stockholders, voting trusts, or by any other direct or indirect means'."

CONSUMER HAS NO ALTERNATIVE

Mr. DOUGLAS. Frankly, Mr. President, I find it shocking to read in the hearings testimony to the effect that if the residential consumer does not like the price of gas, he can turn to coal—that he has no right to demand just and reasonable gas prices. The expressed philosophy simply means turning back the clock. Let the monopolies—let the utilities charge what the traffic will bear. If he does not like the cost of telephone service, or what he pays for electric lights, the consumer can go back to writing letters and burning candles. How can such a proposal be seriously advanced?

I cannot emphasize too strongly that natural gas is now a necessity in the daily lives of the people of America, just the same as electricity, telephones, and water. All these services are furnished by utilities, and if the citizen needs such service, there is only one place where it may be obtained on a practical and economical basis—and that is from the local utility.

The substitutes and alternatives are substitutes in a technical sense only. The homeowner might use candles and oil lamps in place of electricity. He can also buy water in bottles or drill his own private well if he does not like the cost of water furnished by the local utility. But it is well recognized by all the regulatory statutes dealing with public utilities, as passed in the United States, that the substitute sources for the commodities purchased from such utilities furnish no real or practical protection for the consumer against unreasonable rates. The fact that it is possible for the consumer at a great financial sacrifice to shift from natural gas to oil, coal, and electricity if he does not like the price charged, simply denies the need for any regulation of utility rates in this country.

REGULATION IS ESSENTIAL FOR CONSUMER PROTECTION

Mr. President, I have already pointed out that in the absence of regulation of field prices, there is nothing to prevent the field cost of gas from continuing to spiral toward, and that it is the expressed intention of producers to seek higher prices in the future. Thus, it is essential that regulation, under the Natural Gas Act, over the prices paid producers of natural gas be continued for the protection of 21 million American families who are captive customers of the natural-gas industry.

It is contended by promoters of this proposed legislation that the consumer is best protected by competition. The proponents make much of the point that prices of natural gas have not gone up along with prices of competitive fuels or with the general cost of living. They presented statistical data and charts showing that residential consumers have been receiving a great bargain in natural gas.

The cost of natural gas to the residential consumer does not, of course, show the same reaction to inflationary conditions as does the cost of other fuels. There is no reason why gas prices should have risen as fast as the general cost of living. Unit costs of gas should have decreased as consumption increased. The same situation prevails with respect to the cost of electricity; but during that period, the average cost of electricity per kilowatt-hour has gone down, whereas the average price of gas per thousand cubic feet has gone up. Retail gas and electric rates are regulated.

The effect of regulation and the benefits which consumers have derived therefrom are demonstrated clearly by the chart which appears at page 497 of the hearings, whereon are compared the cost of living, weekly wages in Wisconsin industries, and rates for electric, gas, telephone, and bus fares in that State during the period 1940 through 1954. This chart shows that increases in all utility rates have lagged far behind increases in prices and wages, and that electric rates have even declined. This demonstrates the benefits of regulation to the consumer, and the decrease in unit costs of electricity as consumption increases. Moreover, it is a well known economic fact that as high fixed costs of a product are spread over more and more units, the cost per unit goes down. We see that this has happened with electricity, but that it has not happened with natural gas.

The argument that unit gas prices have increased, but less than the increase in the cost of living, is really an important admission by the proponents of the bill. Either the industry is grossly inefficient, has excessive profits, or has loaded onto the consumer disproportionate costs at a time when unit costs should have decreased as the industry rapidly expanded. Far from being an argument in support of the bill, it is an outright admission of price increases for which no justification has been furnished.

Although Dr. Boatwright has testified that the "consumer is best protected by a competitive market," the Standard Oil expert furnished to the committee evidence that refutes his own conclusion, for he testified and presented statistics to demonstrate that during the past 6 years, 1947 through 1953, industries purchased natural gas from 14 pipeline companies at higher prices than the resale rates fixed by the Federal Power Commission. Dr. Boatwright says "This would indicate that the regulated prices for sales to utilities are lower than prices based on competition among fuels." Dr. Boatwright's table VII, which he presented to the Senate committee—Senate hearings, page 170, table VII—shows that the industrial rates of the pipelines, which are not regulated, are higher than the resale rates prescribed by the Federal Power Commission.

This fact becomes of even greater significance when it is recognized that, in the main, the volumes which are sold for industrial purposes at the higher prices than the price of resale gas are of an interruptible or "dump" nature, and have a lower priority of service than the firm service to distributing utilities. In other words, industries were willing to pay more for interruptible service than is paid by utilities for firm service under rates prescribed by the Federal Power Commission.

Further evidence of the beneficial effect of regulation is shown by comparing the costs allocated by the Federal Power Commission to the industrial nonjurisdictional business with the revenues which the companies receive from such industrial business. In every pipeline

company rate case where direct sales are made to industries, it is found that the revenues received from industrial sales are substantially in excess of the allocated cost of service. For example, in the Panhandle case—Commission Opinion No. 269—in which the cost and revenue figures applied to the year 1952, the opinion shows—table 11, appendix 1—that the average revenue received from industrial service was 28.09 cents per thousand cubic feet, whereas the allocated cost, including a return of 5¾ percent, was only 19.35 cents. On the other hand, the allocated cost per thousand cubic feet to jurisdictional business was 24.57 cents per thousand cubic feet. On that basis the Commission increased Panhandle's rates to its jurisdictional customers to that level, which was still 3½ cents per thousand cubic feet below the unregulated industrial rate.

Is there any reason to doubt that the rates charged by the pipelines to distributors for firm service would be substantially higher than those charged industries for interruptible, second-priority service, if regulation were absent? This fact should dispel any doubt that the consumer is best protected by regulation. Higher prices charged by gas producers on sales to pipelines would have to be passed on to the distributors, and by them in turn to the consumers.

PRODUCERS STAND TO COLLECT BILLIONS IN PROFITS IF THE GAS INDUSTRY BILL IS ENACTED

Huge profits are at stake in this legislative proposal to nullify effective natural gas regulation. If the gas producers succeed, it will cost consumers of this country from $600 to $900 million annually. It will increase the value of the known gas reserves of the Nation from $12½ billion to $30 billion. The industry's million and a half dollars plus "educational campaign" is a minute fraction of the annual "improvement" which will be available to producers if they succeed in their objective. It is no wonder that "big oil" is working and spending to put this bill through Congress.

The producers and proponents deny that this legislation would cost the consumer several hundred million dollars annually. They say that these figures are simply taken out of the air. They say that it will not happen if they are freed from regulation. On the other hand, the evidence is clear that the producers seek and expect to secure higher prices in the future. They are anticipating future field prices ranging all the way up to 45 or 50 cents per thousand cubic feet. That was the statement of one witness. I have presented evidence showing that current prices in contracts now being entered into in the Southwest range up to more than 20 cents with periodic price step-ups beyond that, which go as high as 28 cents and some at 30 cents per thousand cubic feet during the life of the contract. We also know that these gas purchase contracts are loaded with escalation clauses of every conceivable variety. Would the proponents of this legislation dare assert that the price of gas is going to stabilize at the present level if producers are freed from regulation? They know they cannot make such a promise.

For the year 1955, the American Gas Association reports the utility sales—and I emphasize "utility sales"—of natural gas to be 62,908 million therms, which is roughly equivalent to 6.3 trillion cubic feet. This volume represents an increase in sales of approximately one-half trillion cubic feet over the year 1954. Of this volume residential consumers purchased approximately 2 trillion cubic feet; commercial customers, 0.55 trillion cubic feet; industrial and others, 3.74 trillion cubic feet.

If we take the 1955 sales of 6 trillion cubic feet—or 6 billion thousand cubic feet—which is an understatement by 5 percent, and multiply it by 5 cents per thousand cubic feet, the modest increase suggested several years ago by General Thompson, of the Texas Railroad Commission, to which I referred earlier, we obtain an annual increase in the cost of gas of $300 million. If we multiply the 6 trillion cubic feet, or 6 billion thousand cubic feet, by 10 cents per thousand cubic feet, which I have pointed out is the more likely figure, we obtain an increase of $600 million per year. The 10-cent increase coincides with the 20-cent average field price which Dr. Gonzales, of Humble Oil & Refining Co., prophesied would be necessary to achieve a demand-supply balance. If we were to use an increase of 15 cents per thousand cubic feet, which coincides with the 25-cent field price suggested by Mr. Bailey, the Tulsa, Okla., producer, and by Mr. Shelton, of Sohio Petroleum Co., to whom I referred earlier, we obtain an overall annual increase of the cost of gas to all consumers of $900 million.

Annual increases in the cost of gas to consumers could be computed so as to reflect the ideas of some of the gas industry's spokesmen that natural gas should be priced on the basis of its heat content as compared with oil and coal. These spokesmen point out that natural gas is a premium fuel and should command prices higher than oil and coal. As one example of this thinking, I refer to a statement made by Mr. Rayburn L. Foster, general counsel of Phillips Petroleum Co., in an address before the Executives Club, Milwaukee, Wis., on October 24, 1955.

It will be remembered that it was Milwaukee, Detroit, and the two States of Michigan and Wisconsin which kept the Phillips case alive. Mr. Foster was going into the camp of the enemy. He said:

> I can find no fault with the idea that gas, being a superior and more sought-after fuel than coal or oil, ought to sell for at least as much as coal or oil if the demand and supply situation prompts purchasers to pay that much for it. Certainly there is no warrant for the Government intervention to prevent the normal effect of competition to the extent of bringing the price of a superior fuel up to a parity with an inferior fuel.

Spokesmen for the oil and gas producers say that an annual increase in the cost of gas to the consumer of $800 million is fantastic and sheer, unsupported propaganda. They ask this question: If Federal regulation is all that prevents producers' prices from rising precipitately, why did they not do so before June 7, 1954? The short answer to that question is that they did. It is shown by the evidence which I have already presented that between 1946 and 1954, producers' prices more than doubled. Since 1948, the rise in field prices has added more than $200 million on an annual basis to the cost of gas to pipeline companies. With current prices being entered into at double the present average field price, and with most of the contracts containing renegotiation and favored-nation clauses, the only thing that stands in the way of further precipitate, upward rises in field prices of gas is Federal regulation provided for by a good law and made effective by a good and active commission.

Enforcement of the Natural Gas Act is all that will block these heavy new demands by the producers.

It is well known that the demand for natural gas exceeds the supply. Mr. L. F. McCollum, president of Continental Oil Co. and chairman for the producers' lobby for the Fulbright bill—National Gas and Oil Reserves Committee—said recently, according to the Oil and Gas Journal, January 9, 1956, that because the regulated local distributors get the biggest cut out of the consumers' gas bill, and the pipeline companies get the next largest cut, such facts alone should convince the public that gas producers are not going to get anything like $800 million a year more through passage of the bill. To demonstrate his point, he added:

> To raise decontrolled prices anywhere near the predicted sum would seriously endanger the natural gas industry's competitive position with oil and coal, and could well drive gas entirely out of the fuel market.

Mr. McCollum's statement certainly implies that the oil industry has the power if it cares to exercise it to increase the cost of gas to the consumer by $800 million a year, but that they would not do it because it would damage their competitive position with oil and coal. But with the oil and gas supply both controlled by the major oil companies, how can they lose by jacking up the price of gas?

That is a point which has not been sufficiently emphasized in the debate. Substantially the same companies control both gas and oil, although there are alternative methods of distribution in the case of oil which differentiate oil from gas.

Oil industry spokesmen claim that there is a large unsatisfied market for natural gas and that consumers are clamoring for more and more.

The residential consumer is a captive customer. In 1954, residential consumers paid $1,436,000,000 for natural gas. The average annual bill was about $80. What Mr. McCollum is saying is that the average residential consumer cannot be compelled to pay an additional $30 a year for natural gas. Yet, what alternatives do the residential consumers have if rates go up that much? Either they pay the $30 or they junk their gas appliances, which cost from $500 to $1,000 a living unit.

As I have repeatedly said, based upon my analysis of the situation, I am convinced that the annual increase in the cost of gas if this bill becomes law will reach a minimum of $600 million. This is based upon an average increase in the field price of natural gas of 10 cents which would bring that average to 20 cents, the initial price named in numerous contracts in the last 3 years. I am content to rest my estimate of the increased cost to the consumers on that figure.

I should like to point out, since the reserves are 21 times the annual flow, if we apply a factor of 21 to the annual increase in revenue, it means a minimum increase in the value of the reserves of $12,600,000,000. If the price is increased by 15 cents, or to a total of 25 cents in the field, it means an annual increase of $900 million. Capitalized at 21 times, the value would be $18,900,000,000.

Of course, there is some question as to whether that would not also increase the value of that portion of the reserves which will not be used for gas sold, but utilized for other purposes. That would send the value of the reserves still higher.

EXAMPLE OF WINDFALLS AVAILABLE TO ONE COMPANY IF FULBRIGHT-HARRIS BILL PASSES

The question of gas reserves is an interesting one. I hold in my hand the 24th annual report of the Panhandle Eastern Pipeline Co. for 1953. On pages 11 to 13 are some very interesting statements about the gas reserves, and I read the following:

> Our owned gas reserves in the so-called proven area are carried at their cost aggregating less than $3 million, which your company estimates is in the order of 1 percent of their replacement cost under present conditions.

The report goes on to describe the reserves of the company. Farther down, in the paragraph at the bottom of page 11, the report states that reserves of 3 trillion, 500 billion cubic feet are owned by the company, and that, in addition, Trunkline Gas Co. has under gas purchase contract a natural-gas reserve of 2 trillion, 300 billion cubic feet, which is committed to that company.

If we accept these figures, a 13-cent rate would give their reserves a present value of $455 million for properties which are carried on their books at $3 million.

Mr. President, let me repeat that figure. Here is a pipeline company which carries its reserves on its books at $3 million; reserves which at a 13-cent rate, are worth $455 million. Think of the melon which can be cut. If the rate goes up to 20 cents per thousand cubic feet, the value of the reserves will be worth $700 million, instead of the $3 million carried on the books.

FULBRIGHT BILL WORSE THAN KERR BILL

Panhandle happens to be fortunate in having these huge reserves. The Tennessee Gas Transmission Co. is not so fortunate. With Panhandle standing to make this enormous amount from an increase in the average price, does anyone believe that they will put up any heroic resistance to an increase in the average price? Every increase in the average price sends up the value of their enormous reserves. That may explain why most pipeline companies have changed their tune since 1950 and are now enthusiastically behind the pending bill. The pending bill is worse than the Kerr bill. The Kerr bill, as I have pointed out again and again, did not propose to change the law so far as the properties of the pipelines were concerned. The pipelines would still be under regulation. However, this time the pipelines have been cut in, too. That would be quite a luscious melon which Panhandle would have to cut.

I wish to call attention to the fact that I have merely read from the company's statement to its stockholders, not from a muck-raking journal. I have taken a statement out of their own mouths.

RESIDENTIAL CONSUMERS WILL BEAR BRUNT OF INCREASE IN GAS RATES IF PRODUCERS ARE GRANTED EXEMPTION

A great deal of money and energy has been expended by the producers to demonstrate to the public and to Congress, that the producers' share of the consumers' dollar is approximately 10 percent. In this connection, violent attacks are being made on distributing utilities. It is charged that they are responsible for high gas rates. These attacks are purely diversionary in nature. They have nothing to do with the real issue which is before the Congress.

I have had a chart made of a section of pipeline which shows graphically the composition of the gas flowing through the line by classes of sales. This chart, which is based on 1953 natural gas sales made by utilities, shows that the nonspace heating residential, commercial, and firm industrial sales, account for approximately one-half of the total natural gas sales by utilities. The other half is accounted for by the interruptible, industrial sales and residential space-heating sales.

In 1954, utilities sold approximately 3.13 trillion cubic feet of gas for industrial purposes. The average realization was 24.5 cents per 1,000 cubic feet. As the average field cost of gas purchased by the interstate transmission line in 1954 was 9.6 cents per 1,000 cubic feet, it is obvious that the producers' share of the industrial customers' dollar was about 40 percent in place of the 10 percent the producers have talked about.

Generally speaking, most gas which is sold to industry by pipeline companies and distributors is sold in competition with oil and coal. There are, however, some industrial uses of natural gas where it has superiority because of technological reasons. However, with respect to gas which is sold for burning under boilers, industrial sales are made on a highly competitive basis as between the three principal fuels.

Mr. HUMPHREY. Mr. President, will the Senator from Illinois yield?

Mr. DOUGLAS. I shall be very glad to yield.

Mr. HUMPHREY. I heard the Senator's comment with respect to the Panhandle statement. As I recall, he was reading from the company's statement.

Mr. DOUGLAS. Absolutely; from page 11 and later pages of the annual report of the Panhandle Eastern Pipeline Co. for 1953.

Mr. HUMPHREY. The Senator, earlier in his statement, estimated that there would be an increase in the value of gas reserves of around $12½ billion if this bill should pass.

Mr. DOUGLAS. That is the minimum figure.

Mr. HUMPHREY. In the light of what the Senator from Illinois has said about the Panhandle Co., does he not feel that he may be at the minimum-minimum in his estimate?

Mr. DOUGLAS. I may well be. Of course, if they were to value their gas-producing properties at the present figure, there would be a tremendous writeup, so that not all of the increased value would come from the increases in field rates, but a large part would.

Mr. HUMPHREY. The Senator is indicating, in other words, that the valuation made is based on information which is not exactly current or on estimates which are not current, or which perhaps were made at the time of acquisition of the properties.

Mr. DOUGLAS. The pipeline company apparently gave very little value to its gas reserves.

Mr. HUMPHREY. In the beginning?

Mr. DOUGLAS. Yes; that is correct. It may be that the figures represent cost, but the company gave a very low value. The increase in the price of gas has already sent up the value of the reserves enormously. It will go up still further if a further increase takes place, as we believe it will.

Mr. HUMPHREY. The Senator referred to charges, and I heard him mention the amounts of industrial gas which had been sold on an annual basis. Was the Senator speaking of firm industrial or interruptible and firm?

Mr. DOUGLAS. We should differentiate between the two. As I remember, roughly 50 percent of the industrial gas is interruptible. These are 1953 figures. We do not have the 1954 figures. About half is interruptible.

Mr. HUMPHREY. It is the dump rate which lowers the base rate by the average rate, which figure is generally used by the proponents of the bill in the discussion of the so-called national average base rate.

Mr. DOUGLAS. That is absolutely correct. The exponents of the bill have been taking the highest residential rates as though they were the typical rates, when, as a matter of fact, the average residential rate is only about 80 cents per thousand cubic feet. If we take into account the industrial rate, the average overall rate is only about 44 cents, of which the producer gets 10.7 cents.

Mr. HUMPHREY. I am sure the Senator would be intrigued by the observation that if the public power advocates in discussing public power wished to operate under firm power rates and dump power rates and come down to a low kilowatt rate they would be subject to very severe criticism by those who were trying to discuss a rate structure as between public power and private power. When we discuss public power we say the firm power rate is 3 mills. Everyone knows that the secondary power rate may be a fraction of the 3-mill rate, because it is very much in the same classification as

as is interruptible industrial gas, as a blending in of the interruptible industrial gas with firm industrial gas, which brings down the overall rate structure.

Mr. DOUGLAS. That is correct.

Mr. HUMPHREY. I hope the Senator does not mind my interruption. While I trust every Member of the Senate will read the Senator's splendid discussion and argument on the subject, I wish that the laymen who may read this RECORD—and there are a number of students of Government and of economics who do read the RECORD, persons who are opinion-makers and who write commentaries—may be able to form a layman's point of view. Some of the terminology involved is rather technical. I shall be the laymen's advocate for the moment and, in that way, be able to make the RECORD more clear.

Mr. DOUGLAS. The Senator's statement is very much appreciated.

Mr. President, increases in the cost of gas to distributing utilities presents the management with two alternatives. One, whether to lose industrial business or pass on the entire increase to the residential and commercial users. Competition with other fuels is such that none or only a small portion of the increase can be passed on to industrial users, particularly for boiler fuel sales on an interruptible basis. If we take an example where one-half of the sales of a distributing utility are sales to industry and its cost of gas increases by 10 cents per thousand cubic feet at the city gate, practically the entire 10 cents per thousand cubic feet applicable to the entire volume of gas purchased would be passed on to the residential and commercial users, if the industrial business were to be retained.

That is, if residential and commercial took half, which they do not, the increase would be approximately 20 cents. If they took a third, the increase would be approximately 30 cents.

Mr. HUMPHREY. Mr. President, will the Senator from Illinois yield further?

Mr. DOUGLAS. I yield.

Mr. HUMPHREY. The Senator's point is that as to industrial gas, and particularly interruptible industrial gas, where there are supplementary fuel systems, if the price goes up too much, the consumers simply revert to fuel oil or some other fuel.

Mr. DOUGLAS. And if prices increased, they would also lose business.

Mr. HUMPHREY. Therefore the remainder of the increase would have to be borne primarily by the residential consumers.

Mr. DOUGLAS. And they have already given their fortunes as hostages in the purchase of gas ranges and gas hot water heaters, and do not have alternative fuel systems.

Mr. HUMPHREY. Yes; and the purchasers may still be paying on their gas appliances.

Mr. DOUGLAS. That is correct. I am in the same situation, so far as a gas furnace is concerned.

The Senator from Minnesota has made a very interesting addition to the discussion. I have been saying that the appliances could not be junked. The Senator from Minnesota has pointed out that in many cases the purchasers are still paying for them. Therefore, in an added sense, they are tied to them, the balances unpaid are obligations.

In the event the industrial business is lost its share of fixed charges and overhead expenses must be assigned against the residential and commercial customers. Thus the cost of serving those two classes of customers would rise substantially more than the average increased cost of gas at the city gate. If the load factor of the distributor decreases, this reduces the load factor of the pipeline company with the result that its unit cost of transporting the gas increases, and the average price at the city gate is increased still further.

Another factor of some importance concerns the gas consumed in the compressors required to push the gas through the pipeline and the gas lost in transmission and distribution operations. In order to sell one thousand cubic feet of gas to the ultimate consumer approximately one and one-eighth thousand cubic feet of gas must be purchased in the field. The cost of the additional one-eighth thousand cubic feet of gas purchased must be added to the one thousand cubic feet of gas sold by the distribution company in making comparisons of producers' prices and the cost of gas to the ultimate consumer.

Thus it is possible for the increases in the cost of gas to the residential consumer to be several times the increase in the cost of gas in the field due to the pyramiding effect on the residential consumer of increases in the pipeline company rates and the distributing company rates, due to competitive fuel situations governing the sales of gas for industrial purposes and the lowering of the pipeline company and distribution company load factors through the loss of industrial business.

It is therefore highly misleading to charge that increases in the price of gas in the field can have only a minor effect on the consumers' gas bill.

GAS CONSUMERS IN PRODUCING STATES HIT BY RISING COST OF GAS IN THE FIELD

The gas consumers of the producing States are also being adversely affected by the rising cost of gas in the field. This situation has been brought out into the open in two proceedings before the Federal Power Commission.

One of the proceedings involved the issuance of a Certificate of Public Convenience and Necessity by the Federal Power Commission to Signal Oil & Gas Co. Signal was seeking to sell to Cities Service Gas Co. approximately 30 million cubic feet a day of gas from its Fox gasoline plant in the south central area of Oklahoma at an initial price of 12 cents a thousand cubic feet. Oklahoma Natural Gas Co., which is the largest distributor of gas in the State of Oklahoma, and Lone Star Gas Co. with large operations in Texas, opposed Signal's application solely on the ground that the 12-cent price was excessive and urged that any certificate issued to Signal be conditioned upon the filing of a rate of a 10 cents per thousand cubic feet.

The Federal Power Commission on November 26, 1955, in opinion No. 288, conditioned the certificate of public convenience and necessity in accordance with the requests of Oklahoma Natural Gas Co., Lone Star Gas Co., the city of Kansas City, Mo., and other cities who would be affected by the increased cost of gas to Cities Service Gas Co. This denial of the 12-cent price could not have been accomplished except for the Supreme Court's decision in the Phillips case.

In its opinion, the Commission pointed out that gas prices in the purchase areas of both Oklahoma Natural and Lone Star, in Oklahoma, were almost constant at about 5 cents per thousand cubic feet from 1945 to 1950—page 10. The average was about 6 cents in 1952 and that the present maximum price in the areas in Oklahoma was 10 cents per thousand cubic feet. The average field price of all gas purchased by Oklahoma was approximately 9.9 cents per thousand cubic feet. The Commission stated:

> The contention of Oklahoma Natural and Lone Star that a 12-cent sales price by Signal will drive the maximum price in the area from 10 to 12 cents is not contradicted by Signal, and a witness for Cities Service admitted that this would be the effect of the sale as proposed. Although the favored-nation clauses in the existing contracts of Oklahoma Natural and Lone Star would not be triggered by the price Cities Service pays Signal, nor would any of Cities Service's favored-nation's clauses be triggered, the record clearly shows that the price proposed by Signal would inevitably cause a general price area increase for all major sales to 12 cents per thousand cubic feet as a result of future purchases of new supplies of gas.

The impact of the higher price of gas upon gas consumers was pointed out by the Commission in its opinion in these words:

> Oklahoma Natural presented evidence that a general 2-cent increase in the cost of purchased gas would cost the company approximately $2 million a year. Lone Star stated that the comparable cost to it would be approximately $1,140,000 a year. With respect to Cities Service, a comparable cost would be approximately $1 million a year. Oklahoma Natural also contends that it loses important industrial sales as a result of a general increase in purchased gas cost.

I would also refer Senators to the testimony given in this proceeding by Mr. Joseph Bowes, president of Oklahoma Natural Gas Co., and Mr. Peters and other officials of the company, pointing out that if the increase in the price of gas raises their costs $2 million annually, they cannot absorb the $2 million. They testified that they would either lose their industrial business or would have to add the $2 million to the bills of their residential customers.

The other case before the Federal Power Commission involved a proposal of Natural Gas Pipeline Company of America in Docket G–4280 to build a line through the southwestern part of Oklahoma and into Jack and Wise Counties, Tex., for the purpose of purchasing and transporting to its markets, which are chiefly in the city of Chicago, an additional 78,000 thousand cubic feet of gas per day. Natural Gas Pipeline Co. has

entered into contracts with producers in this area for the purchase of gas at prices of 15 cents per thousand cubic feet with escalations to higher levels.

Oklahoma Natural Gas Co. and Lone Star Gas Co. in this proceeding took a position similar to that in the Signal case. These companies claimed that if Natural were permitted to build this project and to pay the price of 15 cents for natural gas, which is 5 cents in excess of the current going price in the area, it would cause a general price increase for all sales in the area. This would result in Lone Star being required to increase the rates to its customers by an amount of approximately $13 million a year, principally to Texas consumers.

In an effort to avoid this situation, Lone Star, which up to this time has not had any rates subject to the jurisdiction of the Federal Power Commission, offered to sell Natural Gas Pipeline Co. its additional requirements and to deliver it at Natural's compressor station in the Panhandle field at a price which would secure a saving to Natural of some $3⅓ million annually.

During the course of this proceeding, which is presently pending before the commission, Mr. A. H. Eddins, executive vice president of Oklahoma Natural Gas Co., presented testimony in behalf of his company. Mr. Eddins pointed out that in 1951 his company paid an average of 5.3 cents per thousand cubic feet for gas and that since then its average cost has risen to 9.9 cents. After testifying that the cost of gas is the largest expense to the company, Mr. Eddins further testified—pages 2698–2699, G–4280:

Question. What impact has a rising cost of gas supply had upon the rates to consumers?

Answer. The company's rates have been twice increased by corporation commission in the last 3 years to permit the company to earn a reasonable return with the rising cost of gas and gas service. Our cost of gas has practically doubled within the last few years, and the consequent rate increases have applied to all our customers, in total over $6 million annually.

Question. What would be the impact of an increased price of purchased gas of Oklahoma Natural in the amount of 5 cents per thousand cubic feet?

Answer. We are now faced with a threat as a result of the proposed pipeline of Natural Gas Pipeline Company of America that the cost of gas will rise drastically.

Question. How substantial an increase in cost would this be to the company?

Answer. If our cost of purchased gas were to rise 5 cents it would amount to an annual increase of over $5 million in our costs, which of course we would have to pass on to our customers.

Question. Would Oklahoma Natural be able to absorb this without further rate increases?

Answer. No, the recent Oklahoma Corporation Commission orders allowed us a rate of return of 6 percent on an investment-rate base, and we could not absorb any additional cost without reducing our return to a level below the reasonable return found by that Commission.

Question. Could the additional cost be passed on to industrial customers?

Answer. If our increased costs were passed on to industrial customers, it would in my opinion result in a substantial loss of the industrial load which would leave us with capacity unused, and gas which we are contractually bound to purchase, which our customers could not consume. We have reached the point with the industrial customers where further increase in rates would result in a serious loss of such business to competing sources of fuel. Our present industrial load is necessary to permit the system absorption of the constant intake of natural gas during the summer and other off-peak periods. We are faced with two alternatives. One, lose a substantial part of the industrial load if the rates are increased and create a problem of taking care of our existing gas purchase contracts, or, two, we can apply all of the increase to the domestic and commercial customers.

I have just quoted from the sworn testimony of the executive vice president of the largest gas utility in Oklahoma. In the 12 months ended August 31, 1955, Oklahoma Natural sold 29,220,000 thousand cubic feet to residential customers for $18,167,000. Thus, the $5 million increase which Mr. Eddins was talking about would constitute on the average an increase of 27½ percent in the residential rates of 302,000 residential customers of Oklahoma Natural.

Let me ask the Senators from the great State of Oklahoma if in the light of this testimony they are not concerned about what will happen to the gas bills of 300,000 Oklahoma families?

Since 1951, the average rate charged for residential service by Oklahoma Natural has increased from 44.56 cents per thousand cubic feet to 62.17 cents per thousand cubic feet, an increase of nearly 40 percent. Another 5-cent increase in the field cost of gas to Mr. Eddins' company would boost it another 27½ percent.

Is Oklahoma Natural gouging its customers in Oklahoma? I should think not, when it is willing to incure the enmity of producers by putting up a fight before the Federal Power Commission, in which it was joined by Lone Star Gas Co. of Texas and the city of Chicago, to protect gas consumers from increases in rates.

Consolidated Gas Utilities Co., another utility company with 100,000 customers, serving both Oklahoma and Kansas, also intervened in this same proceeding before the Federal Power Commission. In its petition to intervene, it made this statement:

Your petitioner points out that Natural has stated in its application that it proposes to purchase additional volumes of gas along the route of its proposed pipeline. Therefore, should Natural Gas Pipeline Co. succeed in obtaining supplies of natural gas for its proposed pipeline in Oklahoma at a price equivalent to the 15 cents per thousand cubic feet proposed to be paid in Jack and Wise Counties, Consolidated will be unable to purchase additional supplies of gas in the areas where gas will be purchased by Natural unless it is willing to pay 15 cents for all additional gas so purchased. Furthermore, if Natural succeeds in purchasing gas in Oklahoma at such price, the price which Consolidated will be forced to pay for new connections will likewise be 15 cents and thus, for comparable gas now purchased in the same areas, the price will be increased from the present 10 cents rate under the provisions of the "favored nation" and "renegotiation" clauses in Consolidated's gas purchase contract. Consolidated avers that such an increase in its cost of purchased gas would require it to substantially increase its rates to its customers, to their great detriment and disadvantage, and contrary to public interest.

In this connection, Consolidated points out that in the part of Oklahoma to be traversed by Natural's pipeline there are oil refineries which sell fuel oil to industrial and commercial customers at a price which probably would be less than that of natural gas if the cost of such gas at the wellhead increased to 15 cents. The impact on Consolidated and its customers if a substantial part of its commercial and industrial business were lost to fuel oil resulting from any such increase in the price of gas at the wellhead cannot be overstated.

These Oklahoma and Texas utilities recognize clearly the effect of higher field prices upon rates to their customers and that the greatest impact will be upon the residential consumer because of the impossibility of increasing industrial rates. It is regrettable that the public officials of these great gas producing States and their elected representatives to this body apparently do not foresee the consequences to their own citizens, who use gas to meet their daily needs, if the producers have their way and succeed in securing exemption from regulation of their interstate sales under the Natural Gas Act.

Mr. HUMPHREY. Mr. President, will the Senator yield to me at this point?

Mr. DOUGLAS. I yield.

Mr. HUMPHREY. When the Senator speaks of the consumers' gas bill, I am certain he recognizes that the letters and messages we have been receiving, which relate to consumers, are generally considered to be from commercial and residential consumers. I do not know if the Senator's mail is of the same type as mine, but most of the letters I have received have been from the commercial and residential users of gas.

I gather that what the Senator is trying to point out is that if gas prices go up at the producers' level, the interruptible industrial gas becomes too expensive, and industry reverts to another fuel, if industry has an alternate power system, then the full burden of the increase in the cost of gas will fall upon the commercial and residential users.

Mr. DOUGLAS. That is absolutely correct.

Mr. HUMPHREY. Of even more significance, a smaller volume of gas will be going through the pipelines.

Mr. DOUGLAS. That is correct.

Mr. HUMPHREY. That will result in a decrease in the pipeline load, which when translated into the thousand-cubic-feet or units of gas moved will place a greater overhead cost on the delivery of each unit.

Mr. DOUGLAS. The Senator is correct.

Mr. HUMPHREY. Not only will the greater overhead cost start with the producer, but it will continue through the pipeline; and in order to get 1 thousand cubic feet at a main into a house, it is necessary to have 1⅛ thousand cubic feet coming into the pipeline.

Mr. DOUGLAS. That is correct.

Mr. HUMPHREY. That also will pyramid the cost. A pipeline having a smaller volume of gas moving through it will result in the cost of the movement

of the gas being at a higher percentage on what is moved.

Then the gas will reach the distributing company, which has thousands, perhaps millions, of dollars invested in its network of mains feeding into the homes and places of business. When there is no demand for gas by the interruptible industry, because of the increase in cost, the whole burden of the additional cost of the gas will fall upon those who are, in a sense, less able to pay for it.

Mr. DOUGLAS. That is correct.

Mr. HUMPHREY. Or, to put it another way, the burden will fall upon those who are restricted by the nature of their heating or power system to the gas facility.

Mr. DOUGLAS. That is absolutely correct.

Mr. HUMPHREY. This would affect thousands upon thousands of ordinary business establishments.

Mr. DOUGLAS. Yes; thousands of business establishments. It would affect 1,572,000 commercial establishments, according to 1954 figures; and 19,700,000 residential consumers. The latter figure, as we know, has since been increased to 21 million. So virtually half the American people are involved as consumers.

Mr. HUMPHREY. Also, a rising percentage of new construction is desirous of using gas fuel as a means of heating or for power, if it is available.

Mr. DOUGLAS. That is correct.

Mr. HUMPHREY. One point which impressed me, as I looked over some of the Senator's earlier statements, was that the producers seem to have forgotten one of the important essentials of what might be called the competitive capitalistic system; namely, that it is not the margin which is taken off each unit which is so important; it is the velocity of the units.

What our producer friends want to do is to have an increase in the velocity of flow of units of gas, but to maintain the same margin of profit they had on a smaller velocity or flow of gas. This is contrary to the whole idea of the consumer's economy. It is contrary to the theory of a mass consumption and a mass production economy.

As I understand competitive econnomics, we try to take a smaller slice of the profits portion, but get the slicer working faster on a larger volume.

Mr. DOUGLAS. The purpose is to produce a larger volume.

Mr. HUMPHREY. In other words, as the volume moves through, while the unit of profit may be substantially diminished, the total aggregate profit will be substantially higher because of a greater flow of goods, or in this instance a greater flow of gas. But it seems to bother some producers when they find that they are producing more but are not making, in the same proportion, the same amount more profit on the basis of the increased production.

If that were the case, I think we would pretty well dry up all sources of new wealth in the United States or in any other area of the world. This is what is done in Europe in many instances. I do not want to be uncharitable, but the European economy has regulated or limited the flow of goods, with the profit being as large as the market will bear.

Mr. DOUGLAS. Per unit.

Mr. HUMPHREY. Our American economy is based on the production of a volume of goods, with a minimum of profit. This provides for overhead and capital improvement, and a net profit which is a fair and reasonable return on the investment. I think this certainly has been demonstrated in the gas business.

Mr. DOUGLAS. I thank the Senator from Minnesota.

Mr. President, I sent to the desk a few minutes ago an amendment in the nature of a substitute. The amendment would exempt from the regulation of prices producers who sell less than 2 million thousand cubic feet of natural gas in a year. When the bill reaches the stage where the consideration of amendments will be timely, I intend to offer my amendment in the nature of a substitute.

Mr. HUMPHREY. Mr. President, will the Senator yield at that point?

Mr. DOUGLAS. I yield.

Mr. HUMPHREY. As I think everyone is aware, the Senator from Illinois has been working on this question a long time, and some of us have discussed the matter with him. Do I understand correctly that the amendment in the nature of a substitute would exempt a major portion of the independent producers?

Mr. DOUGLAS. It would exempt about 5,300 of approximately 5,500 producers. It would exempt 96 percent of all producers, and would confine regulation to 197 of the biggest producers; but they are the ones who produce 90 percent of the gas. We would exempt only the tail, and if the dog is regulated, that is the main concern we have, and we do not need to pay much attention to the tail.

Mr. HUMPHREY. I think the Senator from Illinois has put his finger on the sensitive gas and oil nerve, because I have heard a great deal of talk to the effect that "you would not want to regulate a little dairy producer, would you? You would not want to control the price the little producer would charge for a few dozen eggs, would you?"

In other words, those who have argued for unregulated prices on gas production at the wellhead, so to speak, have said, "How would you feel if your dairy farmer's production were regulated as to price?"

Let me say that if there were, out of some 6,000 farmers, about 100 or 200 who produced more than 90 percent of all the butter, perhaps there would be a pretty good case made for regulation of some of the prices, particularly if it were in the form of a pipeline operation. I refer to the method and form of distribution.

The Senator from Illinois has put his finger on the real issue. Our concern is not so much with the independent producer of gas from a well; the real concern in the bill has to do with eliminating regulation of prices charged by the large producers, who make up about 4 percent of the total number of producers.

Mr. DOUGLAS. The Senator from Minnesota is quite right. Lest some person excessively critical of the Senator from Minnesota and the Senator from Illinois should read the RECORD, I should like to say that, of course, neither the Senator from Minnesota nor the Senator from Illinois is proposing regulation of dairy prices.

Mr. HUMPHREY. No; I was pointing out that there are some persons who have said, "Senator HUMPHREY, you would not want your dairy farmers regulated as to prices." I may say that is a false and almost totally nongermane analogy, simply because of the nature of the distribution and the handling of gas as such.

All milk produced is not put in one tube for transportation to a particular city, and all butter produced does not go into one chute for a particular community. There are thousands and thousands of independent producers.

Mr. POTTER. Mr. President, will the Senator from Illinois yield?

Mr. DOUGLAS. I yield to the Senator from Michigan, who has borne a heroic share of this battle.

Mr. POTTER. I was interested in the argument made by the Senator from Minnesota. Of course, if the dairy farmers had captive consumers, such as the gas producers have, an entirely different situation would be presented.

I should like to take this opportunity to commend the distinguished Senator from Illinois for his valiant fight against the pending bill. I know it is a trying chore for the distinguished Senator to speak and bring out the facts, and there are many facts which he has developed. He is probably the most knowledgeable man on the Senate floor with respect to this bill. I think the effort he has made has brought to the attention of the American people the purpose behind the bill, who will benefit, who will pay, and the fact that the pending bill should not be passed. The distinguished Senator from Illinois has performed a great service, and I wish to commend him.

I might add at this time that, if we did not have great respect for the forum in which we are present, I assume that we probably could agree quite readily to amendments this evening, without too much difficulty.

Mr. DOUGLAS. I believe the opponents of the bill have on their side, not only a majority of Senators present, but all those present.

Mr. HUMPHREY. Mr. President, will the Senator from Illinois yield?

Mr. DOUGLAS. I yield.

Mr. HUMPHREY. I gather that the absence of Senators who are in favor of the bill must indicate that they are in sympathy with the substitute which the Senator from Illinois has proposed. I may say, most frankly, that the substitute would give the greatest freedom to the small, independent producer that anyone could ever hope for; namely, nonregulation. I wish the proponents of the bill were present to hear the Senator from Illinois, because I am sure they are interested in the small producers.

The evidence which the Senator from Illinois has been presenting is the kind of evidence which should convince anyone. I do not think there has ever been

such an overall, comprehensive examination of this very difficult and complex question as has been presented by the Senator from Illinois.

I may say to the Senator from Michigan that the junior Senator from Minnesota has read the speech of the Senator from Michigan as it was delivered and printed in the RECORD. It has been studied by one of my associates, who is working on the bill. If the Senator will forgive me, we may take a line or two, or at least some of the thoughts contained in the presentation of the Senator from Michigan and use it in the speech which I shall make in a day or so.

Mr. DOUGLAS. Mr. President, I wish to say I appreciate the kind words of the Senator from Minnesota. I do not deserve them. We are all working together, to the best of our ability. It is a great consolation that we have the feeling that our cause is just, and that there exists a fellowship between us which is very precious.

Mr. President, I have said there was one great advantage in confining regulation to the 197 top concerns in that it would free the small producer from regulation. But there is another great advantage in that it would free the Federal Power Commission from a lot of work. One of the arguments which has been made against the bill has been that if the Federal Power Commission should have to regulate 8,000 producers—in reality the number is only 5,500—the Commission would bog down in paperwork. By exempting more than 5,300 of the producers, we would confine the task of regulation to manageable proportions. The Federal Power Commission could regulate 197 big producers. In fact, I would say that the system of regulation as proposed would involve much less redtape than would the ineffectual form of regulation proposed in the Harris-Fulbright bill, because there is contained in that bill a provision that, in the matter of escalation clauses and other provisions, may induce the pipeline companies to ask for an advance ruling.

If the pipeline companies should ask for an advance ruling—and I am certain they would—it would mean that the Federal Power Commission would have to have submitted to it contracts of all 5,500 producers, and the Federal Power Commission, under the Harris-Fulbright bill, would be confronted with the same administrative difficulties which have taxed them under the present law.

The exemption of 97 percent of the producers—taking 2 million thousand cubic feet as the cutoff figure—would really make the enforcement program manageable.

Mr. POTTER. Mr. President, will the Senator yield?

Mr. DOUGLAS. I yield.

Mr. POTTER. It also would meet the argument which the proponents have been making with regard to the so-called redtape, as they call it, for the same small producer, the one who does not have the big financial backing. The distinguished Senator from Illinois has well brought out the fact that the great volume of the gas which is sold is not sold by the so-called small producers. There are not many of them who even sell gas in interstate commerce—only a handful. It is the large producers who sell the bulk of the gas.

Mr. DOUGLAS. Exactly so.

Mr. POTTER. I think the amendment of the distinguished Senator from Illinois has great merit, and I would assume that the proponents of the bill would simply accept the amendment without debate.

Mr. DOUGLAS. I have thought so. But the amendment is met with most bitter opposition from the large producers and from the proponents of the Harris-Fulbright bill.

Mr. HUMPHREY. Mr. President, will the Senator from Illinois yield to me?

The PRESIDING OFFICER (Mr. MCNAMARA in the chair). Does the Senator from Illinois yield to the Senator from Minnesota?

Mr. DOUGLAS. I am glad to yield.

Mr. HUMPHREY. It is perfectly obvious that the proponents of the Harris-Fulbright bill have great personal faith and confidence in the Senator from Illinois, because at this time, when the Senator from Illinois has submitted his amendment in the nature of a substitute, we find that no proponent of the bill is on the floor ready to object. Therefore, inasmuch as all Senators now present are opposed to the Harris-Fulbright bill, it is obvious that the proponents of the bill trust the Senator from Illinois and know full well that neither he nor any other opponent of the bill present at this time would violate what might be termed the moral principles or principles of ethical conduct governing this body.

If the proponents of the bill would accept with equal good faith the arguments of the Senator from Illinois, we could soon conclude the debate; and the public interest would be protected, and the proponents of the bill would be able to say to their constituents, "We were able to avoid having any regulation imposed upon 96 percent of all the producers."

Mr. President, no other group in America can boast of having received treatment as good as that. If any other group received such treatment, it could show that it had done quite well. Most of the time we find it difficult to do that well for even a scant majority of any particular group.

Mr. POTTER. If we could do as well for the consumers as that would do for the producers, we would be doing very well indeed for the consumers.

Mr. President, I would really assume that the proponents of the bill would accept the amendment of the Senator from Illinois. If the proponents are interested in learning the historic facts the distinguished Senator from Illinois has to present and the great benefit which they would receive by means of the amendment of the Senator from Illinois, I should think they would be present, in the interest of their own constituents.

So I am a little distraught that the proponents of the bill are not at this time in the Chamber, to hear the very able arguments being made by the Senator from Illinois.

In line with the suggestion of the distinguished Senator from Minnesota [Mr. HUMPHREY] that only opponents of the bill are now on the floor, let me say that of course I realize that the ethical principles of procedure are observed in the Chamber; but it is interesting to speculate what could be done if there were a contrary notion on the part of the Members present this evening.

Mr. DOUGLAS. Mr. President, the Senator from Michigan [Mr. POTTER] had a marvelous war record in the European theater—a record which is one of the noblest achieved by any member of the armed services, although the Senator from Michigan never speaks of it—which endears him to us all the more, of course.

I wonder whether the Senator from Michigan recalls an incident in the New Zealand war, during a battle between the Maoris, one of the aborigines of New Zealand, and the British troops. The Maoris were a very chivalrous group. During one battle they were pushing the British forces very hard, and the ammunition of the British became exhausted. So the Maoris suspended the fighting for the day, and that night took to the British troops a supply of ammunition sufficient to enable them to fight effectively the next day. Certainly that was evidence of a very high degree of chivalry. I doubt that, personally, I would be willing to go that far in demonstrating chivalry.

On the other hand, of course we shall not move the adoption of any of these amendments, although I believe we could do so, inasmuch as the present Presiding Officer [Mr. MCNAMARA] is favorable to our point of view regarding the amendments and the bill.

Mr. President, I am very happy to see the beaming countenance of the acting majority leader [Mr. CLEMENTS], who now appears in the Chamber. I expect that he may be about to move that the Senate take a recess.

Mr. POTTER. Mr. President, if the distinguished Senator from Illinois will yield further to me——

Mr. DOUGLAS. I am glad to yield.

Mr. POTTER. Let me say that I am most appreciative of the kind remarks of the distinguished Senator from Illinois concerning my own war service. His remarks mean doubly as much to me, in view of his own distinguished record. I know that the Senator from Illinois enlisted in the Marines at an age when 99.9 percent of the persons in his age group would be working in their normal pursuits or professions, without thought of offering their service in combat. I am well aware of—and have told the American people of—the distinguished record of the Senator from Illinois, which of course is one which cannot be excelled by any other Member of Congress.

Mr. DOUGLAS. Mr. President, I appreciate what the Senator from Michigan has said. When I spoke of his most distinguished war record, I did not wish to elicit a return compliment from him. Of course I may say that both of us get real satisfaction from the privilege which was given to us.

Mr. President, if the distinguished Senator from Kentucky [Mr. CLEMENTS],

the acting majority leader, has a motion to make, I shall be glad to yield to him.

EXHIBIT A

JANUARY 13, 1956.

Spokesmen for gas producers submitted in hearing on Harris-Fulbright bill considerable material seeking to prove that consumers are being gouged by local gas utilities with implied acquiescence of State regulatory commissions. But such spokesmen did not present any basic information on economics of gas production. Our hearings record is therefore devoid of such essential data, and it is not otherwise publicly available. In order that full facts may be available for Senate consideration, it is requested that you furnish me with answers to the following questions at your earliest convenience, since the managers of the bill propose its immediate consideration. Please state as of the most recent available date and as of the end of each of your last 5 fiscal years (1) the volume of your gas reserves in producing gas lands; (2) the volume of your gas reserves in nonproducing gas lands; (3) your gross investment in gas leases and production facilities, (4) your depreciation and depletion reserves, and (5) any unamortized exploration costs not included in your gross investment figure. Please state also for each of the years 1950 through 1954, for the most recent available 12-month period, and for the first full year in which you sold gas for interstate markets, the following figures with respect to your gas business: (1) total volume of gas sales, (2) total revenues, (3) cost of production exclusive of taxes, (4) Federal income taxes, (5) other taxes, (6) depreciation and depletion accounts, (7) net income, and (8) the percentage which net income from sales of gas after taxes bears to total investment in gas producing properties.

PAUL H. DOUGLAS,
United States Senator.

NEW YORK, N. Y., *January 18, 1956.*

Hon. PAUL H. DOUGLAS,
United States Senate,
Washington, D. C.:

This will acknowledge receipt of your telegram dated January 16, 1956, addressed to Magnolia Petroleum Co., care of Socony-Vacuum Oil Co., New York. We forwarded copy of this telegram on its receipt to Dallas, Tex., office of our affiliate Magnolia Petroleum Co. with request that it be given their prompt attention.

F. W. BARTLETT,
Executive in Charge of Production, Socony Mobil Oil Co., Inc.

HOUSTON, TEX., *January 19, 1956.*

Senator PAUL DOUGLAS,
United States Senate,
Washington, D. C.:

Our information on Harris-Fulbright bill hearings is that material submitted by proponents to which you refer was intended to and did show the relative amounts realized by producers, transporters, and distributors from the sale of gas. This indicated that the average price realized by producers is around 10 percent of the price paid by residential users served by local gas utilities. The record is not devoid, as you say, of essential data on the economics of natural gas since such information was presented by John Boatwright and other witnesses. This testimony made it clear that gas exploration and production are inseparably related with oil exploration and production. Your inquiry is apparently intended to ascertain the rate of return on investments in gas operations for purposes of comparison with the return on investments of local gas utilities. You must realize that a comparison of rates of return on highly hazardous investments such as the exploration for and production of gas and on utility investments with low risk is meaningless and most likely to be misleading.

In seeking to make these comparisons you request information on the amount of investment in gas properties, the cost of producing gas exclusive of taxes, Federal income taxes, other taxes, depreciation and depletion reserves and accounts, and net income, all with respect to gas and covered by seven of your enumerated questions. As you know, leases secured from landowners cover both oil and gas which are usually found together in underground reservoirs. Wherever oil is found, gas is also present in the reservoir and both oil and gas are produced from the same wells, utilizing the same equipment and facilities. Because of this complex interrelationship between these two products, and the activities involved in exploration for and production of them, no generally accepted accounting practices or methods exist in the industry for separating or allocating these items of investment, cost, and net income as between oil and gas. Consequently, we are unable to answer the enumerated questions mentioned. Also, since we do not capitalize exploration expenses, the inquiry regarding unamortized exploration costs is not applicable. In view of these facts, the other information sought would be useless in any effort to ascertain rate of return on investments in gas operations. Data on gas sales and revenues are published in our annual reports. Our gas sales for 1954 were approximately 335,111,000 thousand cubic feet and our gross revenue from these sales amounted to $30,852,687, an average of only 9.2 cents per thousand cubic feet. Effective competition accounts for this low field price.

HUMBLE OIL & REFINING CO.,
HINES H. BAKER, *President.*

TULSA, OKLA., *January 19, 1956.*

Hon. PAUL H. DOUGLAS,
United States Senate,
Washington, D. C.:

This will acknowledge receipt of your wire of January 13 addressed to Sinclair Oil and Gas Co., 600 Fifth Avenue, New York, and latter received by its headquarters here. This company is primarily engaged in the business of producing both oil and gas, with the major part of its investments and revenues from oil. It has not segregated its business in a manner that will enable us to give answers to your questions which will give you a fair picture of our business with respect to the matters called for particularly as to costs or investments in nonproducing leases, dry holes, geophysical and exploratory information, and other items in regard to calculation of profits investments, depletion, and depreciation. Furthermore, to attempt to do so would require a tremendous amount of expense, time, and effort.

L. G. RHEINBERGER,
Vice President, Sinclair Oil and Gas Co.

TULSA, OKLA., *January 18, 1956.*

Hon. PAUL H. DOUGLAS,
United States Senate,
Washington, D. C.:

Acknowledging your telegraphic inquiry December 13, none of information requested readily available and most of it could not be made available without extensive engineering studies and accounting audits. Point out that this company is engaged in production of crude oil, condensate, and gas and recovery of natural gas liquids. No presently existing laws or regulations require such companies to segregate costs and profits between these categories of operations and we attempt no such segregation in our accounts. It is generally considered in the industry that such segregation is impractical if not impossible. Our sales of gas for interstate deliveries are comparatively small, averaging about 50 billion cubic feet annually at an average field sales price of less than 9 cents per thousand cubic feet, which on a B. t. u. basis is equivalent to about half of the average price of coal f. o. b. mines.

B. R. CARNEY,
Warren Petroleum Corp.

NEW YORK, N. Y., *January 19, 1956.*

Hon. PAUL H. DOUGLAS,
United States Senate,
Washington, D. C.:

We acknowledge your night letter of January 13, 1956, which was not received till Monday morning in which you request certain statistical and financial data related to Shell Oil Co.'s natural-gas activities.

First, Shell denies that either it, or to the best of its knowledge any industry spokes-

men, stated during the congressional committee hearings on the Harris-Fulbright bill that consumers are being gouged by local gas utilities. Anyone who reached this conclusion must have done so on the record of the hearings which developed a price distribution picture that shows that less than 12 percent of the residential gas consumers' dollar reaches the gas producer in the field.

Second, the broad basic economics of gas production were discussed by Dr. Boatwright in his statement Consumer Interest in Natural Gas Competition submitted to the Senate committee during the course of the hearings. We recommend this statement for your reading as it includes not only data on gas price distribution but also information on competitive markets, demand and supply, and field price behavior. It is Shell's belief that the economics of gas production as measured by public utility accounting practices assuming for the moment that valid costs can be determined, which we deny have little practical bearing on the cost of natural gas to the ultimate residential consumer when almost 90 percent of the price he pays is already regulated by the appropriate Federal and State commissions having jurisdiction.

The economics of gas production from the consumers' standpoint reduce to the simple price-supply-demand relationships that exist for any commodity in a free market. This may be even more true in a business such as ours with the great risk in capital expenditures for exploration.

Third, the capital investments and operating expenditures in the search for and the development of gas reserves are so inextricably bound up with the concomitant expenditures for allied activities on the crude oil side that Shell does not and cannot segregate these costs between the two commodities on any valid basis, much less in accordance with the breakdown you suggest. Apart from our inability to segregate exploration and production costs between oil and gas is the added difficulty of separating cost of interstate gas sales per se from that of intrastate gas sales and other gas operations such as those for gasoline recovery, cycling, pressure maintenance, artificial lift, and so forth.

Fourth, considering the many alternate means of exploiting our gas reserves, the fact that we do not calculate reserves on a pipeline gas quality basis but instead include in the figures both wet and dry gas whether or not associated with oil in the reservoir and whether or not available for sale, and the fact that we often exclude minor reserves from our figures, we feel that public disclosure of our gas reserves would not be helpful and may be subject to misinterpretation.

Fifth, Shell does disclose its total sales of gas in its annual report to shareholders and in rounded billion cubic feet these were as follows:

1950	122
1951	146
1952	177
1953	223
1954	286
1955	295

1955 sales are estimated at roundly 295 billion cubic feet. Shell accumulates gas sales revenue figures on an overall basis but we do not disclose these because not only does the unit price vary as determined by the point of sale, i. e., wellhead on up to plant outlet but is also affected by delivery pressures, and the type of gas sold, i. e., whether wet oil well and gas well gas sold for gasoline recovery or dry, dehydrated separator or plant residue gas sold for local or interstate use. Publication of unqualified revenue figures are meaningless and we do not have a breakdown of sales revenues by categories.

Sixth, we sincerely regret our inability to supply you with more specific answers to the requested data but we are sure you will appreciate that this is so because Shell is unable to segregate original cost and expenses between oil and natural gas as explained in third, above.

W. F. KENNEY,
Vice President and General Counsel, Shell Oil Co.

TULSA, OKLA., *January 18, 1956.*

Hon. PAUL H. DOUGLAS,
United States Senator, Senate Office Building:

Replying to your January 13 telegram regarding the economics of that unsegregated phase of our business relating to the production and sale of gas, it is impossible to furnish the requested information. Since nearly all of our gas production and gas producing rights arise under leases covering both oil and gas, many of which produce or will produce both oil and gas, our accounting and other records do not reflect investment or operating costs or the other requested information separately as to either oil or gas. While we can furnish gas reserve figures as to our producing leases, it is impossible to determine the gas reserves under our undeveloped leases.

CHESLEY C. HERNDON,
Executive Vice President, Skelly Oil Co.

CHICAGO, ILL., *January 17, 1956.*

Senator PAUL H. DOUGLAS,
Senate Office Building,
Washington, D. C.:

In response to your telegram your request has been submitted to our accounting department. However, our accounting procedures do not segregate items of cost as to operations, dry holes, exploration, lease acquisition, surrenders, seismic work, and other general exploratory expenses as between gas and oil. Any such allocation would have to be on a purely arbitrary basis. We likewise do not in our accounting procedures distinguish between oil and gas the depreciation on the many dually completed wells which are producing both oil and gas, nor do we segregate as between liquids and gas any elements of cost in very extensive gathering systems. For your information we receive an average of 9.4 cents per thousand cubic feet for natural gas. After paying royalties, overrides, production costs, State taxes, Federal taxes, debt retirement, and a modest dividend to our stockholders, what is left from sales of natural gas and oil is immediately employed in the search for new reserves.

RICHARD WAGNER,
Chairman, the Chicago Corp.

NEW ORLEANS, LA., *January 18, 1956.*

Hon. PAUL H. DOUGLAS,
United States Senate, Senate Office Building, Washington, D. C.:

We are somewhat confused by your wire of January 16, as to the connection between alleged gouging by local gas utilities and the basic economics of the independent gas producer. The former is a conventional utility with a monopoly franchise and fixed rate of return, while the latter is engaged in a high-risk, highly competitive business.

The figures you request relative to the cost of exploring for, producing, and marketing natural gas are not reflected in our accounting procedures separately, and apart from the costs of exploring for, producing, and marketing crude oil. The reason is that the search for oil and gas are inextricably tied together, the costs being the same whether you find one, both, or neither. Any attempt to allocate costs between crude oil and natural gas is arbitrary and the result misleading.

THE CALIFORNIA CO.,
H. J. POLK.

NEW YORK, N. Y., *January 16, 1956.*

Hon. PAUL H. DOUGLAS,
United States Senate,
Washington, D. C.:

Your telegram January 13, addressed to Sinclair Oil & Gas Co., 600 Fifth Avenue, New York, has been referred to that company at Tulsa, Okla., where headquarters are located.

SINCLAIR REFINING CO.,
F. A. BUSH.

FINDLAY, OHIO,
January 18, 1956.

Hon. PAUL H. DOUGLAS,
United States Senate,
Washington, D. C.:

Your night letter of the 13th instant was delivered on Saturday while our offices were closed. We are answering at the earliest possible moment. At the outset, may we respectfully disagree with your interpretation of the evidence submitted by the producers on the Fulbright-Harris bill. No spokesman for the producers ever charged the distributing companies with gouging the consumers with the implied acquiescence of the State regulatory commissions. The producers did submit testimony to show that the price they received for gas in the field is less than one-tenth of the price paid by the consumers for the same at the burner tips, but this testimony was submitted for the purpose of showing that even had the Fulbright-Harris bill gone so far as to remove all field price controls, which it does not, nevertheless 90 percent of the price paid by the consumers for gas at the burner tips would still be fixed on a utility basis by the State regulatory agencies and by the Federal Power Commission operating in their respective jurisdictions.

Regarding the 13 questions propounded to us, we regret we cannot furnish you all of the information desired because we do not and cannot separate the costs and investments in exploring for, developing, and producing oil, gas, and condensate when these hydrocarbons are produced from the same lease and, in many instances, from the same well. However, we will furnish you as much of the information as we have available. In answer to the first question of the first series, you are advised that our estimated developed net proven gas reserves for the year 1951 were 1,125,740 million cubic feet; for 1952, 1,301,166 million cubic feet; for 1953, 1,361,893 million cubic feet; for 1954, 1,399,7003 million cubic feet; for 1955, 1,480,277 million cubic feet. In response to the second question in the first series, you are advised that our estimated undeveloped net proven reserves for the year 1951 were 747,100 million cubic feet; for 1952, 644,218 million cubic feet; for 1953, 770,898 million cubic feet; for 1954, 715,165 million cubic feet; and for 1955, 629,729 million cubic feet. We cannot furnish answers to your third, fourth, and fifth questions in the first series because we have never been able to devise a satisfactory accounting procedure for separating the costs and investments in different hydrocarbons coming, in many instances from the same reservoir. Any system for allocating a certain percent of the exploration, development, and production cost to oil and a different percent to gas is arbitrary. In response to the first and second questions in the second series, we regret to inform you that for 5-year period inquired about we did not separate in our accounting procedure revenues from liquids removed from casinghead gas and revenues from the remaining residue gas. Consequently, we cannot give you for the 5-year period the information sought in the first and second questions. In response to the third to eighth question in the second series, this information cannot be supplied because, as previously pointed out, we have never been able to devise any satisfactory accounting procedure under which we can separate the cost of producing oil from the cost of producing gas where the two hydrocarbons come from the same lease, the same reservoir, or the same well. Moreover, it has never been necessary in the operation of our business for us to attempt to arbitrarily segregate these costs.

THE OHIO OIL CO.

SUNRAY MID-CONTINENT OIL CO.,
Tulsa, Okla., January 19, 1956.

Hon. PAUL H. DOUGLAS,
United States Senate,
Washington, D. C.

DEAR SIR: Receipt is acknowledged of your telegram of January 14, 1956, in answer to which we wish to advise as follows:

First, the name of Sunray Oil Corp. on May 16, 1955, was changed to Sunray Mid-Continent Oil Co. The statements made in this letter, therefore, are made with reference to the operation and business of Sunray Mid-Continent Oil Co.

In your telegram, you ask information and data from this company be made available for use during the Senate consideration of the Harris-Fulbright bill. The information and data is requested for gas only.

Sunray Mid-Continent Oil Co. is engaged primarily in the business of discovering, developing, and producing oil. In the search for oil, it has also discovered and developed gas reserves. In this business, it is impractical, if not impossible, to conduct the search for and development of oil separately from that of gas. It is the experience of this company that, more than one-half the time, when gas is discovered and developed, it is found in the same leasehold or common reservoir and results from the same exploratory effort as is oil.

It might be possible that such information could be reconstructed, but it would require:

1. Some arbitrary method of allocating the gross figures between oil and gas and other operations of the company (in the industry there is no accepted basis that we know for making such allocations);

2. An audit of the books and records of the company and its predecessor companies back for a period of more than 5 years.

3. The hiring of an outside force, in addition to the normal company accounting department, to accumulate and compile the necessary data; and

4. A substantial length of time, perhaps a year or more, to complete the job.

It is therefore apparent that we are unable to make timely or meaningful compliance with your request.

I am enclosing the annual reports of the company for 1954, 1953, and 1952 which, I believe, contain a substantial amount of the information you have requested but not in the form in which you have requested it. The annual report for the calendar year 1955 has not yet been prepared and published.

Very truly yours,

C. F. MCCARROLL,
Manager, Gas Sales Division.

UNITED CARBON CO.,
Charleston, W. Va., January 19, 1956.

Hon. PAUL H. DOUGLAS,
United States Senate,
Washington, D. C.

MY DEAR SENATOR: I have your long telegram of January 13. I would like very much to supply you with full information as requested, as I believe that the better informed you are as to the situation of independent natural gas producers, the less you will be disposed to favor Federal regulation of natural gas production. However, the information requested by you would require many months and many thousands of man hours to assemble, as United Carbon Co. and subsidiaries operate 1,769 wells in eight States and many different fields.

I note your reference to the claim that consumers are being gouged by utility companies now engaged in the business of distribution. I certainly make no such claim, though I am well aware that the total gas rate charged by the distributing companies is usually many times the price per thousand cubic feet received by the independent gas producer. Whether the distributor's rate is or is not a gouge depends upon the effectiveness of the regulation now imposed and which will continue to be imposed regardless of the Fulbright bill. The transmission companies and the distributors are public utilities, possessors of franchise and monopoly, who are entitled to earn a fair return on their invested capital, no more and no less, and we assume that is what they are receiving. We independent producers, possessing no franchise and having no guaranty of a profit, fair or otherwise, are in an entirely different category.

As producers of natural gas on a large scale, we deal only with the transmission companies. We find that they are pretty hard bargainers. If we have some gas that a transmission company really wants they pay us up to 15 cents per thousand cubic feet in the Hugoton field and in the Texas Panhandle. If, however, we have an isolated well or lease, with only one transmission line nearby, we find that they will pay us 10 cents or less. The reason is that we have only one possible market and the buyer has the whip hand.

I personally have been much interested in newspaper reports of your activities in connection with the regulation of gas production. You have always been described to me as a statesman who was more interested in the truth than in political advantage. I respectfully suggest that if you will inform yourself as to the circumstances attending the production of natural gas, you will conclude not only that regulation of this nonutility business is unwise and un-American, but also that with regulation the consumers will pay more money for less gas.

I am taking the liberty of sending to you, under separate cover, a copy of our last annual statement, covering the calendar year 1954, from which you will see that, though successfully engaged not only in natural gas production, but also in oil production and carbon black manufacture, we are not making extravagant profits, but merely about 12 percent on net sales.

Yours very truly,

OSCAR NELSON, Jr.

UNION OIL AND GAS CORPORATION
OF LOUISIANA,
Houston, Tex., January 19, 1956.

Hon. PAUL H. DOUGLAS,
United States Senate,
Washington, D. C.

DEAR SENATOR DOUGLAS: This will refer to your recent telegram which we received Monday morning. We have instituted a preliminary review of the matter and, at the present time, it appears that we are faced with an almost insurmountable task because of the many elements making up the items set out in your telegram and the nature of our accounting procedures. We are, however, continuing our review.

Your telegram was addressed to Union Sulphur and Oil Corporation at 663 Gulf Building, Houston, Tex. In order that your files may be corrected, the company name was changed to Union Oil and Gas Corporation of Louisiana last year and our offices were moved to The Houston Club Building.

Very truly yours,

ELLIOTT G. FLOWERS.

HOUSTON, TEX., *January 23, 1956.*

Hon. PAUL H. DOUGLAS,
Senate Office Building,
Washington, D. C.:

With reference to your night letter of January 13, received by us January 16, we deny that any spokesman for our company has asserted or implied that local gas utilities are gouging consumers. A fact which cannot be disputed, and which the record shows, is that local gas distributors receive the major portion of the gas consumer's dollar, whereas gas producers receive a relatively minor share.

Although we do not consider that any of the information requested from us has any real bearing on the merits of the Harris-Fulbright bill, we are quite willing to answer your inquiries to the extent possible.

As to our reserves, in a prospectus dated October 28, 1954, and filed with the SEC, Continental stated that as of August 31, 1954, its estimated natural-gas reserves in the United States were in excess of 2.2 trillion cubic feet. This figure included both producing and shut-in gas. It may not be comparable with reserve figures of other companies because there is no uniform method of calculating reserves and different companies use different methods in making their computations.

We are unable to answer your questions concerning our gross investment, depreciation and depletion reserves, exploration and production costs, taxes, and net income applicable solely to our gas business, because:

A. Leases on millions of acres are acquired and the leased lands are tested at great expense by various exploratory methods. There is no way of telling, other than by actual drilling of wells, whether the lands will produce oil or gas or both or whether they will be wholly unproductive. Many of these leases are abandoned, some before and some after drilling. Accordingly it is impossible to allocate the leasehold and exploratory costs to such gas as may be discovered on the few properties found to be productive of oil or gas or both in paying quantities.

B. Natural gas is generally associated in the same reservoir with oil or other hydrocarbon liquids. When so associated, the gas and liquids are produced together from the same wells. It is absolutely impossible to allocate to the gas alone its proper share of the gross investment, production, and processing costs, taxes, depletion and depreciation, and net income.

According to our records, the volume of natural gas, natural-gas liquids, and casinghead gas delivered during the past 6 years from our company's leases to pipelines, natural gasoline plants, and consumed in company operations, were as follows (in billions of cubic feet):

1950	1,070
1951	1,271
1952	1,439
1953	1,442
1954	1,298
1955 (estimated)	1,230

Our revenues from gas alone cannot be accurately stated because our records lump together revenues derived not only from gas but also from natural-gas liquids produced from the same wells.

CONTINENTAL OIL CO.

BARTLESVILLE, OKLA., *January 23, 1956.*

Hon. PAUL DOUGLAS,
United States Senate,
Senate Office Building,
Washington, D. C.:

Your telegram addressed to American Gas Production Co. (now named Cities Service Gas Development Co.) has been forwarded to this company for reply. Cities Service Gas Development Co. is a wholly owned subsidiary of Cities Service Oil Co.; its properties are operated by Cities Service Oil Co. in conjunction with our other oil and gas properties located in 20 States.

We are familiar with the testimony submitted at the hearings on the Harris-Fulbright bill. We have not found in the record testimony "seeking to prove that consumers are being gouged by local gas utilities with implied acquiescence of State regulatory commissions." On the other hand, there is testimony, to which you undoubtedly refer, establishing conclusively that the price paid producers of natural gas in the field constitutes only a small portion of the ultimate price paid by consumers. There was further testimony demonstrating that the field price for natural gas under free competi-

tion has advanced far less than the general cost of living. The testimony seems to justify the belief that there is no reason for Congress to single out natural gas as the one commodity at the producers level for Federal price regulation on a public utility basis.

Our company is primarily an oil producer, but a majority of our wells also produce gas. We have given much consideration to the problems of allocating investment and costs between oil and gas. It is evident that, because exploration for and production of natural gas is inseparably associated with exploration for and production of oil, it is impracticable to make reasonable or realistic segregation of investment in acreage and production facilities, depreciation and depletion reserves, exploration and geophysical costs, taxes, and other costs of production. Therefore, it is impossible for us to supply information which would show the economics of gas production. Even if we could answer your questions on the basis of speculative assumptions, we respectfully submit that such information would have little relevancy to the main issue developed in the debate on the Fulbright bill, that is, whether or not it is in the public interest to regulate prices for natural gas in the field by Federal authority on a public utility basis.

CITIES SERVICE OIL CO.

NEW YORK, N. Y., *January 24, 1956.*

Hon. PAUL H. DOUGLAS,
Senate Office Building,
Washington, D. C.:

Your telgram of the 13th instant was received on January 16.

Some of the information you have requested is unobtainable and some would take so long to prepare that it could not be ready in time to serve your purpose. However, we can advise you now that our estimated gross gas reserves at the end of 1951 were 9.6 trillion cubic feet; at the end of 1952, 10 trillion; at the end of 1953, 10.5 trillion; at the end of 1954, 11.1 trillion; and at the end of 1955, 11.4 trillion; and our gross sales of natural gas in 1951 aggregated 162 billion cubic feet; in 1952, 181 billion; in 1953, 209 billion; in 1954, 244 billion; and in 1955 are estimated at 288 billion.

THE TEXAS CO.

TULSA, OKLA., *January 23, 1956.*

HON. PAUL H. DOUGLAS,
United States Senator,
Senate Office Building:

This refers to your telegram of January 13, which was received in this office on the morning of January 16, requesting certain information concerning the natural gas operations of this company. You state that "spokesmen for gas producers submitted in hearing on the Harris-Fulbright bill considerable material seeking to prove that consumers are being gouged by local gas utilities with implied acquiescence of State regulatory commissions. But such spokesmen did not present any basic information on economics of gas production." We respectfully take exception to that statement. Spokesmen for the gas producers merely sought to show, which has now been established as a fact, that the producers of natural gas receive a very small part of the consumers' dollar and that approximately 90 percent of what the typical consumer pays is already subject to State and Federal regulation because of its franchise and monopoly status. We know of nothing in the testimony that implies gouging of the consumer by any segment of the industry or that charges any State regulatory agency with failure to perform its proper function. With respect to the economics of gas production, we feel that a great amount of testimony bearing directly on the subject was presented to both the House and Senate committee hearings on the pending legislation. The testimony goes as far as it is possible to go in the light of the fact that the production of oil and gas is essentially a single operation. All producers whether large or small, are faced with the impossibility of determining the separate costs of the joint products which are found as a result of an exploratory effort or which are produced as a result of the work of a single project.

Certain questions in your telegram point up this problem. You ask for information concerning (1) our gross investment in gas leases and production facilities; (2) our depreciation and depletion reserves; (3) any unamortized exploration costs not included in our gross investment figure; (4) cost of gas production exclusive of taxes; (5) Federal income taxes with respect to gas; (6) other taxes with respect to gas; (7) depreciation and depletion accounts on gas; (8) net income on gas; and (9) the percentage which net income from sales of gas after taxes bears to total investment in gas producing properties. It is not possible to answer these questions. Our records do not reflect the information and there is no manner in which the records could be kept to reflect the information without making allocations and segregations among oil, gas, and liquid products extracted from gas upon a completely arbitrary and unjustified basis. As you are undoubtedly aware from your study of this question, oil, gas and liquifiable hydrocarbons contained within the gas are produced in many instances from the same leasehold and through the same well bore, not only do the combinations of the products recovered vary from well to well, from lease to lease, and from field to field, but the proportion which each product bears to the total varies between parcels of land within the same lease and, from month to month, even within individual wells for example, a lease may contain oil wells from which casinghead gas is produced with oil and also gas wells producing gas and liquefiable hydrocarbons. Wells which are oil wells today may become gas wells tomorrow. And, in the case of oil wells, the relative volume of gas will change continually until abandonment. In operations of this type the same personnel are engaged in the production of the combined products, accordingly, all costs incurred in the operations are necessarily charged against the leases without segregation among the individual products. It is not only obvious that to do otherwise would be completely inaccurate, but any arbitrary apportionments made at any particular time would immediately become invalid because of the continuous changes in the character of the production recovered. Under these circumstances, which as you can see do not permit cost segregation among the combined products, it is clear that answers cannot be given to any question raised in your telegram that would have to be based upon a profit-and-loss calculation by individual products.

A further question raised in your telegram, which is impossible of answer from the information contained in our records, concerns our total volume of gas sales and the total revenue received from those sales for each of the years 1950 through 1954. Our records do not segregate the sales of dry or residue gas suitable for transmission in a pipeline and ultimately sold for consumer use from sales of wet gas in the field for delivery to the processing plant for the removal of the liquefiable hydrocarbons contained in the gas. In the latter type of sale, both the volume sold and the revenue received include consideration of the liquid hydrocarbons contained within the gas. The records are maintained on a basis that combines the proceeds obtained from the liquid hydrocarbons and from the production ultimately sold as a dry gas after processing. This is true, for example, with respect to the annual report of our parent company, Standard Oil Co. (Indiana), for 1954, which states that during that year its producing subsidiaries sold 393.47 billion cubic feet of gas for $37 million. The column stated includes liquefied hydrocarbon production and the revenue stated includes lease revenue from the sale of liquefied hydrocarbons. We are, therefore, unable to advise separately the realization obtained from the sale of natural gas suitable for transmission in pipelines. However, in case you desire the combined sales and revenues for gas and liquefied hydrocarbons, the report referred to shows them as follows: 1950, 208.9 billion cubic feet for $12 million; 1951, 264.66 billion cubic feet for $17 million; 1952, 315.858 billion cubic feet for $22 million; and 1953, 367.555 billion cubic feet for $29 million. Other questions in your wire relate to information concerning the volume of gas reserves in producing and nonproducing lands. The estimates made by this company in that connection are included in the total shown in the annual reports of Standard Oil Co. (Indiana). As per its annual reports the total reserves of natural gas of Standard Oil Co. (Indiana) have been estimated and published by years as follows: 1952, 10.1 trillion cubic feet; 1953, 9.9 trillion cubic feet; 1954, 11.38 trillion cubic feet. These figures represent our best estimate of proven gas reserves for producing and nonproducing lands. No segregation of reserve estimates between producing and nonproducing gas lands is maintained.

Lastly, your telegram requested that questions (4) through (9) above be answered with respect to the "first full year in which you sold gas for interstate markets." Gas sales and revenues for the same period were also requested. It appears that such a sale was made about November 1, 1932. All of the records which the company maintained at that time have been stored for years in various warehouses. Many of them have been destroyed in order to save space. If these records are still in existence, they would also reflect the impossibility of answering your questions accurately as our method of accounting has not changed in the meantime. Oil and gas were produced jointly from the same leases, through the same well bores in those days too.

STANOLIND OIL & GAS CO.

BARTLESVILLE, OKLA., *January 20, 1956.*

Hon. PAUL H. DOUGLAS,
United States Senator,
Senate Office Building,
Washington, D. C.:

This is an answer to your night letter of January 13 asking for certain information concerning our natural-gas business.

You preface your request for information by stating that "spokesmen for gas producers submitted at hearings on Harris-Fulbright bills considerable material seeking to prove that consumers are being gouged by local gas utilities with implied acquiescence of State regulatory commissions." We have read of such charges being made on the Senate floor and in the press but we know of no such charges before the committee. We do not understand that any material submitted to the committee was for the purpose which you attribute to it. Nor do we understand the fact to be as you state that spokesmen for gas producers did not present to the committee any basic information on the economics of gas production. To mention one witness, we think Dr. Boatwright covered the subject quite adequately.

It has been our position, and some of our officials have so stated in a number of public addresses, that high distributor margins in many areas are due in large part, at least, to the small volume of gas handled and that the remedy of consumers against high prices lies in increased consumption of natural gas in their areas which should bring about lower distributor margins. Substantial increased consumption to distributing systems can only be possible by encouraging independent producers to produce and sell

natural gas to interstate pipelines. Utility type regulation of producers will have the opposite effect and will inevitably result in less gas supplies for interstate markets.

A few examples of distributor margins in relation to the volume handled will serve to illustrate the point that volume is the key to lower distributor margins:

Boston, with an annual volume per customer of 23 thousand cubic feet has a distributor margin of $2.36. Baltimore, with an annual volume per customer of 43 thousand cubic feet has a distributor margin of $1.12. Detroit, with an annual volume per customer of 98 thousand cubic feet has a distributor margin of 58 cents. Pittsburgh, with an annual volume per customer of 154 thousand cubic feet has a distributor margin of 43 cents. Kansas City, Mo., with an annual volume per customer of 222 thousand cubic feet has a distributor margin of 28 cents.

Notwithstanding your questions are propounded upon what we regard as an erroneous premise, we shall answer them insofar as the information is available.

The first year in which sales were made by Phillips for interstate market probably was 1924. For that year total volume was 32 billion cubic feet, revenue, $862,000 for both interstate and intrastate sales.

Total volumes of gas sales and total revenues for periods referred to in your telegram for both interstate and intrastate sales are: 1950 volume 504 billion cubic feet, revenue $26 million; 1951 volume 579 billion cubic feet, revenue $33,900,000; 1952 volume 568 billion cubic feet, revenue $37,200,000; 1953 volume 567 billion cubic feet, revenue $45,900,000; 1954 volume 624 billion cubic feet, revenue $51,800,000; 1955 (December estimated) volume 631 billion cubic feet, revenue $52,900,000.

Our books do not reflect the figures which you request concerning investment, costs, net income, etc., for gas. Much of the gas which we sell is produced either from oil wells together with crude oil or from condensate wells together with condensate. We have no allocation of investment or production costs as between crude oil and condensate on the one hand and the gas produced from those wells on the other. The rest of the gas is produced from gas wells but contains natural gasoline and other liquefiable products, most of which are removed in natural gasoline plants. We have no allocations of investment and production costs for such wells as between such liquids on the one hand and the gas on the other. Therefore, in respect of gas as distinguished from crude oil, condensate, and natural gasoline, our records do not reflect the figures which you request for "gross investment in gas leases and production facilities," "depreciation and depletion reserves," "unamortized exploration costs not included in gross investment figures," "cost of production exclusive of taxes," "Federal income taxes," "other taxes," "depreciation and depletion accounts," "net income," and "the percentage which net income from sales of gas after taxes bears to total investment in gas producing properties."

It has always been the policy of Phillips Petroleum Co. not to disclose publicly estimates of its supplies of raw materials and feed stocks, including reserves of natural gas, except as required by the Securities and Exchange Commission in connection with public financing. The only estimate of its total gas reserves published by Phillips Petroleum Co. during the last 5 years is that contained in a registration statement and prospectus filed with the Securities and Exchange Commission dated May 26, 1953 and stated as follows: "The total proved reserves of natural gas of 17.89 trillion cubic feet are classified as follows: (a) 73.9 percent are 'owned reserves' and 26.1 percent 'controlled reserves'; (b) 68 percent of the 'owned reserves' and 94.6 percent of the 'controlled reserves' will be produced from presently developed acreage; (c) 73 percent of 'owned reserves' are from properties which are dedicated or contracted for varying tenures under contracts in effect on December 31, 1952."

PHILLIPS PETROLEUM CO.,
K. S. ADAMS,
Chairman.

PITTSBURGH, PA.,
January 20, 1956.

Hon. PAUL H. DOUGLAS,
United States Senate,
Washington, D. C.:

In reply to your telegram of January 13 we have made every effort to supply the information requested. The evidence presented by representatives of the natural gas producing industry in the hearings on the Fulbright-Harris bill showed that the price received by the producers for natural gas at the wellhead is only a very small percent, approximately 10 percent on the average, of the price ultimately paid at the burner tip by the residential consumer. The purpose of this testimony was to show that competition between producers has resulted in making natural gas available to consumers at a reasonable price in the field without the necessity of Federal regulation of independent gas producers and that, even if the regulation of the field price of natural gas contained in the Fulbright-Harris bill were eliminated and the price paid to producers left free from Federal regulation, as it was for many years before the decision in the Phillips case, the price paid to the producer would not rise out of proportion and would not materially affect the ultimate price paid by the consumer. We know of no spokesman for the producers who ever charged that consumers were being gouged by local gas utilities with implied acquiescence of State regulatory commissions and respectfully disagree with this interpretation which you place on the evidence presented in behalf of the gas producing industry in the hearings on the Fulbright-Harris bill. We regret that most of the information which you request in your telegram cannot be obtained for the reasons hereafter stated. However, we are furnishing you all of the available data requested. In answer to the first question of the first group, you are advised that our estimated gas reserves in producing gas lands for the period ending December 31 in each of the following years were the following million thousand cubic feet: 1950, 3,574,678; 1951, 3,655,891; 1952, 3,852,172; 1953, 3,987,696; 1954, 3,960,026; and for period ending October 31 1955, 3,963,024. In answer to the second question in this group, our estimated gas reserves in nonproducing gas lands for the period ending December 31 in each of the following years were the following million thousand cubic feet: 1950, zero; 1951, zero; 1952, 3,854; 1953, 20,015; 1954, 201,071; and for period ending October 31, 1955, 176,970. For several reasons we are unable to furnish the information requested in the third, fourth, and fifth questions of this group. As you know, gas is frequently produced simultaneously with oil and in many other instances gas and oil are produced from the same lease and the same reservoir at different stages of production. As a result, any allocation of investment and cost and depreciation and depletion reserves between oil and gas would necessarily be abritrary and wholly unsatisfactory. For many years attempts have been made to devise a satisfactory accounting procedure providing for such an allocation but to date none has been found to our knowledge. For these reasons our records do not reflect this data requested by you with respect to our gas properties. We are unable to answer the first and second questions in the second group for the reason that during the periods about which inquiry is made our records do not reflect how much of the gas sold by us has gone into interstate commerce. The information requested in the third through the eighth questions of the second group is not available for the reasons heretofore stated in reply to the third, fourth, and fifth questions of the first group. We regret our inability to supply more of the information you requested and wish to assure you of our continued desire to cooperate with you and other Members of the Congress in every way possible.

GULF OIL CORP.

RECESS

Mr. CLEMENTS. Mr. President, pursuant to the previous order of the Senate, I move that the Senate now stand in recess.

The motion was agreed to; and (at 6 o'clock and 16 minutes p. m.) the Senate took a recess, the recess being, under the order previously entered, until tomorrow, Wednesday, January 25, 1956, at 12 o'clock meridian.

NOMINATIONS

Executive nominations received by the Senate January 24 (legislative day of January 16), 1956:

DEPARTMENT OF AGRICULTURE

Marvin Leland McLain, of Iowa, to be an Assistant Secretary of Agriculture, vice James A. McConnell, resigned.

COMMODITY CREDIT CORPORATION

Marvin Leland McLain, of Iowa, to be a member of the Board of Directors of the Commodity Credit Corporation, vice James A. McConnell, resigned.

HOUSE OF REPRESENTATIVES

TUESDAY, JANUARY 24, 1956

The House met at 12 o'clock noon.

Rev. Thomas J. Furphy, O. S. F. S., Northeast Catholic High School, Philadelphia, Pa., offered the following prayer:

O almighty and eternal God, who deigns to look upon our fair country with an eye ever filled with love and kindness, grant to us here present Thy bounteous benediction that by every thought, word, and action we may always feel Thy love and solicitude.

O God of wisdom and justice through whom all authority is rightly administered, assist with Thy holy spirit of counsel and fortitude the elected Representatives of our Nation here present that they may be enabled by Thy powerful protection to discharge their duties with honesty and ability.

May God support us all the day long till the shades lengthen and evening comes; and the busy work is hushed, the fever of life is over and our work is done. Then in His mercy may He give us safe lodging, a holy rest, and peace at last. Amen.

The Journal of the proceedings of yesterday was read and approved.

MESSAGE FROM THE PRESIDENT

A message in writing from the President of the United States was communicated to the House by Mr. Tribbe, one of his secretaries.

MESSAGE FROM THE SENATE

A message from the Senate, by Mr. Carrell, one of its clerks, announced that the Senate has passed a joint resolution of the following title, in which the concurrence of the House is requested:

S. J. Res. 115. Joint resolution designating the month of February in each year as American Heart Month.

COMMITTEE ON RULES

Mr. McCORMACK. Mr. Speaker, I ask unanimous consent that the Committee on Rules may have until midnight tonight to file reports.

The SPEAKER. Is there objection to the request of the gentleman from Massachusetts?

There was no objection.

LEGISLATIVE CALENDAR

Mr. McCORMACK. Mr. Speaker, I ask unanimous consent to address the House for 1 minute.

The SPEAKER. Is there objection to the request of the gentleman from Massachusetts?

There was no objection.

Mr. McCORMACK. Mr. Speaker, the Committee on Rules is meeting this afternoon on several bills, and I am advising the membership of the House that if they report out a rule on some of them, I might bring some of them up tomorrow. Is that agreeable to the gentleman from Massachusetts?

Mr. MARTIN. Certainly. May I inquire further? According to present indications, the school construction bill will not be up this week.

Mr. McCORMACK. That is right. I will go beyond "indications" and say it will not be up this week.

ECONOMIC REPORT—MESSAGE FROM THE PRESIDENT OF THE UNITED STATES (H. DOC. NO. 280)

The SPEAKER laid before the House the following message from the President of the United States, which was read and, together with the accompanying papers, referred to the Joint Committee on the Economic Report and ordered to be printed with illustrations:

THE WHITE HOUSE,
January 24, 1956.

To the Congress of the United States:

I am herewith presenting my economic report, as required by section 3 (a) of the Employment Act of 1946.

In preparing this report, I have had the assistance and advice of the Council of Economic Advisers. I have also had the advice of the heads of executive departments and independent agencies.

Since my report is long, I present below, largely in the words of the report itself, what I regard as its highlights.

RECENT ECONOMIC ACHIEVEMENTS

Full employment, rising incomes, and a stable dollar have been cherished goals of our society. The practical attainment of these ideals during 1955 was the year's great economic achievement.

The past year has brought fresh witness to the basic strength and resiliency of our economy. We have broken through to new and higher ground, and have reached the threshold of a $400 billion economy.

Whether we observe economic activity at the stage of production, or employment, or income disbursement, or consumer spending, we find evidence of progress and prosperity. The Nation's expanding income is being shared widely. Employment and wages are at record levels. Both investment and consumer spending are going forward at a good pace. Some groups of people have not, however, enjoyed a full measure of prosperity, and we must keep that fact before us as we build for the future.

THE ROLE OF GOVERNMENT

The mainspring of our economy is to be found in the qualities of the American people. Given free institutions and a favorable physical environment, an expanding economy is the natural fruit of the enterprise of such a people.

Today, we believe as strongly in economic progress through free and competitive enterprise as our fathers did, and we resent as they did any unnecessary intrusion of Government into private affairs. But we have also come to believe that progress need not proceed as irregularly as in the past, and that the Federal Government has the capacity to moderate economic fluctuations without becoming a dominant factor in our economy.

Our governmental policies have concentrated on building an economic environment that favors an orderly expansion of private activities. The Federal Government has not sought to maintain good times by expanding our already huge governmental outlays or by permitting the value of money to depreciate.

The administration has sought, in cooperation with the Congress, to discharge its responsibility through a series of closely related policies. First, by removing direct controls over prices and wages, which had outlived their usefulness. Second, by preserving an actively competitive environment and assisting new and small businesses. Third, by curtailing governmental activities that could be handled as well or better by private enterprise. Fourth, by restricting public expenditures, and yet adding to the country's defensive strength and its stock of public assets, especially highways, hospitals, and educational facilities. Fifth, by lightening the burden of taxes imposed on individuals and businesses. Sixth, by extending the ties of trade and investment with other nations of the free world. Seventh, by tempering the impact of unemployment, old age, illness, and blighted neighborhoods on people, yet not impairing self-reliance. Eighth, by extending the automatic workings of our fiscal system that tend to offset or cushion changes in income arising from changes in economic activity. Ninth, by attacking fundamental causes of weakness in the farm situation. Tenth, by acting promply and resolutely when either recessionary or inflationary influences in the general economy became evident.

To help keep our surging economy in a healthy condition the Government in 1955 held the tax line. The Federal Reserve System shifted from a policy of active credit ease to one of moderate restraint. These policies contributed in large degree to the achievement and maintenance of prosperity without price inflation.

EXTENDING PROSPERITY

A period of general prosperity, such as we have recently been experiencing, presents a challenge to an intelligent citizenry. We must find ways and means of extending prosperity to the less flourishing sectors of our economy.

The position of farmers in our dynamic economy has aroused deep concern. It is imperative that we strengthen farm programs on the basis of a realistic appraisal of the present situation.

The persisting decline in farm prices and incomes reflects a continuing imbalance between farm output and its ultimate disposition. The imbalance and resulting huge surpluses are to be traced largely to the technological revolution in American agriculture, changing domestic demands for farm products, the expansion of agricultural production abroad, and the repeated extension of wartime price-support levels long after the end of World War II.

Many parts of our agricultural policy are working well and require only moderate changes. Together with the nine-point program built around the soil bank put forward in the recent message on agriculture, they constitute a many-sided attack on the ills that beset agriculture. There is no easy cure for persisting surplus conditions. The programs now recommended, if framed wisely and adopted promptly, will promote the welfare of farmers and the Nation.

The basic cause of low incomes is low productivity, irregular employment, or both. The Government can do a great deal to help people who have been left behind in the onrush of progress by undertaking special programs for raising their productivity.

One of the largest groups of low-income families is in rural areas, mostly on farms too small for efficient operation. The rural-development program is a soundly conceived approach to helping these farm families raise their productivity and thereby improve their economic status. Legislation is needed which will permit the program to be expanded in line with recommendations made last year.

To cope with chronic unemployment which has persisted in some communities, despite the attainment of practically full employment in the Nation at large, a new area assistance program is recommended.

Vocational rehabilitation, widened coverage of the Federal old-age and survivors insurance program, and housing needs of older people are fields in which advances should be made.

Relatively few people are as yet protected by insurance against catastrophic

illness. The pooling of risks by private carriers, or if need be through a Federal program, would help meet this problem.

A joint Federal-State program for indemnifying flood victims on losses to real property, business inventories, and household effects should be authorized.

BUILDING FOR FUTURE PROSPERITY

Lasting prosperity of the Nation depends far more on what individuals do for themselves than on what the Federal Government does or can do for them. The rate of our economic advance in the years ahead will depend largely on our ability as a people to preserve an environment that rewards individual initiative and encourages enterprise, innovation, and investment.

Government can contribute to the strengthening of competitive enterprise through monetary, fiscal, and housekeeping policies that promote high and rising levels of economic activity; by helping small- and medium-sized businesses overcome impediments to their expansion; and by vigorous measures for preventing monopolistic practices and combinations.

For the present fiscal year a balanced budget is in prospect. Once a budgetary surplus comes definitely into sight and economic conditions continue to be favorable, we should begin reducing our huge public debt. Such an act of fiscal integrity would signify with unmistakable clarity that our democracy is capable of self-discipline.

To help meet the pressing need for more schoolrooms, the Congress is urged to authorize a program of Federal aid for school construction which, over a 5-year period, could be expected to stimulate the States and localities to sufficiently greater efforts to remove the accumulated shortages.

The country urgently needs a modernized interstate highway system to relieve existing congestion, to provide for the expected growth of motor vehicle traffic, to strengthen the Nation's defenses, to reduce the toll of human life exacted each year in highway accidents, and to promote economic development.

The development of consumer installment credit has been highly beneficial to our economy. However, it sometimes accentuates movements in the buying of consumer durable goods. Although present conditions do not call for the use of any authority to regulate the terms of installment credit, this is a good time for the Congress and the executive branch to study the problem.

Sound policies to promote the expansion of the international flow of goods, capital, enterprise, and technology will powerfully advance our national security and economic welfare, and help to build a stronger and more unified community of free nations.

Early passage of legislation authorizing membership of the United States in the Organization for Trade Cooperation and providing for further customs simplification is of high importance.

CONCLUSION

Foresight has helped our Nation make great strides in recent years toward a balanced and sustained prosperity. We have succeeded in expanding the scope of free enterprise, and yet increased the sense of security that people need in a highly industrialized age.

Taking recent developments all together, it is reasonable to expect that high levels of production, employment, and income will be broadly sustained during the coming year, and that underlying conditions will remain favorable to further economic growth.

Great opportunities lie ahead for American businessmen, consumers, workers, farmers, and investors. The recommendations of this report should be helpful in the realization of these opportunities.

DWIGHT D. EISENHOWER.

PENSIONS AT 62 FOR ALL WORLD WAR I VETS

Mr. LANE. Mr. Speaker, I ask unanimous consent to address the House for 1 minute and to revise and extend my remarks.

The SPEAKER. Is there objection to the request of the gentleman from Massachusetts?

There was no objection.

Mr. LANE. Mr. Speaker, over 37 years have passed, but the Congress of the United States has not yet enacted a general pension for the aging veterans of World War I, even though the Nation has recognized the obligation by providing pensions for the veterans of all previous wars in our history, culminating in the pension of about $100 a month that is now received by the veterans of the Spanish-American War, without regard to other income.

The precedents are many.

The Nation is committed, in gratitude and in honor, to give the veterans of World War I pensions equivalent to those granted to veterans of previous wars.

It cannot default on this duty, without betraying a national policy that has prevailed for many generations.

I have long sponsored a resolution calling for the payment to all honorably discharged veterans of World War I, and who have reached the age of 62, a monthly pension of $100 a month for the rest of their lives, as a matter of right, and without reference to disability or indigence.

The cost? Less than half the interest on the national debt.

The thinning ranks of 1917–18 are approaching the 60th milestone of their lives. Even as I speak, some of them are passing their 62d, 65th, or 67th birthdays.

It is too late for those who have been mustered out of life.

But, before they were called to the bivouac of the dead, they, too, believed that this Nation would do right by its veterans.

The time has now come when the Nation can recompense their surviving comrades during the harvesttime of their lives.

"Nothing is too good for them," we said, as they fought to defend our freedoms during the critical days of 1917–18.

How have we carried out that pledge since then? Precious little, on the whole. And less than little, when we recall the struggles to provide for their families during that other and longer battle for survival that they were forced to fight during the depression in their own country.

These were the men of the bonus army. Remember? The Federal Government's shameful treatment of them is not a bright page in our history.

But where are we going to get the money to pay a pension to these old soldiers?

We are getting and spending that money today on many projects outside the United States. The plight of strangers in other lands touches us to the quick. We are so eager to help that we sometimes assist them before assistance is requested. But when anyone in the United States raises his voice in behalf of pensions for veterans at 62, the attitude suddenly changes. The defensive strategy of evasion, delay, and financial juggling comes into play even though the Nation was never in a better position to pay such pensions than it is today.

More than 37 years have passed since the end of World War I. Time enough for the veterans to become old. Time enough for this Nation to start paying back its obligation to those who defended it, because there is not too much time left for veterans to enjoy a pension of $100 a month, beginning at 62.

HOME IMPROVEMENT YEAR

Mr. WIDNALL. Mr. Speaker, I ask unanimous consent to address the House for 1 minute and to revise and extend my remarks.

The SPEAKER. Is there objection to the request of the gentleman from New Jersey?

There was no objection.

Mr. WIDNALL. Mr. Speaker, last Monday, January 16, I attended a meeting here in Washington that may well be one of the most important of the year 1956 for the American people.

In the presence of Members of both Houses of Congress, top members of the President's White House family, Cabinet members, officials from many departments of the Federal Government, and industrial leaders, a nationwide campaign—Home Improvement Year—was launched to improve our middle-aged homes.

The older neighborhoods of our towns and cities are the dwelling places of half the American people. Some of them are fine and beautiful. Others are blighted and in danger of slipping into slums. All of them are composed chiefly of prewar houses, many of which were the best of their day, but nearly all of which lack the comfort, convenience, and livability now normally provided in newer houses which have benefited from the new technology of our Nation.

Altogether, there are some 20 million houses of sound construction that can be salvaged and improved for modern living. They represent an investment exceeding $200 billion.

But they stand for a lot more than dollars. They are the living places of about half of our families. Keeping these homes in good condition, bringing

them abreast of the modern benefits of American progress, represents jobs—represents productive work and a better livelihood for millions of our laboring force.

Our homes today are one of our greatest national assets, and one of our most important resources for better living. Our homes mean higher incomes for our workers and better living conditions for the same labor force which contributes so much to homebuilding itself.

But we have not been maintaining that asset properly. We have not been creating the job opportunities that necessary maintenance and desirable improvement of our existing homes can provide.

By concerted effort, however, we can and must give this task the attention it needs on a truly national scale. As a people, we are going to make a big start in 1956, which the Housing and Home Finance Administrator, at President Eisenhower's urging, has just designated as "Home Improvement Year."

I am introducing today into the RECORD some of the statements made by Administrator Cole and others on the occasion of the formal launching of this vital enterprise of the people. In my judgment, it is going to mean a significant upsurge in our living standards and our production—benefits that will be measured at the grassroots for the consumer, the working men and women, for the communities of America, as well as for capital and investment.

It is going to mean better homes for 20 million families. These are families that need and want better homes, and that can afford to pay for improving them if financing, merchandising, and working skills are made available for this job on a large scale.

While we should continue to help poorer families, unable to pay the full cost of good modern housing, to get out of the slums—while we should continue without slackening to clear out slum structures and to renew the blighted areas of our communities—we would be tragically nearsighted if we did not give our concerted attention to the maintenance and improvement of the great mass of sound housing where millions of our medium-income families live.

The benefits in family life and modern comforts to the mass of our people are obvious. The building industry—our manufacturers and materials suppliers, our lenders, our builders, and allied business—are already alert to this opportunity and have joined together to make their services available in every American community for this improvement campaign.

And there is another equally important group for whom home improvement means greatly increased opportunity for service and for productive income. They are the workers—the laboring force—whose hands and minds must accomplish this job and who create the tangible wealth of this country.

For industry is not just money, or markets. Industry is people—people who plan and think and work to provide a better living for all of us.

The people of industry are not only those who meet in the director's room to manage and direct. They are also the men on the lumber lot, the women who serve us in our lending institutions, our stores and offices, the salesmen in the building materials and hardware stores, the draftsmen and the truckdrivers, the carpenters, the bricklayers, the skilled workmen with their modern power tools—adding a new wing to the home for the growing family, modernizing the kitchen or the bath, bringing more light, more space, more areas for living and recreation into the older home, in line with modern techniques and design.

We need the force of every one of these people in Home Improvement Year. And all of them stand to benefit from the work and business opportunities that flow from uplifting the housing standards of our people. We need their skills and craftsmanship. Indeed, we cannot afford to waste them.

We need them today to make our homes better. We will need even more of them in the early sixties when, once again, we will face mounting demands from a rising crop of new families for whom more homes must be built and for whom existing homes must be available in good condition and large numbers. We must keep employment high, the year round, not only for the sake of the fine draftsmen we already have in our building heritage, but to induce thousands of others to enter this field, to learn through their apprenticeship the skills that must be maintained and expanded for future needs.

Home Improvement Year goes beyond the improvement of homes alone. It is a dynamic force in our present and future economy to keep our living standards rising and our laboring force fully employed and their skills maintained and replenished.

I now insert into the RECORD the condensed remarks, made at the launching of Home Improvement Year, January 16, 1956, by Mr. Clem D. Johnston, chairman of the board, Chamber of Commerce of the United States; Mr. Fritz B. Burns, a builder, of Los Angeles, Calif.; Hon. Albert M. Cole, Administrator of the Housing and Home Finance Agency; Mr. John R. Doscher, executive director of Operation Home Improvement:

STATEMENT OF CLEM D. JOHNSTON, CHAIRMAN OF THE BOARD, CHAMBER OF COMMERCE OF THE UNITED STATES, AT THE HOME IMPROVEMENT YEAR KICKOFF, MAYFLOWER HOTEL, JANUARY 16, 1956

Ladies and gentlemen, I have the pleasure of welcoming you, on behalf of the Chamber of Commerce of the United States, to this unusual meeting—this launching of Home Improvement Year.

This is a fascinating and important venture. We are setting out to take another step to help improve the homes of America.

To me this is another achievement of business leadership. You manufacturers and distributors of building materials and equipment, you building trade association members, you private enterprise-minded men in Government, and we in the Chamber of Commerce of the United States, voluntarily came together to design this campaign and set in motion a program which can help improve millions of homes.

Home Improvement Year will have other benefits:

1. It will add to our national production.

2. It will provide more jobs for the craftsmen who support their families by employment in the home-improvement industry.

3. It will provide increased sales of building materials and equipment and services.

These are the things—more production, more jobs, and more sales—which bring better living to the people of America. This is one of the important objectives of the national chamber.

This is why we are for this nationwide home-improvement campaign.

I am proud that our voluntary, private, and competitive way of getting progress in America has provided this opportunity to again let the profit motive give us a purpose which can benefit so many Americans.

I congratulate you for your participation and, again I welcome you.

CONDENSATION OF REMARKS BY FRITZ B. BURNS, BUILDER, OF LOS ANGELES, CALIF., AT THE LAUNCHING OF HOME IMPROVEMENT YEAR

This is a happy day for me.

I started in the real-estate business before I finished grade school. I began building homes before I was old enough to vote. As a young man I found keen satisfaction in watching new homes rise and seeing cities expand. I was proud to think I had a hand in their growth.

I never lost my early feelings of satisfaction and pride in our industry. But as I grew older I began to realize that something else was happening to our cities—something evil. While new homes grew constantly better and cities flourished, many of the older homes and older neighborhoods were going to wrack and ruin.

Along with a lot of other people I started thinking about what would happen if we continued to neglect these older neighborhoods. The majority of the houses in them were still soundly built. Why should they be abandoned this way? But the fact was that most of them had not been kept up. They needed a lot more than a coat of paint. They had to be brought up to the new standards found in the new houses we were putting up all over the county. If they were not, no matter how much new building in the country we put up, we would have, instead of a net gain in housing, a net loss of decent dwelling places.

As I just remarked, a lot of people were thinking about the problem. All of them wanted to do something about it, too, and some of us got together, in various parts of the country, and worked out plans. But there was no central dynamo to provide the power on a national scale.

One day just under a year ago, Bill Ulman, of the Housing Agency, and I were mulling over the situation in my office in Los Angeles. We agreed that it might do a lot of good if we could set up a national home-improvement week. Some time later, in Denver, Al Cole, Bill Ulman, Axel Nielsen, and I developed the idea further. Why not have a home-improvement month? Why not a home-improvement year?

That was the real start. We would line up the National Association of Home Builders, with its "new face for America" campaign. We would line up the National Association of Real Estate Boards and pick up its "build America better" project. And we would use that fine organization, Action—the American Council to Improve Our Neighborhoods. We could call together the producers, the retailers, and the lenders into one mighty effort to rescue the living wealth of America—our homes.

The United States Chamber of Commerce offered to sponsor the whole program—and within 3 months of that first exploratory talk in Los Angeles, Operation Home Improvement was born.

The important thing, perhaps the most important, is that everybody we talked to recognized the need for unity of action. All the diverse organizations supporting Home Improvement Year are working together.

There are no rivalries, no jealousies, no conflicts. We have a perfect partnership.

An indispensable member of this partnership of the forces of private enterprise is the Federal Government. I think of this member as the cement that gives solidarity and strength to the structure we are erecting together.

And it must be an enduring structure. Working always as a team, combining our idealism with the hardheaded Yankee commonsense that is our precious heritage, demanding never less of ourselves than the very best that is in us, requiring inflexible standards of material and workmanship, we will make it an enduring structure.

The supervising architect is well known to all of us. And he is favorably known to all of us. We have not always agreed with his decisions. Some of us have argued with him. A few of us have quarreled with him. But we all trust him. And all of us know in our hearts that we couldn't find a better man for the job.

He isn't a builder by profession. He is not a dealer in real estate. He is not a mortgage lender. He is not a manufacturer or supplier of building materials. He came up the hard way—through Congress.

I present to you my very good friend, the Administrator of the Housing and Home Finance Agency, Al Cole, of Kansas.

CONDENSATION OF AN ADDRESS BY ALBERT M. COLE, ADMINISTRATOR OF THE HOUSING AND HOME FINANCE AGENCY, DESIGNATING 1956 AS HOME IMPROVEMENT PLAN

The moment at hand, January 16, 1956, was chosen many months ago as the time to start a great national crusade to raise the level of living in all parts of our country. The means by which we will achieve that end is improvement of the fundamental element of living, the homes of America.

This is a joint enterprise. Millions of individuals will take part in it. Thousands of communities will participate. Civic organizations and many special groups, such as the ones sponsoring this meeting, will contribute their energies. Major areas of private industry, including all media of communications, will marshal their powerful forces. The Federal Government will aid in every possible way.

When the present administration took office, not quite 3 years ago, President Eisenhower and his team were keenly aware of the need for more and better housing for all the people of the Nation. But on this occasion I want to discuss, not slums, not blighted areas in danger of becoming slums, not even those urban sections that touch on such areas. I want to talk about all older areas—those in which houses 10, 20, 30 years and older predominate—in all the towns and cities of the United States.

It is in the older areas, many of very high quality, that more than half of the Nation's people live today. The total property investment—though not precisely measurable—is considerably in excess of $200 billion.

And we have not been protecting that investment. We have been letting a vast national asset—dwelling place of half the American people—depreciate at a rate no factory or mercantile establishment would tolerate. And business leaders have been partly at fault. They thought only in terms of "somebody else's property." Along with others, they failed to see that this was the Nation's property, the Nation's economy—and thus the depreciation directly affected us all.

The capital value of our properties has not been keeping pace with other capital values. More important, the dividends have been falling off—and I mean not only municipal tax revenues but dividends in efficiency, comfort, and satisfaction. The dividends in livability have not kept up with the dividends from other sources. Nor have they begun to keep up with American standard of livability which the restless genius of American home builders is constantly elevating to new heights. Countless thousands of our dwellings not only lack the utility and livability made possible by postwar technical developments, but are limited to facilities popular between 1900 and 1935.

Today the building and allied industries—with the continued cooperation of the Government—are about to undertake an enterprise of tremendous scope and of a social import that cannot yet be measured. These industries are not only going to construct probably 1,300,000 new homes in 1956, but they are going to improve very substantially 10 million or more existing dwellings at a cost of over $9 billion. An additional 10 million or more homes will receive maintenance and repairs in excess of another $5 billion. The total will be about $3 billion, or 25 percent, more than was spent in 1955—and I believe it is a conservative estimate. The Chamber of Commerce of the United States, for example, recently published a statement which I will quote:

"These figures certainly indicate that, despite the discovery that the residential modernization market may be about twice as large as we thought, the limit may be far from reached. A possible additional expansion of 25 to 50 percent of the present activity is within probability."

I also want to read to you the sentence immediately following:

"This is a challenge to the construction industry that should not be passed at a time when other sectors of the construction market may be temporarily close to the limits of increased expansion."

This is indeed a challenge to home builders. It is also an opportunity of spectacular dimensions for lenders, realtors, architects, producers, and all allied trades and professions. It will mean a whole new area of employment for labor. And neither the challenge nor the opportunities will be ignored by any of these.

I do not use the term "challenge" lightly, nor as a matter of rhetoric.

For years a nearly hopeless burden has been placed on the individual homeowner who wished to improve his home in an older neighborhood. He was usually unable to borrow the funds for a real job of improvement—a new wing, a new bathroom or kitchen—because few wished to lend substantial sums to a homeowner in an aging area that showed signs of blight.

Now we have a really fresh approach. We urge broadscale, neighborhoodwide home improvement, not just pockets of endeavor. And instead of relying solely on the part-time efforts of well-meaning citizen groups—without whom there would be no real progress—we now rely also on the national and local businessmen who can find in this crusade the fulfillment of a social and economic need without jeopardizing the interests of his stockholders.

I must at the same time remark that it is the responsibility of businessmen and lenders to be vigilant in the interests of homeowners. There is no place in this national movement for greed or careless practices. There can be no toleration of laxity in granting either conventional or Government-insured loans. I urge lenders and builders alike to require identical standards in the granting of both these types of loan.

You are all aware that during the half dozen years ahead there will be a fall off in new family formations due to the coming of age of the smaller baby crop born during the depression period of the 1930's. An attendant moderate drop in demand for new homes during those few years can be very profitably balanced by satisfying the demand for home improvement—and thus, without risking pressures of an inflationary character, keep fully employed the producers and suppliers of building materials, the forces of labor and management. At the same time the building industry will be tooling up in preparation for the clearly visible new home-building boom that will get underway in the early 1960's.

As one new and practical step to assist in the home-improvement effort, the Housing and Home Finance Agency will recommend liberalization of its procedures, through both legislation and regulations, to an extent that will bring our mortgage insurance facilities into phase with today's standards. We are also undertaking to send through the country highly qualified teams to aid in training the personnel in all our field offices and thus expedite all qualifying applications for Federal assistance.

The challenge facing us all will be met. All elements of the building industry are moving forward to accept the challenge and to seize the opportunity.

Newspapers great and small, magazines of every kind, trade journals, the radio and television chains, all are giving lavishly of their space and time. They, too, have determined to meet the challenge.

Many other industries, some of them not even indirectly associated with the building and building-service industries, have recognized the challenge. They know that anything which makes for a better America must have their support. And they are warmly giving it.

Municipal authorities in thousands of communities feel the challenge deeply. They are very close to the need for improving the homes of America. They know the importance of good homes and sound neighborhoods in maintaining a sound capital structure in their communities. And they know how great are both the financial and social dividends. Their support is being given to the limit.

I believe I am safe in saying that no peacetime endeavor of the American people has ever had such assurance of universal support as this our nationwide home improvement enterprise, a true partnership of private industry and Government. This partnership has no opposition. Everywhere it has support.

In this room here today, in addition to the representatives of many industries, there are present distinguished members of both Houses of Congress. Many of the President's Cabinet and several of the White House staff are with us today, as are other Government officials from a number of Departments, State and municipal officers, and community leaders. They are labor leaders, education and health authorities, publishers, editors, news analysts. There are religious leaders and persons eminent in numerous other fields of activity. All of you have come here with a single purpose.

You have come to demonstrate your faith in the enterprise that all of us are undertaking together.

You believe that our postwar technology, which has already greatly raised the level of living in America, will continue to advance. You believe that the soaring national standard of livability can be increasingly enjoyed by ever-growing numbers of our people. And you believe that millions of them are eager to realize that standard in its most elemental reality—the homes in which they live and rear their children to become useful members of society.

You believe, too, I have no doubt, that as millions of Americans in the medium income group advance their present level of living closer to the new American standards, private industry as a whole will become more and more convinced of the real feasibility—as well as the desirability, which no one now disputes—of home improvement on an even broader scale. We should never permit ourselves to forget that the long-term objective—the attainment of which will be most profitable in every way for all concerned—is

to raise the level of living for all the American people.

I have here a letter written to me by the President of the United States, in which he says in part:

"I hope that the Housing and Home Finance Agency can now join with communities, the building and lending industries, and private citizens in a nationwide effort toward this goal. "DWIGHT D. EISENHOWER."

In response to the President's directive I will now read a statement, the substance of which I hope will be given wide and continuous publicity throughout the United States:

"DECLARATION OF 1956 AS NATIONAL HOME IMPROVEMENT YEAR

"The President of the United States has stated that the present administration from the outset recognized three major goals of equal importance in the complex task of housing the American people.

"One goal was to provide, by private enterprise and initiative, a modern home for every American family that seeks and can afford to buy such a home. This is approaching achievement.

"Another goal was to provide more and better housing, both by private enterprise and Government aid, for American families with low incomes. This is being increasingly accomplished.

"A third goal was nationwide renewal and restoration of middle-aged dwellings in basically sound condition.

"Aware of the magnitude and urgency of this need to rehabilitate our older homes, the President has expressed his desire that the Housing and Home Finance Agency stimulate our communities, the building and lending industries, and private citizens everywhere to a full and systematic achievement of a modern home for every American.

"If this objective is attained with the energy at our command, and with the crusading spirit of our people, our entire population—owners, tenants, and laboring force alike—will be enormously benefited.

"Therefore, as Administrator of the Housing and Home Finance Agency, I urge the American people to join with the President and the great forces of private enterprise in concerted effort to attain nationwide improvement of our country's homes and neighborhoods.

"In pursuance of our common objectives, I designate 1956 Home Improvement Year."

REMARKS BY JOHN R. DOSCHER, EXECUTIVE DIRECTOR, AT THE LAUNCHING OF HOME IMPROVEMENT YEAR, JANUARY 16, 1956

Someone wired recently and referred to this day as an historic occasion. In many respects it is. For today marks the beginning of a campaign which is bound to have a very positive effect on our Nation. This campaign is called Operation Home Improvement.

Today, for the first time, all the many and diverse factors in the building business are joining forces under the banner of Operation Home Improvement to combat one of our most serious domestic problems: the deterioration of our housing inventory.

Private industry has a big job to do in selling home improvement to the American people. To do it takes a big idea. Nothing less could unite an industry. Nothing less could make an impression on the American people who are the most promoted-to people in the world.

Operation Home Improvement is a big idea. It's big because it is simple. It is not a new organization or association. It is simply a year-long campaign designed to coordinate the efforts of all in the home-improvement industry, both at the national and at the local level, to accomplish two things: (1) To interest more people in improving their homes, and (2) to help to make it easier for home owners to buy materials and services.

The campaign is sponsored by the Chamber of Commerce of the United States and the building industry. As you have seen, it has the active support of the Federal Government.

The potential is indeed enormous. Some economists estimate that the home improvement market could be doubled in the next few years. The condition of our housing inventory in America certainly points up the need.

We've got a big job to do in developing this market. Statisticians tell us that 1 house in 10 is a slum, half of the remaining are in need of repair and improvement. Certainly the other half need to be maintained. We have always prided ourselves on having the highest standards of living in the world, but with the alarming deterioration of our housing inventory, our standards are being steadily lowered.

What's happened to the American pride in the home?

Why don't people spend money to keep their homes up to modern standards?

Certainly, with our current prosperity, full employment, the highest wages we've ever had even adjusted for inflation, people can afford to improve their homes. Half the owner-occupied homes in America are owned scot-free—there are no mortgage payments to be made every month. Most of these are the older homes that are in need of modernization. The other half of our homeowners have about a 50-percent equity—more than enough on which sound readvances could be made for improvement work.

Manufacturers, trade association executives, financing experts, service, and installation people and Government housing officials, all agree that Operation Home Improvement is a big enough idea to help achieve a new degree of teamwork. With one seal and one slogan and the declaration of Home Improvement Year, this idea has already created unprecedented cooperation at the national level. And, from tests at the local level in pilot cities, it is apparent that the idea is big enough to get everyone pulling together.

It looks now as if the seal of OHI may well become one of the greatest banners ever used in the history of American business. This year, this seal will appear in many millions of dollars worth of national advertising. In local advertising, beginning today, it is being used by countless thousands of dealers, contractors, lenders, and retailers of home equipment products. It is estimated that at the local levels alone, over $250 million worth of advertising will carry this seal during Home Improvement Year. In addition, an equal amount will probably be spent on direct mail, display materials, and other promotional activities using the seal.

Never before have all the diverse elements of this huge industry joined together for the common good of all. And by joining forces in this common effort, everyone in this industry is helping to insure our most precious possession—the American home—the bulwark of our way of life.

It is because of this that Operation Home Improvement is one campaign that is big enough to deserve the attention of editors of leading magazines. Every major magazine has joined the team to help sell better living in better homes. Millions and millions of families will be reading more and better editorial material on the subject. And on these editorial pages, they'll see the OHI seal time and time again.

Newspapers, too, are using the seal editorially.

Through the repetitious impact of the seal in editorial content of magazines and newspapers, and in advertising, people everywhere will get the idea that "56 is the year to fix"—and they will be encouraged to improve their homes this year.

Operation Home Improvement is indeed a big idea. And it is a well coordinated national effort. But perhaps most exciting is what happens at the local level when a whole city gets behind OHI and makes a local campaign out of it. Today, many mayors are proclaiming "Home Improvement Year" to mark the beginning of their local campaigns.

This local level application is most important because it means that dealers, contractors, and lenders are joining together to encourage more people to improve their homes and to help to make it easier for them to buy materials and services.

The timing for this integrated campaign is perfect. Our economy needs this multi-billion-dollar stimulus—the building industry needs this campaign to maintain sound growth—and the American people need the help that this campaign promises in making repair and remodeling work easier to buy.

Thus, Operation Home Improvement is private enterprise's answer to President Eisenhower's request that there be established a concerted effort to improve old but still sound dwellings. As Collier's magazine stated on its editorial page this week, "The campaign is based on a valid premise: that pride in one's home and community can be as infectious as slovenliness—and far more rewarding and economical. From any viewpoint—the welfare of the community or the self-interest of the homeowner—the program makes sense and deserves vigorous support."

PAYMENTS TO LOCAL GOVERNMENTS IN LIEU OF TAXES ON FEDERAL INDUSTRIAL PROPERTY

Mr. MEADER. Mr. Speaker, I ask unanimous consent to address the House for 1 minute, to revise and extend my remarks, and include extraneous material.

The SPEAKER. Is there objection to the request of the gentleman from Michigan?

There was no objection.

Mr. MEADER. Mr. Speaker, in the last days of the 1st session of the 84th Congress, the Congress adopted my bill, H. R. 6182, providing for payments to local governments in lieu of taxes on certain types of federally owned industrial properties. On August 12, 1955, the bill was signed by the President and became Public Law 388.

Mr. Speaker, no payments to local units of government have yet been made pursuant to that law.

I investigated that failure to comply with the law. I believe the results of my inquiry will interest other Members of the Congress, particularly those in whose constituencies are located plants on which payments are to be made, the officials of the local units of government which will receive these payments, and the public generally.

As might be expected, some of the agencies required to pay taxes on industrial properties dragged their feet at the outset developing facts and taking action to precede actual payments to localities required under Public Law 388. However, I am happy to report that with the cooperation of the Department of Defense and Members of the Congress, particularly those from districts affected, that reluctance has been overcome and a more cooperative attitude has been brought about.

The first problem encountered by the agencies was to identify those properties

which came within the four corners of the act, namely, properties formerly owned by the Reconstruction Finance Corporation or its subsidiaries and which were transferred to other agencies of the Government subsequent to January 1, 1946. I have now obtained a list of these properties from the Department of Defense, the General Services Administration, and two other affected agencies, and incorporate it at this point in my remarks:

Mr. Speaker, before payments can be made upon those properties, additional data must be obtained from the local assessing officers. A letter requesting such information recently has been sent from the Department of Defense, and the General Services Administration is obtaining similar information through its regional offices. I incorporate a copy of the Defense Department letter at this point in my remarks:

DEAR SIR: In order to facilitate this Department's preparation of its budget estimate, I should appreciate your supplying certain information as soon as possible to (the selected office in your Department).

The records of this Department indicate that payments in lieu of real property taxes on the following properties or portions thereof at the designated localities may be payable under the terms of Public Law 388 of the 84th Congress:

"Date of transfer by RFC of custody and control."

"Property."

Public Law 388, a copy of which is attached, adds sections of 701-705 to the Federal Property and Administrative Services Act of 1949. Section 703 provides:

"Where real property has been transferred on or after January 1, 1946, from the Reconstruction Finance Corp. to any Government department, and the title to such real property has been held by the United States continuously since such transfer, then on each date occurring on or after January 1, 1955, and prior to January 1, 1959, on which real property taxes levied by any State or local taxing authority with respect to any period become due, the Government department which has custody and control of such real property shall pay to the appropriate State and local taxing authorities an amount equal to the amount of the real property tax which would be payable to each such State or local taxing authority on such date if legal title to such real property had been held by a private citizen on such date and during all periods to which such date relates."

Sections 702 (b) and 702 (d) provide:

"The term 'real property' means (1) any interest in land, and (2) any improvement made thereon prior to any transfer thereof occurring on or after January 1, 1946, from the Reconstruction Finance Corp. to any other Government department, if for the purpose of taxation such interest or improvement is characterized as real property under the applicable law of the State in which such land is located.

"The terms 'real property tax' and 'real property taxes' do not include any special assessment levied upon real property after the date of a transfer of such real property occurring on or after January 1, 1946, from the Reconstruction Finance Corp. to any other Government department."

Section 704 (b) further provides that no payment shall be made under section 703 with respect to any real property of any of the following categories:

"(1) Real property taxable by any State or local taxing authority under any provision of law, or with respect to which any payment in lieu of taxes is payable under any other provision of law.

"(2) Real property used or held primarily for any purpose for which real property owned by any private citizen would be exempt from real property tax under the constitution or laws of the State in which the property is situated.

"(3) Real property used or held primarily for the rendition of service to or on behalf of the local public, including (but not limited to) the following categories of real property: courthouses; post offices and other property used for purposes incidental to postal operations; and federally owned airports maintained and operated by the Civil Aeronautics Administration.

"(4) Office buildings and facilities which are an integral part of, or are used for purposes incidental to the use made of, any properties described in paragraph (1), (2), or (3) of this subsection."

The information needed is as follows:

"(1) Bills for payment due under Public Law 388, if real property taxes levied by your State or by any local taxing authority within your State have become due since January 1, 1955 for all or any portion of the period since that date. In this respect, I invite your attention to the provisions of sections 702 (b) and 702 (d), quoted above. Section 703 does not authorize payments until the taxes become due, but if taxes for all or any portion of the period since January 1, 1955 have not yet become due and will become due within the next year, I should appreciate your submitting an estimate of the bill. Any bills should show, in addition to the total payment due, the assessed value of the property transferred and the applicable tax rate.

"(2) If a composite tax rate is used by any taxing jurisdiction, a breakdown of the elements of the rate or rates.

"(3) Copies of tax bills pertaining to these properties for the three years prior to transfer of custody and control and any tax bills rendered thereafter. All bills should indicate assessed value of the property and the applicable tax rate.

"(4) A statement of whether any of the plants listed above fall within any of the four categories listed in section 704 (b)."

The information requested above will be used to supplement our records.

Sincerely yours.

Mr. Speaker, I am assured that as soon as a substantial number of replies has been received from local assessing officers, the agencies will start making payments. I sought to learn when those payments might be expected by local units of government and received assurances they could begin within the next 60 days.

Under Public Law 388, only that property transferred on January 1, 1946, should be considered in computing the payment to be made in lieu of taxes. In other words, improvements and additions made by the Federal Government after the property was transferred from the RFC or its subsidiaries are not subject to the law.

I also inquired about the availability of funds to make those payments to localities and was assured that money is available and that the financial procedures will present no problem whatever.

I have intentionally refrained from listing the amounts of current estimates of the payments to be made on each property because those figures could be affected by information from assessing officials, and current estimates might therefore be misleading. It is expected, however, that the total of those annual payments will be in the neighborhood of $3 million.

POLITICS INFLUENCING MILITARY DECISIONS

Mr. FLOOD. Mr. Speaker, I ask unanimous consent to address the House for 1 minute, and to revise and extend my remarks.

The SPEAKER. Is there objection to the request of the gentleman from Pennsylvania?

There was no objection.

Mr. FLOOD. Mr. Speaker, I am going to refer again to the statements being made by General Ridgway. I feel I have some special right and privilege to make these remarks, because it was my motion and amendment considered last year on the Defense appropriation bills when I said very much the same thing that General Ridgway is now stating when he is out of uniform. I read from the Washington Post of this morning:

"The gentlemen who accept these great posts of authority and responsibility in the Defense Department should be as completely divorced from politics as is humanly possible. I think the tendency, which was manifested many times during my tour as Chief of Staff, of civilian secretaries making military decisions on a basis of political expediency constitutes a danger to this country.

"The power that is vested in the civilian secretaries, particularly in the Secretary of Defense, is so enormous that it could do incalculable harm if applied on the basis of what is good for the party, instead of what is good for the country. * * * They should never bring political pressure to bear on their military advisers.

"I must also say, regretfully, that my ideas and my efforts did not receive the same support from Secretary of Defense Wilson. From that office stemmed many suggestions that I take actions which, had I done so, would have seriously impaired the Army's capability to accomplish its missions, and would have weakened, rather than enhanced the esprit, the pride, the confidence of victory, which are the basic strength of any military mission.

"For example, it was suggested that I reduce the strength of combat divisions overseas, that I inactivate certain units and reduce others to a cadre basis.

"Finally, in a letter to the Secretary of Defense, transmitted through the Secretary of the Army, I pointed out that it was just such thinking as this, applied to the Far East theater, which brought us to the brink of disaster in the Korean war, and I made it explicitly clear that I would not reduce the strength of combat units facing potential enemies overseas, thus subjecting them to the possibility of annihilation, unless I had a direct order to do so.

"After each exchange of views," Ridgway continued, "I came away convinced that either the Secretary was a man whose mental processes operated on a level of genius so high I could not grasp his meaning or that considerations beyond the ken of a soldier's logic were influencing his thinking."

H. R. 8001, THE FISHERIES POLICY BILL

Mr. WILSON of California. Mr. Speaker, on January 3, I introduced H. R. 8001, the fisheries policy bill, and a number of my distinguished colleagues have introduced similar legislation since that date. A feature common to all of these bills is the establishment in the Department of Commerce of an Office of Assistant Secretary of Commerce for Commercial Fisheries.

As I remarked on this floor on January 12, the primary desire in this feature of the legislation is not to change the fisheries function from one executive department to another, but it is, rather, to focus attention on the grave problems of the commercial fisheries of the Nation by establishing an office at a policymaking level whose primary responsibility would be to give these problems attention.

In asking that this office be established in the Department of Commerce, however, we are following the recommendations of the best authority on the subject of which we know, the Commission on Organization of the Executive Branch of the Government, established by the Congress under the chairmanship of former President Herbert Hoover, to study the executive branch of the Government and to recommend what steps were necessary to improve its efficiency.

The Commission established a distinguished task force of experts to recommend to it particular actions that would be beneficial in the field of natural resources. On pages 226–227 of that task force's printed report occur these statements:

Fishery and wildlife activities have been administered by the Fish and Wildlife Service of the Department of the Interior since the consolidation of the Bureau of the Biological Survey and the Bureau of Fisheries in 1940. Consolidation of these functions in a Fish and Wildlife Service has not facilitated efficient and economical administration. This administrative combination of dissimilar major functions has resulted in the neglect of the commercial fishery phase of the responsibility.

Fisheries are predominantly an ocean resource, whereas terrestrial wildlife is predominantly a land resource. Fishery problems deal with important basic industrial and commercial activities. Wildlife problems are largely concerned with recreation and noncommercial activities. The areas of common interest are much less important than the differences.

The desirability of separating fishery functions from those concerned with terrestrial wildlife is emphasized by the following:

1. Important fishery problems are increasingly related to ocean resources. The development and management of these resources often involve cooperation with other nations. Problems of this sort are far removed from those of land management and recreation with which most wildlife problems are concerned.

2. Government functions dealing with commercial fishing, a productive food industry and a provider of trained seamen and ships, should be clearly identified and so

organized that prompt authoritative action can be taken to mobilize the industry in times of national emergency.

3. Except as fisheries and terrestrial wildlife are both of recreational interest, the major functions dealing with each of these resources are of special concern to widely differing private interests and to different Federal agencies.

Further on the task force says:

It is the opinion of the committee that the activity of the Federal Government should be more clearly focused on these problems and that there is need for greater efficiency and better service in the protection, development, and use of the Nation's fishery resources. The inclusion of fishery functions in the agency also concerned with terrestrial wildlife has not facilitated adequate attention to fisheries problems. The committee recommends the separation of fishery functions from those of wildlife. It recommends the establishment of both a Fisheries Service and a Wildlife Service in the proposed Department of Natural Resources.

The Hoover Commisison decided against recommending to the Congress the establishment of a separate Department of Natural Resources, but, having in mind the comments of its task force on natural resources with respect to fisheries, it did make recommendations to the Congress with respect to commercial fisheries. On pages 27 and 28 of its report to Congress on the Department of Commerce the Hoover Commission said:

V. INDUSTRIAL AND COMMERCIAL SERVICES

With one exception, all of the functions and activities of the Government that would comprise the Industrial and Commercial Service in the enlarged Department of Commerce are already located there. That exception is the activities of Government dealing with commercial fisheries. Certain other improvements in Commerce activities are, however, recommended.

Fishery activities

At one time, the commercial fishery functions of the Federal Government were handled by a Bureau of Fisheries which was located in the Department of Commerce. In 1940, this Bureau was consolidated with the Biological Survey of the Department of Agriculture, and transferred to a new organization, called the Fish and Wildlife Service which was located in the Department of the Interior. A Bureau of Fisheries can be one of the most important industrial and commercial agencies in the Government. It is related to industry, to commerce, and to the merchant marine at many points.

Our Committee on Natural Resources, whose report is submitted separately, recommends that this essential industry, commercial fisheries, should be more actively developed as an important contributor to the Nation's food supply. However, the committee recommended that this activity be grouped with those agencies dealing with natural resources.

Recommendation No. 13

The Commission recommends that all commercial fishery activities of the Department of the Interior be transferred to a Bureau of Commercial Fisheries in the Department of Commerce.

Mr. Speaker, the act of 1903, which originally established the Department of Commerce, provided that its major purpose should be "to foster, promote and develop the foreign and domestic commerce; the mining, manufacturing, shipping, fishing industry; and the transportation facilities of the United States."

It was during this period from 1903 to 1940 when the commercial fishery function was in the Department of Commerce that the major fisheries of the country developed and prospered. We would like to see the conditions of those years recaptured. We agree with the Hoover Commission's recommendation on this subject and in our proposed bill we have followed those recommendations to the letter.

THE LATE HONORABLE MARTIN J. KENNEDY

The SPEAKER. Under previous order of the House, the gentleman from New York [Mr. DONOVAN] is recognized for 60 minutes.

Mr. DONOVAN. Mr. Speaker, I rise to pay my respects to the memory of the late Hon. Martin J. Kennedy who for 14 years was a Member of this House. He came here from New York City in 1930. He left these Halls in December 1944.

Martin Kennedy passed away on the 27th of last October. During all those years from 1930 to 1944 he represented the district that I now have the privilege and honor to represent. It is located on the upper east side of Manhattan Island in the City of New York.

Martin Kennedy was a beloved and distinguished member of our community. He spent the largest part of his life in devoted public service. Before he came to Congress in 1930 he had served 6 years in the New York State Legislature.

He left behind him a revered widow and one son. The blood of Martin Kennedy flows in the veins of 5 little grandchildren. Their mother was once a pretty child whom I used to take to church on Sunday many years ago.

Martin Kennedy is now gone. There remains of those who served in the Halls of Congress from that 18th Congressional District of New York only myself. It is not easy for me to stand here this morning 3 months after he departed this world to express the deep devotion, love, and affection that I bore for Martin J. Kennedy. But I am confident that I am speaking for thousands of New Yorkers.

I see before me one of his closest friends who served with him when he was a Member of this House. I yield to the gentleman from New York [Mr. KEOGH].

Mr. KEOGH. Mr. Speaker, I join with my distinguished colleagues in paying tribute to one whom I knew and knew well, both during our service in this body and during his subsequent years in private life. Martin Kennedy was my friend in all the fine meanings of that word. He was my guide and counselor both here in Washington and in New York. Only too infrequently does one have the opportunity as he passes through life to meet a person possessed of the virtues and character of a sterling patrician, a faithful public servant, and a distinguished citizen, and Martin Kennedy was one such.

Martin Kennedy served his city, his State, and his country with an unselfish and an unwavering devotion, with what we like to think of as meeting the highest requirements of devoted public service. No task was too burdensome, no assignment too trivial for him. He would devote himself unsparingly to it. Such is the heritage he leaves to a loving wife, Elizabeth. He leaves a greater heritage and a great name to a fine, loyal, and devoted son, John, who himself is the father of five young children. But more than that, Martin Kennedy will leave in the Halls of this great body a memory that will be matched by few men who have served here or who will serve here. My sympathy goes to his family.

Mr. KEATING. Mr. Speaker, will the gentleman yield?

Mr. DONOVAN. I yield to the gentleman from New York.

Mr. KEATING. Mr. Speaker, while Martin Kennedy served in Congress before my time, I have known of his outstanding service in this body and to our country.

I want to join with the gentleman from New York [Mr. DONOVAN] in expressing sympathy to the family of Martin Kennedy, and appreciation for the fine life he lived and the great contributions he made.

I want to do that also on behalf of the minority leader, the gentleman from Massachusetts [Mr. MARTIN] who was temporarily called out of the Chamber, and who requested me to speak also in his behalf and in behalf of the Members on this side who served with Martin Kennedy.

Mr. McCORMACK. Mr. Speaker, will the gentleman yield?

Mr. DONOVAN. I yield to the distinguished majority leader.

Mr. McCORMACK. Mr. Speaker, I join in the remarks made by my friend from New York and my other colleagues from New York on the passing of our former colleague and late dear friend, Martin Kennedy.

Martin Kennedy was a remarkable man. He was a man who inspired others by his fine outlook on life and by his devotion to duty. He was one who did so under great pain and suffering at times. His indomitable willpower was evidenced by his ability to overcome a serious condition that happened to him many years ago.

Martin Kennedy was a gentleman whose faith in God and country was deep, whose loyalty to our Government and its institutions was outstanding. Mr. Kennedy and I during his service in this body became very close friends. I was in New York City on the morning of his burial and attended the Mass. The gentleman from New York [Mr. KEOGH] and other Members were also there.

Mr. Speaker, I join with the New York delegation in conveying to Mrs. Kennedy and her son and to their loved ones my profound sympathy in their great loss and sorrow.

Mr. DONOVAN. Mr. Speaker, I ask unanimous consent that all Members may have 5 legislative days in which to extend their remarks at this point in the RECORD on the life and character of the late Martin J. Kennedy.

The SPEAKER. Is there objection to the request of the gentleman from New York?

There was no objection.

Mr. ROONEY. Mr. Speaker, it was with sadness that I learned of the untimely passing of our former colleague, Hon. Martin J. Kennedy, who was a distinguished and revered member of the New York delegation during his long tenure of service in the House of Representatives.

Martin Kennedy was a kindly friend of mine for many years. It is with those years of friendship in mind that I rise to pay this brief tribute to his life and character.

Martin Kennedy was a native New Yorker who served as a Democratic Representative in this body for 14 years. Representing the 18th Congressional District of New York City, he was steadfast in his devotion to his constituents. During his long and distinguished service, he made many substantial contributions to good government and was held in high esteem and respect by his colleagues on both sides of the aisle.

Through all the years of our personal friendship and association I learned on countless occasions the warmth of his heart and the kindliness of his spirit. I shall always retain a happy recollection of our fraternal associations as fellow members of the Ancient Order of Hibernians and the Knights of Columbus.

In Martin Kennedy's passing I have lost a good friend and shall always cherish his memory. His good wife, his son, grandchildren, and brother and sister have my deepest sympathy in their sad bereavement.

Mr. KLEIN. Mr. Speaker, I would like to add my few words to those of the other Members extolling the virtues of our departed colleague, Martin J. Kennedy. It was my privilege to have served with him in this body. He was a good and kindly man who left behind him many friends—many of whom may not have known him personally as we did here, but who knew of him as a friend of mankind. He served his constituents conscientiously and helped to maintain the reputation of Members of Congress, particularly of the New York Democratic delegation to this great House. He was a credit to our State and our Nation, and to the Democratic Party. We shall remember him with great affection. I am certain his widow and his son, John, are very proud of him, as they should be. We shall all miss him.

Mr. CELLER. Mr. Speaker, It was with much sorrow that I learned of the death of Martin John Kennedy, who had served so ably in the House of Representatives from my State for 14 years. He gave the keenness of his mind and the depth of his heart to the multiplicity of crucial problems that came before him in his years of service, which included the years of the depression, the years of the Second World War, and their aftermath.

His was an independent judgment, as vigorous as it was sincere. There were times when I, though a fellow Democrat and a fellow New Yorker, disagreed with him on matters of national policy. But these disagreements were in the best of the democratic tradition. To him, facing a problem meant facing it squarely, examining it all in every light. To him it meant having the courage to disagree with the majority if, after true consideration, such were his convictions.

His was a personality of many facets. I enjoyed his friendship. I enjoyed his directness. I enjoyed his independence. His passing has been a jog to the springs of memory, recalling to me the intensity of the years we shared together in the House, the moments of trouble and the moments of elation. I am proud to have known Martin John Kennedy and to have worked with him. The New York delegation is proud to have numbered him among one of theirs. It is well that we now do honor to his name, as he did honor to it in his life.

FEDERAL AID TO SCHOOL CONSTRUCTION

The SPEAKER pro tempore (Mr. KEOGH). Under previous order of the House heretofore entered, the gentleman from New York [Mr. POWELL] is recognized for 60 minutes.

Mr. POWELL. Mr. Speaker, the Rules Committee is now considering a rule pertaining to the Kelley bill dealing with Federal aid to school construction. It is possible therefore that next week the House of Representative will consider this bill with any amendments thereto which would appropriate $400 million a year for the next 4 years to build new school buildings so sorely needed by our children within these 48 States.

The overtones of this legislation and the subsequent debate will reach far out into nearly every avenue of our national life. The position that I will take in offering various amendments will be of major concern to both the proponents and the opponents.

My motivations will be moral as well as legal. Drew Pearson and Marquis Childs, among many others, have written concerning this problem and my approach in recent days. News articles and editorials have appeared in most of the national dailies. Not everything, however, that has been presented has revealed the entire problem. Therefore, with a view toward establishing all the truths, may I sketch first the facts surrounding this issue:

The May 17, 1954, decision of the United States Supreme Court declared that segregation in public education was unconstitutional. This was followed by the May 31 order that all provisions of Federal, State, or local law requiring or permitting segregation in public education must yield to the principle announced in the 1954 decision. In spite of this clear pronouncement by the Court, the Federal agencies still refuse to withhold funds which certain defiant States are using to extend segregation in the public schools.

At this point I offer a letter from the Comptroller General of the United States dated January 23, 1956. In this letter I have raised three specific questions with the Comptroller General. Each of these questions was asked for the purpose of determining whether the Congress must specifically direct Federal agencies to withhold funds from the defiant States. The heart of the Comptroller General's answer is as follows:

> The statutes conferring jurisdiction upon the accounting officers of the Government have been enacted primarily for the purpose of giving effect to the various laws enacted by the Congress so far as they involve the expenditure of public moneys. On the fundamental basis that it is for the Congress to say how and on what conditions public moneys shall be spent, the position of the General Accounting Office, as the agent of the Congress, is to give full effect to enactments of the Congress regardless of any collateral questions which may be raised so long as they remain unchanged by legislative action and unimpaired by final judicial determination.

In other words, the Supreme Court drew up a great guidepost with a sign pointing "This way to democracy through integration." Failure of the Congress to include my amendment will place this body in the position of ignoring the clear requirements of the United States Constitution. The Comptroller General's opinion shows that the executive branch of our Government which will be in charge of dispensing the Federal funds under this bill will do absolutely nothing to prevent Federal funds from going to those States which are openly defying the Supreme Court.

I have had lengthy correspondence in the past with Mrs. Oveta Culp Hobby, former Secretary of the Department of Health, Education, and Welfare, concerning the Hill-Burton Act. In 1954, colored doctors who sought the right to visit their patients in hospitals aided by the Hill-Burton Act were refused permission solely because of their race. Mr. Park M. Banta, General Counsel for the Department of Health, Education, and Welfare, ruled in a letter dated March 10, 1954, that his agency was powerless to act because Congress had not authorized it to withhold funds from hospitals that refused to permit colored doctors to attend their patients. I am inserting a copy of this letter which was addressed to Mr. Clarence Mitchell in the RECORD:

MARCH 10, 1954.

Mr. CLARENCE MITCHELL,
Director, Washington Bureau,
NAACP, Washington, D. C.

DEAR MR. MITCHELL: The Secretary has asked me to reply to your letter of February 11, 1954, in further reference to aid under the Hospital Survey and Construction Act for the proposed city-county hospital project at Houston, Tex. You are particularly concerned with the question of the authority of the Federal Government to refuse to approve an application for Federal aid under the act where the hospital does not allow colored doctors to use its facilities for treatment of their patients.

As indicated in Dr. Cronin's letter to you of January 8, 1954, the staffing policies of hospitals fall within the scope of section 635 of the act, which provides that, except as otherwise specifically provided therein, no Federal officer or employee shall have the right to exercise any supervision or control over the administration, personnel, maintenance, or operation of a hospital receiving funds under the act. The provisions of the act requiring assurances as to nondiscrimination relate only to the provision of hospital facilities for patients and not to staffing practices. Efforts at the time of enactment of the statute to extend the nondiscrimination provisions to the staffing practices of hospitals were unsuccessful.

You refer to the discussion of the proposed amendment offered by Senator MURRAY. (CONGRESSIONAL RECORD of December 11, 1945, pp. 11797–11798.) Your attention is also invited to the discussion of a proposed amendment by Senator LANGER which was similarly

rejected. (CONGRESSIONAL RECORD, December 11, 1945, p. 11799.)

In the light of this legislative history, it is clear that the Congress did not, by the provisions on nondiscrimination, intend to confer on the Surgeon General authority to withhold approval of an application solely because the applicant refuses to permit colored doctors to use the hospital facilities, and this view has been consistently followed in the administration of the act. For this reason, regardless of the desirability of permitting the Surgeon General to withhold approval of an application in such cases, further congressional action would seem necessary to authorize such action on his part.

Sincerely yours,

PARKE M. BANTA,
General Counsel.

The Hill-Burton Act seeks to accomplish the same laudable ends we are seeking in the program of giving aid to the States for education. It appropriated Federal money to build hospitals. These hospitals have been built—many of them in the South. Negroes are either excluded from the hospitals or placed in inferior, substandard Jim Crow sections. Negro doctors and nurses are either completely excluded or Jim Crowed. The executive branch of the Government through Mrs. Hobby has consistently said that it will do absolutely nothing concerning this condition.

The present Secretary who succeeded Mrs. Hobby, Mr. Marion Folsom, has also publicly stated that he will follow the pattern of his predecessor. The question of the Department of Health, Education, and Welfare's policy toward States which defy the Supreme Court was raised at the White House Conference on Education. Delegates from the State of South Carolina brought a report to the Conference which openly announced defiance of the Supreme Court. When the question of whether these delegates could have their transportation paid by the Federal Government was raised, Mr. Banta ruled that because Congress had included no conditions in the law authorizing travel funds payments could not be withheld. This question was also submitted to the Comptroller General, who also ruled that payments must be made because Congress had not placed any restrictions in the act it passed. Later, Dr. Harold Hunt, Under Secretary of the Department of Health, Education, and Welfare told the Herald Tribune forum on December 6 that enforcement of the Supreme Court's decision against school segregation was the responsibility of the law-enforcement agencies. On December 7 he was asked whether his agency would withhold funds it now administers from States which defy the Supreme Court. He also replied that funds would not be withheld except in his case, he placed the burden of deciding whether grants should be made on the courts. I offer this correspondence for the RECORD also:

DECEMBER 20, 1955.

Mr. CLARENCE MITCHELL,
Director, Washington Bureau NAACP,
Washington, D. C.

DEAR MR. MITCHELL: Your letter of December 7, 1955, refers to the responsibility of this Department for the administration of the several education grant-in-aid programs under which Federal funds are made available to the States and to local school districts. You state that in the allotment of funds under these programs the responsibility of enforcing the Supreme Court's decision concerning segregated education rests therefore in the Department of Health, Education, and Welfare. You then ask to be advised "what steps the Department is taking to prevent the unconstitutional spending of federally appropriated funds."

At the time of its decision in May 1954, declaring that segregated State or Federal elementary and secondary education deprives Negro students of rights guaranteed by the Federal Constitution, the Supreme Court asked for further argument to consider whether it could permit a gradual adjustment to be accomplished. Subsequently, in its order of May 1955, the Supreme Court recognized that the effectiveness of its decisions throughout the country must be gradual and directed the district courts to consider all the various problems involved in determining whether or not a particular State or school district was proceeding "to make a prompt and reasonable start * * * consistent with good faith compliance at the earliest practicable date."

In short, it seems clear that under the Supreme Court's decisions the question as to the time when in the public interest there must be full compliance in any particular situation with the constitutional principle announced was to be left for final determination by the courts in the exercise of their equity powers.

Accordingly, under the present state of the law, the Department has taken the position that any decision to withhold grants because of the continuation of some degree of segregated education should necessarily be based on a court determination that the particular State or school district in question was not proceeding to make such a prompt and reasonable start toward good faith compliance with the pronouncement of the Supreme Court.

Sincerely yours,

HAROLD C. HUNT,
Under Secretary.

It is important to remember that the five States which have most vigorously proclaimed their defiance of the Supreme Court now receive over $75 million a year as grants from the Federal Government for educational purposes. All this money now is being spent for segregated schools.

When President Eisenhower attacked my amendments as being "extraneous" and "unnecessary," he did not say he would use his executive power to prevent funds going to those States defying the law of the land.

The question, therefore, that I must ask and which I have asked the American people wherever I have spoken during 1955 is this: "Is it not illegal and immoral to appropriate Federal funds to any State which not by public opinion but by legislative action has voted to defy the law of the land?" Not a single person nor organization has been able to factually indicate that I am wrong. The only reply that I get is "Your amendment might kill the bill." How shocking that we Americans, who are supposedly religious, have so lost our sense of values that we are willing to support illegal and immoral un-American actions and attitudes.

But I have refused to be dissuaded, to retreat, to compromise.

I am a stanch advocate of Federal aid to education, and have been all my public life. If I were not, I would introduce a simple amendment to deny all funds to all States that refuse to obey the Supreme Court decision. This I am not going to do. My amendments are as follows:

Line 15, on page 5, I am proposing an amendment to section 103 (a) of the bill which is as follows:

(8) Provide that school facilities of the State are open to all children without regard to race, in conformity with the requirements of the United States Supreme Court decisions; except that if a State plan does not so provide, it shall not prevent payment of funds authorized under this act to such State for use in counties or other political subdivisions within the State that are operating their schools in conformity with the said Supreme Court decisions.

On page 6, at the end of line 25, section 104 (a), the bill is amended by changing the period at the end thereof to a comma and adding the following language:

And shall state that the county or other subdivision in which each project is located is operating its schools without regard to race, in conformity with the requirements of the United States Supreme Court decisions. A State plan which meets the requirements of the Commissioner in every other way shall be permitted to be put into effect in those school districts which comply with the Supreme Court decisions.

This amendment will deny funds only to those school districts that refuse to obey the Supreme Court decision. There are sections of Arkansas, Delaware, Maryland, Oklahoma, and West Virginia that are now integrated. Tennessee, Kentucky, and Texas are beginning district by district to integrate. Under my bill, every single school district in these States will receive funds.

My second amendment will even make my proposition much more acceptable. Here it is: At section 104 (d) of the Kelly bill I will present this amendment:

Any funds allotted to a State under this act which are not paid to said State because of failure to comply with section 103 (a) or 104 (a) of the act shall be paid to said State at such time as said State does comply, provided such compliance occurs before 3 years from the date of enactment, notwithstanding any other provisions of this act.

In other words, there will be held in escrow funds for every single school district in Mississippi, Alabama, Georgia, South Carolina, Virginia, Florida, Texas, or anywhere else that is not integrated at the time the bill is passed. At any time, therefore, within the 4 years of the length of the bill if those school districts do decide to integrate, the money will not have been appropriated, it will be available.

One of the most ridiculous arguments made by many of my colleagues is that my amendments will hurt the Negro people. When I ask how do they know, they tell me, "Well, we know the Negro." This is as stupid as for me to stand up before an audience of Irishmen on St. Patrick's Day and tell them that I know the Irish, or to tell a group of Italians of the Order of Columbus that I know Italians. These men who say they know the Negro do not even know the white man. During the very week that the State of Virginia by a vote of 2 to 1 thrust education back into the Dark Ages and voted to scrap public

education, the School Board of Arlington, Va., voted that they would integrate.

One of the outstanding opponents in the past of any form of integration, a good colleague of mine from Oklahoma came to me just this past week and said that they are integrating without any trouble and, furthermore, next year that the University of Oklahoma, which has the best football team in the United States, will probably have a crack Negro on its squad.

Negro people have waited many, many years for this hour of democracy to come and they are willing to wait a few more years rather than see a bill passed which will appropriate Federal funds to build a dual system of Jim Crow schools in defiance of the law.

The CIO has always stood firm in the field of race relations. I am sad to announce the shocking news that the first official act of the new labor organization of the CIO and AFL, combined, in the field of race relations is a plan—placed into operation last week—to defeat my amendment. If this action is not rescinded, then the vast majority of American people will have to agree that Mike Quill was right when he warned that the new trade-union movement was discriminatory. The United Steel Workers last week sent representatives at their expense from all over the United States to Washington to lobby against my amendments.

What would happen if the Federal aid to education bill became the law of the land without my amendment? The decision of the Supreme Court of the United States would be ignored by Congress. Segregation, Jim Crow, and discrimination would be more richly endowed than ever before. Heavy blows would be dealt to those expanding islands of democracy in the deep South where courageous, consecrated white southerners are fighting for full democracy, for integration, for obedience to the law of the land, and for obedience to the moral law of God. There would be no encouragement to these individuals and groups to press in their districts, counties, and States for right and law. Millions would be squandered by building dual schools. All this would amount to moral chaos at a particular time in history when America cannot afford any form of moral confusion.

Unless our institutions are undergirded with religious morality, we build our Nation in vain.

Unless the grace and truth of the prophets and Jesus Christ supersede the mores and customs of bigotry, our Nation will never be exalted.

The fight between the free world and the slave world will be won on the basis of moral stamina only. We acknowledge that the Soviet is basically immoral and atheistic, but all reports indicate that religion is growing. Shall we let an immoral Soviet grow in grace while we supposedly Christian Americans through default, expediency, and compromise become unmoral?

We will not win the battle through the force of arms. We will win through ideas. Here and now we must make the choice; shall it be Marx or Christ; Lenin or Lincoln; Stalin or Roosevelt; Khrushchev or Eisenhower? These choices can only be made by a Congress on its knees in prayer; a Nation on its feet practicing brotherhood, and a people dedicating its minds and its hearts to the absolute values of good and truth and righteousness, rather than to the relative values of compromise.

The problem before our Nation now in this House of Congress is basically a moral problem. Even if legal aspects do arise, we know that all legalisms are but sounding brass and tinkling cymbals unless great pillars of morality support them.

This is our challenge.

Have we the moral courage?

CYPRUS AND THE MIDDLE EAST

The SPEAKER pro tempore (Mr. KEOGH). Under previous order of the House, the gentleman from Ohio [Mr. HAYS] is recognized for 20 minutes.

Mr. HAYS of Ohio. Mr. Speaker, I have never been one to criticize without at least offering an alternative to that which I criticize. Today I would like to address myself to the situation in the Middle East and especially as it concerns the question of Cyprus. The present difficulties in the Middle East are no little due to the lack of a positive American policy in that part of the world, and to the obvious mishandling from the British side of the problems in that area.

In the first place our position in the eastern Mediterranean, and that of the free world, have been gravely weakened as a result of the policy followed on the Cyprus question. The Tripartite Conference in London last August could hardly have been expected to yield any other results, than to hopelessly complicate the issue and, what is worse, provide an open and acute conflict between Turkey and Greece, at the expense of our defense position in the Mediterranean by paralyzing, as it did, the Balkan Alliance and undermining NATO.

The British policy on this issue since 1953 was aiming at introducing Turkey as a third interested party in the controversy and cultivating Turkish stubborn opposition to the Cypriot claim for self-determination. I would quote in this respect from a report dated October 13, 1954, by the well-known London weekly, Economist, the following—and remember, this is a British paper I am quoting from:

> There is good reason for thinking that since 1953 the Foreign Office has been urging Ankara, in the words of Othello's advisers, to "consider the importance of Cyprus to the Turk," a subject which had previously excited the Turks as little as the Dodecanese.

In pursuance of this policy the Tripartite Conference in London was called in order to create an opportunity for Turkey to oppose the self-determination of Cyprus. The British belief apparently, was that Turkish intransigence followed by Turco-Greek conflict would provide an excuse for the indefinite continuation of colonialism in Cyprus.

It appears that little consideration was given to the harmful effects of such policy upon Western unity and defense in the Mediterranean. They were, however, easily foreseeable. Yet United States influence had been directed toward inducing Greece to participate in the Conference in spite of the latter's warning of the extreme dangers from such a conference.

The proceedings at the Conference and its results have shown both its utter uselessness and its disastrous repercussions upon the West.

The exemplary conduct of the people of Greece—in spite of the anti-Greek riots in Istanbul and Smyrna they had shown responsible restraint which saved the situation from worsening—appears in the eyes of the Secretary of State to have merited a rebuke couched in identical terms as that addressed to Turkey. The victim was thus put in the dock together with the aggressor. This exacerbated public feeling in Greece, already wounded by American opposition in the United Nations to the self-determination of Cyprus. A neutralist movement has since appeared in Greece, something wholly nonexistent before. It is somewhat amazing to me to hear some people say that the neutralist movement in Greece is due to the failure of the Marshall plan. The neutralism in Greece today is directly due to the mishandling of the whole Cyprus situation by the State Department during the last year.

It seems that United States policy in the Middle East is passively following in the wake of British policy, retaining its initiative only on Far Eastern affairs. But from the moment the United States took over from the British the military and other responsibilities in Greece and had spent millions in that respect, they had a corresponding duty to formulate and adopt their own policy in all Greek affairs, a policy consistent with American principles and with the wider interests of the free world.

American policy should be directed toward an early solution of the problem of Cyprus in a way satisfactory to all concerned and on the principle of self-determination, for the application of which a date should be fixed as rightly pointed out by the Manchester Guardian of January 2, 1956, another British paper. A fair and honorable solution would ensure the friendliness and cooperation of the local population, rendering the island an asset in defense. The real interest of Turkey, as well, would be to ensure such an effective use of the island in defense, by the appropriate solution of the problem. The rights of the Turkish minority can be fully safeguarded by the necessary guaranties, as had been done in so many other cases.

It seems to me that a sensible policy would be for the United States to urge immediate self-determination on Cyprus with a prior understanding by both the Cypriots and the Greeks as well as the Turks that no matter how the vote goes the military bases on Cyprus shall be reserved to NATO and to be garrisoned by whatever troops NATO determined would most feasibly suit its purposes in the defense of the eastern Mediterranean. I have every reason to believe that this solution would be acceptable to all parties and we only need the cooperation of the British to put it into effect.

It would reaffirm America's traditional stand toward colonialism. It would give the Cypriots the chance of self-determination which they so ardently desire and perhaps most important of all from a military standpoint it would make the bases on Cyprus truly military bases for defense against the common enemy instead of bases for troops to be fighting with the people of the islands. It must be quite obvious even to the most feeble of military minds that the bases on Cyprus are useless as they now exist with the troops stationed there busily engaged in carrying on a repressive warfare with the population of the island. In order to get these bases back into a useful capacity for the defense of the Mediterranean, it seems to me that the policy that I have outlined is the thing that will do it.

Mr. BENTLEY. Mr. Speaker, will the gentleman yield?

Mr. HAYS of Ohio. I yield.

Mr. BENTLEY. The gentleman is inclined to blame the State Department's mishandling of this problem for the wave of neutralism that exists in Greece today. I wonder if the gentleman would not admit that there are other factors which are responsible for whatever neutralism may exist in Greece.

Mr. HAYS of Ohio. The gentleman and I have discussed this matter before. It seems to me the Cyprus situation has been the thing that ignited it and has caused the whole thing to flare up into a flame. It is like throwing gasoline on smoldering embers.

Mr. BENTLEY. Does the gentleman think the State Department is entirely responsible for the situation that exists today?

Mr. HAYS of Ohio. I think the State Department is responsible for not having a definite policy in the eastern Mediterranean and apparently letting the British dictate our policy there.

Mr. BENTLEY. After all, is not the determination of policy there a matter strictly between the British and the Cypriot people themselves?

Mr. HAYS of Ohio. Not any more so than was the situation in Egypt in connection with the Suez Canal and the Egyptians and the British. It seems to me the State Department had a lot to do with the determination of policy in that instance.

Mr. BENTLEY. What the gentleman means, is then that he thinks we may try to get into too many parts of the world where our interests are not paramount, instead of letting the people there settle the issues themselves.

Mr. HAYS of Ohio. I do not follow the State Department in all that it thinks is of paramount interest in the eastern Mediterranean.

Mr. BENTLEY. Then it is the gentleman's idea that we should not enter into the Cyprus situation at all, that it is one in which we should have no interest?

Mr. HAYS of Ohio. On the contrary, we should have an interest, but our policies have not been consistent, especially in view of our past policies of self-determination for the peoples of the world.

Mr. BENTLEY. In other words, the gentleman thinks the State Department by its present policy has been responsible for the situation as it exists today.

Mr. HAYS of Ohio. I do not say we are entirely responsible for it, but we did not do anything to prevent it.

Mr. BENTLEY. I want to clear that up. I am sure the gentleman does not want to make the statement that the State Department is entirely responsible, but that he will recognize there are other factors that have made their contribution.

Mr. HAYS of Ohio. I think the State Department's attitude and actions are responsible in very great parts for the anti-NATO feeling, for the neutralist feeling—I will not say anti-American feeling for I do not think there is such, but certainly they have a right to feel our attitude is strange on this matter of self-determination.

Mr. McCORMACK. Mr. Speaker, will the gentleman yield?

Mr. HAYS of Ohio. I yield to the gentleman from Massachusetts.

Mr. McCORMACK. I want to congratulate my friend from Ohio in his well-prepared and carefully analyzed speech which comes at a most timely moment in the world's history.

The United States has a consistent record of anticolonialism, going back to the days of the Founding Fathers. The American Revolution was a revolt of the people of the Thirteen Colonies against the British colonialism of those days. The very birth of our country came as a result of the desire to be independent by reason of a detestation of colonialism.

The people of America of succeeding generations have been strong in support of those peoples seeking to throw off the yoke of colonialism. This very Congress only last year showed by a unanimous vote of both branches how deeply entrenched that ideal is in our minds: The right of a people capable of self-government to attain their national desires and objectives through independence and freedom.

I introduced a resolution last year rededicating America to its time-honored position in opposition to colonialism and also to the modern ruthless form of colonialism, Communist imperialism. Unfortunately, in the United Nations our Government through our representatives have given tens of millions of people throughout the world the color of right to think we are identified with colonialism. As a result of this action, contrary to the history and spirit of America, our influence has sadly waned in various parts of the world. Instead of our leadership encouraging and inspiring people under colonial rule to seek in an orderly way self-government we have caused them to believe we are against them—that the ringing words of the Founders of our country against colonialism have been forgotten by us, and instead of holding this great ideal in the minds of others that we are arrayed against them. As a result of this state of mind on the part of several hundreds of millions of persons throughout the world, by way of reaction, we have suffered and our potential enemy, the Soviet Union, and communism have gained—this with our Nation having the finest record of anticolonialism in the world's history, not only with our own independence being achieved but also in the case of Cuba and our relinquishment of control over the Philippines.

For decades our country was the moral leader throughout the world in its traditional principle of the right of people to self-determination.

In the Far East and in the Middle East our prestige and leadership have been weakened as a result of people there thinking that we are helping colonial powers to remain in power.

In the eastern Mediterranian, for example, our position has been greatly weakened as a result of the policy followed in the United Nations on the Cyprus question, which the gentleman from Ohio [Mr. HAYS] has in particular addressed himself to. The quicker our country plays a leading part in the solution of this question, the better it will be for the free world. Our country should immediately exercise its powers and influence with Great Britain to quickly and satisfactorily settle this important matter.

There is no question but what the trouble in French North Africa is caused by the Kremlin. The Kremlin could stop this trouble there at once, and probably would if France would give the Soviet Union something it badly wants—withdrawal from NATO. But if the French should do this it would be only the beginning of the end.

We read of trouble occurring in British North Africa. There is no question but what it is Communist inspired, the origin being in the Kremlin. The dream of Russia for centuries has been control of the Mediterranian. And it is vitally important for the free world that the Cyprus question be quickly settled and in a satisfactory manner. America should act so that people everywhere will recognize us again as the leader against colonialism.

The conference at Bandung took an emphatic position against colonialism and imperialism of all forms. Great men there spoke out against Communist imperialism with the No. 1 man of Red China present and right to his face. They looked with hope and expectancy to America for that moral leadership which would foster and strengthen nations that had just emerged from colonialism and that we would be an inspiration to peoples still subjected to seek their right of self-determination.

May I say to those nations and to those people that the people of the United States overwhelmingly sympathize, yes, support them, in their aspirations. Even with their disappointments, they should realize that the United States and its people are just as much opposed to colonialism as were the Founders of our country. They should look a little ahead and realize that if by way of reaction they gravitate toward the Soviet Union, it will only be the beginning of the end of their freedom and independence. For America has no designs on any other country. There are no people in the world who have any fear of the United States destroying their independence and freedom. We are not bent on world revolution and ultimate world domination. But the situation is differ-

ent in relation to the Soviet Union and communism. However, the fact remains that there are several hundreds of millions of persons in the world, and in an important part, who feel we are on the side of colonialism. We are not going to change their minds by words. We can only do it by deeds.

We did this last year in the unanimous adoption of a resolution which I had the honor to sponsor; but while the effect of that resolution has not as yet been lost, it has been diminished by the manner in which we have acted in the United Nations when votes on the question of anticolonialism came up.

But it is not too late for us to recover our leadership. There is still time for our country to get back to its traditional position. In the moral leadership of the world, there is still time for our country to reassert its position.

The cold war is being waged in the economic field, but the ideological and political relations are just as important, and probably more so.

In the light of the requirements of this new competition, there should be a reappraisal of America's policy and a new approach. Not only by words but by actions and deeds we should show the peoples of other lands that America is opposed to colonialism and thereby regain the confidence of countless of millions who detest communism but who seek the right of self determination.

Mr. HAYS of Ohio. I thank the gentleman for his contribution.

Mr. BENTLEY. Mr. Speaker, will the gentleman yield?

Mr. HAYS of Ohio. I yield to the gentleman from Michigan.

Mr. BENTLEY. I want to commend the gentleman on his statement, and I also want to commend our distinguished Majority Leader, the gentleman from Massachusetts, on his fine statement with regard to colonialism. I may say that a great many of us on both sides of the aisle certainly share this view on colonialism, whether it is practiced by the Soviet Union or any other power. I seem to recall that last year during the debate on foreign aid I offered an amendment which if adopted would have denied foreign aid to any country that persisted in future acts of colonialism. I do not recall the gentleman's position on that, but I wonder how he would feel about it. In other words, is the gentleman willing to use foreign aid in the implementation of his views?

Mr. HAYS of Ohio. Well, I would say to the gentleman that that would be in my opinion one way to do it. I would think that it might be our last resort. In other words, that would be using a club to get what we might get by persuasion, and I would prefer to first try to persuade our British friends and others who practice colonialism, to do what we would like, and then if we cannot persuade them, I certainly would be inclined to go along with the gentleman's amendment. I have always been one who likes to use persuasion before I use force, because I think the results you get by means of persuasion are frequently better than use of force.

Mr. BENTLEY. I thank the gentleman.

Mr. MADDEN. Mr. Speaker, will the gentleman yield?

Mr. HAYS of Ohio. I yield to the gentleman from Indiana.

Mr. MADDEN. I want to join with the gentleman from Ohio [Mr. HAYS] and the gentleman from Massachusetts, [Mr. MCCORMACK] on the outstanding contribution they have made in analyzing the situation especially in regard to Cyprus. I have talked to a great number of folks back in my district who are familiar and acquainted with that situation in Cyprus and the remarks of the gentleman from Ohio and the gentleman from Massachusetts are sensible contributions toward a solution of self-determination for the people living on the Island of Cyprus. In regard to colonialism, the resolution which the gentleman from Massachusetts [Mr. MCCORMACK] sponsored last year, if enacted by the Congress will prove a long step in solving some of our international difficulties. The Bandung Conference which was held last May or June resulted in the defeat for the Kremlin in its cold war campaign. The Communists set up that Conference with the thought that they might incite the people of Asia and Africa against the Western world. As a matter of fact, it reverberated against the Communists and the representatives of these nations of Asia and Africa made speeches on the floor of that Conference in opposition to Communist colonialism the same as any other kind of colonialism. Unfortunately for the Communists, who created that Conference with the thought that they would win a great victory over the Western world, they failed miserably because the Asian and African nations wanted no part of colonialism either Communist or European.

The people of Cyprus are entitled to enjoy the government and independence which the great majority of its inhabitants desire.

The remarks made by the gentlemen from Ohio and Massachusetts are timely and if followed, in essence, by the United Nations would contribute greatly to the peace of the world.

AIR COLLISIONS

Mr. MCCORMACK. Mr. Speaker, I ask unanimous consent to address the House for 10 minutes and to revise and extend my remarks.

The SPEAKER. Is there objection to the request of the gentleman from Massachusetts?

There was no objection.

Mr. MCCORMACK. Mr. Speaker, the radio announced last Friday that the CAA is going to investigate a near collision of two giant airplanes carrying some 70 unsuspecting people over the Cleveland Airport last Thursday night.

GENERAL CONDITION

It is becoming well known that our control and protective system has not kept up with the accelerated development of the air industry which has become enormous and will become increasingly dangerous with the full advent of jet machines. Split seconds may mean the saving or snuffing out of hundreds of lives. It is said that several collisions per day are narrowly averted at our busy and overcrowded airports.

PRESIDENT'S BUDGET MESSAGE

The January 1956 budget message at page M66 states:

Promotion of aviation: During the past 5 years, the rapidly expanding use of the Federal airway system and the increasing speeds of both conventionally powered planes and military jet aircraft have produced serious traffic congestion. To maintain our high standards of safety, aircraft have had to be delayed or flights canceled, with a resulting heavy cost in time and money to both the operators and users of the planes.

As a step in meeting the immediate problem, I am recommending new authority to incur obligations of $40 million in 1957. This will enable the Department of Commerce to expand further the capacity of the present airway system by installing greatly improved air navigation and traffic control facilities.

To keep pace with further advances in aviation, I shall shortly initiate a comprehensive study of the Nation's long-range needs for aviation facilities. This study will take into account both civil and military needs in order to avoid costly duplication of equipment and systems. I shall expect it to point the way to the development, installation, and operation of the most efficient and economical air navigation system within the capabilities of our technology.

In addition to the expenditures to expand the capacity of the airway system, expenditures for operating the present airway system must rise substantially to handle the expanding traffic, to operate new facilities provided under earlier appropriations, and to take over from the Department of Defense the costs of operating certain radar installations serving common military-civilian needs. Federal grants to help local communities build airports are also increasing as a result of the legislation enacted last year. In total, expenditures of the Civil Aeronautics Administration will rise by an estimated $50 million to $200 million in the fiscal year 1957.

CIVILIAN-MILITARY ISSUE

The President speaks of "initiating a comprehensive study of the Nation's long-range needs for aviation facilities." The needs involve both civil and military aviation and costly duplication of equipment and systems are to be avoided. Furthermore, the system is to be most efficient and economical, with the capabilities of our technology.

The President also speaks of the need for appropriations to permit the CAA "to take over from the Department of Defense the costs of operating certain radar installations serving common military-civilian needs."

It is presumed that the choice of words was intended as written and that "costs" not "operations" will be assumed by the civilian agency.

Since the unveiling of the SAGE project at Lexington, Mass., last week, a number of responsible newspapers have carried articles about the multibillion Air Force defense system which will interlace the continent with ground and radio communications and which will be controlled by our most advanced technologically mechanical brain machines at various locations throughout the Nation.

The elaborate and extremely costly system is intended to detect all planes which enter its scope, provide flight surveillance and control and if necessary

dispatch the proper weapon to destroy a hostile intruder.

It is obvious that all planes, both friendly and unfriendly must be detected, their flights plotted, controlled, or intercepted. Not one must get through, over, or under the detection system.

There is much in common between the growing military and civilian programs. The planes traverse the same space at ever swifter speeds as they converge at centers of population and the overcrowded airports by day and night and in storm and fog.

The gigantic military defense network of which the major portion is known as SAGE is to a great extent a standby system. When completed, it will include 25,000 to 28,000 wire circuits at an estimated cost of $240 million per annum. With all operation and maintenance costs included, the total annual cost after construction will be around $400 million annually according to Secretary Wilson. It might well be more.

But this multi-billion-dollar investment will be but partially used in peacetime by the military though its advocates speak of its almost unlimited capacity with robot machines which react several hundred thousand times faster than the human mind, according to Dr. George E. Valley, Jr., associate director of the Lincoln Laboratory, which has helped create it.

It is small wonder that economy-minded citizens want to see the full potential of the system employed to assist the overtaxed civilian aviation system.

BUDGET BUREAU STUDY

Reliable sources state that Budget Director Rowland R. Hughes appointed a high-level special aviation study group last year under W. B. Harding, of Smith-Bainly & Co., investment bankers, to study the possibilities of SAGE as a means of solving the serious safety and economic problems of air commerce in the forthcoming jet age.

DOUBLE DUTY URGED

Reportedly, the Harding study group pointed out that SAGE would be to a great extent capable of handling the double duty of air defense and civilian traffic control. The report added that—

Exploiting this double capability takes on added urgency as we contemplate the additional $260 million which the CAA has discussed spending in the next 5 years (for civilian traffic facilities) while the military is rushing to completion its $3 billion or more investment in SAGE and its associated radars.

We cannot escape the conclusion—

The report declared—

that these two independently conceived and separately developed systems could be better coordinated. If they are not urgently developed into a common system there will be wasteful duplication in time and tax money.

While the report comments on the potential of duplication and waste between the planned civilian system and Air Force SAGE system, it is common knowledge that there is also great duplication and triplication among the various communication systems of the Department of Defense. This extends also to the procurement, storage, and distribution of supplies and equipment required by the systems.

SHARE THE COST IDEA

Recent statements from a high official in the Commerce Department indicates that he feels the time has come to reduce subsidies to commercial aviation. The Budget Bureau has also subscribed to the policy of charging the public for the use of public facilities and services. It is quite possible, therefore, that a double duty military-civilian system may evolve with much if not most of the cost borne by commercial aviation. If so, this might afford a desirable check and balance against excessive costs.

WHO WILL OPERATE SYSTEM

The inevitable problem of designating an operator for a double duty military-civilian system must be met headon and presumably by the Congress. If two systems are not practicable because of cost and other considerations, who will operate the one? Should it be a military or civilian operator? Should it be a joint operation, a committee, or board, or council?

SENATOR MONRONEY'S BILL S. 2818

Without committing myself to it at this time, a possible solution may lie in a proposal of Senator MONRONEY, Democrat, Oklahoma. A bill he has introduced—S. 2818—would divorce the Civil Aeronautics Administration from the Department of Commerce and make it an independent agency. It is quite possible that such an autonomous agency, which would not be in either the military or commercial aviation orbit, could serve both with economy, efficiency, and impartiality.

It is certain that this subject which has flashed on the horizon will be one of stirring interest very soon. It should be thoroughly looked into by appropriate committees of the Congress.

UKRAINIAN INDEPENDENCE DAY

Mr. McCORMACK. Mr. Speaker, I ask unanimous consent to address the House for 10 minutes.

The SPEAKER. Is there objection to the request of the gentleman from Massachusetts?

There was no objection.

Mr. McCORMACK. Mr. Speaker, on January 22, 1956, about 2 million Ukrainians, who have been expelled from their country as the result of centuries of occupation by foreign enslavers and now by the Red Russian terrorists, celebrated the declaration of the independence of Ukraine here and abroad. This declaration of independence was proclaimed in the stormy times of Russian revolution which ended with the most terrible scourge in human history, the rule of the Red Kremlin.

On January 22, 1918, Ukraine organized itself as an independent democratic republic which protected all the personal rights of its citizens and the rights of the national and religious minorities to organize their own cultural and religious lives on their own pattern.

By proclaiming their national independence, the Ukrainian people freed themselves also from their religious dependence upon Moscow, which had been forced upon them 250 years before. This religious dependence upon Moscow had been a sore point in the souls of millions of Ukrainian men and women. When it enslaved Ukraine politically, Moscow also enslaved the Ukrainian Orthodox Church and made it a tool of the Russian policy of russification in Ukraine. In 1918, the entire hierarchy of Ukraine consisted of Russians; the higher clergy and the theological institutions were in the hands of Russians who had been sent in from the north, from the territory of the Russian people. The lower clergy who were Ukrainians were terrorized by the tsarist police and their own spiritual authorities and were forced to act as the tools of the Russian imperial system. The Ukrainian language had been driven out of the Orthodox churches of Ukraine. It is no wonder, then, a strong movement commenced in the independent Ukrainian Republic to free the church in Ukraine from Moscow and to form a Ukrainian Orthodox Church which was not subject to the patriarch of Moscow but was completely autocephalous and a Ukrainian national church.

By 1921, when the Bolsheviks finally occupied the Ukrainian Republic, the organization of the Ukrainian Autocephalous Church had been completed. Its head was the Kievan Metropolitan Vasyl Lypkivsky, who was succeeded in 1927 by Mykola Boretsky. Ukrainian Orthodox bishops had been consecrated for the entire country. They were under the Metropolitan of Kiev. The Ukrainian Orthodox Church had been thoroughly Ukrainianized and the Ukrainian peole had received the right again of praying in their mother tongue and in accordance with their own traditions.

When the Bolsheviks established their Communist regime in Ukraine, they felt themselves too weak to start a struggle over this and for about 10 years they tolerated the existence of the Ukrainian Autocephalous Church. It was only after they had dealt with their opposition in the territory of Russia that they attempted in 1930 to annihilate the Ukrainian Autocephalous Orthodox Church.

Then they brought to trial the outstanding leaders of the church and condemned them to the concentration camps; some they shot immediately. The persecution of the Ukrainian Autocephalous Church continued for some years and ended with its complete destruction. All the bishops were removed from the administration; more than 30 bishops were liquidated by Red Moscow directly or by heavy forced labor in the camps of death. Finally the order came from Moscow to break up the Ukrainian Autocephalous Church and to forbid it to exist as an organization.

In the meanwhile the Kremlin had come to an understanding with the Patriarch of Moscow, and the dioceses and individual parishes of Ukraine through the work of the MVD, passed again under the control of the Moscow Patriarch.

Still the Bolsheviks did not control the entire territory of Ukraine. As a result of the downfall of the Ukrainian

Democratic Republic in 1921, the western part of Ukraine passed under the rule of Poland. The overwhelming majority of the population in western and Carpathian Ukraine had acknowledged for centuries the Catholic Faith of the Eastern Rite. They had accepted the supremacy of the Roman See. This part of Ukraine as a result of the extension of the boundaries of the U. S. S. R. in 1941 also finally passed under the control of Red Moscow and soon that regime began to liquidate the Ukrainian Catholic Church, especially in Galicia and Carpathian Ukraine. It thus followed the footsteps of the Russian Tsars in their treatment of the Ukrainian Catholics.

In the early months of 1945 an order came from the Moscow Patriarch to Metropolitan Joseph Slipy who resided in Lviv and to all the bishops of this part of Ukraine to accept Russian Orthodoxy. When they refused, the Metropolitan and seven bishops were arrested, brought before a secret Soviet court and sentenced to long terms in concentration camps. Of the bishops arrested, four have died but the others are still living in the labor camps.

Moscow put in the places of the arrested bishops who were of course Ukrainian Catholics, Russian Orthodox bishops who began to compel the clergy and the faithful to recognize the rule of the Russian Orthodox clergy but usually without much success.

The Ukrainian Autocephalous Church was formally destroyed 25 years ago. The Ukrainian Catholic Church was formally liquidated 10 years ago. During the joyful celebration of the Ukrainian Declaration of Independence the Ukrainians outside the borders of Ukraine remember also these sad anniversaries of the religious persecution of 40 million Ukrainian men and women in their native Ukraine, their brothers and sisters, by the Kremlin. Yet despite the formal suppression of both Ukrainian churches, they still exist underground like the churches in the catacombs of old.

This situation must be brought before the eyes of the world, for this is all taking place on the territory of the Soviet Union, a member of the United Nations. It must be made particularly clear to the members of the neutralist block, the former colonial nations who are now cynically courted by the hypocritical words of the leaders of the Red Kremlin.

Peoples everywhere and nations of all lands have had their ups and downs in modern times, but in our lifetime East European nations have endured more suffering and misery, and have had to put up with more varieties of hardship than peoples elsewhere. Most of these East Europeans have had their share of greatness and glory, and they all have contributed considerably to the common pool of our western civilization. Today they all share the same fate: they groan under the despised and contemptible Communist tyranny. This is particularly true in the case of the numerically largest ethnic group in Eastern Europe, the 40 million Ukrainians.

But the Ukrainians have had more than their share of misfortune during the last half century. While most East European nations enjoyed a period of national independence during the hiatus between world wars and have become victims of communism since World War II, helpless Ukrainians were engulfed in Soviet communism in 1920, and they have been struggling unsuccessfully against it ever since.

While the independence proclaimed on January 22, 1918, is a memory, it has become a memorable day, a glorious landmark in recent Ukrainian history, and it is being celebrated by Ukrainians everywhere except in the Ukraine. That fair land of riches and plenty, that fertile home of the peasant is a deserted and desolate steppe land as far as liberty and freedom is concerned. There is no freedom of movement, no freedom of action, no freedom of expression; and Communists have been trying hard to eliminate freedom of thought. Under such abominable circumstances patriotic Ukrainians are not allowed to celebrate their independence day. We in this free country of ours, however, are glad to join with all Americans of Ukrainian ancestry in the celebration of that day and hope that soon the Ukrainians will have the freedom to do the same in their beloved homeland.

LEAVE OF ABSENCE

By unanimous consent, leave of absence was granted to Mr. CELLER (at the request of Mr. ROGERS of Colorado), for the balance of the week, on account of illness.

SPECIAL ORDERS GRANTED

By unanimous consent, permission to address the House, following the legislative program and any special orders heretofore entered, was granted to:

Mr. HESELTON, for 20 minutes tomorrow.

Mr. POWELL, for 30 minutes on Thursday next.

EXTENSION OF REMARKS

By unanimous consent, permission to extend remarks in the CONGRESSIONAL RECORD, or to revise and extend remarks, was granted to:

Mrs. ROGERS of Massachusetts and to include a description of a bill she introduced.

Mr. LANE in two instances and to include extraneous matter.

Mr. SEELY-BROWN.

Mr. MCGREGOR.

Mr. OSTERTAG and to include extraneous matter.

Mr. SADLAK and to include a letter.

Mr. JOHNSON of Wisconsin.

Mr. WILLIAMS of New Jersey in two instances and include extraneous matter.

Mr. WILSON of California in the body of the RECORD immediately preceding the eulogies on the late Martin J. Kennedy.

Mr. WILLIS.

Mr. DONOHUE (at the request of Mr. MCCORMACK) and to include extraneous matter.

Mr. DINGELL (at the request of Mr. MCCORMACK).

Mr. REED of New York.

Mr. CELLER.

SENATE JOINT RESOLUTION SIGNED

The SPEAKER announced his signature to an enrolled joint resolution of the Senate of the following title:

S. J. Res. 12. Joint resolution to request the Secretary of State to arrange for the International Joint Commission, United States and Canada, to conduct a survey of the proposed Passamaquoddy tidal power project, and for other purposes.

ADJOURNMENT

Mr. MCCORMACK. Mr. Speaker, I move that the House do now adjourn.

The motion was agreed to; accordingly (at 1 o'clock and 15 minutes p. m.) the House adjourned until tomorrow, Wednesday, January 25, 1956, at 12 o'clock noon.

EXECUTIVE COMMUNICATIONS, ETC.

Under clause 2 of rule XXIV, executive communications were taken from the Speaker's table and referred as follows:

1414. A letter from the Secretary of Agriculture, transmitting the report of the Administrator of the Rural Electrification Administration for the fiscal year ending June 30, 1955, pursuant to section 10 of the Rural Electrification Act of 1936 (49 Stat. 1363); to the Committee on Agriculture.

1415. A letter from the Governor of the Canal Zone, President, Panama Canal Company, transmitting a report of disposal of foreign excess property by the Panama Canal Company and Canal Zone Government for the year ending December 31, 1955, pursuant to section 404 (d) of the Federal Property and Administrative Services Act of 1949 (63 Stat. 398); to the Committee on Government Operations.

1416. A letter from the Assistant to the President, The American Academy of Arts and Letters, transmitting the official report of the American Academy of Arts and Letters for the year 1955; to the Committee on House Administration.

1417. A letter from the Secretary of the Interior, transmitting a report on the activities of, expenditures by, and donations to the laboratory operated by the Bureau of Mines at Schuylkill Haven, Pa., for the calendar year 1955, pursuant to the act of December 18, 1942 (56 Stat. 1056); to the Committee on Interior and Insular Affairs.

1418. A letter from the Assistant Secretary of the Interior, transmitting a proposed concession permit with William Mann, which, when executed by the superintendent, Everglades National Park, will authorize the concessioner to provide charter-boat service for sport fishing in Everglades National Park, Fla., during a 6-month period beginning January 1, 1956, pursuant to the act of July 31, 1953 (67 Stat. 271); to the Committee on Interior and Insular Affairs.

1419. A letter from the Assistant Secretary of the Interior, transmitting a proposed concession permit with Walter F. Mann, which, when executed by the superintendent, Everglades National Park, will authorize the concessioner to provide charter-boat service for sport fishing in Everglades National Park, Fla., during a 6-month period beginning January 1, 1956, pursuant to the act of July 31, 1953 (67 Stat. 271); to the Committee on Interior and Insular Affairs.

1420. A letter from the Chairman, Board of Directors, Future Farmers of America, transmitting a report on the audit of the accounts of the Future Farmers of America for the fiscal year ended June 30, 1955, pursuant to

section 14, paragraph (b), of Public Law 740, 81st Congress; to the Committee on the Judiciary.

REPORTS OF COMMITTEES ON PUBLIC BILLS AND RESOLUTIONS

Under clause 2 of rule XIII, reports of committees were delivered to the Clerk for printing and reference to the proper calendar, as follows:

Mr. DURHAM: Committee on Armed Services. S. 1959. An act to direct the Secretary of the Army or his designee to convey a 6.89-acre tract of land out of a 199.959-acre tract of land situated in the vicinity of Houston, Harris County, Tex., to the State of Texas; without amendment (Rept. No. 1664). Referred to the Committee of the Whole House on the State of the Union.

Mr. VINSON: Committee on Armed Services. H. R. 7993. A bill to authorize the construction and conversion of certain naval vessels, and for other purposes; with amendment (Rept. No. 1665). Referred to the Committee of the Whole House on the State of the Union.

Mr. O'NEILL: Committee on Rules. House Resolution 388. Resolution for consideration of House Resolution 471, joint resolution to permit FHA title I repair assistance to new homes damaged by major disasters; without amendment (Rept. No. 1666). Referred to the House Calendar.

Mr. MADDEN: Committee on Rules. House Resolution 389. Resolution for consideration of H. R. 6274, a bill to provide that no fee shall be charged a veteran for furnishing him a copy of his discharge or a copy of his certificate of service; without amendment (Rept. No. 1667). Referred to the House Calendar.

Mr. THORNBERRY: Committee on Rules. House Resolution 390. Resolution for consideration of H. R. 7540, a bill to provide for the sale of a Government-owned housing project to the city of Hooks, Tex.; without amendment (Rept. No. 1668). Referred to the House Calendar.

PUBLIC BILLS AND RESOLUTIONS

Under clause 4 of rule XXII, public bills and resolutions were introduced and severally referred as follows:

By Mr. AVERY:

H. R. 8720. A bill to amend the Bankhead-Jones Farm Tenant Act to adjust the loan limitations of title II so as to provide more effective assistance to production and subsistence loan borrowers; to the Committee on Agriculture.

H. R. 8721. A bill to amend the Bankhead-Jones Farm Tenant Act and to authorize the Secretary of Agriculture to make or insure loans to farmers and stockmen for the purpose of refinancing existing debts, and for other purposes; to the Committee on Agriculture.

By Mrs. BLITCH:

H. R. 8722. A bill to amend the Watershed Protection and Flood Prevention Act; to the Committee on Agriculture.

By Mr. BROYHILL:

H. R. 8723. A bill to create a Washington Metropolitan Area Authority with certain powers over terminal and transportation facilities in the Washington metropolitan area; to the Committee on Interstate and Foreign Commerce.

By Mr. COOLEY:

H. R. 8724. A bill to provide an annual income program for owners of small tracts of land who develop thereon approved commercial forestry, and to assist in such development; to the Committee on Agriculture.

By Mr. DELANEY:

H. R. 8725. A bill to amend the War Risk Insurance Act so as to provide relief for victims of disasters resulting from the forces of nature; to the Committee on Interstate and Foreign Commerce.

By Mr. DONOVAN:

H. R. 8726. A bill to amend the War Risk Insurance Act so as to provide relief for victims of disasters resulting from the forces of nature; to the Committee on Interstate and Foreign Commerce.

By Mr. DOYLE:

H. R. 8727. A bill to correct an inequity resulting from the setting of the effective date of Public Law 68 of the 84th Congress; to the Committee on Post Office and Civil Service.

By Mr. ENGLE (by request):

H. R. 8728. A bill to authorize the burial in national cemeteries of the remains of certain commisisoned officers of the Public Health Service; to the Committee on Interior and Insular Affairs.

By Mr. FINO:

H. R. 8729. A bill to amend title II of the Social Security Act to provide that the work clause shall not apply to work performed by individuals who have attained the age of 65; to the Committee on Ways and Means.

By Mr. FLOOD:

H. R. 8730. A bill to repeal the cabaret tax; to the Committee on Ways and Means.

By Mr. FORAND:

H. R. 8731. A bill to establish a national policy with respect to commercial fisheries; to establish the Office of Assistant Secretary of Commerce for Commercial Fisheries, and define his functions, powers, and responsibilities; to strengthen the commercial fisheries segment of the national economy, and for other purposes; to the Committee on Merchant Marine and Fisheries.

By Mr. GRANT:

H. R. 8732. A bill to provide an annual income program for owners of small tracts of land who develop thereon approved commercial forestry, and to assist in such development; to the Committee on Agriculture.

By Mrs. GRIFFITHS:

H. R. 8733. A bill for the relief of the city of Detroit; to the Committee on the Judiciary.

By Mr. HORAN:

H. R. 8734. A bill to amend the Bankhead-Jones Farm Tenant Act and to authorize the Secretary of Agriculture to make or insure loans to farmers and stockmen for the purpose of refinancing existing debts, and for other purposes; to the Committee on Agriculture.

H. R. 8735. A bill to amend the Bankhead-Jones Farm Tenant Act to adjust the loan limitations of title II so as to provide more effective assistance to production and subsistence loan borrowers; to the Committee on Agriculture.

By Mr. JENSEN:

H. R. 8736. A bill to amend the Bankhead-Jones Farm Tenant Act to adjust the loan limitations of title II so as to provide more effective assistance to production and subsistence loan borrowers; to the Committee on Agriculture.

H. R. 8737. A bill to amend the Bankhead-Jones Farm Tenant Act and to authorize the Secretary of Agriculture to make or insure loans to farmers and stockmen for the purpose of refinancing existing debts, and for other purposes; to the Committee on Agriculture.

By Mr. JOHNSON of Wisconsin:

H. R. 8738. A bill to amend the Watershed Protection and Flood Prevention Act; to the Committee on Agriculture.

By Mr. KEARNS:

H. R. 8739. A bill to incorporate the National Music Council; to the Committee on the Judiciary.

By Mrs. KELLY of New York:

H. R. 8740. A bill to amend the War Risk Insurance Act so as to provide relief for victims of disasters resulting from the forces of nature; to the Committee on Interstate and Foreign Commerce.

By Mr. KING of California:

H. R. 8741. A bill to correct an inequity resulting from the setting of the effective date of Public Law 68 of the 84th Congress; to the Committee on Post Office and Civil Service.

By Mr. LAIRD:

H. R. 8742. A bill to amend the Watershed Protection and Flood Prevention Act; to the Committee on Agriculture.

By Mr. LOVRE:

H. R. 8743. A bill to waive certain provisions of law to permit the Secretary of the Army to acquire certain school facilities in Pollock, S. Dak., required to be relocated by reason of the Oahe Dam and Reservoir project; to the Committee on Public Works.

By Mr. MATTHEWS:

H. R. 8744. A bill to establish a national policy with respect to commercial fisheries; to establish the Office of Assistant Secretary of Commerce for Commercial Fisheries, and define his functions, powers, and responsibilities; to strengthen the commercial fisheries segment of the national economy, and for other purposes; to the Committee on Merchant Marine and Fisheries.

H. R. 8745. A bill to amend the Watershed Protection and Flood Prevention Act; to the Committee on Agriculture.

By Mr. MILLER of Nebraska:

H. R. 8746. A bill to amend the Bankhead-Jones Farm Tenant Act to adjust the loan limitations of title II so as to provide more effective assistance to production and subsistence loan borrowers; to the Committee on Agriculture.

H. R. 8747. A bill to amend the Bankhead-Jones Farm Tenant Act and to authorize the Secretary of Agriculture to make or insure loans to farmers and stockmen for the purpose of refinancing existing debts, and for other purposes; to the Committee on Agriculture.

H. R. 8748. A bill to protect the public health by amending the Federal Food, Drug, and Cosmetic Act to prohibit the use in food of new food additives which have not been adequately tested to establish their safety; to the Committee on Interstate and Foreign Commerce.

By Mr. O'BRIEN of New York:

H. R. 8749. A bill to amend the War Risk Insurance Act so as to provide relief for victims of disasters resulting from the forces of nature; to the Committee on Interstate and Foreign Commerce.

By Mr. POAGE:

H. R. 8750. A bill to amend the Watershed Protection and Flood Prevention Act; to the Committee on Agriculture.

By Mrs. ST. GEORGE:

H. R. 8751. A bill to amend the Agricultural Adjustment Act of 1938 to exempt certain wheat producers from liability under the act where all the wheat crop is fed or used for seed on the farm, and for other purposes; to the Committee on Agriculture.

By Mr. SCHWENGEL:

H. R. 8752. A bill to amend the Bankhead-Jones Farm Tenant Act to adjust the loan limitations of title II so as to provide more effective assistance to production and subsistence loan borrowers; to the Committee on Agriculture.

H. R. 8753. A bill to amend the Bankhead-Jones Farm Tenant Act and to authorize the Secretary of Agriculture to make or insure loans to farmers and stockmen for the purpose of refinancing existing debts, and for other purposes; to the Committee on Agriculture.

By Mr. SCRIVNER:

H. R. 8754. A bill to clear the title to certain Indian land; to the Committee on Interior and Insular Affairs.

By Mr. SCUDDER:

H. R. 8755. A bill to establish a national policy with respect to commercial fisheries; to establish the Office of Assistant Secretary of Commerce for Commercial Fisheries, and define his functions, powers, and responsi-

bilities; to strengthen the commercial fisheries segment of the national economy, and for other purposes; to the Committee on Merchant Marine and Fisheries.

By Mr. THOMSON of Wyoming:

H. R. 8756. A bill to authorize the Administrator of General Services to convey certain lands in the State of Wyoming to the city of Cheyenne, Wyo.; to the Committee on Government Operations.

By Mr. YOUNGER:

H. R. 8757. A bill authorizing a preliminary examination and survey of Pescadero Creek, Calif., for flood control and other purposes; to the Committee on Public Works.

H. R. 8758. A bill authorizing a preliminary examination and survey of San Gregorio Creek and tributaries, California, for flood control and other purposes; to the Committee on Public Works.

H. R. 8759. A bill authorizing a preliminary examination and survey of Redwood Creek, San Mateo County, Calif., for flood control and other purposes; to the Committee on Public Works.

H. R. 8760. A bill authorizing a preliminary examination and survey of streams and in the vicinity of Burlingame, Calif., for flood control and other purposes; to the Committee on Public Works.

H. R. 8761. A bill authorizing a preliminary examination and survey of streams and in the vicinity of South San Francisco, Calif., for flood control and other purposes; to the Committee on Public Works.

H. R. 8762. A bill authorizing a preliminary examination and survey of streams and in the vicinity of San Mateo, Calif., for flood control and other purposes; to the Committee on Public Works.

By Mr. MOULDER:

H. Res. 387. Resolution authorizing the printing of additional copies of the 1955 Annual Report of the House Committee on Un-American Activities, (H. Rept. No. 1648, 84th Cong., 2d sess.); to the Committee on House Administration.

MEMORIALS

Under clause 4 of rule XXII, memorials were presented and referred as follows:

By Mr. ASPINALL: Memorial of the Legislature of the State of Colorado memorializing the Congress of the United States to permit ranchers and farmers and other citizens to sell their agricultural and other products to individuals of foreign nations; and that ranchers and farmers be further allowed, in the payment of income taxes, to treat losses and gains from the sale of crops and livestock as long-term capital gains and losses; to the Committee on Agriculture.

Also, memorial of the Legislature of the State of Colorado memorializing the Congress of the United States to enact legislation approving the apportionment of power credits made by the Upper Colorado River Commission; to the Committe on Interior and Insular Affairs.

Also, memorial of the Legislature of the State of Colorado memorializing the Congress of the United States to take action for the enforcement of the 14th amendment to the Constitution of the United States, by investigating State restrictions upon suffrage; and to enact legislation making certain discriminations and practices against private citizens a Federal offense; to the Committee on the Judiciary.

By Mr. FORAND: Resolution of the Rhode Island General Assembly memorializing Congress with urgent and earnest request to give the State of Israel the right to buy arms for the purpose of defending her people against aggression; to the Committee on Foreign Affairs.

By the SPEAKER: Memorial of the Legislature of the State of Illinois, memorializing the President and the Congress of the United States relative to transmitting a copy of the 1955 Annual Report of the Jupiter Patriotic Association of America, Inc.; to the Committee on the Judiciary.

Also, a memorial of the Adjutant General's Department of the State of Ohio memorializing the President and the Congress of the United States relative to transmitting copies of the amendments to the existing interstate compacts between the State of Ohio and the States of West Virginia and Florida; to the Committee on Armed Services.

PRIVATE BILLS AND RESOLUTIONS

Under clause 1 of rule XXII, private bills and resolutions were introduced and severally referred as follows:

By Mrs. BLITCH:

H. R. 8763. A bill for the relief of Waltraud G. Schramm; to the Committee on the Judiciary.

By Mr. CLARK:

H. R. 8764. A bill for the relief of Herta Marie Zelenak (nee Pich-Lipinski); to the Committee on the Judiciary.

By Mr. DONOVAN:

H. R. 8765. A bill for the relief of Antonio Ciolino; to the Committee on the Judiciary.

By Mr. HAYS of Ohio:

H. R. 8766. A bill for the relief of Gertrud (Scholz) Bayer; to the Committee on the Judiciary.

By Mr. HUDDLESTON:

H. R. 8767. A bill for the relief of the estate of Gladys Louise Chambless; to the Committee on the Judiciary.

By Mr. JAMES:

H. R. 8768. A bill for the relief of Mrs. Patricia M. Emerson; to the Committee on the Judiciary.

By Mrs. KELLY of New York:

H. R. 8769. A bill for the relief of Henry Aleong Gonzales, Perline Aleong Gonzales, and Annette Aleong Gonzales; to the Committee on the Judiciary.

H. R. 8770. A bill for the relief of Ruby Delmena Addison; to the Committee on the Judiciary.

By Mr. LANE:

H. R. 8771. A bill for the relief of Virginia Casani; to the Committee on the Judiciary.

By Mr. POWELL:

H. R. 8772. A bill for the relief of Ralph (Raffaele) Gargiulo; to the Committee on the Judiciary.

By Mr. SHELLEY:

H. R. 8773. A bill for the relief of Frank Louis Morita and John Michael Takezawa; to the Committee on the Judiciary.

H. R. 8774. A bill for the relief of Aston Willis Waite; to the Committee on the Judiciary.

By Mr. SISK:

H. R. 8775. A bill for the relief of Miss Elena Brena; to the Committee on the Judiciary.

By Mr. WALTER:

H. R. 8776. A bill for the relief of Efstratios Skenderis; to the Committee on the Judiciary.

H. R. 8777. A bill for the relief of Giovanni Terlevich; to the Committee on the Judiciary.

By Mr. YATES:

H. R. 8778. A bill for the relief of Teresa Mary Vazquez; to the Committee on the Judiciary.

PETITIONS, ETC.

Under clause 1 of rule XXII, petitions and papers were laid on the Clerk's desk and referred as follows:

448. By Mr. BUSH: Petition of Pennsylvania State Camp, Patriotic Order Sons of America, favoring the continuation of the McCarran-Walter Act, Public Law 414, and opposing any amendments which would destroy its effectiveness; to the Committee on the Judiciary.

449. By Mr. SHORT: Petition of Mr. Charles E. Lunn and other citizens of Springfield, Mo., protesting alcoholic beverage advertising on the radio and television; to the Committee on Interstate and Foreign Commerce.

450. Also, petition of Mrs. W. M. Oldham and other citizens of Springfield, Mo., protesting the advertising of alcoholic beverages on radio and television; to the Committee on Interstate and Foreign Commerce.

EXTENSIONS OF REMARKS

Albert Gallatin

EXTENSION OF REMARKS

OF

HON. HARRISON A. WILLIAMS, JR.

OF NEW JERSEY

IN THE HOUSE OF REPRESENTATIVES

Tuesday, January 24, 1956

Mr. WILLIAMS of New Jersey. Mr. Speaker, history records that the cabinet of our third President, Thomas Jefferson, was a most harmonious one because, in appointing its members, he had taken into account the lessons learned as Washington's Secretary of State. Therefore, while he selected wise and strong personalities, they were chosen for their complementary qualities as well as for their specific abilities in the arts of war and peace. Because they believed in small "d" democracy as did their leader, the cabinet members were able to work effectively in concert. There was no upstaging; there was discussion and agreement. As a result, at the conclusion of the two Jefferson administrations, the national debt had been reduced, trade was flourishing and taxes were lowered.

No single member of the Presidential Cabinet was more responsible for this happy state of affairs than the Swiss-born Albert Gallatin who had deported himself excellently as a Member of Congress before his appointment as Secretary of State in 1801. This talented immigrant, who had come to America at the age of 19 from Geneva where he was born on January 29, 1761, brought not only his notable fiscal talents to the service of his adopted land but his deep-seated belief in the rights of the people as well.

Since he was so concerned with distributing the benefits of his wise commercial and financial policies among all the people and because he was born abroad, Gallatin had a rough road to travel, for both these factors earned

him the active ill will of the Hamiltonian forces with their pro-British and aristocratic orientation. Because he was French-speaking and democratic, his enemies—the Federalists—were quick to link him with the French revolution whose excesses, along with Jefferson, he deplored, but whose basic democratic concepts he favored.

Gallatin, as a Member of the House, had already established the Ways and Means Committee to approve Government's disbursement of the people's money. As Treasurer, he worked to liquidate the public debt and lower taxes. Rigid economy and extended trade he held the best ways to progress and prosperity. Consequently, he was an opponent of commercial and military wars.

The Jeffersonians, less interested in diplomatic representation than commercial representation in foreign countries, had a staunch supporter in Gallatin who was to negotiate a number of advantageous trade agreements when, after leaving the Treasury, he was to represent his country abroad. The War of 1812 had only shortly ended when he put through a pact eliminating excessive English duties on American goods; and, in London in 1818, he worked successfully for a commercial convention.

In commemorating his birthday, I have pointed up his trade achievements purposely; for, in America's dealings with the land of Gallatin's birth, this country has departed from the trade precepts he proved so sound.

A tariff barrier must be hurdled, not by one side but by both; and in imposing restrictions on Swiss watch imports, not only the Swiss but the Americans are being hurt. United States importers and assemblers who make their livelihoods by buying goods abroad are penalized; United States exporters who ship their farm and manufactured goods are hurt for the foreign nation affected tends to buy less because it can earn fewer dollars; the consumer has to pay more for the imported product.

In rescinding tariff curbs against the Swiss watch industry, we stand to gain in many ways: First, Switzerland and other foreign friends will know that we mean it when we say, "trade, not aid," is the best policy; second, goods will flow more freely between the two countries to the benefit of both their economies; and third, the people of both lands will be able to get the products each wants at fair and profitable prices.

Cleaning Up the Doorway to America

EXTENSION OF REMARKS

OF

HON. HAROLD C. OSTERTAG

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Tuesday, January 24, 1956

Mr. OSTERTAG. Mr. Speaker, as our country expands in population and industry, immense new burdens are laid upon our limited supplies of surface waters. The demand for water constantly increases. The supply is constant, however; and the supply of clean, usable water is decreasing. This is a situation which we shall ignore to our peril. There is an old saying that you never miss the water till the well runs dry. Our national water resources are not inexhaustible, however, and unless we mobilize to keep them clean and useful, the well will run dry. That is a job for the individual; for the communities; for industry; for the States, and for the Federal Government. No one can escape responsibility. Efforts to keep our surface waters clean and usable must be constant and unremitting.

The States have a particularly large stake in this matter. One of the first questions that industry's scouts ask, when they look for new sites, is: How is the water supply? Is it adequate? Is it useful? Will it last?

Mr. Speaker, I have been actively interested in the preservation of our surface waters for many years, first as chairman of New York's Joint Committee on Interstate Cooperation, and now as a member of this body. It is a tribute to the vision of New York's citizens that they supported the enactment of a statewide water pollution control program some years ago.

Moreover, they have also supported the creation of interstate pollution control agencies, so that today, New York has cooperative interstate arrangements with every one of the States on its border, to control the pollution of its surface waters.

Among the oldest and most successful of those interstate agencies is the Interstate Sanitation Commission, comprised of representatives of the States of New York, New Jersey, and Connecticut. The Commission is now marking its 20th year of operation. When it was established, the waters around New York, the doorway to America, were swiftly deteriorating under an overload of filth. Today, through the unrelenting efforts of this tri-State agency, the never-ending battle against pollution is being won.

President Eisenhower has taken note of this significant battle in a telegram to the Commission. It is included in its 20-year report, which was released today. Calling it "the first of many interstate bodies created by the States to deal with such problems," the President has expressed the hope that its report will receive widespread attention among American citizens. "For the problem of the pollution of our waters," he points out, "is of concern to all of us."

Mr. Speaker, the work of the Interstate Sanitation Commission is important to every State in the Union, and to the District of Columbia, for it proves that the States, working together, can deal effectively with the problem of pollution control if they have the will and the determination.

At this time, there is pending before Congress legislation to strengthen and extend a program of Federal-State cooperation in the control of water pollution. The Interstate Sanitation Commission's report provides effective guidelines for such cooperation in conformance with administration's policy of keeping as much government as possible close to the people who live under it and pay for it.

Under leave to extend my remarks, Mr. Speaker, I include some excerpts from the Interstate Sanitation Commission's report, and I commend the entire report to the attention of the Members of this House:

CLEANING UP THE DOORWAY TO AMERICA—TWENTY YEARS OF PROGRESS IN POLLUTION CONTROL, 1936–56—INTERSTATE SANITATION COMMISSION—NEW JERSEY, NEW YORK, CONNECTICUT

Text of telegram from President Dwight D. Eisenhower to the Commission on the occasion of its 20th anniversary:

THE WHITE HOUSE,
Washington, D. C.

Dr. WILLIAM C. COPE,
Chairman, the Interstate Sanitation Commission:

Twenty years ago, the interstate compact between New York, New Jersey, and Connecticut was signed, with the approval of the Congress. It provided for their partnership in combating the growing pollution of the interstate waters around New York Harbor.

The first of many interstate bodies created by the States to deal with such problems, it has been a pioneering organization. I am therefore glad to learn of the Commission's plans for issuing a progress report. I hope it will receive widespread attention among American citizens, for the problem of the pollution of our waters is of concern to all of us.

DWIGHT D. EISENHOWER.

In the overview the commission's job is to protect the rights of the public in its varied legitimate uses of the waters of the district, by releasing the waters from their bondage of carrying waste.

Although the uses appear incompatible at first, it has long been recognized that waters serve many purposes, providing there is judicious control. This control starts with the commission's classification by desired use, (the A and B classification). These classifications were set up after public hearings, so that all interested could be heard.

Once the classifications were set up, then standards of treatment established in the compact became effective.

No treatment of wastes is perfect, and all effluent brings some pollution to the waters. But the waters have recuperative powers themeslves with the action of tides, currents, sun, wind, and benevolent bacteria.

The commission's effort has been to keep the pollution low enough so that the natural recuperative powers could keep the waters in good shape.

This phase of the program is related to the directive of the compact to abate present and "control future pollution."

We measure this in terms of people served. Here is the record.

In 1936 the sewage of 7,200,000 people was being discharged untreated into the waters of the district.

Today sewage from 9,500,000 is receiving treatment. This is more than the total contributing pollution 20 years ago.

Pollution existing in 1936 has been abated.

COSTS

This program, like any other improvement, has cost money. First let us clearly state that the administrative cost of the commission is small compared to the cost of construction of sewage treatment plants and appurtenances, which total to date $300 million. The construction costs are carried by local bond issues and taxes, and the commission's job is to assure each municipality that all other municipalities will construct plants to

equal the standards set, and to synchronize the program so that no municipality is unduly penalized for its efforts.

Notwithstanding the accomplishment over the 20-year period the costs of constructing these treatment plants averages about $1 per year per person served.

INDUSTRY

The importance of the waters of the area to the industry cannot be overrated. Some industries which are large employers and taxpayers in the area, utilize waters in the millions of gallons per day.

To the knowledge of the commission, no industry has left the area because of the quality of the waters for which the commission is responsible, and no undue hardships in treatment of water have been imposed.

RECREATION

Health is always first.

Despite the dysentery epidemic in Chicago from sewage pollution in the thirties, and the catastrophe of 1,100 cases of gastroenteritis following harbor water entering water mains on the west coast a few years back, the commission will not guarantee that drinking or swimming in polluted water, or eating polluted shellfish will kill you. It might, but no guarantee.

The chief engineer puts the story of polluted water in this comparison:

"Fill your bathtub with clean, warm water. Take a dipper and dip out one quart from the used but unflushed toilet bowl. Dump it in the tub. That is the equivalent of some of the bathing waters when the commission started 20 years ago."

You can bathe in that bathtub but people consider it an unpleasant idea and not up to American standards.

Today in the A areas the picture is different—like a well-known soap—99 percent plus of all discharge into the bathing area is treated and sterilized with chlorine.

In fishing and shellfishing, the commission's program of treatment has produced a gradual improvement in the waters of the district despite the fact that 2 million more people have moved into the area. This is reflected in the fact that there is now fishing in Jamaica Bay, where one doubts that were many fish 20 years ago. There have been changes in opening and closing shellfish areas. Shellfish are reported being cultured in the Hudson for transfer elsewhere for growth. The Harlem River, once a black, fetid stream, is now much improved. And so it goes down a long list of waters of the area.

THE ROAD AHEAD

As has been indicated there is a job ahead to:

1. Complete the remaining work now under way to bring treatment up to present standards.

2. Maintain an equitable use of the waters of the area through the changing years ahead.

3. Revise the standards as the purity of the waters increases, to meet new needs as populations increase, to cope with new industries and new types of pollution.

Not only are there such new problems as radioactive and chemical wastes, but the Legislatures of New York and New Jersey have delegated to the commission the task of studying whether air pollution is an interstate problem, in the New York metropolitan area, and to recommend means of control. Connecticut has enacted legislation giving its consent to the study, subject to the approval of the Congress of the United States.

This will bring a new kind of problem to the commission to study, in a new field, under an extension of the interstate compact.

The joint legislative committee on interstate cooperation regarded the work of the interstate sanitation commission "as one of the outstanding examples in the United States of an effective pollution abatement program. The success of this interstate compact demonstrates the great potentialities of interstate cooperation and the compact method in solution of interstate problems."

Address by Hon. Leverett Saltonstall, of Massachusetts, at Salute-to-Eisenhower Banquet in Philadelphia

EXTENSION OF REMARKS
OF
HON. EDWARD MARTIN
OF PENNSYLVANIA
IN THE SENATE OF THE UNITED STATES

Tuesday, January 24, 1956

Mr. MARTIN of Pennsylvania. Mr. President, on last Friday evening, our very distinguished and able colleague from Massachusetts [Mr. SALTONSTALL] delivered an address at Philadelphia. I believe the address should be carefully read by all Members of the Senate. Therefore, I ask unanimous consent that it be printed in the CONGRESSIONAL RECORD.

There being no objection, the address it be printed in the RECORD.

Philadelphia holds many happy memories for me—of friendships and hospitable homes, of winning 2 college-crew races in 1 day on the Schuylkill—but by far the most pleasant of all is my friendship and daily contact with your two fine Senators—ED. MARTIN and JIM DUFF. Serving first as a governor with ED MARTIN, I have worked with him over the years in Washington. Later JIM DUFF and I became friends when he was your governor. That friendship and respect for him have increased in Washington. You have two conscientious, hard-working men of integrity and experience in Government representing you in the United States Senate.

This is a great week for Boston and Philadelphia. First we celebrate the 250th anniversary of Benjamin Franklin's birth and now I have the pleasure of joining you in your salute to our great President—Dwight Eisenhower.

Boston was the birthplace of Benjamin Franklin; Philadelphia became his chosen place of home and business. I suppose, when every true American thinks of Philadelphia, he hears the Liberty Bell. How symbolic is that bell in the history of our country.

Back in Massachusetts there is a story that in the latter years of Benjamin Franklin's life, not long after the town of Franklin, Mass., was incorporated, its people wrote to your great citizen and said they were building a steeple for their townhall. They told him they would be honored if he would contribute the bell to be hung in that steeple. Franklin, who was abroad at the time, replied characteristically: "Sense is better than sound," he wrote. "I am sending you a gift of books from London."

I tell this little story not to minimize the proclamation of "liberty throughout the land and unto all its inhabitants thereof" that was made by the Liberty Bell, but, being a Massachusetts man, I take some pride in the fact that Benjamin Franklin, born in our city of Boston, placed sense—good Yankee commonsense—above the ringing sounds of a fine bell.

Tonight we are gathered together to salute another great American, as great in his day as Benjamin Franklin was in that vital period of our history between 1750 and 1800. We are gathered to pay our tribute to a man of action, of great commonsense, a man of character, integrity, and patriotism.

There is perhaps no citizen within our memory who, as a civilian and as a soldier, has served our country more faithfully or with greater effect. It has been the good fortune of few to equal his career as a soldier, a diplomatic administrator, and a statesman. It is the good fortune of few to qualify as his equal in the highest office of our land.

As a soldier he was the leader of the combined free forces in fighting Hitlerism. As a soldier and as a diplomat, he was the first Commander in Chief of NATO, organized to preserve the peace that had been won at such great sacrifice and to build up a greater security against a future world war.

Now as the President of our country, he has the responsibility not only of being the Chief Executive of the United States, but also of being the head of the country recognized as the leader of the forces of freedom as they seek greater peace in the world. Truly, today, as the President of the United States, chosen by the people, Dwight Eisenhower has proved himself a political leader of enormous ability and personal appeal.

So, tonight we render him our salute. In so doing we rededicate ourselves to the task of maintaining peace in the world, achieving greater prosperity and more happiness for the people of our country. With pride we believe that he is a man fit to walk beside Benjamin Franklin and those other defenders of our freedom and our future, whose names and public service are engraved on our history.

Recently Mrs. Saltonstall and I completed a trip that took us into many countries as we went around the world. In almost every one of those places I saw their leaders and each time the first question that was asked of me was, "How is your great President? We hope he is getting well rapidly. We need him in his sincere effort to strengthen our security and the peace of the world. We need him as do you."

Let's look at the record as the late Governor Smith, a Democrat, used to say. But let us look at the Eisenhower record. Let us recall for a moment those objectives which persuaded Eisenhower to make himself available as a candidate for the Presidency.

The most appealing issue of the campaign of 1952 was to end the war in Korea. Eisenhower promised to do his best to do that. It has been ended.

He declared his firm intention to rout Communists out of our Government and out of our industrial life. That routing of the Reds has gone forward actively, relentlessly, and generally successfully.

Corruption in public service has been stopped. That record speaks emphatically for itself.

As a candidate Ike resolved to eliminate economic controls and thereby unshackle our economy, which he was convinced could realize undreamed-of potentials.

The year 1955 with its many new records proves the wisdom and success of that policy. Nineteen fifty-five shows a gross national product of almost $387 billions, 6 percent above 1953's, the all-time high. The average weekly wage is running as high as $76, with 63 million people employed. Just think of it. We built 7,250,000 new automobiles and installed some 7,600,000 new TV sets in 1955.

Candidate Eisenhower, as he promised faithfully to do, has established a climate in labor relations in which our industrial effort has reached these unparalleled successes because there were fewer major labor disputes and greater progress and achievement by both management and labor than has been recorded in several decades.

He pledged himself to reduce the Federal payroll, to balance the budget, and to reduce, if possible, high taxes, and thus increase the

ability of men and women everywhere to have more to spend for their needs. Taxes were reduced, and we look to a balanced budget and to an ever-increasing efficiency in government.

You and I supported the President in his campaign because we believed in a restoration to the States and to the individual communities of those rights and authority properly due them. The events of every passing day give witness to this respect for local decision and local control of affairs in every area of government where the best decision is the decision made by men and women close to home.

In this era where the free peoples must be constantly alert and where strength, firmness, and unity are the foundation upon which we must build greater security and enduring peace, Candidate Eisenhower pledged a reordering of our defensive posture. As Commander in Chief, he has built, and is continuing to build, a defensive force on the ground, in the air, and on the sea that has the ability to meet the challenges of the nuclear age in which we live, and yet at the same time achieve that posture with a due respect for the health of the economy over the long pull. That is the only way upon which the foundations of our military security can be maintained.

The Air Force program—to reach 137 wings at the end of fiscal year 1957—is a little ahead of schedule, and we will have 131 wings at the end of the present fiscal year. All medium bomber wings of the Strategic Air Command are now equipped with six-jet B–47's. These B–47's, together with a very large fleet of KC–97 tankers and an extensive overseas base complex, constitute our principal ready striking force. Our forces today represent a deadly deterrent for any country considering an attack on us because of their strength, their modern equipment, and their ability to retaliate promptly with devastating effect.

Truly, Korea, communism, corruption, and change were the issues of the campaign of 1952. These issues brought pledges of action—pledges that have been kept.

What everyone of us wants in government is confidence in the integrity, admiration of the character, and reliance upon the word of those whom we vote into high office. Three years have proved that President Eisenhower and the men whom he has chosen to work with him have kept his campaign promises to a remarkable degree—not an easy thing to do at any time, and even more difficult in these days, when crises loom suddenly at home or abroad in the East or in the West.

Now, as men and women who love our homes, are proud of the places in which we live and work, we face the challenging job ahead. We face our responsibilities determined to see it that we have a government in which we have confidence, one in which we can take real pride.

On such an occasion as this, when we salute our great President—Dwight Eisenhower—it is fitting and proper that we take a close look and a long look at that job ahead.

It is right that we ask ourselves why it is we want to maintain strongly the ideals and the policies of Ike's administration. It is timely that we rededicate ourselves right now to this program which has as its heart the maintaining of peace in the world and the creation of greater prosperity and progress for all in this great country of ours.

To maintain our security and to win greater opportunities for peace in the world is our primary objective for the future. Our success in that endeavor depends upon two great fundamentals. First, the effective enunciation of, and the persistent endeavor to carry forward, an imaginative, sound, sensible, long-range foreign policy—not to react any more than is absolutely necessary to day-to-day crises that may occur, but, rather, to sustain the confidence of the free peoples of the world in what we are trying to accomplish over the years. This requires careful planning at home and effective action on those plans in everyone of our embassies and consulates throughout the world.

I was impressed as I went around the world by the high caliber of the men and women working for us everywhere, sometimes under very difficult conditions. I was equally impressed by the knowledge that the people in these countries, as well as their leaders, have of us. They look to us for leadership. They admire us, they respect us, they envy us, and, naturally, they are going to try to get from us all that they think they can.

We on our part must give them confidence that we are going to stay with them in their efforts to gain real freedom and a better life. At the same time we must never let ourselves forget that the cornerstone upon which our foreign policy is laid is that action which will provide greater security and a better opportunity for ourselves here at home. That is the aim, I know, of the Eisenhower administration.

To back up that long-range policy, we must be strong in a military sense. Our forces must be equipped with the most modern weapons available. There must be sufficient young men efficiently trained so that they can carry out their duties with the least possible danger to themselves and for the maximum defense of this Nation. This goal requires constant research and experiment, efficient production, and an ever-increasing expense as weapons become more complicated and destructive.

In this time of tension, in this atomic age, we can no longer plan, as did the great Confederate general, Nathaniel Bedford Forrest, just to "git thar fustest with the mostest." Ours is the tougher job of "gittin thar fustest with the mostest of the bestest," if any aggressor takes the field.

Manpower alone will not prevail in modern warfare. Nuclear weapons alone will not achieve victory. What is required is a shrewd, skillful, sensible balancing of the two in such a way as to make most effective use of our Armed Forces in order that they in turn may offer the greatest possible deterrent power, whenever and wherever required. No one realizes this more clearly, no one is more determined to see that this military stature is maintained effectively than is the man in the White House today.

These are the facets of the administration concerning security and peace that play upon us at home and concern many, many peoples in many sections of the world today.

But, basic also to our own future, is the progressive and honest administration of those obligations of government which we have determined over the years to be those responsibilities that we believe government can bear better for us than we can for ourselves at home, in our towns, or in our States.

Time does not permit me, nor would you desire me to discuss these questions 1 by 1. Let us remember that the President, as a good administrator and as a loving father and grandfather, understands these problems as does every man and woman in his own home. I think they are best expressed by the statement that the President made to the 48 Republican national committeemen on September 10, 1953, in Denver, Colo., when he said: "If we are for the people, which means for the individual as such, we go first to the 10 first amendments of the Constitution—the Bill of Rights. That was written for the people. That Bill of Rights does not guarantee to each of us a profitable living. It guarantees to each of us an equal opportunity with all others to earn our living for ourselves and for our families, and to protect our future.

"We could discuss further what we mean by 'for the people,' but I refer to another quotation of Lincoln's which was generally to this effect, 'The function of government is to do for the people what the individual cannot do at all, or do so well for himself, and in all those things which the individual can do for himself, the government ought not to interfere.'"

What I have had to say about our national defense, our foreign policy, our sound economy, applies to these words of the President. There is equal application of those words to be found in the vigorous attack which this administration is making on the problem of school construction and of highway construction, in the fields of health, education, and welfare, with most immediate stress placed upon amendments to our social-security laws in order that more Americans may be included within their benefits.

It is to be found, inspiringly, in the historic, unprecedented progress that has been made in the winning of civil rights for ever more Americans. It is revealed, dramatically, in this administration's blueprinting of further campaigns of conscience against those restrictions and discriminations which have been anything but American.

When we salute President Eisenhower tonight, we salute one who believes in our history and our traditions and in our continuing progress and growth, who thinks not of himself but of what he, as long as he is in the White House, can do to better the life of each and every one of us. When we salute our President, we salute a man who has great understanding of world problems and a unique experience in dealing with the leaders of the world. He wants peace. He wants progress and he will do everything in his power to continue to work for that peace and that progress.

His epochal speech to the General Assembly of the United Nations in December 1953 radiated that confidence and his sincere determination to work toward these objectives among the peoples of the world, whatever their racial origin, wherever they may live.

Truly, we can go home tonight firm in the realization that this administration is determined to achieve peace with honor, peace with security, peace with prosperity, peace with progress, and a leadership of our affairs at home that will offer greater opportunities for every American.

This dinner is of and by itself a salute to a great American. It represents also a gathering of patriotic citizens who recognize that still more is required of each of us—in our hearts, in our minds, and in our daily devotion to duty as we tackle the job ahead under the leadership of this man we salute tonight. That job can be done and will be done.

Let me conclude with the words of that great man who was born in our Boston 250 years ago this week and became your great Philadelphian:

"It is undoubtedly the duty of all persons to serve the country they live in, according to their abilities. Let it suffice, that I now take up a resolution, to do for the future all that lies in my way for the service of my countrymen."

Dwight D. Eisenhower fulfills admirably today that patriotic sentiment of Benjamin Franklin's spoken over 200 years ago.

Anniversary of Ukrainian Independence

EXTENSION OF REMARKS

OF

HON. ANTONI N. SADLAK

OF CONNECTICUT

IN THE HOUSE OF REPRESENTATIVES

Tuesday, January 24, 1956

Mr. SADLAK. Mr. Speaker, on Sunday, January 22, Americans from all

parts of the Nation celebrated the 38th anniversary of the independence of the Ukraine.

Geographically, the Ukraine is part of the Union of Soviet Socialist Republics, but historically has stood as one of the primary bulwarks against Soviet imperilism, throughout the centuries. This unconquerable desire for national freedom is still imbued in the hearts of Ukrainian patriots whose sufferings at the hands of Communists dates back to the destruction of its churches and the Red sponsored famine of 1932–33.

The German invasion of World War II brought short lived hope for these freedom loving Ukrainians, who soon were persecuted and dominated by another imperialism. But even now, the Ukrainian Resistance Army continues to fight against Soviet attempts to destroy the peoples' burning desire for independent freedom. Brutal purges and deportations ordered by Moscow have liquidated countless numbers of Ukrainian leaders, but the spiritual and moral resources of the people produce immediate substitutes.

Ukrainian culture, centered in the capital city of Kiev, continues to flourish, and historically has been the moving force behind the nationalistic spirit of the people. Its centuries of traditions and customs represent the indefatigable struggles of a country destined to possess the same freedom enjoyed by Americans in the United States.

With over 40 million people, the Ukraine is the largest non-Russian nation behind the Iron Curtain, and should the Communists ever attempt actual aggression, Ukrainians can be counted as our most important and natural allies, in defeating Russian imperialism.

The struggle and goals of this freedom loving nation, like that of our forefathers should not be ignored. The continual free existence of the United States and other independent sovereignties, is contingent upon the establishment of those liberties throughout the family of nations. The Ukrainians have proven their right and demonstrated their ability to express their own free, independent voice in our family of nations.

Acadian Bicentennial Year

EXTENSION OF REMARKS
OF
HON. EDWIN E. WILLIS
OF LOUISIANA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, January 24, 1956

Mr. WILLIS. Mr. Speaker, we of Louisiana feel very proud of the Acadian bicentennial celebration staged so successfully in our State during 1955. This year-long observance opened with special events at the New Orleans Sugar Bowl on New Year's Day and was climaxed with a brilliant finale in Longfellow-Evangeline State Park, certainly one of the most beautiful public parks in the country, at St. Martinville, my hometown. Here the talents of several hundred of their descendents were utilized in honoring the 200th anniversary of the migration of the Acadians to Louisiana from Nova Scotia, and large numbers of the State's outstanding musicians and dancers joined in the presentation of a most colorful folk festival.

The bicentennial year included a visit to Louisiana by a delegation from French Canada, a pilgrimage to the Mother Church of the Acadians at St. Martinville, and a reciprocal good will trip to Nova Scotia by a large party of prominent Louisianians.

Other events added to the great interest shared in the observance by thousands of visitors from throughout the United States and from abroad, who helped to make this the greatest statewide celebration in Louisiana's history.

We are grateful for the recognition given the bicentennial by Congress in adopting a concurrent resolution which I had the privilege of introducing in the House and which was sponsored in the Senate by United States Senators ALLEN J. ELLENDER and RUSSELL B. LONG, of Louisiana. A similar measure was offered in the House by Representative T. A. THOMPSON.

The concurrent resolution stated that "the Congress of the United States joins the people of Louisiana in commemorating the bicentennial anniversary of the migration of the Acadians from Nova Scotia to Louisiana and other areas, and pays tribute to their spirit of courage, perseverence, and loyalty that has inspired the Nation."

Appreciation to all who had a part in the program has been expressed by Dr. Thomas J. Arceneaux, president of the Acadian Bicentennial Celebration Association. In behalf of the executive committee and himself, Dr. Arceneaux, dean of the College of Agriculture at Southwestern Louisiana Institute, Lafayette, a State college which is doing much to preserve the French language and picturesque Acadian customs in that section, points out that national attention has been centered on the State and fitting honor has been paid to a people who have contributed so much to Louisiana.

Flood Control Protection for Worcester, Mass.

EXTENSION OF REMARKS
OF
HON. HAROLD D. DONOHUE
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Tuesday, January 24, 1956

Mr. DONOHUE. Mr. Speaker, I should like to include at this time the statement I presented last Thursday to the Public Works Subcommittee of the House Appropriations Committee at their hearing on the supplemental appropriations bill.

The statement follows:

Mr. Chairman and members of the committee, I am very grateful for the opportunity to appear even briefly before you today.

Mindful of your tremendous committee schedule and burdens, together with your personal office duties, I have no intention of entering upon any long, extended discussion or recitation of figures on general flood control projects with which we are all concerned. I realize full well that statistical facts and figures are available to you from our efficient Corps of Army Engineers. Also, my most able and distinguished friend and colleague, from my neighboring district, Representative PHILBIN, is here to speak on behalf of the Massachusetts State Flood Control Committee, and no one can explain our overall flood control problems better than he.

I would, therefore, like to confine my remarks at the moment to the particular project, commonly described as the Worcester Diversionary Tunnel, so vitally necessary to the life, safety, and property protection of the citizens of my native city and for which, as you all know, there has been included a sum of $60,000 in this bill to enable the Army engineers to complete a resurvey of the area and planning involved.

Very briefly, the project, in essence, provides for an intake structure for flood water to enter and then a tunnel and channel, with a total length of slightly less than 3 miles. Its purpose will be to conduct part of the flood water flow that normally passes through the city of Worcester directly into the Blackstone River lying south of Worcester. As I have said, the specific technical facts and figures are before you in the reports.

Now, while it is true that Federal participation in this project was authorized in 1944, it is not so true to have the impression casually conveyed and casually accepted that our city refused or turned the Federal authorization down. No official city action of that nature was ever taken. It is more completely the truth to realize that the intention of the city was to hold the project in abeyance because of the imminence and impact of staggering war costs. Also, no one then, including the Army engineers or our best weather experts, could foresee that by 1955 our fair city and area would be adjudged by our professional weather people to stand in the "path of hurricanes." It is indeed idle to currently speculate on what could have been past done, and it would be a punishment beyond the fault, if any there was, to reproach a people for the order in which they listed local problems for solution, when the threat of repetitive natural disasters could not be then scientifically known or suspected. Those of you who come from areas that have been unfortunately visited by these floods and other natural disasters are, I am sure, well aware of the practicalities of human nature which often impractically delay decisions, and in the light of the terrible tragedies and damage that descended upon us through our floods of August 1955, and the widespread destruction and ruin similarly wrought upon so many other sections of the country in most recent months and years, will, I am confident, be sympathetic toward any community in the Nation seeking to sensibly protect themselves from any additional sudden catastrophe from the changing weather, winds, and patterns.

The city of Worcester governing body has already taken the official action required for municipal participation in cooperation with the Federal Government. The State legislature is at this moment attempting to expedite the enactment of the necessary legislative approval of which you must be assured. No one knows better than we do that the legislative machinery sometimes may grind with exceeding slowness and irritation. I am informed that the particular measure includes all of the projects proposed for the State of Massachusetts and some in cooperation with neighboring States and its comprehensiveness further enables us to understand a reasonably lengthy consideration of an inevitably cumbersome measure. However, I am also informed that the Governor himself and the leaders of the legislative

branches are doing all in their power to speed the action and if absolutely necessary, to formulate and approve a special bill for our particular Worcester project. May I, therefore, pray your patience on this score, with the assurance that the requirements of the law and this committee will be met at the earliest possible moment.

The essentiality of this project to the continuing welfare of Worcester is undoubted by anyone. Prayerfully remembering the personal sorrow and human tragedy which cannot be materially valued, it has been reliably but conservatively estimated that the presence of this tunnel during our most recent flood disaster would have prevented approximately $15 million of the property damage that was done. The Army Corps of Engineers has repeatedly and authoritatively stated that the tunnel is a vitally needed protection and it will do the job within reason. They have also testified that the project is well justified economically, inasmuch as the benefits that will derive are far greater than the cost and that the ratio of annual benefit to annual cost is exceedingly good. The President has included and requested the funds for this flood control work, and in order to initiate the resurvey that must be accomplished before actual construction is started, which is planned for 1957, there remains only the approval of this committee; without your approval, the whole project could encounter tragic disruption.

I most sincerely urge that you give this item, the only one in our area for which funds are here allotted, your very sympathetic consideration, and if your precedents and policies demand, you will approve it with the proviso that the resurvey not begin until the assurances required are of record, and they will, I pledge, be presented for your official technical record within the very reasonable future.

May I thank you, Mr. Chairman and committee members, for your courtesy and attention.

A Well-Deserved Tribute to Our Great President

EXTENSION OF REMARKS

OF

HON. DANIEL A. REED

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Tuesday, January 24, 1956

Mr. REED of New York. Mr. Speaker, Secretary of the Treasury George M. Humphrey, a great American statesman, has paid a perfect tribute to another great American statesman, President Dwight David Eisenhower.

Under leave to extend, heretofore granted, Mr. Speaker, I am inserting in the RECORD the address of the Secretary of the Treasury George M. Humphrey delivered at the New York-New Jersey Salute to Eisenhower dinner at Madison Square Garden, January 20, 1956:

We are here tonight to salute the greatest American of our time—Dwight David Eisenhower.

History may ultimately record him as the greatest man of many times, but it is clearly evident at the moment that he is beyond doubt the outstanding figure in the world today.

Never before in history have the hopes of so many millions of people throughout the world been centered on the shoulders of one man. Never before in history has a man stricken with illness had the fervent prayers for his recovery from so many millions of people all over the world.

One reason for this great attachment of so many millions to our President is the fact that he has become a symbol for peace. A military man for most of his life, President Eisenhower has fought valiantly for peace and against war during the past three decades.

His military service in the Philippines and later in Africa and in Europe brought him into intimate contact with the people of many nations. His warm personality, remarkable good will, great wisdom, enormous patience, and devotion to duty have become well known to both the leaders and the ordinary citizens of many countries on a close personal basis.

IN WORLD WAR II HE WAS THE CONQUERING HERO

In World War II he was the conquering hero who led the forces which repelled the armies of the dictators and eventually won peace and freedom for the overrun nations. He returned to Europe to head the drive for a NATO structure again to protect the free world from another threat to peace and freedom.

During the last 3 years as President of this great land, President Eisenhower has become increasingly in the eyes of the world the great hope for a just and lasting peace. He has become the embodiment of the fervent hopes of millions of the world's people for the eventual day of just peace among nations.

So, I am humbly proud, and I know that you too are proud, to be among the vast numbers of American citizens who tonight are saluting President Eisenhower.

His character is reflected in the objectives he has held and worked for during his term of office and the depth of his sincerity has imbued his associates with those same objectives and enthusiasm for their accomplishment. His objectives are few and simple. They can be characterized with but a single word—progress—steady, insistent, persistent progress in three fundamental directions.

Toward a just and lasting peace throughout the world.

Toward a widespread and continuing prosperity.

Toward greater freedom for the individual in his pursuit of happiness and protection from the ravages of adversity for all mankind.

SEES HIS IDEALS ROOTED IN PRACTICABILITY

His high ideals are firmly rooted on the solid foundation of practicability. He is no idle dreamer. He wants and works for his dreams to come true. How far he has succeeded is history, but it is worth reviewing for just a few moments tonight.

His accomplishments toward peace have recently been described at length in the state of the Union message to the Congress. The problems are enormous. The broad highway to accomplishment is not clear and it is beset with frustrations and difficulties at every turn, but the bare fact remains that within a few months after he took office the shooting stopped in Korea and no American mothers have had to worry about their sons and daughters since then in a shooting war.

Crises continually beset us and will continue to do so but we can all rest assured that we have a wise, cool head directing a firm hand on the tiller to steer our ship of state as carefully as it can be done between the rocks and shoals of war and aggression, but forward—always forward, pressing forward toward a just and lasting peace.

His accomplishments toward a widespread and continuing prosperity are here before our eyes to see on almost every hand. Only a part of our farm population is still suffering from the burdensome surpluses accumulated under past laws ill devised to bring on anything but the very burdens which are now bearing so heavily on farm crops, production, and prices in some fields. Practical, workable relief in that area is of first concern, and no problem is receiving greater attention. But it is the result of an accumulation of years of bad practice and cannot be soundly corrected all at once.

Everywhere else on almost every side we are having the greatest employment, the most jobs, the best pay, the lowest percentage of people unemployed, the highest earnings, and the best times, by any measure, that this country has ever seen with new high records in almost every line.

It is no accident that this great economic achievement has come about under the leadership of President Eisenhower. We have achieved prosperity without the bloody cost of war, and without the false promise of inflation. The American people today enjoy not only a record economy but a sound one. This achievement in economic integrity is no surprise to anyone who knows the President. It reflects the integrity of the man.

It is a subject, next to peace, that is closest to his heart, and closest to your welfare.

I am asked many times why we in the Eisenhower administration have given such very great importance to balancing the budget and stopping inflation.

Balancing the budget in prosperous times is the prime requisite of financial integrity.

We have made financial integrity and stability in the cost of living, one of our foremost goals.

We have not done this out of any academic concern. It isn't just a matter of accounting or bookkeeping or businessman's fetish.

Money has no value except as it affects people. We are so concerned about the value of the dollar because it is the people's money we are collecting, spending—and defending, and because stability in the cost of living so vitally affects each of us.

WE ARE DETERMINED TO AVOID INFLATION

We are determined to avoid inflation, as well as to prevent deflation. Either can jeopardize the happiness, the hopes, and the well-being of all the 167 million people of this great Nation.

Inflation can steal away your savings, your pension, and the value of your wages.

Deflation can endanger millions of jobs.

The integrity—the staying power—of the value of the dollar is of primary importance to each and every one of us no matter what our condition. Rich or poor—old or young—on a salary or a daily wage, or living on a pension or an insurance policy, we are all concerned, not only as it affects our current cost of living but our very jobs are at stake.

A job is the most important thing in America.

Whether you are working for yourself, in a profession or in a factory, in a mine, in transportation, in some form of service, or on a farm, it is all the same.

To have a job you must have tools, power and machines to work with, and someone must save and invest to supply them. We have a rapidly growing population and over a million new jobs must be created every year to supply our needs. That means new tools—new factories—new mines—new trucks and trains, and all kinds of things to work with.

That means more and more investment to buy them; and who will invest if the value of their money is uncertain? Who will buy the big bond issues? Who will make the mortgage loans? You all are involved. Not only is your job at stake but your home is also. Who will make the loans that permit you to buy your home or your car on time if the value of money is uncertain?

MILLIONS OF YOU ARE ALSO INVESTORS

Moreover, millions of you are also investors. It is not the rich who supply the funds today. The great investors in this country are not only the millions of small individual investors, but are the small savers who through

the insurance companies, the pension funds, the savings banks, union and fraternal funds, and the other ways of saving buy the stocks, bonds, and mortgages and make the other loans.

Sound money is the incentive that keeps men doing their best. That spurs their imagination to do research and make new inventions. That underlies our great industrial machine. That will modernize the old jobs and make the new jobs to make the new and better and cheaper things we all need to continually increase our scale of living. That will induce the savings and investment of savings of the millions of Americans who have confidence in our free system and the soundness of our finances.

These are the material reasons why a balanced budget, financial responsibility, and the soundness of the dollar are of fundamental importance to each and every one of us, no matter who we are, nor where we are.

Bad money, like a bad apple, will rot the whole barrel.

A government that adopts inflation as a policy to achieve its ends leads its people into false land.

FALSE MONEY LEADS TO THE SLAVE STATE

When you tinker with a value so basic as the value of money—when you induce inflation and make it a policy to give the people more and more income of less and less buying power—falseness in all other things must follow.

The government which adopts a policy of inflation must preempt to itself an ever-growing web of other powers with which it can hide the falseness of its money and smother the complaints of the people as they see the buying power of their savings and life insurance being stolen away, as the prices of food, clothing, and shelter rise faster than more false money can supply.

False money leads to the slave state.

The buying power of the dollar dropped from 100 cents to only 52 cents in just 15 years preceding the election of this administration. But the long trend of inflation that had been eating away at the value of your dollar has now been halted, and there has been no significant loss in the buying power of the dollar now for over 3 full years.

This means that when your incomes are increased—and they are now at record highs—you have a real raise, not merely a raise to match the higher cost of living that was for so long the order of the day. This has been a real "Eisenhower extra."

WHO WANTS TO GO BACK?

You all remember their slogans in the last campaign "You never had it so good" and "Don't let them take it away." You can ask them now "Who wants to go back?"

Now how did this all happen? What were some of the specific moves by the Eisenhower administration which contributed to this result?

Total Government spending was cut sharply. Spending now is $10 billion under 3 years ago, and $14 billion less than had been planned by the final budget of the previous administration.

We at long last have balanced the budget, the surest index to thrifty management in a home, in a business, or in the Federal Government.

And, we have made the largest dollar tax cut in the history of this country. This great tax reduction of almost $7,500 million was a mighty assist in the transition from a wartime to a peacetime economy.

The Eisenhower administration has also accomplished much toward greater freedom for the individual in his pursuit of happiness and from the ravages of adversity. Artificial controls, rationing, price fixing, and all manner of directives and decisions from Washington were promptly removed in nearly everything but farm programs, where rigid laws prevented. Ten million additional people were included in social-security benefits. The minimum wage was increased. Additional health research is assisting in the prevention and treatment of disease. Large-scale integrated Federal road and school building programs are proposed. The scale of living of 167 million Americans is higher than ever in our history.

SAYS SLAVE STATES MULTIPLY ON INFLATION

These, then are some of the ways that the administration of President Eisenhower has contributed toward peace, defended the value of your work and savings, and increased your freedom of opportunity and free choice.

We can never take for granted the preservation of our free way of life. Only a people of high integrity can deserve freedom. No people, however great, can preserve integrity if it must transact its business, measure its worth, in a false, inflated currency. Prudence, thrift, honest work, and honest government must all go hand in hand.

And make no mistake about it. It is no coincidence that since the scourge of inflation was let loose on the modern world slave states have multiplied.

In the slave state, men do things under the lash of the whip of "do it or else." They have been robbed of the honest values that spur men in the free world to work, to save, and to build a better life. We are determined here on preserving those values, so that in our country men will never lack the incentive to do the things in freedom that make for a fuller and better life—and do them far better than they can ever be done in any slave state.

IN THESE TIMES OF DEADLY CONTEST

These basic incentives to honesty, thrift, hard work, and production cannot fail to inspire—as it has inspired—thrifty, hard-working government. And it cannot fail to preserve among our people those qualities of prudence, thrift, industry, and spirit of self-betterment that have made them the greatest and best provided people on this earth.

In these times of deadly contest between our way of freedom and the reactionary ways of the Communist slave state, it behooves us all to keep intact and vigorous all our qualities of greatness. Only if we do so can we remain a great beacon light of freedom and promise in the free world, an encouragement to all others to pursue our way of freedom, and avoid seduction into slavery.

The large measure of success in restoring freedom from war and financial integrity and progress in the pursuit of happiness for all the people are truly the proudest accomplishments of the great leader we salute tonight.

It reflects, as perhaps nothing else can, the basic honesty and high character of the President himself.

There is no more fitting time than this to pledge that we shall not falter in this great task, nor shall we ever be driven from it by men who would ignore tomorrow's doom for today's advantage.

There Is Need for a Long-Term Foreign Economic Policy

EXTENSION OF REMARKS

OF

HON. HARRISON A. WILLIAMS, JR.

OF NEW JERSEY

IN THE HOUSE OF REPRESENTATIVES

Tuesday, January 24, 1956

Mr. WILLIAMS of New Jersey. Mr. Speaker, there is a compelling need today, it appears to me, for a sound, long-term foreign economic policy as part of our foreign policy. Limited authorization for long-term aid would provide the President with the flexibility he needs for such projects as the Aswan Dam, which is of imaginative and dramatic interest to the people in the area it will affect. It is not in our national interest for the President's hands to be rigidly tied in this field.

Authorization is not appropriation, of course, and the Congress must retain its ability to review each year's requests. However, authorization would give renewed courage to our friends in the free world as demonstration of the fact that we are in this fight to win. The contest with the Soviets which we now face requires the ability for long-term planning.

I urgently hope the administration will maintain its position on this vital subject.

I would like to call the attention of the Congress to a statement by 17 House Democrats on this subject, made last weekend. May I also point out the eloquent editorial in this morning's Washington Post and Times Hearld, entitled "On Planning Ahead."

JOINT STATEMENT BY 17 DEMOCRATIC MEMBERS OF CONGRESS ON LONG-RANGE FOREIGN ECONOMIC POLICY

The attached release is issued by the following Democratic Members of Congress, including two members of the House Committee on Foreign Affairs—Congressmen A. S. J. CARNAHAN and HARRISON A. WILLIAMS, JR.—VICTOR L. ANFUSO, New York; THOMAS L. ASHLEY, Ohio; JOHN A. BLATNIK, Minnesota; RICHARD BOLLING, Missouri; A. S. J. CARNAHAN, Missouri; CHET HOLIFIELD, California; LESTER HOLTZMAN, New York; EUGENE J. KEOGH, New York; RICHARD E. LANKFORD, Maryland; EUGENE J. MCCARTHY, Minnesota; TORBERT H. MACDONALD, Massachusetts; ADAM C. POWELL, JR., New York; JAMES M. QUIGLEY, Pennsylvania; HENRY S. REUSS, Wisconsin; JAMES ROOSEVELT, California; FRANK THOMPSON, JR., New Jersey; HARRISON A. WILLIAMS, JR., New Jersey.

JOINT STATEMENT—FOREIGN ECONOMIC POLICY

The shift in the Soviet foreign policy from primary emphasis on military encroachment to emphasis on economic, political, and psychological penetration of the free world has been obvious for some time. A primary reason for the shift has been the success of the United States bipartisan policy of developing the military strength of the free world.

This success argues strongly for the continued maintenance of our military strength, but at the same time we must recognize the new challenge we face and develop policies to forward the free world's interests and combat the Communists' tactical shift. Indeed, we should recognize the shift of Soviet tactics as providing the West with a great new opportunity. If the contest between tyranny and freedom is to be pursued on economic, political, and psychological grounds, we have a clear advantage. Our system of political freedom and an expanding economy which benefits all is clearly superior to the Soviet system of regimentation and forced economic advance. But this advantage is ours only if we use it.

One of the best tools in the arsenal of freedom is a sound, long-range foreign economic policy. We must tell the world, through a statement of principle in the Congress, that America is in the fight for freedom to stay and that we are prepared to continue our offers of help to those free countries which are prepared to help themselves advance economically and politically toward freedom.

We therefore join in urging that such a statement of principle be written into the mutual security legislation this year. We believe this statement should make clear that it is the bipartisan policy of the United States to resist aggressive communism but also, and equally important, to further the opportunities of all men to realize their legitimate aspirations for freedom and economic progress.

Moreover, we look with favor on providing authority in this year's legislation for the President to make certain advance commitments of economic development funds for a period not exceeding 5 years. Within a reasonable limit this will increase, not reduce, the flexibility of our aid program by permitting the Executive to meet emergency situations as they arise.

We recognize, of course, that apropriations for each year's expenditures must and should be reviewed by each Congress. However, we believe a statement of the intent of the American people, speaking through their elected representatives, that we are in this fight to win would assist in offsetting the gains the Soviets are attempting to achieve in those areas striving for economic and political advancement. We believe our friends in those areas would take renewed confidence in their ability to resist Communist encroachment and their capacity to achieve their legitimate aspirations within the framework of freedom if they have tangible evidence that the United States is prepared to assist them as long as such assistance is necessary.

[From the Washington Post and Times Herald of January 24, 1956]

ON PLANNING AHEAD

It is unfortunate that Secretary Dulles' dance on the diplomatic brink has influenced the discussion of long-term foreign aid commitments. Reverberations over the magazine article about Mr. Dulles continue to demonstrate the baneful effects of the indiscretion, more because of the bald and smug overstatement that because of disagreement with the basic doctrine of deterrence of aggression. A return to perspective is not much helped by the assumption on the part of some of Mr. Dulles' champions that it was perfectly all right to release a campaign document which, incidentally, scared the free world, but that it is dastardly politics to question the wisdom and propriety of this sort of performance by the Secretary of State.

Be this as it may, the country simply cannot afford to let the discussion of its long-term interests in foreign affairs be diverted by massive retaliation against Mr. Dulles. Especially for that reason, the courageous statement of 17 Democratic Members of the House of Representatives in support of the principle of advance commitment of certain foreign aid funds is noteworthy and commendable. America's interest in economic aid as an instrument of free world policy goes far beyond partisan politics; and the Democrats' own record in supporting such aid against right-wing Republican opposition is creditable.

Critics can point to a good many instances in which narrow-minded actions within the Republican administration have worked against the very principles it is now promoting. Chalmers Roberts' story in this newspaper Sunday about how Burma was rebuffed last summer when it sought to pay for American technical aid with surplus rice pointed to incredible shortsightedness. It is in just this sort of problem—the adaptation of techniques to suit the needs of individual countries such as Burma—that the Soviet Union has scored a propaganda success.

Administration mistakes quite apart, however, the new Russian campaign designed to neutralize large areas of the free world faces this country with an immediate challenge. Obviously, even so strong a capitalist economy as ours could not stand the cost of attempting to counter every Machiavellian maneuver of the Soviet masters. They are free to promise without regard to public opinion at home or the needs of their own people. If we are to meet the challenge we need to place our emphasis, not on efforts to outbid the Russians frontally, but on skillful application of flexible and selective techniques.

Beyond the grant-and-loan type of aid, we probably ought to devise means of absorbing the surpluses of the countries we are trying to help, either through preclusive buying or a sort of brokerage system. But long-range commitment authority, although it is by no means the whole answer, is indispensable to a flexible approach. We ought to be in a position to encourage countries we are trying to help to plan ahead on specific projects of open economic benefit, such as dams and roads, with the assurance that they can be carried through.

The fact that one Congress cannot bind another need not prejudice this kind of flexibility if legislators will adapt the military aid contract authorization formula to the economic aid program. New appropriations would always be subject to congressional check. Economic warfare of the sort now forced upon us requires broad advance planning of the sort that would be impossible on a year-to-year basis. The economic challenge will remain long after the 1956 campaign and Mr. Dulles' boasts have been forgotten; and this is the point that both the administration and Congress need to keep in mind.

A New Life for Old Cities

EXTENSION OF REMARKS

OF

HON. THOMAS J. LANE

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES

Tuesday, January 24, 1956

Mr. LANE. Mr. Speaker, under leave to extend my remarks, I wish to include the following address which I delivered over station WMEX, Boston, Mass., on Saturday, December 17, 1955.

The address follows:

A NEW LIFE FOR OLD CITIES

American cities are faced with a serious challenge.

That challenge is: How to do the modernizing job that has been postponed time and time again, until now it can be postponed no longer.

Cities have not yet broken with the outmoded past. In many cases they have not succeeded in adjusting themselves to the present. Few of them are thinking of the future.

The downtown areas of cities were designed for a bygone age. Every development since then has been expected to fit into this rigid mold.

Of course this has been impossible.

Cities are belatedly waking up to the fact that they must adapt themselves to the needs of motor cars and electric power. They cannot expect progress to operate in the channels and according to the patterns that were good enough for the 19th century, but are inadequate for the dynamic needs of today.

Both people and industries are in flight from the cities to the suburbs.

A big city like New York tried to meet the challenge by vertical development but this has obvious limitations.

Industry cannot function in skyscrapers.

And huge apartment houses are not the best places in which to bring up families.

People want more room for living and more room for working.

When a conservative organization like the United States Chamber of Commerce recognizes the problem as urgent, we can believe that it is.

The Federal Government has alerted itself to the problem by making some Federal aids available for the redevelopment of cities. More help will be forthcoming, as the pressure for change becomes inevitable.

The Chamber of Commerce of the United States, as a result of an exploration of community problems by local chambers, has issued an urban-development guidebook which is a pioneer in its field.

It is recommended for all civic-minded people who are interested in the problems of community growth and change.

As the chamber observes, and I quote: "For many generations, the physical structure of the city remained the same. It had rectangular blocks with narrow building lots on them. It was designed to be compact. Its supply of power and its means of transportation made compactness necessary. The waterwheel and the steam engine, the horse and buggy, and foot travel, did not permit a community to spread out. At the turn of this century, the motor age and the age of electric power began to pull apart the time-honored city structure. The radius of men's activities multiplied several times. Today, after 50 years, our cities are in an urban crisis. Basically, this crisis is created by the process of finding more room in which to do things. But we cannot get more room within the old structure of our cities. These structures have to be broken apart and recreated, and this is what we are in the process of doing. As a result of our urban crisis, a new community is emerging out of the old community."

Congestion, blight, inadequate public finance—these are the three major headaches of every city and town.

The typical community is threatened by suffocation.

Take one example.

Worcester, Mass., had a population of about 100,000 in 1900. By 1954 this had more than doubled. For transportation, at the turn of the century, Worcester had 16,000 horses. By 1954, with the same downtown street layout, over 67,000 motor vehicles were crowding for passage, and at a faster speed.

New York City has estimated that traffic delays cost its citizens more than $1 billion a year, or about two-thirds of the city's budget.

This is driving business, industry, and residents out of town, lowering property values and damaging the tax base.

The third factor, urban blight, may be defined as deterioration. It affects commercial and industrial properties, as well as residential. This failure to maintain properties or improve them, makes them less inviting for use. Neither people nor industries will put up with rundown houses or factories.

Nearly every city or town in the country is faced with increasing difficulties in its public finances, frequently amounting to crises. Hardly enough revenue is coming in from the one source—real-estate taxes—to keep up municipal services. The result is a shortage of funds to cope with the problems of congestion and blight.

In the last analysis, it is up to all the people of a given community to cooperate in the renovation of their city or town, so that it will keep step with progress.

Of course, a wide base of citizen participation is necessary to prevent any few individuals or small groups from exploiting a

city's redevelopment program for their own selfish interests, instead of working for the community at large.

Since the early 1930's, most American cities have been receiving direct financial aid from other governments, but principally from the State government. This aid most commonly takes the form of shared taxes and of annual grants, to be used mainly for highways, public welfare, and schools.

Since 1949, direct Federal financial aid has been available for slum clearance and urban redevelopment. The Housing Act of 1954 has considerably widened the range of Federal participation in dealing with slums and blighted areas.

The Congress, in providing funds for urban renewal, emphasized the fact that the communities themselves must assume the main initiative and responsibility.

There is no justification for Federal assistance except to cities which will face up to the whole process of urban decal and undertake long-range programs.

As soon as a community proves that it has developed a so-called workable program for dealing with the problems of slums and blight, it may qualify for the following types of Federal aid:

1. The urban renewal service. The chief purpose of this service is to provide technical and professional assistance in preparing the workable program, and in planning and developing urban renewal programs.

2. Advances for surveys and plans.

3. Temporary loans for urban renewal projects.

4. Definitive (long-term) loans for urban renewal projects for use when project land is leased rather than sold for development.

5. Capital grants for urban renewal projects—up to two-thirds of net project cost.

6. Special grants for demonstration projects in urban renewal—also on a two-thirds basis.

7. Special grants for urban planning assistance. Of importance to the smaller cities and towns and to metropolitan areas, in the field of community planning.

8. Special provisions for FHA mortgage insurance to provide easier financing for building or rehabilitating residential property.

9. Special mortgage-insurance provisions to facilitate construction or rehabilitation of low-priced residential accommodations to rehouse families displaced, either by urban renewal projects, or by other governmental action.

10. Provision for low-rent public housing to be used in connection with rehousing displaced families that cannot pay for adequate private housing.

In cases where blighted housing is redeveloped to commercial or industrial use, of course, the revenues received by the city are usually substantially greater than would result from residential use of the land. This, in turn, eases the load of all other real-estate taxpayers.

Project treatment of blight often benefits the community by helping keep its central area economically strong by removing an important cause of the migration of residents, business, and industry to areas beyond corporate limits. In many instances, those who move would prefer central-area locations except for nearby unpleasant or profit-inhibiting conditions.

In many instances, the judicious selection of project areas near the downtown district, and the careful replanning of land uses and street patterns in these areas, serves to loosen up and spread out the area and thus provide more space for traffic movement and for parking.

Slum areas are not only firetraps, health hazards, and traffic bottlenecks, but cost a city more in terms of municipal services, than they pay in taxes. When torn down and replaced by modern facilities tailored to the automobile age, they not only pay their share of the tax load, but considerably more.

Sacramento, Calif. (population 163,000), is an example of a city that is working hard on slum clearance, the elimination of traffic congestion, and in the establishment of industrial areas to provide locations for new industries.

How is this being financed?

The Sacramento Redevelopment Agency is pioneering a new type of revenue bond which is permissible under the California community redevelopment law. It is expected that this bond arrangement will provide the necessary one-third local grant-in-aid which, combined with a two-thirds Federal grant, will meet net project costs.

These bonds will be secured primarily by the increased tax revenue derived from the new buildings in the redeveloped project, which may be pledged under California law by the city council to pay local cost of that development project.

In Nashville, Tenn., the congested central business district is not far from the State capitol buildings and grounds, but has long been separated from them by residential slums and blight. The rundown area of about 70 acres is now being cleared for redevelopment, mainly for commercial use. Improved highways and off-street parking will ease the traffic flow. It is expected that, within a few years, the business district itself will occupy substantially more space than at present. This will mean greater economic activity and greater income, for a city that is liberated from the seedy slums that once held back its progress.

There is no city or town in the United States that cannot improve itself if its people cooperate in a program of urban redevelopment.

We have some public and private means to do the job.

If necessary, we can devise new and better ones.

But any means unused are as good as none.

A new life for old cities can be created only by citizen interest and citizen action.

The 38th Anniversary of Ukrainian Independence

EXTENSION OF REMARKS

OF

HON. JOHN D. DINGELL

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

Tuesday, January 24, 1956

Mr. DINGELL. Mr. Speaker, January 22, 1956, was the observance of the 38th anniversary of Ukrainian independence. This day offers the American people a wonderful opportunity to reaffirm their faith in the eventual liberation of the Ukrainian nation from Communist tyranny.

Freedom has been eliminated in the Ukraine. The Soviets have denied the people their civil liberties and have destroyed their democratic institutions. The objectives of the Soviet regime are obvious, for with the denial of human rights and the destruction of Ukrainian culture Moscow hopes that resistance to tyranny will be crushed.

Tangible evidence that despotism exists is the eyewitness testimony of mass murders, starvation, and persecution received from Ukrainian victims of Soviet atrocities given to the House Select Committee on Communist Aggression a couple of years ago.

However, despite these ruthless tactics employed by the oppressor, the Ukrainians have remained faithful to their homeland and its traditions and continue to fight for their ideals. The Soviet press itself acknowledges the existence and activity of the Ukrainian nationalists whose goal is to separate the Ukraine from Russia. This admission is evidence of the growth of the resistance movement and that the Soviets fear what it can do.

There are over 1½ million Americans of Ukrainian birth or descent who are conscious of and have a strong interest in this struggle. It is appropriate on the occasion of the celebration of the 38th anniversary of Ukrainian independence that all Americans join with them in hoping and praying that in the not too distant future the enslaved Ukrainians will once more enjoy the liberty for which they are so valiantly struggling.

These feelings of sympathy, which we in America share for the gallant people of the Ukraine, must not be limited to mere well-wishing. Although this date calls attention to both the joy and sorrow of the Ukraine, the chains which bind the Ukranian people bind many other millions of peoples in other lands; and we must remember that freedom is assured for none until all are free. Only by rescuing others from serfdom to the Soviet may we then in America be able to devote ourselves to the fullest development of our own economic and cultural heritage.

With these things in mind, America must press vigorously for the right of those countries behind the Iron Curtain to self determination at the earliest possible date, and to see to it that the captive lands are able to enjoy free elections at as early a date as possible. We must continue to help with economic aid, and with weapons, those who courageously fight against Soviet domination in the Ukraine, Poland and other nations held captive.

The principle of early free elections is set forth in both the Atlantic Charter and in the Yalta agreement. Indeed, these two documents specifically guarantee early free elections to most of the peoples held captive by the Russians.

I call upon the President to make it an inflexible policy of this country to press continuously and vigorously for liberation of all the countries detained against the will of their people by the Soviets, by all means short of war. We must make liberation of these countries one of the principal topics of each and every future meeting between representatives of this country and Russia. All our economic and diplomatic pressure must aim at early and truly free elections within all the countries of Eastern Europe.

The Ukranian people, and the others enslaved behind the Iron Curtain, look to us for help in their struggle for freedom and justice. Never let it be said that America has turned its back on those who cry for liberty.

Report by Senator Lehman to the People of New York State

EXTENSION OF REMARKS
OF

HON. HERBERT H. LEHMAN

OF NEW YORK

IN THE SENATE OF THE UNITED STATES

Tuesday, January 24, 1956

Mr. LEHMAN. Mr. President, I ask unanimous consent to have printed in the CONGRESSIONAL RECORD the text of a radio report I made to the people of New York State on January 20, 1956.

There being no objection, the report was ordered to be printed in the RECORD, as follows:

NEW YORKER'S REPORT ON THE NATION

(Text of Senator HERBERT H. LEHMAN's first radio report to the people of New York State during the 2d session 84th Cong.)

Fellow New Yorkers, greetings from the Nation's Capital. I am resuming my periodic radio reports to the people of New York State. I want you to know what your Senator is thinking and doing in the course of this critical congressional session. Many important issues and legislative proposals, vitally affecting the interests of our State, will be before the Congress this year. I want your help and guidance in representing the interests of New York. So write and tell me what you think, too.

As in the past, I will report to you every 4 weeks over this station. And I want to express my appreciation to the station to which you are listening for carrying these reports.

As you know, Congress convened on January 3, and, as I speak to you today, the legislative work of the session has just about gotten under way. We heard the President's state of the Union message on January 5, his special message on farm problems on January 12, and his budget message on January 16. Our work is now cut out for us.

President Eisenhower's state of the Union message contained some fine words and fine sentiments with many of which I agree. But these sentiments were strangely different from those which have been expressed in the recent past by the congressional spokesmen for the President's own political party. The President's message has been described as a New Deal document. I wouldn't go that far. I wouldn't say that the President has become a New Dealer.

No; he has just borrowed a little of the liberalism some of us have been preaching for a great many years. He borrowed some of our sentiments, and our phraseology—about the welfare of the people and the need for the Government to do for the people what the people cannot do for themselves, with regard to the people's health, and security, and well-being.

Yes, the President said some very fine things. But what does his administration propose to do, to translate those sentiments into actions and programs? Will the Eisenhower administration support sound legislation? Will it fight for amendments to the McCarran-Walter Act, and for civil rights legislation, for Federal appropriations for school construction and medical research? Will the administration oppose giveaways of our natural resources and the ever-increasing concentration of economic power in the hands of monopolies? Will the administration work to extend social security coverage and to make social security available to the disabled? Will the administration fight for the interests of the consumer against the forces of special privilege? Will it put the welfare of the average farmer and the average worker and the small-business man above the interest of the processor and the great corporations?

Well, we will see. By the deeds of the Eisenhower administration, not its words, shall we know them.

I am going to report to you today on some of the legislation which I think this Congress must pass, and which this administration should support, and some of the legislation which Congress should defeat and the administration should oppose. I am going to talk not so much in generalities as in particulars.

But first, I want to say a word about the world scene, and to comment on the strange story of the Secretary of State, John Foster Dulles, and his recent interview with Life magazine.

This interview has been much discussed in the public press and on the floor of Congress. Senator HUBERT HUMPHREY, a member of the Senate Foreign Relations Committee, has charged that what Secretary Dulles told in Life magazine about last year's great international crises, in Korea, in Indochina, and with regard to the islands of Quemoy and Matsu off the coast of China * * * what Secretary Dulles described as his own policy in these three critical situations, was quite different from what Secretary Dulles had told the Foreign Relations Committee, in confidence, about these same situations.

There is a question of fact involved here. Secretary Dulles owes the Foreign Relations Committee an explanation, and he owes an explanation to the American people.

Did Secretary Dulles deliberately take us right up to the brink of war, as he told Life magazine? Was he, in fact, ready to plunge this country into war, without the consent of Congress, and without even the consent of President Eisenhower, as far as we know?

Who authorized these warlike actions, and these decisions to risk war? Had the American people authorized Secretary Dulles to take these risks, to stake the fate of our civilization on his own wisdom and discretion?

Is this administration seeking peace or war? Is the policy of this administration the one enunciated by President Eisenhower at Geneva or the one enunciated by Secretary Dulles in Life magazine?

In fact, my friends, I believe that we avoided war because of our allies, and not in spite of them. We avoided war because of the strength and unity of the free world, a strength and unity established under Presidents Roosevelt and Truman, despite the reckless policies of Secretary Dulles, which almost broke up the unity of the free world, and almost got us into war. And today, that unity was never more strained, and placed under greater pressure than it has been by Secretary Dulles' unfortunate and ill-timed statements to Life magazine.

Our allies are embarrassed and indignant at the evident distortion of history in which Secretary Dulles has indulged. And our enemies are rubbing their hands with glee, reprinting and rebroadcasting with obvious relish the statements made to Life magazine by Mr. Dulles.

Mr. Dulles claims full and sole credit for deterring the Communist power, in Korea and Indochina and in Quemoy and Matsu. Let him beware. He has resurrected the specter of massive retaliation. He brandishes the hydrogen bomb. He indicts our country as one willing to risk atomic war to gain its objectives, or, at least, Mr. Dulles' objectives.

Mr. Dulles should remember that he who claims credit for the wind must also accept blame for the storm.

Much more remains to be said on this score. It will be said in the months ahead. I hope and pray that no permanent harm has been done our country, and the cause of free world unity and peace by these rash and self-serving assertions by Mr. Dulles. The cause of a nonpartisan foreign policy has been struck a heavy blow.

But back to Congress and its prospects for constructive legislative action.

There is one bill before the Congress which is being hotly debated which I would not call constructive legislation. Quite the contrary. I refer to the natural gas bill, the so-called Harris-Fulbright bill, the bill to take the price of natural gas—the gas that lights your ovens and heats your homes—out from under the regulation of the Federal Power Commission.

The Harris-Fulbright bill would exempt producers of natural gas from rate regulation. The Supreme Court decided not long ago that these natural gas producers were subject, under the law, to Federal Power Commission rate regulation. The purpose of the Harris-Fulbright bill is to set aside the decision of the Supreme Court, and to give the natural gas producers the unquestioned right to charge for natural gas whatever the traffic will bear.

The producers quite frankly admit that as soon as rate regulation is abolished, the price will go up. Who will pay? The consumers will pay. We in New York State will pay.

It will cost the consumers of the Nation from a quarter to a half billion dollars a year. We in New York State will pay our share, to enable the 35 great companies which control 70 percent of the total production of natural gas to increase their already great profits. And these profits are not subject to the ordinary rates of taxation which apply to other business profits. No; these profits get the benefit of a notorious tax loophole, the 27 percent depletion allowance.

I am going to fight against this bill. I am going to oppose it as hard as I can. But what is the administration doing about this bill? What is their attitude? There was no word about it in the President's state of the Union message. There is still today no word from the White House as to President Eisenhower's attitude. There is only an eloquent silence.

I hope this bill will be defeated in the Senate. It has already passed the House. Only you, the consumers—the general public—can prevent this bill from passing. You can express yourself, to your representatives in Congress, and to the President. You can tell them how you feel about this proposed outrage upon the consumers of America.

Then there is the subject of juvenile delinquency, which is very close to my heart, and on which congressional action is urgently needed.

I must mention, too, the need for legislation to provide a system of flood and disaster insurance. The people of New York State, and of Connecticut, and Massachusetts, and Rhode Island and Pennsylvania know how desperately such insurance is needed. I will do my best to see that such legislation is enacted.

I would like to talk at length about the need to amend the McCarran-Walter Act, and the Refugee Relief Act. I need not tell you of my interest in that legislation. I haven't time today but I can tell you that we have a fight ahead on this, too.

And civil rights. If there is one front that calls for legislative action, it is this one. How long can we endure the continued denial of basic human rights to some of our citizens? How long can we tolerate the denial of the right to vote to the Negroes in great parts of the South? How long can we tolerate the brutal physical violence, the reign of terror which is now underway in some parts of the South against Negroes and whites who dare to join in the fight for equal rights, for human rights?

Here is a front that demands action. Here is a test of the good will of the administration, and of its courage and sincerity. I hope that all men of good will, of both parties, and without regard to party, will respond to this challenge and take the necessary action, without further delay. Yes, there is much more to be said, but no time to say it in.

Goodby and good luck, to all of you. I will be talking to you again, over this station, 4 weeks from now with my next report to New York.

Crisis in Education Is Concern of All

EXTENSION OF REMARKS
OF
HON. LESTER R. JOHNSON
OF WISCONSIN
IN THE HOUSE OF REPRESENTATIVES
Tuesday, January 24, 1956

Mr. JOHNSON of Wisconsin. Mr. Speaker, in the course of the last century the people of the United States developed the finest public and private educational system in the world. Our educational system and those who are responsible for its functional operations have served us well in peace and in war. Most students of American affairs believe that our educational system has contributed much to giving our Nation an informed and enlightened citizenry.

In keeping with our concept of the vital role of public education we have retained control and financing of public schools at the local level to assure maximum democratic management. The philosophy of local control and responsibility explains why at the present time only 3 percent of all school funds are contributed by the Federal Government. Local communities pay 55 percent of the Nation's school bill, and the remaining 42 percent comes from State governments. However, since World War II local governments have had more than their share of difficulties in meeting financial responsibilities to maintain and expand school facilities.

The financial difficulties of local and State governments stems from the fact that for a number of years the Federal Government collects more than 75 percent of all tax money. Our State and local governments must get along with what is left. No one will dispute the fact that the Federal Government has had to collect the bulk of taxes to wage a war and prepare for defense in the tense years since the end of World War II. Expenditures for war and defense have left education without fiscal parity since 1940.

I am not an educator, but—as a parent, citizen, and interested layman—I am concerned about the crisis in our educational system. I believe, for a number of reasons, that the crisis in education is the concern of every person. I believe that Congress must enact legislation to provide for Federal aid to education. There is too much at stake to ignore any longer the crisis in education.

During and since World War II a growing number of educators, PTA members and other interested laymen have pointed out the lack of classrooms, shortage of teachers, and other problems rising out of overcrowded classrooms and use of obsolete buildings.

Since 1950 a total of 5,600,000 children have been added to our school population. It is estimated that our annual increase in school population for the next 5 years will be 1,350,000. According to educational authorities, elementary school enrollment in 1960 will be 68 percent above 1946 and 28 percent above that of 1954. Secondary schools also face a crisis, for by 1969 the children already born will push secondary school enrollment to more than 70 percent above the 1954 level.

The increase in school population comes at a time when 56 percent of the Nation's classrooms are overcrowded. The United States Department of Health, Education, and Welfare—in an estimate released on January 12, 1956—states that at least 470,000 new classrooms are needed in the next 5 years. Of this total, 180,000 are needed to replace worn out classrooms of questionable safety. The other 210,000 classrooms are needed to take care of estimated new enrollment. Surveys show that 47 percent of our public-school buildings are over 30 years old, and 22 percent of our school buildings are over 50 years old.

While the proposed legislation deals only with Federal aid for school construction, I believe that some mention must also be made of the teacher-shortage situation. At present we need an additional 140,000 teachers. There will be need for 500,000 more teachers in 1965 than we have today. In other words, we must find 16 new teachers for every 10 that are now teaching.

I presume that one of the main reasons for the shortage of teachers is the low pay. For example, in 1954 the Nation's teachers' colleges graduated 100,000 teachers. Only 63,000 out of the 100,000 graduates were willing to take positions teaching. Our financially hard-pressed State and local governments cannot raise enough money to build schools and increase teachers' salaries. It is pertinent to point out that State and local governments spent almost $2.5 billion on school construction in 1955 as compared to about $1 billion in 1949–50.

Before I close there is one other aspect of our educational crisis that I wish to mention. Earlier in these remarks I stated that our educational system has served us well in peace and war. While I believe we have the finest educational system in the world, I am very much disturbed over reports about the number of scientists and engineers that are being graduated in Soviet Russia.

In 1954, for instance, Russia graduated 54,000 scientists and engineers as compared to about 20,000 in the United States. In a few years Russia will be graduating each year 80,000 scientists and engineers. I need not emphasize the importance of scientists and engineers in the event the world is plunged into a nuclear weapon war. As Admiral Rickover said recently, "if the crisis in education is not met, we will be in danger of losing the cold war by default."

In the event that this comes to pass there will be no Congress in which we—as freemen—can debate the question of Federal aid for education. If we lose by default—and thus fall under the iron heel of a dictator—there will be no opportunity to debate segregation, desegregation, Federal or local responsibility in education.

For this and other reasons, I believe we must act now. I urge my colleagues to temper their thinking with the cold and hard facts of the crisis in education—we may not have too many opportunities to consider this question if we fail to act now for one reason or another.

Adequate Highways: How and When?

EXTENSION OF REMARKS
OF
HON. J. HARRY McGREGOR
OF OHIO
IN THE HOUSE OF REPRESENTATIVES
Tuesday, January 24, 1956

Mr. McGREGOR. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following address made by me before the 54th annual convention of the American Road Builders' Association, at Miami Beach, Fla., on January 13, 1956:

It is always a pleasure to attend a national convention of the American Road Builders' Association—and this is one of the best. The atmosphere is informal, the company is genial, and the main discussion is one that's close to my heart.

Having been a roadbuilder myself and having spent many a long hour on highway legislation in Congress, it is not hard for me to understand the mutual problems that bring you together. I think I can share the sentiments you feel about a business that is one of the toughest and, yet, one of the most rewarding in the world.

I am a firm believer in the application of private enterprise methods to highway construction. I'm glad to say it and you can mark it down: ARBA is the champion when it comes to supporting this viewpoint. The ingenuity and thoroughness with which most of America's roads are being built today is evidence of the effectiveness of the contract method of doing business.

When men are pitted against each other in competitive bidding, as required by most of our State and city highway departments, the best in each comes to the top. The public gets the benefit—in lower costs and higher quality.

The leadership that America has earned in the know-how of roadbuilding comes from this unique teamwork of public officials, engineers, and businessmen.

Right now, the vital issue facing our industry is what Congress will do about the need for a national highway program. For months, my colleagues and I have wrestled with this problem at close range. It is a subject surrounded with complications and opinions.

A frequent question that comes up, is: "Can the highway industry, without economic dislocation, expand to handle a larger construction program?"

ARBA has always answered that question to my satisfaction, and I am sure, to the satisfaction of most Members of Congress. We are not so far from World War II that we cannot remember how quickly industry can expand its capacity. That is particularly true if wise planning has eliminated some of the uncertainties from the picture.

I think you should always be prepared to appraise your own strength—and I'm glad

to hear you are now making a reappraisal—and to give Congress the benefit of your expert findings. We have learned to rely upon ARBA's knowledge of the roadbuilding industry and the capacity of each segment to produce the kind of highways America needs—and in the time and volume they are needed. We will need your help in this session, as in other sessions, to answer some of the still unresolved problems that hamper adoption of a greatly expanded roadbuilding program.

I would like to divert for just a moment and pay my respects to the officers and staff of the American Road Builders Association, in their endeavors that the country may have adequate highways. To you, Mr. President Robertson, you have done an excellent job, Bert Miller, Bob Smith, and all of the other staff members have been most helpful and most courteous, however, today we do miss one who has been of great assistance not only to your present speaker but to the problem of the road industry and America as a whole. I am referring to my distinguished friend, the late Tom Keefe, who departed from this world a few months ago. Tom is not with us in body but his activities and the results of his endeavors will long be remembered by all of us.

It was my pleasure to address you a year ago on the subject, President Eisenhower's Highway Challenge. A great deal has happened since then, some of it dismaying—some of it highly encouraging. You have followed the progress of Federal legislation closely throughout the past 12 months and it is not necessary to review the defeat of what many Members of Congress considered a reasonable, workable solution to the problem of financing a long-range road program. It is pointless to dwell upon what might have been, or to quail before the job that must be done now to get our highways into shape. The important thing is to keep our mind on the increasing need and seek fresh solutions.

The grand plan presented by our beloved President, speaking in the interests of all America, may have lost some of its trimmings, but his noble objective is intact. Thanks to the boldness of our President's proposal and to the farsightedness of highway leaders, we are thinking today in terms of money for road construction far larger than ever before. That contribution—in imagination and leadership—must be acknowledged, for it has played a major part in advancing the national good roads cause—farther than any other one action in history.

Some of us who have worked in legislative harness for highway development in this country for many years can appreciate better than others that last year was not a year lost. It was actually a gain. We went through a legislative shakedown and we all learned a lot.

Two years ago, it was my responsibility to serve as chairman of the House Subcommittee on Roads. For weeks, that committee heard the testimony of witness after witness lay bare the highway dilemma facing the Nation. It became apparent to all of us that, on one hand, the automotive age had almost overwhelmed the country and, on the other hand, highway construction had not kept pace. It was reported that automobiles and trucks manufactured in the last 10 years, if parked bumper to bumper, would occupy 4 times as many vehicle lanes as new highways built to accommodate them.

This disturbing imbalance was brought home to us at our hearings 2 years ago. It became obvious that Congress must step up Federal assistance to the States to build expressways, cross-country throughways, and farm-to-market roads. This we did in the Case-McGregor Act. Federal aid was boosted 52 percent above the act of 1952 to $875 million annually.

Soon after that, when President Eisenhower advanced his grand plan for a multi-billion-dollar-road program, many of us knew that the proposal was not unreasonable nor overly ambitious. The burden of testimony before our committee had all said otherwise. The pro and con arguments were still there, of course. But there was no doubt of the need. Not any longer.

Today, the need simply grows greater. Last year, our assembly plants turned out 8 million motor vehicles. It has been estimated that 4½ million more will be produced in the current 6-month period. Those of you who are dealing with traffic problems know what that means.

Traffic accidents continue to mount as the number of automobiles, trucks, and buses on our streets and highways increases. Some 38,500 lives were lost last year. The Christmas holiday traffic slaughter was a nightmare. There is no valid excuse in a nation as advanced as ours for such preventable loss in human life. Where inadequate highways are at fault, they must be expanded or rebuilt to safer standards. Other stern measures must be taken. How can we do otherwise?

Economic losses are secondary to the loss of lives, and the toll of injuries, but they are significant. Here's a flat statement: Inefficient highways are costing the American people entirely too much money. Maybe those who won't be moved by crushed bones and spilt blood, will feel a twinge in the pocketbook. But this is no joke.

Every morning and evening literally millions of safe-driving people are forced to waste precious hours driving or riding to work on congested, overtaxed streets. Where is our vaunted national efficiency?

Economic advisers tell us that America is expanding at a tremendous rate and that our transportation facilities will be strained to the limit within the next few years. Highway transportation, which serves the Nation so well, must not be held in stalemate during this expansion period. Roadbuilding must go ahead—fast—so that this form of transportation can keep pace with demand.

These are pressing reasons for immediate, realistic action.

The question is: "What will Congress do about it?"

I wish I could answer that question positively for you. I know that in the roadbuilding business, the uncertainty during legislative debate can be discouraging and sometimes costly.

Most of us in Congress who have studied the highway needs of America for years know exactly where we stand. Some of our colleagues, and I say this kindly, are just becoming reeducated on this new and greater road problem and are just now realizing in full the urgency for new highways. I know that the number of advocates of realistic roads is increasing. It may be a slower process than we would like, but it is the only right way for problems of such scope to be properly handled. The legislation that finally starts America into an era of unprecedented roadbuilding will be better because of that process.

I am sure that men of good will can sit down together and resolve their differences. I am sure they will do so in this case. If one man can help, I assure you I'm ready and willing to cooperate—to the hilt—right now.

We who are privileged to hold responsible posts on the House committee are fully aware that the next move is ours. You may be sure it occupies the time and thought of all of us. I assure you that my most conscientious effort will be to help draft the kind of legislation that will bring America's highways up to the high standards required.

May I quote from President Eisenhower's state of the Union message to Congress January 5, 1956.

"In my message of February 22, 1955, I urged that measures be taken to complete the vital 40,000-mile interstate system over a period of 10 years at an estimated Federal cost of approximately $25 billion. No program was adopted."

Continuing my quote from the President's message, "If we are ever to solve our mounting traffic problem, the whole interstate system must be authorized as one project to be completed approximately within the specified time. * * * Furthermore, as I pointed out last year, the pressing nature of this problem must not lead us to solutions outside the bounds of sound fiscal management. As in the case of other pressing problems, there must be an adequate plan of financing. To continue the drastically needed improvement in other national highway systems, I recommend the continuation of the Federal Highway Act."

That, ladies and gentlemen, was a statement of the President of the United States and I am in accord with it 100 percent. I want to make it perfectly clear that I favor and will do everything I can to put into a law an adequate highway program, both for the interstate and the intrastate and I will be for a reasonable program whether it goes into effect as a one-package bill, or the interstate and intrastate in separate pieces of legislation.

The 1954 Highway Act, which it was my privilege to author, is a biennial highway authorization, and it expires June 30, 1956. This bill authorized $315 million primary, $210 million secondary, $175 million urban, and $175 million interstate, plus various amounts for forest highways, roads and trails, parkways, Indian reservation roads, etc. This total amount approximately equals the amount of revenue brought in by the 2-cent-per-gallon Federal gas tax.

This authorization is financed by taxes now in existence, and no additional taxes would be necessary if the existing law, 1954 Highway Act—Public Law 350—would be reenacted. Additional amounts or allocations could be added to each system, possibly $100 million total, and we would still be within the limits of the revenue brought in by existing taxes. I am of the firm conviction that this law could be reenacted with very little opposition. You know the history of the Clay committee bill, as well as the so-called Democrat, or Fallon, bill, that was before the last session of Congress. Both bills were defeated, and, in my opinion, because of the financing involved. Some refused to accept the Clay committee bond recommendation, which called for $25 billion worth of bonds for highway purposes extending over a period of years. The Congress also defeated the so-called Democrat, or Fallon, bill, because many felt that the revenue-raising features or taxes were not equitable. Regardless of the arguments pro or con, the program was defeated. Regardless of the merits or demerits of the interstate highway program, which is to be financed by an entirely new financial program, the question arises, Shall the interstate system, with a new financial program requiring additional taxes, be incorporated in the same legislation that includes the intrastate system primary, urban, and secondary roads when the financing is already established and no new taxes are necessary?

I hear the same arguments, and some new ones, on the floor of Congress and on the Hill that I heard last August. No one seems to object to the intrastate bill but most everyone seems to object to the interstate proposal financing program. Most everyone, with some exceptions, wants an interstate highway but they want the other person to pay for it. I hear some old arguments renewed, with more emphasis relative to financing the highway program and I am referring to the Governor's Conference group, and others, insisting that the roads, both interstate and intrastate, should be financed from revenue derived by the Federal Government from existing excise taxes on automotive products paid by highway

users. A very fetching appeal. I would like, however, to point out some of the facts of life regarding this approach. Excise taxes levied by the Federal Government have been and are now levied and justified as a source of revenue for the general support of government. I know as well as you that while the Federal gas tax was never levied as a highway user charge, that developments over the past 10 years have more and more led to its being accepted as such and I think we all understand the reasons behind this acceptance. The excise fuel tax yields approximately $1 billion a year. The total excise yield to the Government from this and related automotive excises now reaches $2.5 billion. I question seriously whether we are entitled to consider these excise taxes as highway user charges, certainly those taxes beyond the Federal fuel tax and lubricating oil taxes. I question the physical soundness of a move in this direction, at least beyond the Federal fuel tax. The other excises can, by no stretch of the imagination, be considered a fair measure of highway use. Congress at no time by legislative action has ever identified these excise taxes as highway user charges.

To earmark the total yield of the automotive excise taxes for highway purposes, as some are recommending, would deprive the general revenue now used for support of the Government of an additional $1½ to $2 billion over and above the fuel tax yield. This would unbalance our Federal budget to the tune of $1½ to $2 billion and would have to be made up from other tax sources if the budget is to be balanced and, ladies and gentlemen, the budget is balanced for the first time in many years. I am asking you would you deplete our existing general revenue fund by that amount of money to build highways? If you would, what tax would you recommend to take its place to make up this deficit? Would you want me to support or would you, if you were in my position, support an increase in the income tax, for example? Faced with this choice, it would seem to me—and I hope that you will agree—to be a sounder financial procedure to consider the levying of additional equitable charges on the highway users, who are the direct beneficiaries of a greatly expanded system, in some manner related to the benefits they derive.

May I again quote from the President, who has said on numerous occasions, "A sound Federal highway program, I believe, can and should stand on its own feet with highway users providing the total dollars necessary for improvements and new construction."

Another important factor should be considered when we are even thinking of depleting the general revenue fund. We all know that the general tax funds of all levels of our Government—Federal, State, and local—are presently drained nearly dry and with our tremendous increase of population, the burden placed on the revenues in the forseeable future will require all the talent and ingenuity we have to prevent the complete destruction of our various government structures. The increasing demand for schools, hospitals, welfare, social security, sanitation, public buildings, and playgrounds presents us with a general revenue problem of staggering proportions. So, before your organizations or any of you individually propose to deplete the revenue fund by $1½ to $2 billion for highway purposes, give consideration to the other urgent and, yes, vital needs.

It is never possible to devise a tax acceptable in full degree to those upon whom the tax is imposed. No tax that this Congress or any other Congress may devise will be completely painless to that individual or group upon whom the increase falls. I, personally, believe that there is equity and fairness in the theory that the highway-user-charge principle should be applied on the basis of benefits derived. I state positively and publicly that I do not believe that such a user charge should be punitive. The justification of levying a tax is to soundly finance an adequate highway program and not to exterminate or discriminate unfairly against a legitimate highway user.

I have endeavored to explain my position relative to a new financing program. You can readily see that it is controversial and subject to a great deal of discussion but remember one thing, ladies and gentlemen, if you are going to build highways somebody has to pay for them.

The controversial subject of financing the new program for the interstate system is not applicable to the existing law which was passed by nearly a unanimous vote of the Congress in 1954 and which I authored. It is known as the Highway Act of 1954. It expires June 30, 1956. I have previously given to you the amount of money that it spends for highways. It can be renewed and no new taxes required over the existing taxes. I repeat, why jeopardize this program now in effect by incorporating in the same legislation a 10- or 15-year highway construction program newly and entirely differently financed and which, in my opinion, will jeopardize the passing of the existing law.

I firmly believe in an adequate highway program including the interstate system as well as the intrastate system but I do not want the existing highway program destroyed and scuttled because of the insistence of some to incorporate into the legislation, soon to be before the Congress, new ideas including financing and distribution. I think the interstate system is strong enough to stand on its own merits in its own legislation and I think the proponents of the interstate system are weakening their position when they are attempting to have it carried in the program of the existing law. Let us not jeopardize the existing program that is working so well. Let us have a 10-year or 12-year interstate program in separate legislation and let us continue our intrastate highway program, bringing it before Congress once every 2 years for a look-see by the membership of Congress at that time.

Freedom for the Ukraine

EXTENSION OF REMARKS
OF
HON. HORACE SEELY-BROWN, JR.
OF CONNECTICUT
IN THE HOUSE OF REPRESENTATIVES
Tuesday, January 24, 1956

Mr. SEELY-BROWN. Mr. Speaker, under permission given me to extend my remarks, it is my purpose to speak briefly about freedom for the Ukraine, in connection with the 38th anniversary, January 22, of Ukraine independence.

In my district, last Sunday, several thousand Americans whose ancestral origin is in the Ukraine, gathered in their churches, and afterward in their fraternal halls and in their homes, to take appropriate recognition of this day, which commemorates a joyous but unfortunately only a briefly fulfilled achievement in the centuries-old struggle for freedom and independence on the part of the Ukrainian nation.

I wish that all Americans might have shared in some way in the recognition of Ukrainian Independence Day, because if the hope of every one of us for the expanding of freedom to include every human being throughout the world is to be realized, Ukraine as soon as possible must take its place as a sovereign and equal partner in the buttressing of a free Europe and a free world.

The Ukrainian people are 40 million strong. They comprise the largest non-Russian nation behind the Iron Curtain. They admire the American people, and they are the friends of the United States of America. But, unfortunately, they are the captives of Soviet imperialism, and in the last 38 years they have been made many times the most conspicuous victims of that imperialism translated into shameful tyranny.

The Soviet lexicon calls the Ukraine a "republic" in the Union of Socialist Soviet Republics, but this is a mockery of the term, as is the membership of the Ukraine in the United Nations, where it is recognized as a satellite, and where it is known by everyone that its delegates, like all of the officers of the "republic" are but tools of Moscow.

The determination of the Ukrainian people to be really free and independent, however, is stronger than any bonds which temporarily may restrain them. Have they not struggled for centuries for freedom and independence, and having won it, and then lost it, are they not using every resource which is theirs, to win it again?

When the shackles that bind the loftiest aspirations of many noble peoples in Europe are broken at last, the Ukrainian people will have an important part in that achievement, and they will be our allies and our partners in making a better world.

Area Redevelopment

EXTENSION OF REMARKS
OF
HON. EDITH NOURSE ROGERS
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Tuesday, January 24, 1956

Mrs. ROGERS of Massachusetts. Mr. Speaker, my bill, H. R. 8491, would carry out the President's recommendation, in the state of the Union message, to "help deal with the pockets of chronic unemployment that here and there mar the Nation's general industrial prosperity."

In spite of the prosperity enjoyed by the Nation as a whole, some of our communities are suffering from chronic unemployment. For example, in my congressional district, the city of Lowell, Mass., has had severe, continued unemployment resulting from a loss of basic industries.

While many of these situations are due to special causes of a local character, the whole Nation has an interest in helping the affected areas to achieve sound and lasting improvement in their economic condition. Federal assistance should be provided, because the particular localities most seriously affected may be most handicapped in financing their own redevelopment. However, emphasis should be on helping the communities to help themselves. Federal

participation should be kept within modest limits and in conjunction with State and local programs.

The plan is simple. A State having an area of substantial and persistent unemployment may apply for Federal assistance. The Secretary of Labor would then certify the area as one eligible for assistance upon finding certain objective conditions as to the duration and amount of unemployment in the area. Federal assistance would then be provided in research and planning to rehabilitate the local economy; the construction or improvement of industrial plants and facilities, and related community facilities such as water and sewage systems; and the training or retraining of workers in skills necessary to take advantage of new employment opportunities and to supply the labor requirements of new industries. Financial aid for plant construction or improvement would be in the form of loans.

General administration of the program would be assigned to an area assistance administrator in the Department of Commerce. Technical assistance in programs to increase the employability of the labor force for specific job opportunities would be provided by the Secretary of Labor, with the Secretary of Health, Education, and Welfare providing assistance to State vocational education agencies in their programs. An advisory board with the Secretary of Commerce as chairman, and the Secretaries of Agriculture, Labor, Treasury, and Health, Education, and Welfare, and the Administrators of the Housing and Home Finance Agency and the Small Business Administration as regular members, would advise the Secretary of Commerce in carrying out the policies of the act.

Habeas Corpus Bill Upheld

EXTENSION OF REMARKS
OF
HON. EMANUEL CELLER
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Tuesday, January 24, 1956

Mr. CELLER. Mr. Speaker, under leave to extend my remarks, I insert herewith a letter which was printed in the New York Times of January 24, 1956:

HABEAS CORPUS BILL UPHELD—CONGRESSMAN DEFENDS LEGISLATION AS SEEKING TO END ABUSE OF WRIT

To the EDITOR OF THE NEW YORK TIMES:

The letter from A. Philip Randolph, president, Brotherhood of Sleeping Car Porters, published January 16, contained a critical view of a bill, then pending in the House of Representatives, relating to habeas corpus applications.

In the letter Mr. Randolph stated that the proposed legislation, if enacted, would "place such crippling restrictions" on the writ that it would become "unavailable and useless as a remedy except in very exceptional circumstances." He also stated that it will put "wage earners and Negro citizens in situations where it would be difficult for them to vindicate their Federal constitutional rights and to secure their personal liberty."

Such statements, as well as the entire letter, give an incorrect, if not completely false, impression of the purpose of this legislation. The letter is so written that it leads the reader into believing that the legislation is designed to discriminate against minority groups because of their race, color, or creed. Nothing could be further from the truth.

RACIAL BIAS DENIED

Even Thurgood Marshall, special counsel for the NAACP, recognized that such was not the case. While he testified in opposition to the bill, he nevertheless stated that the legislation had "no special racial significance" and contained "no threat of racial discrimination."

The purpose of the bill, H. R. 5649, is to restrain the abuse of the use of habeas corpus in our Federal courts by prisoners who have been convicted in State courts of State crimes. Until recent years a court having jurisdiction of the defendant and of the crime could render a judgment which was binding until reversed on appeal.

A person imprisoned under such a judgment could be released on habeas corpus only on a showing that the court was without jurisdiction to render it. Recent decisions of the Supreme Court, however, have held that even though a court may have had jurisdiction at the inception of a case it may lose jurisdiction during the course of the proceedings as a result of some violation of the defendant's constitutional rights.

This expansion of habeas corpus by the Supreme Court led almost at once to flagrant abuse of the writ, especially by persons imprisoned under judgments of State courts. Prisoners began to use the writ to appeal, as it were, their State convictions in the lower Federal courts. Simply by alleging a violation of a constitutional right a prisoner could seek to have a lower Federal court review the entire State court proceedings even where the conviction had been confirmed by the highest court of the State and certiorari denied by the United States Supreme Court.

The great writ of habeas corpus is one of the most important safeguards of individual liberty; but it was never designed as a writ of review in the Federal courts or anywhere else. The purpose of the proposed legislation is to restrict State prisoners to State courts, and require them to first exhaust available State remedies such as habeas corpus proceedings in the State courts before they will be permitted to make application to the Federal courts.

APPROVAL OF JUDICIARY

It is worthy of note that this legislation has the support of both Federal and State authorities. It has been approved by the Judicial Conference of the United States, composed of the Chief Justice of the United States (Justice Warren) and the Chief Judges of the Federal courts of appeal, the Conference of Chief Justices of the States, composed of the senior judge of the highest court of each State, the Association of State Attorneys General and the Section on Judicial Administration of the American Bar Association. It also has the support and approval of the United States Department of Justice.

Yet in the face of this considered judgment by our learned legal authorities Mr. Randolph implies that the legislation is unconstitutional.

Actually the legislation takes away the use of the writ from no one. The right is guaranteed under the Constitution. No one can suspend the writ; the Constitution forbids it. In those cases where there is a miscarriage of justice the writ will still be available. No matter what injustice there may be, there will be no denial whatsoever of the application for the writ under this legislation. But the application must be properly channeled and there must be proper supervision.

On January 19 this legislation passed the House of Representatives without opposition. This additional approval by the membership clearly indicates its worthiness, from a legal standpoint as well as from the standpoint of justice.

EMANUEL CELLER,
Chairman, Committee on the Judiciary.

The 38th Birthday of Ukrainian Independence

EXTENSION OF REMARKS
OF
HON. THOMAS J. LANE
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Tuesday, January 24, 1956

Mr. LANE. Mr. Speaker, January 22 marked the 38th anniversary of the independence declared by the gallant people of Ukraine.

In spite of Communist occupation and conquest, their devotion to freedom lives on, as strong and as imperishable as their Christian faith.

It is the light that never fails.

Communism has employed every torture and oppression to crush their spirit without success.

With all their material power the Communists are uneasy.

Why?

Because they know they are powerless to overcome the eternal spirit that glows in the hearts of 40 million Ukrainians. Having rejected the divinity that is in man, communism has alienated itself from the people.

Reading between the lines of Communist strategy, we detect this weakness.

Under one pretext or another, they seek to have the United States recognize the status quo in Eastern Europe and thus legitimize their brutal conquests.

That cunning plan is doomed in advance.

For the avowed and undeviating policy of the United States is to achieve by peaceful methods, the eventual liberation of every country held captive behind the Iron Curtain.

Peace can never be established on the shifting sands of expediency or appeasement.

It must be built on the firm foundations of moral principle, freedom, justice, honor.

Free Ukrainians the world over reverently observe the 38th anniversary of their independence.

In so doing they remind us of our own struggle to win freedom and of our responsibility to give every assistance possible to others seeking this same objective.

To the Ukrainians in the United States, and to their relatives overseas, we send greetings.

Although the times are dark, their day will come when the sun will also smile over a free, self-governing, and happy people who are proud to be Ukrainians.

SENATE

WEDNESDAY, JANUARY 25, 1956

(Legislative day of Monday, January 16, 1956)

The Senate met at 12 o'clock meridian, on the expiration of the recess.

The Chaplain, Rev. Frederick Brown Harris, D. D., offered the following prayer:

God of all mercies, who didst guide our fathers as they laid the foundations of this Republic, who hast entrusted to our hands a sacred heritage, crimsoned by sacrifice and the strength of chastening trials, in these high hours of decision freighted with destiny, grant that those, who here speak for the Nation, may be so true to their high calling, as servants of the common good, that radiant joy may transfigure duty, and that on this and every day which may be granted us, appointed tasks may be met with purity of purpose, without moral compromise or craven fear.

We ask it in the dear Redeemer's name. Amen.

THE JOURNAL

On request of Mr. CLEMENTS, and by unanimous consent, the reading of the Journal of the proceedings of Tuesday, January 24, 1956, was dispensed with.

MESSAGES FROM THE PRESIDENT

Messages in writing from the President of the United States submitting nominations were communicated to the Senate by Mr. Miller, one of his secretaries.

MESSAGE FROM THE HOUSE

A message from the House of Representatives, by Mr. Bartlett, one of its clerks, announced that the House had disagreed to the amendments of the Senate to the bill (H. R. 7871) to amend the Small Business Act of 1953; asked a conference with the Senate on the disagreeing votes of the two Houses thereon, and that Mr. SPENCE, Mr. BROWN of Georgia, Mr. PATMAN, Mr. RAINS, Mr. WOLCOTT, Mr. GAMBLE, and Mr. TALLE were appointed managers on the part of the House at the conference.

ENROLLED BILL SIGNED

The message also announced that the Speaker had affixed his signature to the enrolled bill (H. R. 1496) for the relief of Leong Ding Foon Quon, and it was signed by the President pro tempore.

ORDER FOR TRANSACTION OF ROUTINE BUSINESS

Mr. CLEMENTS. Mr. President, I ask unanimous consent that there may be the usual morning hour for the presentation of petitions and memorials, the introduction of bills, and the transaction of other routine business, and that any statement made in connection therewith be limited to 2 minutes.

The PRESIDENT pro tempore. Without objection, it is so ordered.

EXECUTIVE COMMUNICATIONS, ETC.

The PRESIDENT pro tempore laid before the Senate the following letters, which were referred as indicated:

REPORT OF FEDERAL CROP INSURANCE CORPORATION

A letter from the Secretary of Agriculture, transmitting, pursuant to law, a report of the Federal Crop Insurance Corporation, for the year 1955, with an accompanying report; to the Committee on Agriculture and Forestry.

REPORT OF RURAL ELECTRIFICATION ADMINISTRATION

A letter from the Secretary of Agriculture, transmitting, pursuant to law, a report of the Administrator of the Rural Electrification Administration, for the fiscal year ended June 30, 1955, with an accompanying report; to the Committee on Agriculture and Forestry.

REPORT ON OVEROBLIGATION OF AN APPROPRIATION

A letter from the Administrator, General Services Administration, Washington, D. C., reporting, pursuant to law, the overobligation of an appropriation under "Repair, Improvement, and Equipment of Federally Owned Buildings Outside the District of Columbia"; to the Committee on Appropriations.

CONSTRUCTION OF MODERN NAVAL VESSELS

A letter from the Judge Advocate General, Department of the Navy, transmitting a draft of proposed legislation to authorize the construction of modern naval vessels, and for other purposes, with an accompanying paper; to the Committee on Armed Services.

REPORT ON AUDIT OF FUTURE FARMERS OF AMERICA

A letter from the Chairman, Board of Directors, Future Farmers of America, Washington, D. C., transmitting, pursuant to law, a report on the audit of the accounts of the Future Farmers of America, for the fiscal year ended June 30, 1955, with an accompanying report; to the Committee on the Judiciary.

COORDINATION BETWEEN THE CIVIL SERVICE RETIREMENT ACT AND THE SOCIAL SECURITY ACT

A letter from the Chairman, United States Civil Service Commission, transmitting a draft of proposed legislation to provide a measure of coordination between the Civil Service Retirement Act and the Social Security Act, and for other purposes, with an accompanying paper; to the Committee on Post Office and Civil Service.

PETITIONS AND MEMORIALS

Petitions, etc., were laid before the Senate, or presented, and referred as indicated:

By the PRESIDENT pro tempore:

A resolution adopted by the Board of Supervisors of Maui County, Hawaii, favoring the enactment of legislation to authorize the issuance of public-improvement bonds by the Territory of Hawaii; to the Committee on Interior and Insular Affairs.

A resolution adopted by the delegates to the Hawaii State Constitutional Convention of 1950, relating to the reapportionment of the Legislature of Hawaii; to the Committee on Interior and Insular Affairs.

The petition of Ralph R. Murray, of Collegeville, Pa., favoring the enactment of legislation prohibiting the manufacture and sale of automobiles with power to drive in excess of 40 miles an hour; to the Committee on Interstate and Foreign Commerce.

A resolution adopted by the Oklahoma Naturopathic and Physiotherapy Physicians Association, at Oklahoma City, Okla., favoring an investigation of the structure, powers, and policies of the American Medical Association; to the Committee on Labor and Public Welfare.

A letter, in the nature of a petition, from the grand jury, county of San Diego, Calif., signed by Joseph Levikow, foreman, transmitting a resolution adopted by the grand jury favoring an investigation into the administration of aid by the Department of Social Welfare of the State of California (with accompanying papers); to the Committee on Labor and Public Welfare.

A resolution adopted by the board of directors of the Kaweah Delta Water Conservation District, Visalia, Calif., favoring the enactment of legislation to provide funds necessary for the construction of adequate flood-control works on the Kaweah River; to the Committee on Public Works.

REPORTS OF COMMITTEES

The following reports of committees were submitted:

By Mr. HILL, from the Committee on Labor and Public Welfare:

S. 2990. A bill to extend through June 30, 1957, the duration of the Poliomyelitis Vaccination Assistance Act of 1955; without amendment (Rept. No. 1446).

S. Res. 193. An original resolution to provide additional funds for the Committee on Labor and Public Welfare; placed on the calendar; and

S. Res. 194. An original resolution authorizing the Committee on Labor and Public Welfare to employ four additional temporary clerical assistants; placed on the calendar.

(See the remarks of Mr. HILL when he reported the above resolutions, which appear under separate headings.)

By Mr. MAGNUSON, from the Committee on Interstate and Foreign Commerce:

S. Res. 180. Resolution providing additional funds for the Committee on Interstate and Foreign Commerce; without amendment.

By Mr. PASTORE, from the Committee on Interstate and Foreign Commerce:

S. 1456. A bill to amend sections 212, 219 (a), 221 (a), and 410 (a) of the Communications Act of 1934, as amended; with an amendment (Rept. No. 1445).

ANNUAL REPORT OF COMMITTEE ON GOVERNMENT OPERATIONS (S. REPT. NO. 1444)

Mr. MCCLELLAN. Mr. President, I submit the annual report of the Committee on Government Operations, and I ask unanimous consent that I may proceed to comment thereon for about 10 minutes.

The PRESIDENT pro tempore. Is there objection? The Chair hears none, and the Senator from Arkansas may proceed.

Mr. MCCLELLAN. Mr. President, the Senate Permanent Subcommittee on Investigations of the Committee on Government Operations, pursuant to the Legislative Reorganization Act of 1946, is charged with the duty of studying the operation of Government activities at all levels with a view to determining their economy and efficiency. This task is a huge one, particularly when we consider that this past year the professional staff of the subcommittee consisted of only 11 members. The executive branch, at a cost of over $53 billion, operates several hundred separate departments, agencies, and independent offices, employing 2,366,075 civilians alone.

One of the first steps taken by this subcommittee at the beginning of last year was to adopt 17 rules of procedure, which rules are set forth in the report beginning on page 1. The purpose of the rules was to enumerate proper procedures; to set forth certain basic rights of witnesses; to define more explicitly the rights and privileges of individual Senators serving on the subcommittee, and yet not hinder the subcommittee in such a way as to prevent it from meeting its responsibilities.

The subcommittee, during this past year, conducted 79 actual investigations and 67 preliminary inquiries. Thirty-six days of open hearings were held and 91 witnesses heard. In addition, there were 12 days of executive sessions at which 28 witnesses were heard.

The subcommittee's hearings extended through the operations of many of the Government agencies, including the Department of the Army and Agriculture, the Foreign Operations Administration, the Air Force, the State Department, Treasury Department, Navy Department, the Interstate Commerce Commission, and the Department of Commerce.

It covered such widespread activities as the Army loyalty security procedures, exemplified by the Peress case; conflict-of-interest matters at Cabinet and other levels, as in the hearings on former Secretary of Air Harold E. Talbott and Hugh Cross, the former Chairman of the Interstate Commerce Commission. Hearings were held on what steps were being taken or could be taken to obtain the release of American nationals held by the Red Chinese Government. It included studies of waste and inefficiency in the procurement and construction of grain bins by the Commodity Credit Corporation of the Department of Agriculture and the deficiencies in this same program of the Naval Inspection Service; possible collusion and fraud in the negotiation for the award for the construction of grain elevators in Pakistan by a consulting engineer hired by the Foreign Operations Administration; fraud and corruption in the procurement of military apparel by the armed services, as illustrated by the hearings on Harry Lev, Marvin Rubin, and others; a study of the infiltration of Communists in the vital areas of defense plants, and the inquiry on redefection of refugees in Europe back to Communist nations, as well as the failure by the Treasury Department to enforce tariff restriction on watches which is alleged to have cost the United States Government many millions of dollars over the period of the past 25 years.

The subcommittee also investigated East-West trade. It was found that our allies' trade with Communist China in 1955 had increased considerably over the previous record year of 1954. The subcommittee feels that our allies, particularly the British, are making major contributions to the Chinese war economy. At least 13 Americans remain imprisoned in China while our allies' trade with China continues to increase. The role of our allies in this matter during the Korean war, and during this unhappy post-war period is a matter of deep distress to the subcommittee. The subcommittee is vigorously continuing its study of this matter with particular emphasis on the type of goods that are now being sent to Russia and her European satellites, which just a short while ago were felt by our Government to be strategic.

During the year the staff of the subcommittee made a study of the redefection campaign in Europe, which is a concentrated effort of Communist countries to induce people to return to their homelands. It became apparent during 1955 that the problem had become a matter of major significance. Although the number of persons who have actually redefected is unknown, the redefection campaign has had an unsettling effect and the free world is in danger of losing a propaganda advantage which it has thus far maintained.

Legislative investigations to be worth while should accomplish a constructive result. In addition to serving as a basis for legislation, they also serve the important function of bringing to light the existence of conditions which need corrective action. All too often instances have been uncovered by legislative committees of failure to abide by the letter and spirit of our laws, rules, and regulations, and it is only after the legislative investigation that effective action is taken to remedy such conditions. The subcommittee believes it has made a very constructive record during the past year.

As a result of the hearings on the Peress matter, the Peress case is finished as a controversial influence on American life, and the Army has taken 19 corrective measures in order to uncover and deal with security cases.

Because of what was uncovered by the investigations and hearings in the domestic grain-bin program, the Department of Agriculture and the Naval Inspection Service have instituted 21 corrective measures.

In the investigation conducted in connection with the procurement of military hats, bribery, perjury, collusion and fraud, and improper inspection were revealed, as well as the method of making large secret profits through deviations at the expense of the Government. As a result of these hearings, claims are now being pressed by the Government for over a half million dollars on these improper profits. Two Army, one Navy, and one Treasury Department employees were dismissed from Government service. An Air Force officer resigned in the face of a court-martial. Twelve persons and corporations were suspended and two others were debarred and placed on the Consolidated List of Debarred, Ineligible, and Suspended Bidders. New procedures were instituted in procurement of patented components which will save the Government in the future hundreds of thousands of dollars. The subcommittee has recently uncovered further evidence of inefficiency and fraud in the purchase and inspection of textile materials by the armed services. Hearings on this matter will be held in the near future.

In the FOA-Pakistan grain-elevator case, the subcommittee, despite being hampered, delayed, and hindered by Mr. Stassen, the then Director of FOA, uncovered strong evidence of collusion in the negotiations for the award of the contract and prevented FOA from carrying out its announced purpose of negotiating and entering into a contract with the apparent high bidder and thus saved the Government possibly a million dollars.

Its investigation of conflict-of-interest situations resulted in the resignation of Air Secretary Harold E. Talbott and Hugh Cross as Chairman of the Interstate Commerce Commission.

The investigation was continued with regard to Communists in defense plants, and several witnesses were called from Allis-Chalmers, Fitchburg, Mass.; Bethlehem Steel Corp., Bethlehem, Pa.; and General Electric Co., Schenectady, N. Y.

Just this past week the subcommittee held open hearings indicating that over $3 million had been paid by the Government to schools training GI's whose owners refused to tell Government officials whether they had or had not been members of the Communist Party on the grounds that such an answer might tend to incriminate them. The subcommittee intends to continue its investigation into this matter and is working on legislation to prevent its reoccurrence.

Mr. President, I may say that the committee expects to present proposed legislation to prevent such a thing from recurring.

It is difficult, if not impossible, to calculate the actual monetary savings accomplished by the legislative investigations of this subcommittee. It is evident, however, that although such savings are important and are many times in excess of the cost of operating the subcommittee, of even greater importance is the subcommittee's function as a deterrent to improprieties and even criminal offenses on the part of those in Government and those dealing with the Government. The watchdog functions of the subcommittee in the field of general Government operations serves an extremely useful and essential purpose as a check and balance on the executive departments.

It should also be noted that these investigations were conducted with an appropriation of $190,000 and that approximately $15,000 of this amount will be unexpended and therefore returned to the Treasury of the United States.

Thus far, Mr. President, for an expense of $175,000, the results to which I have referred have been accomplished.

In closing I would like to say the subcommittee wishes to express its sincere appreciation to the General Accounting Office for assigning two investigators to the subcommittee for special work and for the major assistance it rendered in many ways during the past year.

It is also most grateful to the Senate Committee on Appropriations for the assignment of an investigator to assist this subcommittee.

Mr. President, on behalf of the Government Operations Committee, I submit the annual report of the Senate Permanent Subcommittee on Investigations, and ask that it be printed.

The PRESIDING OFFICER. The report will be received and printed, as requested by the Senator from Arkansas.

BILLS AND JOINT RESOLUTIONS INTRODUCED

Bills and joint resolutions were introduced, read the first time, and, by unanimous consent, the second time, and referred as follows:

By Mr. CARLSON:

S. 3041. A bill to provide a measure of coordination between the Civil Service Retirement Act and the Social Security Act, and for other purposes; to the Committee on Post Office and Civil Service.

(See the remarks of Mr. CARLSON when he introduced the above bill, which appear under a separate heading.)

By Mr. MURRAY (by request):

S. 3042. A bill to amend section 27 of the Mineral Leasing Act of Februray 25, 1920, as amended (30 U. S. C., sec. 184), in order to promote the development of phosphate on the public domain; to the Committee on Interior and Insular Affairs.

By Mr. SCOTT:

S. 3043. A bill to amend section 270 of the Internal Revenue Code of 1954 so as to reduce the maximum amount of deductions allowable to individuals from the operation of certain businesses; to the Committee on Finance.

By Mr. THYE:

S. 3044. A bill to amend the Agricultural Act of 1949, as amended, so as to extend the provisions of section 201 (c) and the provisions of section 202 (a) and (b), relating to the disposition of surplus dairy products, and the provisions of section 204 (e) of the Agricultural Act of 1954 relating to the program for eradication of brucellosis; to the Committee on Agriculture and Forestry.

(See the remarks of Mr. THYE when he introduced the above bill, which appear under a separate heading.)

By Mr. ELLENDER (by request):

S. 3045. A bill to amend section 314 of the Agricultural Adjustment Act of 1938, as amended; and

S. 3046. A bill to amend the act of May 29, 1884 (23 Stat. 31), as amended, and the act of March 3, 1905 (33 Stat. 1264), as amended, to eliminate the requirement of certain notices thereunder and for other purposes; to the Committee on Agriculture and Forestry.

By Mr. FULBRIGHT:

S. 3047. A bill to provide for the establishment of the Pea Ridge Battlefield National Park, in the State of Arkansas; to the Committee on Interior and Insular Affairs.

(See the remarks of Mr. FULBRIGHT when he introduced the above bill, which appear under a separate heading.)

By Mr. MAGNUSON:

S. 3048. A bill for the relief of Vendelin Kalenda; and

S. 3049. A bill for the relief of Fethi Hep Cakici; to the Committee on the Judiciary.

By Mr. HUMPHREY:

S. 3050. A bill for the relief of Annemarie Appelt and her two minor children, Karin Amelia Green and Sylvia Green; to the Committee on the Judiciary.

By Mr. MAGNUSON:

S. J. Res. 125. Joint resolution proposing an amendment to the Constitution of the United States providing for the establishment of the office of Senator at Large in the Senate of the United States for ex-Presidents of the United States; to the Committee on the Judiciary.

By Mr. BYRD (for himself and Mr. BRIDGES):

S. J. Res. 126. Joint resolution proposing an amendment to the Constitution of the United States relative to the balancing of the budget; to the Committee on the Judiciary.

(See the remarks of Mr. BYRD when he introduced the above joint resolution, which appear under a separate heading.)

By Mr. EASTLAND:

S. J. Res. 127. Joint resolution proposing an amendment to the Constitution of the United States to prevent interference with, and to eliminate limitations upon, the power of the States to regulate health, morals, education, marriage, and good order therein; to the Committee on the Judiciary.

RESOLUTIONS

The following resolutions were submitted or reported, and referred as indicated:

Mr. DIRKSEN (for himself, Mr. BARRETT, Mr. BEALL, Mr. BENDER, Mr. BUSH, Mr. CHAVEZ, Mr. IVES, Mr. KENNEDY, Mr. KUCHEL, Mr. MANSFIELD, Mr. MCCARTHY, Mr. MURRAY, Mr. O'MAHONEY, Mr. PASTORE, Mr. PURTELL, Mr. MALONE, Mr. LANGER, and Mr. MAGNUSON) submitted the following resolution:

S. Res. 192. Resolution favoring the unification of Ireland; to the Committee on Foreign Relations.

(See resolution printed in full when submitted by Mr. DIRKSEN, where it appears under a separate heading.)

Mr. HILL, from the Committee on Labor and Public Welfare, reported the following original resolutions:

S. Res. 193. Resolution providing additional funds for the Committee on Labor and Public Welfare; and

S. Res. 194. Resolution authorizing the employment of additional clerical assistants by the Committee on Labor and Public Welfare.

(See resolutions printed in full when reported by Mr. HILL, where they appear under separate headings.)

Mr. JENNER submitted the following resolution:

S. Res. 195. Resolution to print the 37th biennial report of the Convention of American Instructors of the Deaf; to the Committee on Rules and Administration.

(See resolution printed in full when submitted by Mr. JENNER, where it appears under a separate heading.)

COORDINATION BETWEEN CIVIL SERVICE RETIREMENT ACT AND SOCIAL SECURITY ACT

Mr. CARLSON. Mr. President, the Senate Post Office and Civil Service Committee has today received a bill to implement the recommendations of the Committee on Retirement Policy for Federal Personnel.

Following the enactment of Public Law 555, 82d Congress, President Truman appointed H. Eliot Kaplan of New York State as Chairman of the Committee. The ex officio members of the Federal Personnel Committee were the Secretary of the Treasury, Secretary of Defense, Chairman of the Board of Governors of the Federal Reserve System, the Director of the Bureau of the Budget, and the Chairman of the Civil Service Commission.

This Committee spent much time studying the Federal Service Retirement System and made interim reports to Congress.

When President Eisenhower assumed office at the beginning of the 83d Congress, he continued the same committee in order that they might complete their study. This committee received $225,000 by congressional appropriation and $50,000 through the President's employment fund, making a total of $275,000. The Committee spent $217,000, and I feel it is important that Congress give consideration to their report and their study.

This committee was created at a time when Congress was greatly concerned with, first, the alleged inadequacy of the financial structure of the civil service retirement system; and, second, the continuing efforts to liberalize the civil service retirement system with total disregard for benefits the members of that system might be acquiring under other Government-sponsored systems.

Among other things, the committee was instructed by Public Law 555 to submit its findings and recommendations on the relationships between the civil service retirement system and the general system of old-age and survivors' insurance.

The committee's third report which is published as Senate Document No. 89, part 3, of the 83d Congress, 2d session, recommends that the civil service retirement system be continued as an independent staff retirement plan but that it be coordinated with old-age and survivors' insurance.

In recommending coordination of the two systems in Senate Document No. 89, the committee spelled out its specifications pertaining to coordination. These are:

First. Establish a rational relationship between retirement benefits and service for those whose work-lifetime may include employment in both the Federal service and private industry, taking into account the advantages to Federal employees by extending old-age and survivors' insurance coverage to Federal employment.

Second. Maintain complete independence of the civil service retirement system.

Third. Assure continuance of the civil service retirement system as the primary means of providing adequate protection for career employees, while placing some of the cost on the old-age and survivors' insurance system for providing coverage—particularly for those shifting between Federal and private employment.

Fourth. Provide at least the present level of retirement benefits based on Federal employment.

Fifth. Maintain the total employee contribution at approximately the present level.

Sixth. Maintain simplicity of formula and administration.

I introduce, for appropriate reference, a bill which would carry out the committee's recommendations.

The PRESIDENT pro tempore. The bill will be received and appropriately referred.

The bill (S. 3041) to provide a measure of coordination between the Civil Service Retirement Act and the Social Security Act, and for other purposes, introduced by Mr. CARLSON, was received, read twice by its title, and referred to the Committee on Post Office and Civil Service.

AMENDMENT OF AGRICULTURAL ACT OF 1949 RELATING TO DISPOSITION OF SURPLUS DAIRY PRODUCTS

Mr. THYE. Mr. President, I introduce, for appropriate reference, a bill to amend the Agricultural Act of 1949, as amended, which embodies three amendments of the basic law which I feel are both desirable and necessary.

The first amendment will extend the general authority of the Secretary of Agriculture to dispose of surplus stocks of dairy products until 1958. The second proposed amendment would also continue until 1958 the utilization of dairy products by the Veterans' Administration and by the military services. It will be recalled that these provisions of the law were approved as a means of increasing the consumption of dairy products in veterans' hospitals and in Armed Forces hospitals, as well as through the regular rations of the military services. I believe these provisions of the law should be continued.

The final proposed amendment incorporated in the bill relates to the program for eradication of brucellosis. Specifically, the bill proposes that the Secretary of Agriculture is authorized to transfer up to $20 million, the present figure being $15 million, from funds available to the Commodity Credit Corporation to the appropriation item "plant and animal diseases and pest control." This will provide an additional $5 million for the fiscal year ending June 30, 1956. Additionally, this amendment in my bill would authorize the transfer of $25 million for the fiscal year ending June 30, 1957, and $25 million for the fiscal year ending June 30, 1958. The brucellosis control program has made substantial progress up to the present time, and I am firmly convinced that we must provide adequate funds so as to not hinder its future development. At the present time, I understand there is an immediate need for funds, and, consequently, I am hopeful that Congress will be able to promptly approve an additional transfer of funds for this current fiscal year. Beyond that, I hope Congress will see fit to permit an expansion of the program by authorizing an additional transfer of $10 million, making the total $25 million, for the succeeding 2 fiscal years.

The PRESIDENT pro tempore. The bill will be received and appropriately referred.

The bill (S. 3044) to amend the Agricultural Act of 1949, as amended, so as to extend the provisions of section 201 (c) and the provisions of section 202 (a) and (b), relating to the disposition of surplus dairy products, and the provisions of section 204 (e) of the Agricultural Act of 1954 relating to the program for eradication of brucellosis, introduced by Mr. THYE, was received, read twice by its title, and referred to the Committee on Agriculture and Forestry.

PEA RIDGE BATTLEFIELD NATIONAL PARK, ARK.

Mr. FULBRIGHT. Mr. President, I introduce, for appropriate reference, a bill to provide for the establishment of the Pea Ridge Battlefield National Park in the State of Arkansas. I ask unanimous consent that the bill be printed in the body of the RECORD, together with an article by May C. Downer which was printed in the Southwest Times Record, Fort Smith, Ark., on Sunday, October 9, 1955, entitled "Memorial to the Dead Needed"; and an editorial from the Arkansas Gazette, Little Rock, Ark., entitled "Pea Ridge Park."

The PRESIDENT pro tempore. The bill will be received and appropriately referred; and, without objection, the bill and newspaper articles will be printed in the RECORD.

The bill (S. 3047) to provide for the establishment of the Pea Ridge Battlefield National Park, in the State of Arkansas, introduced by Mr. FULBRIGHT, was received, read twice by its title, referred to the Committee on Interior and Insular Affairs, and ordered to be printed as follows:

Be it enacted, etc., That the Secretary of the Interior shall acquire, by gift, purchase, condemnation, or otherwise, the lands (together with any improvements thereon) known as the Pea Ridge Battlefield, near Bentonville, Ark., and any other lands adjacent to such battlefield which in his opinion, are necessary or desirable to carry out the purposes of this act.

SEC. 2. (a) The lands acquired under the first section of this act shall be set aside as a public park for the benefit and enjoyment of the people of the United States, and shall be designated as the Pea Ridge Battlefield National Park. The National Park Service, under the direction of the Secretary of the Interior, shall administer, protect, and develop the park, subject to the provisions of the act entitled "An act to establish a National Park Service, and for other purposes," approved August 25, 1916 (39 Stat. 535).

(b) In order to provide for the proper development and maintenance of the park, the Secretary of the Interior shall construct and maintain therein such roads, trails, markers, buildings, and other improvements, and such facilities for the care and accommodation of visitors, as he may deem necessary.

SEC. 3. There are hereby authorized to be appropriated such sums as may be necessary to carry out the provisions of this act.

[From the Southwest Times Record, Fort Smith, Ark., of October 9, 1955]

MEMORIAL TO THE DEAD NEEDED—MOVEMENT ON TO INCLUDE PEA RIDGE BATTLEFIELD IN OUR NATIONAL PARK SYSTEM

(By May C. Downer)

Quite a flurry of excitement was noted in northwest Arkansas over the recent announcements that the Pea Ridge Battlefield might become a historical shrine, and that a section of the battlefield might be included in the national park system.

Gov. Orval Faubus has encouraged the idea by appointing a committee to seek Federal funds for this purpose.

This idea is not original as many old timers in Benton County—where was fought on March 6-8, 1862, one of the most important battles between the States—can testify.

More than 25 years ago the plan of converting the Pea Ridge Battlefield into a national park was advocated by both the Northern and Southern survivors of that bloody battle, which many historians have declared one of the most decisive battles of the war.

TWENTY-SIX THOUSAND SOLDIERS

More than 26,000 soldiers were engaged in that battle in which three Confederate generals, W. G. Slack of Missouri, Ben McCulloch, of Texas, and James McIntosh of Arkansas, were killed or fatally injured, and thousands of soldiers killed or wounded and died later.

A bill was introduced by Congressman John N. Tillman of Fayetteville to have $50,000 appropriated for the purchase of the tract where the battle was fought and to create a national park. Although the bill was approved by the full committee and the Committee on Military Affairs, nothing came of the proposal.

The bill had the support of the Pea Ridge National Park Association which was formed in March of 1934, and the late Gov. C. H. Brough who made an extensive campaign through Arkansas, Oklahoma and Missouri to raise $15,000 to match $50,000 in Federal aid for purchase and improvement of the proposed park. Everyone praised the idea but financial support was lacking.

Members of that Pea Ridge Park Association were Capt. C. L. Pickens, Bentonville, president; J. M. Putman, Pea Ridge, vice president; Mrs. Elliott R. Berry, Bentonville, secretary; Claude Duty, Rogers, assistant secretary; Roland D. Judd, Rogers, executive secretary; and J. S. Elder, Rogers, treasurer.

HISTORY WELL KNOWN

Every person who has studied the history of the United States is familiar with the account of the battle of Pea Ridge. There is no need to tell of that battle, which was then Leestown, a small trading post, and 1 mile north of Elk Horn tavern, the place that later was to become nationally known as the headquarters of Union officers who confiscated the building early in the engagement.

Elk Horn tavern was owned by Joe Cox and his young bride, Lucy who took refuge in the basement, and were terrified by the sound of the battle, the cries of the wounded, a number of whom were brought into the building to await transfer to hospitals in other States. Mrs. Cox said the moans of the men, the scraping feet of the officers, the discharge of the guns were nightmares throughout her passing years.

Winston Springs, near the scene of the battle, came in for a share of publicity. Both armies fought bitterly for their possession since they were the main source of drinking water. A small stream fed by the springs ran near the scene of the fighting and kept at least one wounded Union soldier alive for 2 days before he was found by his Irish buddy. With a broken leg and other wounds, he had managed to crawl to the edge of the stream, and cupped the cold water on his face and into his mouth.

REVISITED BATTLEFIELD

Long years later with his two daughters he visited the battlefield during a Blue and Gray Reunion. He then was living in Chicago and had acquired considerable wealth. His daughters said he had many times expressed a desire to return to the place where he had nearly died.

Together the three told the writer this incident: When the man was wounded he was left for dead. When he was found among the dying and dead by his buddy, he was ordered to be taken to Cassville, Mo., the nearest point for surgery which meant in those days amputation of the leg, the quickest way to heal—or else.

The young soldier made his buddy swear that he would not permit surgeons to amputate the leg. Arriving in Cassville in an oxen-drawn cart, the orderlies were told to place the man on the table. His Irish friend armed with the oxen yoke dared any knife to be laid on the man. None was.

Somehow the man recovered and 50 years later was in perfect health with only a slight

lameness as he walked over the Pea Ridge battleground.

Elk Horn Tavern was given back to its owners who lived there many years. The place was converted into a show place where thousands of persons from all parts of the United States have come to look over the now peaceful land, once the scene of what has been termed the fiercest battle fought west of the Mississippi during the War Between the States.

WALNUT TREE POPULAR

One of the sights the tourist always visits is the old walnut tree, a stone's throw from Elk Horn Tavern.

The tree, then a healthy young sapling, stood in line of the battle at one point. Every limb was shorn from its trunk. The next year a few shoots came out, then more as the years went by. Until 2 or 3 years ago, the lordly old tree was among the largest in the area. Hundreds of bushels of walnuts have been picked from the tree, and almost everyone who comes during the fall season goes away with a souvenir. If trees could talk, how much that tree—now almost a century old—could tell.

The tourist sees on the hillside just above the tavern two monuments to the men who died on that battlefield or died later from wounds received during the battle.

On the pedestal of one are the following inscriptions: "Gen. W. G. Slack of Missouri; on the west—Gen. Ben McCulloch of Texas; on the south—Gen. James McIntosh of Arkansas." And on the east—"To the Brave Confederates Who Fell on This Field March 7 and 8, 1862."

ALSO SOME VERSE

On the marble block beneath is inscribed the following: "Oh, give me a land where the ruins are spread, and the living tread light on the hearts of the dead;

"Yes, give me a land that is blest by the dust, and bright with the deeds of the downtrodden just.

"Oh, give me the land with a grave in each spot, and names in the grave that shall not be forgot.

"Yes, give me the land of the wreck and the tomb; There is grandeur in graves, there is glory in gloom.

"The graves of our dead, with green overgrown, may yet form the footstool of Liberty's throne, and each single wreck in the warpath of might shall yet be a rock in the temple of right."

Nearby is the other monument with a handshake inscribed on its side, representing the united and friendly North and South.

SIGNS OF DECAY

There are signs of decay about the place. One little old lady, Mrs. Randy Scott, daughter of Joe and Lucy Cox and now 90 years old, and her invalid daughter, Mrs. Lottie Doke, live in the big old house. Both are too feeble to keep it up as they would like to, but they are gracious hostesses to the tourist who passes that way. For a dime one may go through the rooms, and see some of the most priceless relics and antiques. One can walk down the narrow path and look at the walnut tree that, like the owners, has lost some of its beauty. One of the longest limbs of the tree was blown off, but it is still graceful with its dark green leaves. Singing birds build their nests there year after year.

Someone has said, "Poor is the land which has no heroes, but beggered is the land which having them forgets."

Those who fought and died on the Pea Ridge battlefield should not be forgot, neither the Blue nor the Gray, for each fought for the cause each believed was right, and even at this late hour, it is fitting that they be honored.

It is hoped that Governor Faubus who is a native of northwest Arkansas, will be able to start the machinery moving that will eventually perpetuate their memory, by building a National park on the old battlefield.

[From the Arkansas Gazette, Little Rock, Ark.]

A PEA RIDGE PARK

The movement to have the Pea Ridge battlefield in Benton County designated as a national park brings to mind some important Civil War history which was written there by men of the Blue and the Gray 94 years ago come March 6–8. At Pea Ridge was fought the first battle in Arkansas between Confederate and Union armies. Although the size of the forces was comparatively small the engagement was one of the most decisive west of the Mississippi River.

Gen. Samuel R. Curtis and his 20,000 Federal troops were moving southward from Springfield, Mo. Gen. Earl Van Dorn, with 15,000 Confederate troops—described as "ill trained"—attacked at Pea Ridge with the hope of destroying the invaders. Casualty records show 402 of Curtis' men killed, 800 wounded, and 300 captured while Confederate losses were 185 killed, 525 wounded, and 300 missing. The South also lost three generals in the engagement, Ben McCulloch and James L. McIntosh killed and W. Y. Slack mortally wounded. General Curtis moved on southeastward into Arkansas with little more than minor opposition in skirmishes at Salem, Spring River, Talbott's Ferry, Searcy, Smithville, and St. Charles.

There are many interesting historical aspects to the Pea Ridge battle, one being the fact that a Cherokee Indian brigade of Confederates under Gen. Albert Pike came over from Oklahoma for the fight.

The battlefield is located in one of the most scenic areas in the Nation, one which attracts tourists and other visitors from many States. It would be a fitting thing if the Government would designate the battleground as a national park and assist in preserving it for the benefit of the American public.

AMENDMENT OF CONSTITUTION RELATING TO BALANCING THE BUDGET

Mr. BYRD. Mr. President, the Federal Government has operated in the red for a quarter of a century. If the budget is balanced this year, it will be by inadvertence; Federal officials underestimated revenue from last year's business boom. Expenditures are increasing.

The terrible Federal debt is at or near its all-time peak, and the President has said he will ask for an extension of the $281 billion ceiling for next year.

The administration has brought in a budget requesting appropriations $9 billion higher than total appropriations provided for fiscal 1955. Unexpended balances remaining to be spent out of old appropriations, as of next July 1, are estimated at $74.6 billion. These balances, together with $66.3 billion new appropriations requested by the President, would make a total of approximately $141 billion available for expenditure by Federal agencies as of the beginning of the coming fiscal year.

Once appropriations are made, for all practical purposes, the rate of expenditure from these balances cannot be controlled by Congress under present procedures.

The Senator from New Hampshire [Mr. BRIDGES] ranking minority member of the Senate Appropriations Committee, and I, introduce, for appropriate reference, a joint resolution proposing a constitutional amendment which would require Congress to stay in session each year until it has produced a balanced budget by reduction in expenditures, increased revenue, or both and would require the President to submit budgets within the estimates of revenue.

The amendment, of course, would make exceptions of national emergency situations, such as war.

The PRESIDENT pro tempore. The joint resolution will be received and appropriately referred; and, without objection, the joint resolution will be printed in the RECORD.

The joint resolution (S. J. Res. 126) proposing an amendment to the Constitution of the United States relative to the balancing of the budget, introduced by Mr. BYRD (for himself and Mr. BRIDGES), was received, read twice by its title, referred to the Committee on the Judiciary, and ordered to be printed in the RECORD, as follows:

Resolved by the Senate and House of Representatives of the United States of America in Congress assembled (two-thirds of each House concurring therein), That the following article is hereby proposed as an amendment to the Constitution of the United States, which shall be valid to all intents and purposes as part of the Constitution when ratified by the legislatures of three-fourths of the several States:

"ARTICLE —

"SECTION 1. On or before the 15th day after the beginning of each regular session of the Congress, the President shall transmit to the Congress a budget which shall set forth his estimates of the receipts of the Government, other than trust funds, during the ensuing fiscal year under the laws then existing and his recommendations with respect to expenditures to be made from funds other than trust funds during such ensuing fiscal year, which shall not exceed such estimate of receipts. If the Congress shall authorize expenditures to be made during such ensuing fiscal year in excess of such estimated receipts, it shall not adjourn for more than 3 days at a time until action has been taken necessary to balance the budget for such ensuing fiscal year. In case of war or other grave national emergency, if the President shall so recommend, the Congress by a vote of three-fourths of all the Members of each House may suspend the foregoing provisions for balancing the budget for periods, either successive or otherwise, not exceeding 1 year each.

"SEC. 2. This article shall take effect on the first day of the calendar year next following the ratification of this article.

"SEC. 3. This article shall be inoperative unless it shall have been ratified as an amendment to the Constitution by the legislatures of three-fourths of the several States within 7 years from the date of its submission to the States by the Congress."

UNIFICATION OF IRELAND

Mr. DIRKSEN (for himself, Mr. BARRETT, Mr. BEALL, Mr. BENDER, Mr. BUSH, Mr. CHAVEZ, Mr. IVES, Mr. KENNEDY, Mr. KUCHEL, Mr. MANSFIELD, Mr. MCCARTHY, Mr. MURRAY, Mr. O'MAHONEY, Mr. PASTORE, Mr. PURTELL, Mr. MALONE, Mr. LANGER, and Mr. MAGNUSON) submitted the following resolution (S. Res. 192), which

was referred to the Committee on Foreign Relations:

Whereas on June 6, 1919, the United States Senate adopted resolutions favoring self-determination for the people of Ireland and the House of Representatives in the 65th Congress (1919), 3d session, adopted a House Joint Resolution declaring that the people of Ireland should have the right to determine the form of government under which they desire to live, all of which action was influential in securing freedom for 26 of the 32 counties in Ireland; and

Whereas the maintenance of internal peace and security requires settlement of the question of the unification of Ireland; and

Whereas 26 or the 32 counties of Ireland have been successful in securing international recognition for the Republic of Ireland which has as its basic law a constitution modeled upon our own American Constitution; and

Whereas on the 14th day of December 1955 the United Nations by appropriate action admitted the Republic of Ireland into full membership into the United Nations with all the duties and responsibilities which go with such membership: Now, therefore, be it

Resolved, That it is the sense of the Senate that the Republic of Ireland should embrace the entire territory of Ireland unless a clear majority of all of the people of Ireland in a free plebiscite determine and declare to the contrary.

ADDITIONAL FUNDS FOR COMMITTEE ON LABOR AND PUBLIC WELFARE

Mr. HILL, from the Committee on Labor and Public Welfare, reported the following original resolution (S. Res. 193), which was placed on the calendar:

Resolved, That the Committee on Labor and Public Welfare is hereby authorized to expend from the contingent fund of the Senate, during the 84th Congress, $15,000 in addition to the amount, and for the same purpose, specified in section 134 (a) of the Legislative Reorganization Act approved August 2, 1946.

ADDITIONAL TEMPORARY CLERICAL ASSISTANTS FOR COMMITTEE ON LABOR AND PUBLIC WELFARE

Mr. HILL, from the Committee on Labor and Public Welfare, reported the following original resolution (S. Res. 194), which was placed on the calendar:

Resolved, That the Committee on Labor and Public Welfare is authorized, from February 1, 1956, through January 31, 1957, to employ four additional clerical assistants to be paid from the contingent fund of the Senate at rates of compensation to be fixed by the chairman in accordance with section 202 (e), as amended, of the Legislative Reorganization Act of 1946, and the provisions of Public Law 4, Eightieth Congress, approved February 19, 1947, as amended.

PRINTING OF BIENNIAL REPORT OF CONVENTION OF AMERICAN INSTRUCTORS OF THE DEAF

Mr. JENNER submitted the following resolution (S. Res. 195), which was referred to the Committee on Rules and Administration:

Resolved, That the report of the proceedings of the 37th biennial meeting of the Convention of American Instructors of the Deaf, held at West Hartford, Conn., June 26 to July 1, 1955, be printed, with illustrations, as a Senate document.

AMENDMENT OF SOCIAL SECURITY ACT—AMENDMENT

Mr. LONG. Mr. President, I submit an amendment, intended to be proposed by me, to the bill (H. R. 7225) to amend title II of the Social Security Act to provide disability insurance benefits for certain disabled individuals who have attained age 50, to reduce to age 62 the age on the basis of which benefits are payable to certain women, to provide for continuation of child's insurance benefits for children who are disabled before attaining age 18, to extend coverage, and for other purposes. The bill is presently pending before the Finance Committee. I would further like to explain that the purpose of my amendment is to continue the so-called McFarland amendment. Senators will recall that some years ago the then majority leader, the Senator from Arizona, Mr. McFarland, proposed an amendment which would require the Federal Government to match an additional $5 in providing old-age pensions to needy persons. That has subsequently been extended. I believe it will expire some time in the latter part of this year. Obviously, Mr. President, that matching should continue, because the States are in no position to raise the additional funds necessary. It seems to me that inasmuch as we have provided additional social-security benefits already, and are undertaking to provide additional social-securty benefits again for those who are drawing social security, we should undertake to do something for the needy of the Nation. So far during the Eisenhower administration nothing whatever has been done to improve the condition of needy individuals of this country.

The amendment which I am submitting, in addition to extending the McFarland amendment, would require the Federal Government to contribute an additional $5. I have in mind the aged needy. I have made some study of the cost of the proposal, which reveals that it would cost approximately $77 million for the first year. It seems to me it is a small enough contribution to make toward improving the condition of the needy of this land.

Mr. PURTELL. Mr. President, will the Senator from Louisiana yield for a question?

Mr. LONG. I yield.

Mr. PURTELL. Has the Senator completely overlooked the amendment to the Social Security Act under the Eisenhower administration with reference to farmers?

Mr. LONG. I said, the needy.

Mr. PURTELL. Does the Senator hold that it was not because of the needy in the social-security field?

Mr. LONG. Of course, that does not help any of the farmers who are over the age of 65 today. It helps only those who are able to pay the social-security tax. We should give the needy a further benefit. So far they have not had that benefit. While the Eisenhower administration has done something for the needy already, the Senator will perhaps agree that we should do more.

Mr. PURTELL. I am glad the Senator remembers that the administration has done something.

Mr. LONG. So far, the recipients have had to pay more taxes in the hope that the Federal Government would make a greater contribution to the welfare program.

There being no objection, the amendment was received, referred to the Committee on Finance, and ordered to be printed.

EXTENSION OF POLIOMYELITIS VACCINATION ASSISTANCE ACT OF 1955—ADDITIONAL COSPONSORS OF BILL

Mr. HILL. Mr. President, on January 19, 1956, I introduced the bill (S. 2990) to extend through June 30, 1957, the duration of the Poliomyelitis Vaccination Assistance Act of 1955. I ask unanimous consent that the names of the Senator from Montana [Mr. MURRAY], the senior Senator from New York [Mr. IVES], the Senator from West Virginia [Mr. NEELY], the Senator from Connecticut [Mr. PURTELL], the Senator from Illinois [Mr. DOUGLAS], the Senator from Arizona [Mr. GOLDWATER], the junior Senator from New York [Mr. LEHMAN], the Senator from Ohio [Mr. BENDER], the Senator from Massachusetts [Mr. KENNEDY], the Senator from Colorado [Mr. ALLOTT], and the Senator from Michigan [Mr. MCNAMARA] may be added as additional cosponsors of the bill, the next time it is printed.

The PRESIDENT pro tempore. Without objection, it is so ordered.

ADDRESSES, EDITORIALS, ARTICLES, ETC., PRINTED IN THE RECORD

On request, and by unanimous consent, addresses, editorials, articles, etc., were ordered to be printed in the RECORD, as follows:

By Mr. CLEMENTS:

Proceedings in the ceremonies sponsored by the Christopher Gist Historical Society of the Covington and Newport area in Kentucky, held to commemorate the memory of Hon. John White Stevenson, including address delivered by Senator CLEMENTS.

By Mr. MARTIN of Pennsylvania:

Address delivered by him before the 41st annual meeting of the American Association of State Highway Officials at New Orleans, La., on December 6, 1955.

By Mr. WILEY:

Address delivered by him before Green Bay, Wis., Junior Chamber of Commerce January 22, 1956, on the subject of the need for youthful spirit in Government and private affairs.

Excerpts from a broadcast by him over radio station WTMJ, Milwaukee, Wis., January 22, 1956, on the subject of raising the parity level of dairy products to that of the six basic commodities.

Address delivered by Secretary of Commerce Sinclair Weeks at the Milwaukee salute-to-Ike dinner, January 20, 1956.

By Mr. JENNER:

News releases issued by him as follows: December 19, 1955, Package Deal on New U. N. Members; December 20, 1955, Yugoslavia in the Security Council; and Decem-

ber 30, 1955, the Committee for an Effective Congress.

By Mr. BUTLER:

Article entitled "The Challenge of Political Courage," written by Senator KENNEDY, and published in the New York Times magazine section of December 18, 1955.

SALUTE TO EISENHOWER

Mr. BUTLER. Mr. President, on Friday last the people of America joined with the Republican Party in honoring our beloved President, Dwight D. Eisenhower. As an expression of tribute to him the salute-to-Eisenhower affairs thoughout the Nation bespoke the feelings of all of our citizens. This atmosphere is reflected in a fine editorial which appeared in the New York Herald Tribune on Sunday, January 22, 1956, which I ask to have printed in the body of the RECORD.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

THE LARGEST TOWN MEETING

The great salute to Eisenhower which brought a nation together for what the President called the flying minutes of this electronic tour was deeply impressive on many levels.

From a purely technical standpoint it was a spectacular feat, displaying the ability of modern communications to join all parts of a vast and complex land in a common experience. With 49 gatherings, widely separated in space, spanning a continent, yet linked by the greatest closed circuit television network in history, the salute became what Republican National Chairman Leonard W. Hall called the largest and most significant town meeting in this country's history.

On the political level, this triumph of technology enabled the Republican Party to demonstrate its vigor and unity. Around the central figure of the President, the members of his Cabinet, his party associates, his friends in every section of the Nation, developed a composite picture of what 3 years of Mr. Eisenhower's administration have meant in terms of an evolving party faith that goes beyond partisanship. As Mr. Stassen said in St. Louis, the President's actions have never been motivated by "what is separately and narrowly good for management or for labor, or for any special interest, alone." Using the single yardstick, what is good for America, the President has rebuilt and revitalized the Republican Party.

Thus the technical and political aspects of the salute focus on a fundamental reality: the ideas and ideals which President Eisenhower represents.

Foremost of these, as virtually every speaker emphasized on Friday night, is peace. "Never before in history has a man stricken with illness had the fervent prayers for his recovery from so many millions of people all over the world," said Mr. Humphrey in New York. "One reason for this great attachment of so many millions to our President is the fact that he has become a symbol for peace." And Mr. Dewey in Baltimore gave a concrete example. Quoting an Indian newspaper which "has rarely been kindly in its comments on the United States," Mr. Dewey read from its summary on the Geneva conference: "President Eisenhower arrived at the meeting at the Summit and by sheer force of personal character he dragged all the others up to the summit with him."

This force for peace which Mr. Eisenhower has exerted is not one of personality alone. In Mr. Humphrey's words, "his high ideals are firmly rooted on the solid foundation of practicality." In international affairs, that means strength, military and economic, at home and among the Nation's allies; it means imaginative leadership in presenting constructive plans for lessening the strains of the global conflict between East and West, recognizing the power of peaceful change in an evolving world situation. No contemporary statesman, as Mr. Sherman Adams said in Hartford, "has known more of the world's troubles" than Mr. Eisenhower, "or is better equipped to deal with them."

In the domestic program of the Eisenhower administration, prosperity, greater freedom and increased "protection from the ravages of adversity" are the points cited by Mr. Humphrey as cardinal. The Secretary of the Treasury laid special emphasis upon avoiding both inflation and deflation, to induce the private investment needed for continuing economic growth and preserve the advantages of prosperity. Mr. Benson, in Houston, warned against attempts "to place agriculture on the auction block" and asserted that the President's farm program "is right for the farmers and it is right for America."

Ambassador Henry Cabot Lodge, in Pittsburgh, cited progress toward ending segregation and discrimination because of race and color; Mr. CASE spoke of the President's "forward-looking proposals for aid in school construction, for flood control, aid to economically depressed areas, new highways throughout the country, improved social security and housing." Mr. Dewey praised the "new and refreshing faith in the American people" which the Eisenhower administration has brought to our Government, whereby "price controls, wage controls and a monumental bureaucracy were lifted from the backs of our people." Vice President NIXON spoke, in Chicago, of "the millions of American wage earners who have made the greatest gains in the history of labor under President Eisenhower's fair and friendly policy."

All of these achievements represent a great cause, and a challenge. The principles for which President Eisenhower stands must be firmly rooted into the structure of American Government. How could that be better done than by Mr. Eisenhower himself?

In his moving response to the salute, the President pledged that "in whatever capacity I shall serve, I shall support with all my strength the foreign and domestic programs for America that have been the guide of us all these past 3 years." It is certain that he will continue to work, in the future as in the past, "to convert the uneasy peace in which we live to one that is genuine, based on the great moral principles of justice and right"; that he will endeavor to make the Republican Party "an instrument for genuine service, united in its devotion to a program that preserves intact the vital principles of the American creed."

His future part, "whether to be a candidate for your nomination or a worker in the ranks," remains undecided. The President expressed the devout wish that "there were some method by which the American people could, under the circumstances, point out the path of my true duty." If "the largest town meeting" could not do that, it could, and did, give voice to the earnest hope of the American people that the President will feel morally able to continue in the greater role. It is a hope that will be fervent in the hearts of Americans and freemen everywhere during the days ahead.

THIRTY-EIGHTH ANNIVERSARY OF UKRAINIAN INDEPENDENCE

Mr. IVES. Mr. President, on January 22 our fellow citizens of Ukrainian descent commemorated the 38th anniversary of the independence of the Ukraine. It is a privilege to join with them in taking note of this historic occasion. The gallant Ukrainian people were among the first to fall prey to the ruthless Communist tyranny. Despite decades of subjugation and suffering, the struggle for freedom and independence continues in this brave land. On the anniversary of their independence day we reaffirm our support for the valiant people of the Ukraine as they look forward to the day of liberation from Communist imperialism.

PRESENTATION OF 1956 CIVIC ACHIEVEMENT AWARD TO MISS AGNES JACOBS

Mr. PURTELL. Mr. President, on Monday evening of this week it was my pleasure to attend the annual dinner of the Danielson, Conn., Chamber of Commerce. The feature of the dinner was the presentation of the 1956 civic achievement award to Miss Agnes Jacobs who has been a teacher in the Killingly school system for 39 years.

The presentation of the award was an inspiring event. Gathered to pay Miss Jacobs honor were many of her former pupils who have become outstanding citizens of the community and State.

There have been no statues or monuments erected to honor Miss Jacobs or the hundreds of others like her who have served so devotedly as members of the teaching profession. Yet their work has been immortalized in the influence they have wrought upon their pupils and which has been passed on to and felt by succeeding generations. Their great work has been symbolized through monuments of the spirit which will outlast by many, many years any soaring statues of stone. The presence of so many of her former pupils at the dinner was a most impressive monument.

This was a heartfelt tribute to a woman who has unselfishly served her community and its children for almost 40 years. In addition, Miss Jacobs has been most active in church and civil affairs. Hers, truly, has been a life of service to others.

In paying honor to Miss Jacobs, I feel the chamber of commerce also paid tribute to the thousands of unselfish, devoted schoolteachers in the State of Connecticut and throughout our country. These dedicated men and women in our public, parochial, and private schools, in our colleges and universities have a most sacred trust and responsibility. For it is to them that the Americans of tomorrow look for guidance. They are, in fact, shapers of the American destiny.

I want to take this occasion to pay my respects to Miss Jacobs and through her to the teachers of my own State of Connecticut and this Nation.

EXECUTIVE SESSION

The PRESIDENT pro tempore. Is there further morning business? If not, morning business is closed.

Under the order previously entered, the Senate will now proceed to the consideration of executive business for action on the two treaties on the executive calendar.

The Senate proceeded to the consideration of executive business.

EXECUTIVE MESSAGES REFERRED

The PRESIDENT pro tempore laid before the Senate messages from the President of the United States submitting sundry nominations, which were referred to the appropriate committees.

(For nominations this day received, see the end of Senate proceedings.)

EXECUTIVE REPORTS OF COMMITTEES

The following favorable reports of nominations were submitted:

By Mr. HILL, from the Committee on Labor and Public Welfare:

Francis A. O'Neill, Jr., of New York, to be a member of the National Mediation Board; and

John C. Hume, and sundry other candidates, for personnel action in the regular corps of the Public Health Service.

By Mr. MAGNUSON, from the Committee on Interstate and Foreign Commerce:

Harold Chadwick McClellan, of California, to be an Assistant Secretary of Commerce.

Rupert L. Murphy, of Georgia, to be an Interstate Commerce Commissioner; and

Ira T. Sanders, and sundry other persons, for permanent appointment in the Coast and Geodetic Survey.

By Mr. POTTER, from the Committee on Interstate and Foreign Commerce:

Frederick Henry Mueller, of Michigan, to be an Assistant Secretary of Commerce.

By Mr. BRICKER, from the Committee on Interstate and Foreign Commerce:

Robert W. Minor, of Ohio, to be an Interstate Commerce Commissioner, vice J. Haden Alldredge, retired.

PROTOCOL AMENDING THE SLAVERY CONVENTION; PROTOCOL MODIFYING THE CONVENTION CONCERNING CREATION OF AN INTERNATIONAL UNION FOR THE PUBLICATION OF CUSTOMS TARIFFS

The PRESIDENT pro tempore. If there be no further reports of committees, the Chair lays before the Senate two protocols, Executive F (83d Cong., 2d sess.), and Executive P (82d Cong., 2d sess.).

Mr. CLEMENTS. Mr. President, I ask unanimous consent that the two protocols be considered en bloc, and that after they have passed through their regular parliamentary stages and the resolutions of ratification have been reported and debate has been concluded, a yea-and-nay vote be taken on the question of advising and consenting to the ratification of Executive F, 83d Congress, 2d session, and that the second protocol, Executive P, 82d Congress, 2d session, be deemed to have been ratified or rejected, as the case may be, by the same vote.

The PRESIDING OFFICER (Mr. MURRAY in the chair). Is there objection to the unanimous-consent request? The Chair hears none, and it is so ordered.

The Senate, as in Committee of the Whole, proceeded to consider, en bloc, the following protocols:

Executive F, 83d Congress, 2d session, a protocol amending the slavery convention signed at Geneva on September 25, 1926, which was opened for signature at the headquarters of the United Nations, New York, on December 7, 1953, and was signed on behalf of the United States of America on December 16, 1953.

Executive P, 82d Congress, 2d session, a protocol, signed at Brussels under date of December 16, 1949, modifying the convention of July 5, 1890, concerning the creation of an International Union for the Publication of Customs Tariffs, the regulations for the execution of the convention instituting an International Bureau for the Publication of Customs Tariffs, and memorandum of signature.

The protocols were severally read the second time, as follows:

PROTOCOL AMENDING THE SLAVERY CONVENTION SIGNED AT GENEVA ON 25 SEPTEMBER 1926

The States Parties to the present Protocol,

Considering that under the Slavery Convention signed at Geneva on 25 September 1926 (hereinafter called "the convention") the League of Nations was invested with certain duties and functions, and

Considering that it is expedient that these duties and functions should be continued by the United Nations.

Have agreed as follows:

ARTICLE I

The States Parties to the present Protocol undertake that as between themselves they will, in accordance with the provisions of the Protocol, attribute full legal force and effect to and duly apply the amendments to the Convention set forth in the annex to the Protocol.

ARTICLE II

1. The present Protocol shall be open for signature or acceptance by any of the States Parties to the Convention to which the Secretary-General has communicated for this purpose a copy of the Protocol.

2. States may become Parties to the present Protocol by:

(a) Signature without reservation as to acceptance;

(b) Signature with reservation as to acceptance, followed by acceptance;

(c) Acceptance.

3. Acceptance shall be effected by the deposit of a formal instrument with the Secretary-General of the United Nations.

ARTICLE III

1. The present Protocol shall come into force on the date on which two States shall have become Parties thereto, and shall thereafter come into force in respect of each State upon the date on which it becomes a Party to the Protocol.

2. The amendments set forth in the annex to the present Protocol shall come into force when twenty-three States shall have become Parties to the Protocol, and consequently any State becoming a Party to the Convention, after the amendments thereto have come into force, shall become a Party to the Convention as so amended.

ARTICLE IV

In accordance with paragraph 1 of Article 102 of the Charter of the United Nations and the regulations pursuant thereto adopted by the General Assembly, the Secretary-General of the United Nations is authorized to effect registration of the present Protocol and of the amendments made in the Convention by the Protocol on the respective dates of their entry into force and to publish the Protocol and the amended text of the Convention as soon as possible after registration.

ARTICLE V

The present Protocol, of which the Chinese, English, French, Russian and Spanish texts are equally authentic, shall be deposited in the archives of the United Nations Secretariat. The texts of the Convention to be amended in accordance with the annex being authentic in the English and French languages only, the English and French texts of the annex shall be equally authentic, and the Chinese, Russian and Spanish texts shall be translations. The Secretary-General shall prepare certified copies of the Protocol, including the annex, for communication to States Parties to the Convention, as well as to all other States Members of the United Nations. He shall likewise prepare for communication to States, including States not Members of the United Nations, upon the entry into force of the amendments as provided in article III, certified copies of the Convention as so amended.

In witness whereof the undersigned, being duly authorized thereto by their respective Governments, signed the present Protocol on the date appearing opposite their respective signatures.

Done at the Headquarters of the United Nations, New York, this seventh day of December one thousand nine hundred and fifty-three.

ANNEX TO THE PROTOCOL AMENDING THE SLAVERY CONVENTION SIGNED AT GENEVA ON 25 SEPTEMBER 1926

In article 7 "the Secretary-General of the United Nations" shall be substituted for "the Secretary-General of the League of Nations".

In article 8 "the International Court of Justice" shall be substituted for "the Permanent Court of International Justice", and "the Statute of the International Court of Justice" shall be substituted for "the Protocol of December 16th, 1920, relating to the Permanent Court of International Justice".

In the first and second paragraphs of article 10 "the United Nations" shall be substituted for "the League of Nations".

The last three paragraphs of article 11 shall be deleted and the following substituted:

"The present Convention shall be open to accession by all States, including States which are not Members of the United Nations, to which the Secretary-General of the United Nations shall have communicated a certified copy of the Convention.

"Accession shall be effected by the deposit of a formal instrument with the Secretary-General of the United Nations, who shall give notice thereof to all States Parties to the Convention and to all other States contemplated in the present article, informing them of the date on which each such instrument of accession was received in deposit."

In article 12 "the United Nations" shall be substituted for "the League of Nations".

PROTOCOL

MODIFYING THE CONVENTION OF JULY 5, 1890, CONCERNING THE CREATION OF AN INTERNATIONAL UNION FOR THE PUBLICATION OF CUSTOMS TARIFFS, THE REGULATIONS FOR THE EXECUTION OF THE CONVENTION INSTITUTING AN INTERNATIONAL BUREAU FOR THE PUBLICATION OF CUSTOMS TARIFFS, AND THE MEMORANDUM OF SIGNATURE, SIGNED AT BRUSSELS, DECEMBER 16, 1949

The Representatives of the signatory Governments,

Convinced of the importance of the work of the International Bureau for the Publication of Customs Tariffs instituted by the Convention of July 5, 1890,

Considering that the funds authorized by the said Convention are not sufficient to enable the Bureau to carry out its task adequately,

Duly authorized, hereby agree to make the following modifications in the Convention of July 5, 1890, Concerning the Creation of an International Union for the Publication of Customs Tariffs and in the Regulations for the Execution of the Convention Instituting an International Bureau for the Publication of Customs Tariffs as well as in the Memorandum of Signature:

Convention of July 5, 1890, Concerning the Creation of an International Union for the Publication of Customs Tariffs.

Articles 8 to 10 are replaced by the following articles:

ARTICLE 8

The annual budget of expenditures of the International Bureau is fixed at the maximum figure of 500,000 gold francs.

ARTICLE 9

With the view of fairly assessing the quotas of the Contracting States, these will be divided, according to the amount of their trade, into seven classes each contributing in the proportion of a certain number of units, namely:

1st class: Countries whose trade regularly amounts to more than 5,000 million gold francs: 53 units.

2nd class: Countries whose trade regularly amounts to from 3,000 to 5,000 million gold francs: 36.5 units.

3rd class: Countries whose trade regularly amounts to from 1,500 to 3,000 million gold francs: 25 units.

4th class: Countries whose trade regularly amounts to from 500 million to 1,500 million gold francs: 20 units.

5th class: Countries whose trade regularly amounts to from 300 to 500 million gold francs: 13 units.

6th class: Countries whose trade regularly amounts to from 100 to 300 million gold francs: 8 units.

7th class: Countries whose trade regularly amounts to less than 100 million gold francs: 3 units.

ARTICLE 10

In regard to countries whose language will not be used by the International Bureau the foregoing figures will respectively be reduced by two-fifths, so that they will stand, namely:

	Units
For the 1st class	at 31.8
For the 2d class	at 21.9
For the 3d class	at 15.
For the 4th class	at 12.
For the 5th class	at 8.
For the 6th class	at 5.
For the 7th class	at 1.

REGULATIONS FOR THE EXECUTION OF THE CONVENTION INSTITUTING AN INTERNATIONAL BUREAU FOR THE PUBLICATION OF CUSTOMS TARIFFS

Articles 7, 8, and 10 are replaced by the following articles:

ARTICLE 7

The amount of the proportional contribution of each State will be returned in the form of subscriptions to the International Journal calculated at the rate of 100 gold francs each.

	Gold francs
A. Salaries of the functionaries and employees of the International Bureau (including an additional 15%)	250,000
B. Expenses of printing and distributing the Customs Journal	180,000
C. Provision for Staff Pensions Fund	25,000
D. Rental aid repair of the premises occupied by the International Bureau, fuel, light, supplies, office expenses, etc	30,000
E. Contingency fund	15,000
Total	500,000

ARTICLE 10

The head of the International Bureau is authorized, subject to the approval of the Minister of Foreign Affairs of Belgium, to carry over to the current year unused sums of the previous year. These sums will so far as they extend be applied towards the formation of a reserve fund intended to provide for contingent expenses, but said reserve fund shall, in no case, exceed 100,000 gold francs. The surplus will if so deemed fit permit the price of subscription to the Journal to be reduced but it shall not be used to increase the number of copies guaranteed by the Contracting States; such surplus may also go towards payment of the expenses involved in translation into another language besides those enumerated in Article 1.

This last-mentioned measure can only be carried out subject to the unanimous assent of the States and Colonies members of the Union.

MEMORANDUM OF SIGNATURE

The Memorandum of Signature annexed to the Convention of July 5, 1890, is replaced by the following text:

The undersigned delegates this day assembled for the purpose of making the necessary modifications in the Convention and Regulations concerning the International Union for the Publication of Customs Tariffs, have exchanged the following declarations:

1. Regarding the classification of the countries of the Union in respect to their quotas in the expenses of the International Bureau (Articles 9, 10 and 11 of the Convention):

The delegates declare that the adhering countries are divided into the following classes and shall respectively be bound to contribute in the proportion of the number of units hereinafter set forth:

	Units
First class:	
Germany	53
United States of America	53
France	53
Great Britain	53
Second class:	
Australia	36.5
Belgium	36.5
Canada	36.5
China	21.9
Italy	36.5
Japan	21.9
Pakistan	21.9
Netherlands	21.9
Sweden	21.9
Indian Union	36.5
U. S. S. R.	21.9
Third class:	
Argentina	25
Brazil	15
Denmark	15
Spain	25
Switzerland	25
Czechoslovakia	15
Union of South Africa	25
Fourth class:	
Austria	20
Chile	20
Colombia	20
Cuba	20
Egypt	12
Finland	12
Greece	12
Iran	12
Mexico	20
Norway	12
Philippines	20
Poland	12
Portugal	12
Rumania	12
Turkey	12
Venezuela	20
Yugoslavia	12
Fifth class:	
Bolivia	13
Bulgaria	8
Hungary	8
Peru	13
Siam	8
Uruguay	13
Sixth class:	
Belgian Congo	5
Iraq	5
Seventh class:	
Albania	1
Costa Rica	3
Dominican Republic	3
Ecuador	3
Haiti	3
Honduras	3
Lebanon	1
Luxembourg	3
Panama	3
Paraguay	3
Syria	1

The amounts of the contributions are established provisionally according to the following table. These contributions shall be revised when circumstances change considerably and in any event before March 31, 1954.

	Yearly contribution (in gold francs)	Number of copies of the Journal to which the adhering countries are entitled
FIRST CLASS		
Germany	26,500	265
United States of America	26,500	265
France	26,500	265
Great Britain	26,500	265
SECOND CLASS		
Australia	18,250	182
Belgium	18,250	182
Canada	18,250	182
China	10,950	110
Italy	18,250	182
Japan	10,950	110
Pakistan	10,950	110
Netherlands	10,950	110
Sweden	10,950	110
Indian Union	18,250	182
U. S. S. R.	10,950	110
THIRD CLASS		
Argentina	12,500	125
Brazil	7,500	75
Denmark	7,500	75
Spain	12,500	125
Switzerland	12,500	125
Czechoslovakia	7,500	75
Union of South Africa	12,500	125
FOURTH CLASS		
Austria	10,000	100
Chile	10,000	100
Colombia	10,000	100
Cuba	10,000	100
Egypt	6,000	60
Finland	6,000	60
Greece	6,000	60
Iran	6,000	60
Mexico	10,000	100
Norway	6,000	60
Philippines	10,000	100
Poland	6,000	60
Portugal	6,000	60
Rumania	6,000	60
Turkey	6,000	60
Venezuela	10,000	100
Yugoslavia	6,000	60
FIFTH CLASS		
Bolivia	6,500	65
Bulgaria	4,000	40
Hungary	4,000	40
Peru	6,500	65
Siam	4,000	40
Uruguay	6,500	65
SIXTH CLASS		
Belgian Congo	2,500	25
Iraq	2,500	25
SEVENTH CLASS		
Albania	500	5
Costa Rica	1,500	15
Dominican Republic	1,500	15
Ecuador	1,500	15
Haiti	1,500	15
Honduras	1,500	15
Lebanon	500	5
Luxembourg	1,500	15
Panama	1,500	15
Paraguay	1,500	15
Syria	500	5

2. Regarding the payment of the contributions to be made by the Contracting Parties:

The delegates declare that the same shall be paid in Brussels during the first quarter of each financial year and in money that is legal tender in Belgium.

Should any of the Contracting Parties leave outstanding more than two yearly contributions, in spite of the reminders addressed to such Party by the Belgian Government, it will be the right of the International Customs Tariff Bureau temporarily to discontinue the dispatch of its publications to said Contracting Party.

The present Protocol shall remain open for signature at the Ministry of Foreign Affairs of Belgium until March 31, 1950, inclusive.

From that date, the present Protocol shall be deposited in the archives of the Belgian Government.

The present Protocol shall enter into force between the States which have signed, notified their acceptance or sent in their ratifications, at such date as the aggregate of their annual contributions to the International Customs Tariff Bureau shall exceed one half of the authorized expenditures of the said Bureau, as specified in the present Protocol.

After the present Protocol has entered into force the States which have not signed the present Protocol or have signed it with a reservation may adhere to it upon request. Such adherence shall be notified through diplomatic channels to the Belgian Government, which in turn shall notify the Governments of each of the other Contracting States; such adherence shall enter into effect thirty days after the dispatch of the notification by the Belgian Government.

[SEAL] JUL A. DENOËL,
Chief of the Treaty Service.

BRUSSELS, *May 19, 1950.*

Mr. CLEMENTS. Mr. President, I suggest the absence of a quorum.

The PRESIDING OFFICER. The Secretary will call the roll.

The Chief Clerk proceeded to call the roll.

Mr. CLEMENTS. Mr. President, I ask unanimous consent that the order for the quorum call be rescinded.

The PRESIDING OFFICER. Without objection, it is so ordered.

Mr. GEORGE. Mr. President, I believe unanimous consent was given to have both treaties considered and voted upon en bloc; I understand that is the effect of the unanimous-consent agreement.

The PRESIDING OFFICER. That is correct.

Mr. GEORGE. Mr. President, the first protocol, which is before the Senate is Executive F, 83d Congress, 2d session.

This protocol is very short and simple. By the Slavery Convention of 1926, to which the United States is a party, the parties undertake to prevent and suppress slave trade in territories under their jurisdiction and to bring about the complete abolition of slavery in all its forms. The convention assigned to the Secretary General of the League of Nations the functions of receiving denunciations and instruments of accession to the convention, of notifying the other parties of these, and of receiving laws and regulations adopted for the purpose of implementing the convention. Since the League of Nations is now defunct, it is necessary to reassign these functions; and by this protocol the Secretary General of the United Nations is designated to perform them.

By the same token, all references to the Permanent Court of International Justice, to which, among others, the function of settling disputes between the parties arising from the convention was assigned, are replaced in the protocol by the International Court of Justice, since the former court is likewise defunct. This change affects the United States position with respect to the article providing for the settlement of disputes, under the 1926 convention. According to its terms, as a nonmember of the Permanent Court of International Justice the United States had the option of referring disputes to which it was a party to courts of arbitration other than the

Permanent Court. Since the United States, however, now is a member of the International Court of Justice, it will be obligated under the terms of the protocol to submit disputes regarding interpretation or application of the slavery convention to that court.

Acceptance of this protocol by the United States is consistent with Senate Resolution 196, by which the Senate in 1946 authorized the President to accept on behalf of the United States the jurisdiction of the International Court of Justice, subject to certain reservations.

The procedural changes made by the protocol follow the pattern set by earlier protocols which invested the Secretary General of the United Nations with similar duties relating to conventions on white-slave traffic, on narcotic drugs, and on the circulation of obscene publications.

Since the United Nations and the parties to the convention are agreed that continued international cooperation for the elimination of slavery is desirable, it is necessary to make these changes in the original convention, so that it may be fully effective.

In summary, Mr. President, this protocol is merely an amendment to the existing Slavery Convention of 1926. As I have stated, the protocol will substitute for the old League of Nations, the United Nations; and also will substitute for the old Permanent Court of International Justice, the new International Court of Justice. The protocol will not add anything in substance to the treaty; it simply is necessary to make the treaty conform with the existing machinery for procedural functions and for the interpretation of the Slavery Convention of 1926.

I may say that the only point raised about this matter was an inquiry, addressed to me, asking whether the protocol is consistent with Senate Resolution 196, by which the Senate in 1946 authorized the President to accept, on behalf of the United States, the jurisdiction of the International Court of Justice, subject to certain reservations. The answer to the question is in the affirmative; it is still a matter for the United States to determine whether any issue arising under this slavery convention will actually be submitted to the Court.

Mr. President, I see no reason for any further explanation of this amendment to the existing treaty, unless some Senator has a question to ask.

Mr. President, the second protocol which will be covered by the one vote is Executive P, 82d Congress, 2d session.

The purpose of this protocol is to correct the long-standing inadequacy in the financing of the International Bureau for the Publication of Customs Tariffs. As all of us know, it is necessary to translate the tariff laws and the money terms used by many countries, in order that tariff laws and duties may be properly understood by other countries. This is done by this International Bureau.

The Bureau was established in 1890 with a budget ceiling of 125,000 gold francs, equivalent to $40,838. This amount was raised by assessments on member nations according to the amount of their foreign commerce, the United States being assessed about $2,233 a year, along with other major trading nations. With rising costs and increasing work due to extensive postwar tariff negotiations, the budget ceiling and assessments became completely inadequate to support the work of the Bureau. In 1949, therefore, the protocol now before the Senate was negotiated, raising the ceiling to 500,000 gold francs, or about $163,350, and the United States contribution to $8,658. This is an increase of about $6,400 a year, and constitutes approximately 5.3 percent of total membership assessments.

In recommending the protocol to the Senate, the Foreign Relations Committee weighed carefully the benefits derived by the United States, and concluded that these amply justified the increased contribution.

The Bureau, located in Belgium, collects, translates, publishes, and distributes to its members the tariff schedules, regulations, and laws of all the members. The United States receives 100 copies of each item, which are used extensively by Government agencies concerned with tariffs. The Department of Commerce in particular finds them extremely useful in answering inquiries of United States businessmen interested in exporting, and in giving out general information on foreign countries.

The Bureau employs about 20 skilled translators. Since in the United States such translators would command a salary of about $9,000, it would cost over $100,000 to duplicate the work of the Bureau, according to Department of Commerce estimates. In other words, for the price of our increased contribution to the International Bureau for the Publication of Customs Tariffs, we could barely hire one translator to do the same work.

The protocol has been in force since 1950, with respect to the nations which have acceded to or ratified it. Since that date, our Government has continued to receive the services of the Bureau, while still contributing only $2,233, according to the old scale of assessments. It would seem only equitable that the Appropriations Committees at the proper time consider payment of the increased assessment as of the effective date of the protocol.

The work of the International Bureau is clearly of considerable benefit to the United States, and it is equally clear that it cannot be adequately financed on scales adopted in 1890. I urge the Senate, therefore, to give its advice and consent to ratification of the protocol.

If there are no questions, I think the vote might now be taken, one vote determining both issues.

Mr. KNOWLAND. Mr. President, will the Senator yield?

Mr. GEORGE. I yield.

Mr. KNOWLAND. As I understand, both of these treaties were reported unanimously from the Committee on Foreign Relations.

Mr. GEORGE. Both treaties were reported unanimously from the committee. There was no dissent. I had the impression that an amendment had been offered to the latter treaty, but I am mistaken. That amendment was offered to a treaty which is still before the committee.

Mr. KNOWLAND. Mr. President, if there is no further discussion, I suggest the absence of a quorum.

The PRESIDING OFFICER. The Clerk will call the roll.

The Chief Clerk proceeded to call the roll.

Mr. KNOWLAND. Mr. President, I ask unanimous consent that the order for the quorum call be rescinded.

The PRESIDING OFFICER (Mr. McNAMARA in the chair). Without objection, it is so ordered.

If there be no objection, the protocols will be considered as having passed through their various parliamentary stages up to and including the presentation of the respective resolutions of ratification.

The resolutions of ratification will be read.

The resolutions of ratification to Executive F, 83d Congress, 2d session, and to Executive P, 82d Congress, 2d session, were read as follows:

Resolved (two-thirds of the Senators present concurring therein), That the Senate advise and consent to the ratification of Executive F, 83d Congress, 2d session, a protocol, amending the slavery convention signed at Geneva on September 25, 1926, which was opened for signature at the headquarters of the United Nations, New York, on December 7, 1953, and was signed on behalf of the United States of America on December 16, 1953.

Resolved (two-thirds of the Senators present concurring therein), That the Senate advise and consent to the ratification of Executive P, 82d Congress, 2d session, a protocol, signed at Brussels under date of December 16, 1949, modifying the convention of July 5, 1890, concerning the creation of an International Union for the Publication of Customs Tariffs, the regulations for the execution of the convention instituting an International Bureau for the Publication of Customs Tariffs, and memorandum of signature.

The PRESIDING OFFICER. The yeas and nays having been previously ordered, the Secretary will call the roll.

The legislative clerk called the roll.

Mr. CLEMENTS. I announce that the Senator from Texas [Mr. JOHNSON] is necessarily absent.

The Senator from Georgia [Mr. RUSSELL] is absent because of illness.

I further announce that the Senator from New Mexico [Mr. CHAVEZ], the Senator from Arkansas [Mr. FULBRIGHT], the Senator from South Carolina [Mr. JOHNSTON], the Senator from Tennessee [Mr. KEFAUVER], the Senator from Florida [Mr. SMATHERS], and the Senator from Alabama [Mr. SPARKMAN] are absent on official business.

On this vote, the Senator from New Mexico [Mr. CHAVEZ], the Senator from Arkansas [Mr. FULBRIGHT], the Senator from Texas [Mr. JOHNSON], the Senator from South Carolina [Mr. JOHNSTON], the Senator from Tennessee [Mr. KEFAUVER], the Senator from Georgia [Mr. RUSSELL], the Senator from Florida [Mr. SMATHERS], and the Senator from Alabama [Mr. SPARKMAN] if present would each vote "yea."

Mr. SALTONSTALL. I announce that the Senator from New Hampshire [Mr. BRIDGES], the Senator from Kansas [Mr. CARLSON], and the Senator from Arizona [Mr. GOLDWATER] are necessarily absent.

The Senator from Colorado [Mr. MILLIKIN] is absent because of illness.

If present and voting, the Senator from New Hampshire [Mr. BRIDGES], and the Senator from Kansas [Mr. CARLSON] would each vote "yea."

The yeas and nays resulted—yeas 84, nays 0, as follows:

YEAS—84

Aiken	Frear	McClellan
Allott	George	McNamara
Anderson	Gore	Monroney
Barkley	Green	Morse
Barrett	Hayden	Mundt
Beall	Hennings	Murray
Bender	Hickenlooper	Neely

Chavez	Johnston, S. C.	Smathers
Fulbright	Kefauver	Sparkman

The PRESIDING OFFICER. Two-thirds of the Senators present concurring therein, the resolution of ratification to Executive F, 83d Congress, 2d session, is agreed to.

In accordance with the terms of the unanimous-consent agreement, the resolution of ratification to Executive P, 82d Congress, 2d session, is agreed to by the same vote.

Mr. GEORGE. Mr. President, I request that the President be notified of the ratification of the two protocols upon which a vote has just been taken.

The PRESIDING OFFICER. Without objection, it is so ordered.

EXECUTIVE CALENDAR

Mr. CLEMENTS. Mr. President, I move that the Senate proceed to the consideration of the nominations on the Executive Calendar, beginning with New Reports.

The motion was agreed to.

The PRESIDING OFFICER. The first nomination on the Executive Calendar under the heading of New Reports will be stated.

DEPARTMENT OF STATE

The Chief Clerk read the nomination of Herbert V. Prochnow, of Illinois, to be Deputy Under Secretary of State.

The PRESIDING OFFICER. Without objection, the nomination is confirmed.

Mr. CLEMENTS. Mr. President, I ask that the President be notified of the confirmation of this nomination.

The PRESIDING OFFICER. Without objection, the President will be notified.

The Chief Clerk read the nomination of Isaac W. Carpenter, Jr., of Nebraska, to be Assistant Secretary of State.

The PRESIDING OFFICER. Without objection, the nomination is confirmed.

Mr. CLEMENTS. Mr. President, I ask that the President be notified of the confirmation of this nomination.

The PRESIDING OFFICER. Without objection, the President will be notified.

DIPLOMATIC SERVICE

Mr. CLEMENTS. Mr. President, I ask that the nominations in the Diplomatic Service be considered en bloc.

The PRESIDING OFFICER. Without objection, the nominations in the Diplomatic Service are confirmed en bloc.

The nominations confirmed en bloc are, as follows:

Thomas C. Mann, of Texas, to be Ambassador Extraordinary and Plenipotentiary of the United States of America to El Salvador.

John D. Hickerson, of Texas, to be Ambassador Extraordinary and Plenipotentiary of the United States of America to Finland.

John J. Muccio, of Rhode Island, to be Ambassador Extraordinary and Plenipotentiary of the United States of American to Iceland.

Wiley T. Buchanan, Jr., of the District of Columbia, to be Ambassador Extraordinary and Plenipotentiary of the United States of America to Luxembourg.

Robert H. Thayer, of New York, to be Envoy Extraordinary and Minister Plenipotentiary of the United States of America to Rumania.

Mr. CLEMENTS. Mr. President——

Mr. PASTORE. Mr. President, will the Senator from Kentucky yield?

Mr. CLEMENTS. I yield.

Mr. PASTORE. Mr. President, it is with a great deal of pleasure that I support the nomination of John J. Muccio to be Ambassador to Iceland.

Mr. Muccio is from my own State of Rhode Island, and he has served as a Foreign Service officer since August 15, 1921. He brings to his position as Ambassador to Iceland his many years of experience at various posts throughout the world. He was our first United States Ambassador to Korea and in 1950 was awarded the Medal of Merit by the President of the United States.

Mr. Muccio is a devoted public servant who, I am confident, will reflect the best principles of American tradition on foreign soil.

Mr. President, I ask unanimous consent that a biographic sketch of Mr. John Joseph Muccio be printed in the RECORD at this point.

There being no objection, the biographic sketch was ordered to be printed in the RECORD, as follows:

BIOGRAPHIC SKETCH OF JOHN JOSEPH MUCCIO

Born: Valle Agricola, Italy, March 19, 1900; son of John Anthony and Filomena (Muccio) M. Became naturalized United States citizen, June 1921.

Education: Ph. B., Brown University 1921; LL. D., 1952; M. A., George Washington University, 1925; LL. D., Seoul National University, Korea, 1952.

Experience: Foreign Service officer since August 15, 1921; vice consul, Hamburg, 1924; vice consul, Hong Kong, 1926; consul, Yunnanfu, February, 1928, Hong Kong, March 1928; Foochow, March 1939; Shanghai, February 1931; consul and 2d secretary, La Paz, Bolivia, February 27, 1935; 2d secretary, Panama, August 1938; 1st secretary, June 1939; consul and 1st secretary, Managua, May 1940; counselor, Panama, August 1943; counselor or Embassy, Habana, 1943–44; member, American Mission to Germany, May 1945–47; special representative of President of United States to Korea, August 1948; appointed first United States Ambassador to Korea, 1949; United States Delegate U. N. Trusteeship Council, 1952. Awarded Medal of Merit by President Truman in 1950. Presently Minister at Iceland. Served with United States Army, 1918.

Clubs: Shanghai (Shanghai); Union, Panama Golf (Panama); Metropolitan (Washington).

Home: 30 Lyman Avenue, North Providence, R. I.

Address: Department of State, Washington, D. C.

Mr. CLEMENTS. Mr. President, I ask that the President be notified of the confirmation of the nominations in the Diplomatic Service.

The PRESIDING OFFICER. Without objection, the President will be notified.

WORLD HEALTH ORGANIZATION

The Chief Clerk read the nomination of Dr. Frederick K. Brady, of Maryland, to be the representative of the United States of America on the Executive Board of the World Health Organization.

The PRESIDING OFFICER. Without objection, the nomination is confirmed.

UNITED STATES ADVISORY COMMISSION ON EDUCATIONAL EXCHANGE

The Chief Clerk read the nomination of Rufus H. Fitzgerald, of Pennsylvania, to be a member of the United States Advisory Commission on Educational Exchange.

The PRESIDING OFFICER. Without objection, the nomination is confirmed.

The Chief Clerk read the nomination of Arthur A. Hauck, of Maine, to be a member of the United States Advisory Commission on Educational Exchange.

The PRESIDING OFFICER. Without objection, the nomination is confirmed.

DIRECTOR, GEOLOGICAL SURVEY

The Chief Clerk read the nomination of Thomas B. Nolan, of Nevada, to be Director of the Geological Survey.

The PRESIDING OFFICER. Without objection, the nomination is confirmed.

Mr. CLEMENTS. Mr. President, I ask that the President be notified of the confirmation of these nominations.

The PRESIDING OFFICER. Without objection, the President will be notified.

NOTICE OF HEARINGS ON CERTAIN NOMINATIONS BY COMMITTEE ON FOREIGN RELATIONS

Mr. GEORGE. Mr. President, as a Senator and chairman of the Committee on Foreign Relations, I desire to announce that the Senate received today the nominations of 519 persons for appointment to the offices indicated on the

list which appears elsewhere in the Senate proceedings of today. Included in this group are appointments of Foreign Service officers of various classes, promotions of Foreign Service officers, and consular and/or diplomatic designations for career, staff, and reserve officers. These nominations will be considered by the Committee on Foreign Relations at the expiration of 6 days.

LEGISLATIVE SESSION

Mr. CLEMENTS. Mr. President, I move that the Senate resume the consideration of legislative business.

The motion was agreed to; and the Senate resumed the consideration of legislative business.

MESSAGE FROM THE HOUSE

A message from the House of Representatives, by Mr. Bartlett, one of its clerks, announced that the House had agreed to the amendments of the Senate to the bill (H. R. 5844) to increase the fee for executing an application for a passport from $1 to $3.

STABILITY AND ECONOMIC JUSTICE FOR AMERICAN AGRICULTURE

Mr. GEORGE. Mr. President, I ask unanimous consent to have printed in the RECORD five articles concerning the situation of Georgia farmers and the condition of agriculture at this time, and I also ask unanimous consent to have printed in the RECORD a brief statement which I have prepared in connection with the same subject, the statement to precede the articles.

There being no objection, the matters were ordered to be printed in the RECORD, as follows:

STATEMENT BY SENATOR GEORGE

Nearly every Member of this body has his convictions regarding the present deplorable situation on the Nation's farms and many of us have our own individual ideas about what the administration should do and what the Congress apparently is going to have to do to restore stability and economic justice to the pattern of American agriculture.

I share a feeling of injustice insofar as concerns the present treatment of the farmer and the farm family in our otherwise prosperous Nation. I expect to do everything within my power in this Congress to help to right this wrong.

All of us, I think, can benefit from having access to first-hand information from the farmer himself. During this past congressional recess, the Senate Committee on Agriculture accepted my invitation to come to Georgia and spend a day receiving testimony of conditions existing on the farms in my State. I think all of us benefited from this meeting.

This weekend, I read an article from the Atlanta Journal magazine under the heading, "The Georgia Farmer Speaks His Mind," written by a very capable reporter, William Hammack.

What do Georgia farmers think about the farm problem? The five articles will tell us.

TWO FUNDAMENTAL TROUBLES

Monk Bennett and H. O. Thomas are partners in a big dairy operation at Madison, Ga. They farm more than 2,000 acres and they have some 400 cows. Their dairy averages more than 500 gallons of milk a day. Their huge dairy barns with tall sentinel silos overlook rolling pasturelands where their Holsteins graze.

What's wrong with the farm situation today, gentlemen?

Mr. Thomas chuckled and Mr. Bennett said, "You planning to listen to us talk a whole doggoned week?" Then they got down to cases.

"There are two fundamental troubles," Mr. Bennett said.

"First: A farmer can't sell on an open market, and buy on a closed market, unless something is done about the difference in prices. Tariffs protect industry. A guaranteed minimum wage protects labor. But the farmer has been left out in the cold.

"Second: When a farmer produces goods for export, he must receive a fair American price—not the price on the world market. In other words, the farmer needs a sort of tariff in reverse, because there's a big difference between world prices and reasonable United States prices, and the farmer, in order to live, must have a reasonable United States market price for his products."

Mr. Thomas and Mr. Bennett are outstanding dairymen. When they started their dairy operation some 11 years ago, the average production per cow in their dairy was 5,500 pounds of milk a year. But because the partners have worked hard and planned with vision, they have greatly increased the efficiency of their operation. Today, the average production per cow in their dairy is more than 9,000 pounds of milk a year.

"In spite of that," Mr. Thomas said, "we owe more than twice as much money as we did when we started out. Don't misunderstand—we have made money, we've made a good living, and we have increased the size and scope of our operation. But it's tough not to be able to get out of debt in more than 10 years, and it's tougher when that debt is double what it was more than a decade ago. But if you run a dairy farm, you've got to run it right, and you've got to have proper equipment. Our equipment costs have sky-rocketed, but our milk prices have just nudged up a little bit. Let me give you an example:

"In 1946, we bought a forage harvester for about $800. At that time, milk was selling for around 40 cents a gallon. We wore out that harvester, bought a new one, wore it out, and now we need another one. Today, a harvester costs $1,800. But milk is selling for only 50 cents a gallon. Draw your own conclusions from that."

"Everything we buy today—labor, equipment, processed feed—costs much more," Mr. Bennett observed. "And the rising price curve on these necessities is climbing much sharper and faster than the relative price of milk. But there's one exception in this picture of constantly rising costs—the prices of one category of necessities we have to buy are actually going down, but, to tell the truth, that doesn't make us any happier, because we know these particular low prices are hurting farmers. The stuff we buy from farmers, such as corn and oats and so forth, costs us less today than it did a year ago. For example, local corn this year is around $1.10 a bushel, while last year it averaged about $1.65. Frankly, we don't see how a man can grow corn for $1.10 a bushel. But the man can't stop."

"And that brings up another point which, we believe, is very important," said Mr. Thomas. "A farmer can't stop growing his crops because the prices are low. He's got to produce to live. So, since labor and industry and business are protected, the farmer should have some protection against ruinous prices for what he produces."

COTTON-GROWING CHAMPION

Neal C. Dabbs, of Cartersville, Ga., is a tenant farmer who was named Georgia's champion cotton farmer of 1955. Mr. Dabbs, a hard-working young man, produced 17,136 pounds of cotton on 5 acres, which figures out to 2.6 bales to the acre, a splendid agricultural accomplishment. He plants 45 acres to cotton on the 135-acre farm he rents. As Mr. Dabbs rides his diesel tractor in breaking the rich blackish land of the farm, or as he jockeys his smaller tractor in cultivation, or as he perches high on his new cotton picker in the white harvest season, he can see, from certain of his fields, the prominences of famous Etowah Mounds.

"Conditions are pretty hard on the farmer today," Mr. Dabbs said. "He's got to get out and hustle and make a big volume in order to make what would be a normal salary. And he gets a mighty poor return on his investment in equipment.

"I've got an investment of more than $11,000 in my machinery. I have to farm the way I do, I have to make big yields of cotton, to make a go of it."

What about 90 percent of parity for cotton?

"I'd be afraid to raise cotton without a guaranty of some kind. I'd be afraid to invest money in a cotton crop. And farming takes money. Figure it this way: I have to have $11,000 worth of equipment to prepare the land, plant, cultivate and harvest. It costs more than $30 an acre for cotton-seed and fertilizer. It costs around $30 an acre for labor. Then there is the poisoning program. It all adds up.

"If the farmer has a promise from the Government that he will get, at least, a certain price for his cotton, and if he knows his average per acre yield, then he can figure out how much he may be able to make, if weather conditions are all right. But if there were no parity price. I don't think a farmer could go to the bank and secure loans to raise cotton.

"To my notion, 90 percent of parity is fair. If the Government loan were 100 percent of parity, then the buyer would be kept out of the market, because the farmer would just put all of his cotton in Government loan. But when the loan is 90 percent, then the buyer has a chance to step in and hike his own price and get the cotton. Ninety-percent parity is just a protection for the cotton farmer."

Mr. Dabbs is proud of his new cotton-picker. "It was a big success in 1955," he said. "I was able to average picking eight bales of cotton a day during the best part of the season. And the only labor it took was my own and that of two other men. My record day was when I picked and ginned 12 bales. Of course, that was in cotton which was yielding more than a bale to the acre. A cotton farmer, you know, hopes for a bale to the acre. Everything over that—man, that's what makes Santa Claus jump down the chimney.

"I did some custom picking last year, too, for friends and neighbors. My picker picked 240 bales altogether last season. The only way for a cotton farmer to stay in business these days, because of the high price of labor and costs, is to mechanize."

What has been your experience with rising equipment costs?

"Let me put it this way: Back in 1939, I bought my first tractor. It cost about $1,000. I paid for it with 10-cent cotton. A cotton farmer pays money for equipment, but he figures the price in terms of cotton. In 1955, I bought another tractor. It cost around $3,200. But I paid for it with cotton that brought from 34 to 36 cents. So, actually, my new tractor cost me about the same amount of cotton as my first one did.

"But to get back to parity," Mr. Dabbs went on, "I don't like the idea of these sliding scales. I'm right behind 90 percent

of parity. If they were to weaken parity prices, or do away with parity, I'd be scared, I tell you the truth."

A Family of Farmers

A. C. Ewing, of Covington, Ga., has attained a goal which is advocated by many agricultural economists—he operates an honest-to-goodness family farm. And the Ewings are an agricultural family. Mr. and Mrs. Ewing's eldest son, Charles, who graduated a few years ago at the University of Georgia, where he majored in dairy production, is associated with his father in the management of the 45-cow Ewing dairy farm. And it seems that Mr. Ewing is bringing up his own veterinarian; his second son, Alton, is in the veterinary school at the university. Morton, the youngest Ewing boy, who helps his father and brother on the farm, is a senior in high school and he is planning to go to the College of Agriculture at the university. And Mr. and Mrs. Ewing's daughter, Marion, a Georgia graduate, married a boy who graduated in ag engineering at the university.

The senior Ewings' comfortable farm home is right across the road from Charles' attractive new house. Mr. Ewing is known as the "Alfalfa King" of Newton County.

"A farmer makes a fair salary these days on what he sells, but he gets no return on his investment," Mr. Ewing said reflectively. "If a man wanted to go into the dairy business today, it would take a minimum investment of $1,000 a cow. We're making a living wage. But we are getting no return at all on what we have invested.

"There's another point I'd like to make. The comparative prices on what we receive for our products and what we have to pay out for equipment are not in line. We pay high. We get low. And if Charles and I had to hire much labor, that would take an even bigger bite today out of our total income.

"It's my personal opinion," Mr. Ewing went on, "that most of the folks who will work, and who want to work, have left the farm to go to the city where they can earn even higher wages. I certainly don't begrudge high wages for labor. I'm all for higher wages, because the more money a man working in town makes, the more of my products he's going to buy."

What is your opinion of Secretary Benson's farm program?

"The farmer needs protection. He's got to have protection," Mr. Ewing replied. "So fas as I can see, the Benson program hasn't worked for us."

How have you met today's rising costs of production?

Charles Ewing said: "We have tried to increase our efficiency. I think that's the only way a farmer can lick rising costs these days. And he's got to take better care of his equipment, because replacement costs are climbing to beat the band. It all boils down to this: he's got to become a better farmer. In our case, that means increasing production per cow. If my father and I had stood still for the last 5 years—if we were producing now exactly what we were producing then, why, we wouldn't be making enough to exist on today."

Three-Way Income

Charlie Mann, of Hickory Flat community, near Canton, Ga., raises chickens. A busy farmer, Mr. Mann also owns a number of farm machines, and he augments his income by custom work—shelling corn for neighbors with his corn sheller, harvesting their grains with his combine, bailing hay, and so forth. And he operates a small feed mill where he grinds and mixes feed for his own chickens; he sells some of the feed, he says, "strictly on a cash basis."

Mr. Mann remarked thoughtfully, "Things have been pretty rough lately. Everything I have to buy, and my labor costs, are higher than I've ever known them to be. But the prices I get for my products are down.

"Take corn. Right now, local corn is selling for $1.40 a bushel. Last year it was $1.75. Two weeks ago, corn was only $1.30.

"But major equipment prices are up from 7 to 10 percent over what they were even 6 months ago.

"I keep records. I know that it costs me $1 a bushel to produce corn. It costs me another 12½ cents a bushel to shell it. Well, if I want to come out even a little bit ahead, I have to take advantage of all the by-products. Take shucks, for instance. I can't sell loose shucks, but if I bale them I can sell them, and I can't afford to lose this possibility of income. And I take cobs and grind them up in my hammer mill. I put the groundup cobs before my cattle, and they can eat what they want of the stuff. There's food value in it, because some grains of corn are left on the cobs after the ears run through the sheller. Groundup cobs make good chicken litter, too.

"I've got three sources of income," Mr. Mann went on. "Most of my money comes from chickens. Right now, I have 5,000 birds. The thing I like about the chicken business is that it's a short-term proposition. If you turn over any money at all, you turn it over quick. It takes about 10 weeks for my biddies to grow to broiler size, so in 10 weeks, I either show a profit, or I take my licking and start off from scratch again.

"At one time, I thought it might be a good idea if the Government took a hand in the price of chickens. But I've since changed my mind. I think now that it's better to leave the poultry business the way it is. Of course, it's mighty easy for a farmer to produce a surplus of chickens, but these days, he has just got to produce more to show a profit.

"My second source of income," Mr. Mann continued, "is from custom work with my farm machinery: My corn sheller, combine, hay baler, feed mill, and so on. My third source is the sale of small grains, corn, and hay."

How have you tackled the rising costs of farm machinery and farm labor?

"The only way I could. I had to hike my own prices for custom work. Naturally, this runs up the cost of production to the friends and neighbors I do the work for, but if I didn't get higher prices for my custom work, I just wouldn't be able to keep going."

Although farm prices are sagging, the cost to the consumer still remains high. What do you think is the reason for this?

"I hear a lot of talk that the middleman is taking took big a bite these days. Well, it may be so. But I don't know. The middleman has got to live, too. And it costs money to process stuff, package it, resell it, ship it, and so on."

What's your answer to the farm problem?

"That's the solid gold $64 million question. For one thing, I believe the farmer has just got to produce more. Of course, this will increase present surpluses to some extent, but the farmer has got to raise more and better chickens, increase yields per acre, and spread out, in pure and simple self-defense. He's just got to do it to make a reasonable living."

Democratic Cows—Republican Calves

Leon Lewis, of Cartersville, Ga., raises sheep, dairy cows, laying hens, and hogs. His pleasant home sits above his green pastures where his sheep and cows graze.

"Farmers are going downhill now," Mr. Lewis said. "Sure, farmers have nice homes and good equipment, but their homes are going to need work on them pretty soon and the equipment is wearing out. I'm living today on what I've made in previous years, on my capital, you might say. I'd like to buy some new equipment right now, but I can't pay for it as I go, and I don't see any point of going into debt for it. Not the way things are today."

When did you make money farming?

"Why, under the Democrats, of course. My cows all came along when the Democrats were running the Government, but my calves were born under a Republican administration. And like a fellow told me the other day, these Republican calves are just sucking those Democratic cows to death."

What do you think of Secretary of Agriculture Benson's farm program?

"Benson hasn't got a program, at least, not for us farmers."

What's the matter with the farm situation as you see it?

"I asked a fellow that question the other day, and he said, 'Well, as soon as enough farmers get starved out, maybe the rest of the farmers can make a living.' "

But people are leaving the farm to go to the city. Why aren't the farmers who stay on the land enjoying prosperity?

"Farmers produce more these days. We raise more and better stock, we raise more produce through advanced farming methods and greater know-how. But we have to produce more, if we want to get by. Let me give you an example:

"I used to be able to carry 1 10-gallon can of milk a day to the market, and I'd get $200 in a month's time. So I tried to carry 5 cans of milk a day, to make $1,000 a month. That $1,000 was gross, of course, not profit.

"Well, last month, I carried 6 cans of milk a day to the market, but my gross was down to $800. It wasn't $1,200. My milk income has been cut one-fourth. So I've got to produce more, just to come out even."

What are you doing to keep your head above water in these days of sagging farm prices?

"I'm diversifying. Personally, I like sheep. I think that the sheep business is just about the best paying proposition a man can get into, year in and year out. I've been raising sheep for about 20 years. But I'm not specializing in sheep because I can't afford to. I raise laying chickens, and cows and hogs. If I lose money on milk, maybe I'll make it back on chickens. If I lose money on both of them, maybe I'll squeeze by with my sheep.

"Take hogs. Right now, hogs are selling for under 12 cents a pound. And the College of Agriculture at the University of Georgia in Athens has always said that it takes 10 bushels of corn to raise 100 pounds of hog. Local corn is $1.15 a bushel right now. So it takes me $11.50 worth of corn to raise less than $12 worth of hog. And that is disregarding my investment in the sow, the hog lot, the pasture, and the supplement for the hog feed.

"In 1954, eggs were worth nothing. But I stayed with the egg business, and last year I did fairly well. But this year the bottom might fall out of the egg market again."

You say you'd like to buy some new equipment?

"I'd like to buy a modern tractor and a combine. If I were making what I made a few years ago, I'd buy them right now. But equipment prices have gone up just about the same percentage my own prices have come down. I suppose that's because of increased labor costs. I'm glad factory workers are making more. It means they'll be able to buy more of what I raise. But I surely wish I could afford to buy more of what they make, too."

THE GRASSROOTS OF WISCONSIN PROTEST NATURAL GAS RATE INCREASE LEGISLATION

Mr. WILEY. Mr. President, I send to the desk a series of additional messages

from public officials of Wisconsin, conveying their vigorous judgment in opposition to the natural gas rate increase bill known as the Harris-Fulbright bill.

These expressions and official resolutions, adopted by duly elected officials of localities throughout Wisconsin, demonstrate anew that the people of my State overwhelmingly oppose this legislation.

ARTIFICIAL MAIL FOR BILL FROM OIL STOCKHOLDERS

I stress this fact because an artificial effort apparently is being made in Wisconsin and elsewhere, to get stockholders in petroleum and related companies to send messages to the Congress urging that the present bill be passed, so that the oil and gas companies, in effect, can have complete freedom.

Freedom for what? Freedom to "charge all that the traffic will bear."

Of course, stockholders have a perfect right to exercise their American right of petition, to present a case in their own special interest—to urge an action which they feel will achieve the objective of enhancing their own investment.

STRAW CAN BREAK CAMEL'S BACK

But Congress' concern should not be special interests, but the national interest. We believe profoundly in American shareholding, in stock and bond ownership by an ever wider group of Americans. But simply because stockholders in some corporations may want rates changed by that corporation to skyrocket—is no reason why Congress should permit that to occur. Besides, the stockholders may find that continual rate increases may in the long run prove harmful rather than helpful, to their own investment.

Our people will not tolerate unlimited rate increases. These are straws which can break a camel's back.

In any event, letters which have been generated by the petroleum- and gas-producing companies, while meriting consideration, do not actually reflect the genuine sentiment of the overwhelming mass of Americans throughout Wisconsin or other States.

There is a larger interest than the special interests of the oil and gas companies: It is the interest of 165 million Americans and, in particular, 30 million gas consumers. That is the basic interest with which I concern myself.

I want the oil and gas industry to flourish. It is a great and vital industry which has performed well in war and peace, but I say it will continue to so function under reasonable rate control.

I ask unanimous consent that the texts of the official messages from Wisconsin be printed at this point in the body of the RECORD.

There being no objection, the material was ordered to be printed in the RECORD, as follows:

FORT ATKINSON, WIS., *January 18, 1956.*
Senator ALEXANDER WILEY,
Senate Office Building,
Washington, D. C.:

The members of our city council and myself join to urge you to oppose the Harris-Fulbright bills which we feel are not in the best interests of our citizens.

A. A. STATZ,
Council President.
WALTER SMITH,
President pro tempore.
DELBERT WANDSCHNEIDER,
Councilman.
WALTER GOEGLEIN,
Councilman.
RICHARD STROMMEN,
Councilman.
E. F. KLEMENT,
City Manager.

GREEN BAY, WIS., *January 18, 1956.*
Senator ALEXANDER WILEY,
Capitol Building, Washington, D. C.:

The Common Council of Green Bay, Wis., unanimously endorsed the stand of the Fox Valley conference of mayors against the Fulbright bill.

CLIFFORD A. CENTEN,
City Clerk.

TWO RIVERS, WIS., *January 17, 1956.*
Senator ALEXANDER WILEY,
Senate Office Building:

At its regular meeting on January 16, 1956, the City Council of Two Rivers unanimously voted to go on record in opposition to the Harris-Fulbright bill on natural-gas regulation and to request your support in opposing this measure.

JOHN E. DEVER,
City Manager.

WEST ALLIS, WIS., *January 16, 1956.*
Senator ALEXANDER WILEY,
Senate Office Building,
Washington, D. C.:

The Common Council of City of West Allis has directed me to communicate city's protest against Fulbright-Harris bill, which would exempt natural-gas rates from present Federal control at wellhead. Respectfully request that you exert all possible efforts to defeat this measure. Letter follows.

GEORGE A. SCHMUS,
City Attorney.

CUDAHY, WIS., *January 17, 1956.*
Senator ALEXANDER WILEY,
Washington, D. C.:

The Common Council of the City of Cudahy, Wis., has gone on record opposing to United States Senate bill 1853, known as the Fulbright bill. Your assistance is requested.

JAMES F. KELLER,
City Clerk.

SPARTA, WIS., *January 16, 1956.*

DEAR SENATOR WILEY: We are opposed to the Harris-Fulbright bill, because, if finally adopted, the people of Wisconsin would lose the fruits of the victory we won in the Phillips case. The present time our utilities that sell or will sell natural gas is subject to regulation by our State public service commission.

Yours very truly,
OTIS M. ERICKSON,
Mayor, City of Sparta.

MENOMONEE FALLS, WIS., *January 19, 1956.*
Senator ALEXANDER WILEY,
Washington, D. C.

DEAR SIR: The following is a quote from the minutes of the last meeting of the village board, village of Menomonee Falls, Wis.:

"The following resolution was introduced by Mr. Kraemer, seconded by Mr. Heagney:

"RESOLUTION

"*Be it resolved,* That the Village Board of Trustees of the Village of Menomonee Falls, Waukesha County, Wis., go on record as being opposed to the passage of United States Senate bill S. 1853, known as the Fulbright bill, on the Present United States Senate Calendar.

"All ayes to the resolution by rollcall vote, and resolution unanimously adopted."

Please make note of this expression of opinion.

Yours very truly,
LEONE SUNDERLAND,
Commissioner.

SUPERIOR, WIS., *January 19, 1956.*
Senator ALEXANDER WILEY,
Senate Office Building,
Washington, D. C.

DEAR SENATOR: I wish to take this opportunity to express the city of Superior's opposition to the natural gas bill S. 1853, pending before the United States Senate.

We believe that decontrol of natural gas prices would have a serious adverse effect on the citizens of Wisconsin cities and villages.

Very truly yours,
THOMAS THOMPSON,
Acting City Manager.
EDWARD G. NELSON,
President, City Council.

WAUWATOSA, WIS., *January 20, 1956.*
The Honorable ALEXANDER WILEY,
United States Senate,
Washington, D. C.

MY DEAR SENATOR: Enclosed herewith is a certified copy of a resolution adopted by the Common Council of the City of Wauwatosa at their regular meeting held Tuesday, January 17, 1956.

Very truly yours,
P. H. RIEMER,
City Clerk.

Whereas an amendment to the National Banking Act permitting commercial banks to deal and trade in public revenue bonds has been proposed in the Congress of the United States; and

Whereas United States Senate hearings on the proposed amendment are scheduled to begin in the spring of this year; and

Whereas the hereinabove proposed amendment to the National Banking Act would promote the best interests and general welfare of the city of Wauwatosa: Now, therefore, be it

Resolved by the Common Council of the City of Wauwatosa, That the city of Wauwatosa be recorded in favor of the passage of the proposed amendment to the National Banking Act permitting commercial banks to deal and trade in public revenue bonds now pending in the Congress of the United States; be it further

Resolved, That the city of Wauwatosa strongly urges our national representatives in Washington to support and vote for this legislation; be it further

Resolved, That the city clerk be and he is hereby authorized and directed to mail certified copies of this resolution to Senators ALEXANDER WILEY and JOSEPH MCCARTHY and Congressman CLEMENT ZABLOCKI, National Capitol, Washington, D. C.

Passed and dated January 17, 1956.
P. H. RIEMER,
City Clerk.

Approved January 17, 1956.
WM. B. KNUESE,
Mayor.

MANITOWOC, WIS., *January 19, 1956.*
Senator ALEXANDER WILEY,
Senate Office Building,
Washington, D. C.

DEAR SIR: Enclosed is certified copy of resolution unanimously adopted by the mayor and Common Council of the City of Manitowoc, Wis., at their regular meeting of Monday, January 16.

The resolution, as you will note, opposes the passage of the Fulbright bill.

Very truly yours,
ARTHUR POST,
City Clerk.

Whereas there is now pending in the Congress of the United States the Fulbright bill which would exempt natural gas producers from Federal regulation; and

Whereas this exemption would give the natural-gas producers the right to charge any amount they may care to, which would affect each and every user of natural gas in the city of Manitowoc: Now, therefore, be it

Resolved by the mayor and common council, That we go on record opposing the passage of the Fulbright bill, and be it further

Resolved, That a copy of this resolution be sent to Senator ALEXANDER WILEY and Senator JOSEPH MCCARTHY, and our Congressman from the State of Wisconsin.

Introduced and adopted January 16, 1956.

Approved January 19, 1956.

WALTER KOEPKE,
Mayor.

OSCAR L. ANDERSON.

MADISON, WIS., *January 17, 1956.*

Senator ALEXANDER WILEY,
Washington, D. C.

DEAR SENATOR WILEY: Attached hereto is a certified copy of a resolution adopted by the Common Council of the City of Madison, Wis., on January 12, 1956; said resolution opposing the passage in Congress of the Harris-Fulbright bill.

Your efforts in connection therewith will be greatly appreciated.

Very truly yours,

ELDON L. HOEL,
Deputy City Clerk.

Whereas the primary purpose of the Congress of the United States in adopting the Natural Gas Act of 1938 was to protect consumers from exploitation by suppliers of natural gas, while at the same time assuring the suppliers of a fair and reasonable price for their product; and

Whereas the means whereby Congress accomplished this purpose was to confer jurisdiction upon the Federal Power Commission to fix reasonable rates for sales of natural gas in interstate commerce for resale to consumers; and

Whereas at the present session of Congress there has been introduced before the United States Senate the so-called Fulbright bill, which would exempt from regulation by the Federal Power Commission independent producers of natural gas making sales in interstate commerce for resale: Now, therefore, be it

Resolved, That the Common Council of the City of Madison go on record as opposing the passage in Congress of the Harris-Fulbright bills; further

Resolved, That a copy of this resolution be forwarded to Senator ALEXANDER WILEY and to Senator JOSEPH R. MCCARTHY.

PORT WASHINGTON, WIS., *January 17, 1956.*

Hon. ALEXANDER WILEY,
Senate Office Building,
Washington, D. C.

DEAR SENATOR WILEY: The city of Port Washington wishes to express their opposition to the natural gas bill (S. 1853).

We believe that it is important to the City of Port Washington, and to the entire State of Wisconsin, that this bill be defeated.

Yours very truly,

PAUL T. SCHMIT, *Mayor.*

WHITEWATER, WIS., *January 18, 1956.*

The Honorable ALEXANDER WILEY,
United States Senator,
Senate Office Building,
Washington, D. C.

DEAR SENATOR WILEY: The Whitewater City City Council, at a regular meeting on January 17, 1956, instructed me to notify you that they are opposed to passage of Senate Bill S–1853, known as the Fulbright bill.

The council vote was unanimous in opposition to this bill.

Respectfully yours,

C. F. TRINKLE,
City Manager.

KAUKAUNA, WIS., *January 18, 1956.*

Senator ALEXANDER WILEY,
Senate Office Building,
Washington, D. C.

DEAR SENATOR WILEY: We are opposed to the passage of the Fulbright bill S. 1853 removing Federal regulation on the sale price of natural gas. We have in the United States taken the position that when a monopoly has been created in the form of essential utility services that such a monopoly must be regulated. Electricity, water, and gas come under these essential services. Franchises, indeterminate permits along with State and Federal price regulation are common control measures.

Also our very able Public Service Commission of Wisconsin has taken the stand of opposing bill S. 1853.

Respectfully yours,

H. F. WECKWERTH,
Manager.

RESOLUTION 553

Whereas United States Senate bill S. 1853 known as the Fulbright bill, is on the present United States Senate Calendar, the effect of which will be to exempt producers of natural gas from regulation of prices they charge in contracts for the sale of gas to pipeline companies for transmission and resale in Wisconsin and other consumer States; and

Whereas the Michigan Wisconsin Pipe Line Co. has a monopoly of about 95 percent of the present Wisconsin natural gas market and are supplied by the Phillips Petroleum Co., which has a monopoly of natural gas supply from its gas wells in Texas and Oklahoma; and

Whereas the purpose of the present Natural Gas Act is primarily for the ultimate consumer which will be defeated by the Harris-Fulbright bills because they will create a gap in effective natural gas regulation at its source, by exempting the producers of the natural gas we buy in Wisconsin from any direct Federal regulation and restore to the Phillips Petroleum Co. its unregulated monopoly of basic supply and price of gas to our State or to any other future similar monopoly that might arise in the future: Be it therefore

Resolved, That the city of Cedarburg by its common council is opposed to passage of the Harris-Fulbright bills by the United States Senate; be it further

Resolved, That a copy of this resolution be promptly forwarded to Senator WILEY and Senator MCCARTHY.

Passed and adopted this 12th day of January 1956.

E. STEPHAN FISCHER,
Mayor.

J. C. SCHROEDER,
City Clerk.

WEST BEND, WIS., *January 16, 1956.*

Hon. ALEXANDER WILEY,
Washington, D. C.

DEAR SENATOR WILEY: The people of the city of West Bend, Wis., are very definitely opposed to the Harris-Fulbright natural gas control bill now pending in the United States Senate. There are many private and commercial natural gas consumers in this city. We appeal to you and hope that you will do all you can to defeat this bill.

Yours truly,

WALTER SCHMIDT,
Mayor.

KAUKAUNA, WIS., *January 12, 1956.*

Senator ALEXANDER WILEY,
Senate Office Building,
Washington, D. C.

DEAR SENATOR WILEY: We are opposed to Senate bill S. 1853, known as the Fulbright bill, that would exempt gas producers from Federal Power Commission regulation in establishment of prices for sale of natural gas to pipeline companies for resale in interstate commerce.

Our very able Public Service Commission of Wisconsin has from the very beginning insisted that the Federal agency retain control of gas prices. There are now many monopoly practices, including gas operation, in the furnishing of essential utility services and for these privileges there must be adequate controls.

The passage of the proposed legislation is detrimental to public interest.

Respectfully yours,

JOSEPH F. BAYORGEON,
Mayor.

WEST MILWAUKEE, WIS., *January 17, 1956.*

Hon. ALEXANDER WILEY,
United States Senator, Senate Office Building, Washington, D. C.

DEAR SENATOR WILEY: We are attaching certified copy of resolution opposing bill S. 1853, to remove Federal control of the price of natural gas at the wellhead.

This resolution was passed and adopted at our January 16, 1956, village board meeting, and a certified copy was ordered sent to you.

Very truly yours,

VILLAGE OF WEST MILWAUKEE,
H. C. DIERINGER, *Clerk.*

RESOLUTION OPPOSING BILL S. 1853 TO REMOVE FEDERAL CONTROL OF THE PRICE OF NATURAL GAS AT THE WELLHEAD

Whereas bill S. 1853 is pending before the United States Senate to remove Federal control of the price of natural gas at the wellhead; and

Whereas the removal of Federal control of the price of natural gas at the wellhead would leave natural-gas consumers without adequate protection from exorbitant rate increases; and

Whereas an adequate supply of natural gas, reasonably priced to the consumer, is essential to the economic stability of the citizens and industries of the Village of West Milwaukee and the State of Wisconsin: Now, therefore, be it

Resolved by the Village Board of West Milwaukee, Milwaukee County, Wis., That the United States Senate reject any legislative proposals which would leave the price of natural gas unregulated by Federal authority; be it further

Resolved, That a duly certified copy of this resolution be sent forthwith to the two United States Senators from Wisconsin, the Honorable ALEXANDER WILEY and the Honorable JOSEPH R. MCCARTHY.

Passed and adopted by the Village Board of the Village of West Milwaukee, Milwaukee County, Wis., this 16th day of January 1956.

CHARLES J. BECKOR,
President.

HERMAN C. DIERINGER,
Clerk.

KENOSHA, WIS., *January 18, 1956.*

Hon. ALEXANDER WILEY,
Senator from Wisconsin,
Washington, D. C.

DEAR MR. WILEY: Enclosed herewith find copy of a resolution which was adopted by the Council of the City of Kenosha, Wis., on the 16th day of January 1956.

Very truly yours,

J. R. SAWICKI,
City Clerk.

RESOLUTION 5649—OPPOSING HARRIS AND FULBRIGHT BILLS

Whereas there are pending before the Congress two bills known as the Fulbright bill (S. 1853) and the Harris bill (H. R. 6645); and

Whereas these bills if adopted would have the effect of removing producers of natural gas from any Federal regulation of the price charged by such producers to pipeline companies and other distributors; and

Whereas such exemption of producer prices from any effective control very probably would result in higher prices of this important product to the ultimate consumer, for the benefit of a few producers who operate under semimonopolistic conditions; and

Whereas Government officials and others, such as the National Institute of Municipal Law Officers, the League of Wisconsin Municipalities, and a National Committee of Mayors, representing millions of consumers of natural gas, all have expressed their opposition to this legislation on a nonpartisan basis: Be it

Resolved by the Council of the City of Kenosha, Wis., That they hereby join in this strong voice of protest, on behalf of the citizens of Kenosha, and urge their representatives in the Congress to do all within their power to secure the defeat of the proposed Harris and Fulbright bills.

Dated this 16th day of January 1956.

EDWARD C. FECHNER,
President of Council.

Attest:

J. R. SAWICKI,
Clerk of Council.

NORTH FOND DU LAC, WIS.,
January 16, 1956.

Senator ALEXANDER WILEY,
Senate Office Building,
Washington, D. C.

DEAR SENATOR WILEY: As this village has a present market for natural gas, I urge you to oppose the passage of the Harris-Fulbright bills for the reason that natural gas consumers would be left without adequate protection if there were no Federal control of the prices of natural gas.

Very truly,

FRANCIS W. SPANGLE,
Village President.

1956 ECONOMIC REPORT OF THE PRESIDENT

Mr. WATKINS. Mr. President, I ask unanimous consent to have printed in the body of the RECORD my comments on the 1956 Economic Report of the President.

There being no objection, the statement was ordered to be printed in the RECORD, as follows:

STATEMENT BY SENATOR WATKINS

As a member of the Joint Committee on the Economic Report, it gives me a great deal of personal pleasure to comment on the major achievements of the economy in 1955 as reported in the 1956 Economic Report of the President.

Section 2 of the Employment Act of 1946 provides that "it is the continuing policy and responsibility of the Federal Government to use all practicable means consistent with its needs and obligations and other essential considerations of national policy * * * to promote maximum employment, production, and purchasing power." In his 1955 economic report of a year ago, President Eisenhower in this respect said that:

"With economic activity continuing to expand, it is reasonable to expect that the Nation's output within the coming year [1955] will approach the goals of 'maximum employment, production, and purchasing power' envisaged by the Employment Act."

His 1956 Economic Report, released at noon today, makes it very plain not only that these goals were achieved but also that they were achieved by a much greater margin than anyone expected—especially his critics on the Joint Committee on the Economic Report.

Simply phrased, as President Eisenhower put it:

"We have reached the threshold of a $400 billion economy, and the recent advance has been accomplished without the specious aid of price inflation * * *, whether we observe economic activity at the stage of production, or employment, or income distribution, or consumer spending we find evidence of progress and prosperity. Employment and wages are at record levels. Profits are satisfactory in most industries. Both investment and consumer spending are going forward at a good pace."

This is not to say, Mr. President, that some negative or adverse cumulative movements which affect some of our people do not exist. They do exist, and as the President said:

"We shall need to keep that fact before us as we build for the future.* * * If economic growth is not to be seriously retarded in the future, we must * * * strive to make up for neglects of the past."

The prophets of gloom and doom, Mr. President, in this election year will undoubtedly continue to distort the facts to suit their own selfish purposes. This they will do by minimizing our achievements during 1955 and by magnifying the few remaining adverse cumulative movements which always are present even during the recovery and expansion phases of the business cycle. But so that the American people and the Members of the Senate who have not yet had a chance to examine the President's 1956 Economic Report can have the salient facts before them, I should like to discuss the major achievements of 1955—a year which, under the leadership of a Republican President, gave us unparalleled economic growth and prosperity.

PRODUCTION

The gross national product, which expresses the dollar value of all goods and services created by the economy, is an aggregate measure allowing for seasonal variations, which for 1955 gives us the greatest picture of "the rapidity of recent progress" as the President pointed out in his Economic Report.

In 1955 the value of all goods and services created was 387.4 billion dollars, some 26.9 billion dollars in excess of those produced by the economy in 1954 which were valued at 360.5 billion dollars. The professional staff of the Joint Committee on the Economic Report estimated that a gross national product of 375 billion dollars would be required in 1955 if the goal of maximum employment, production, and purchasing power envisaged by the Employment Act of 1946 were to be achieved. The professional staff also emphasized that this could not be achieved unless the gross national product was running at a seasonally adjusted rate of 385 billion dollars at the end of 1955.

The Committee staff was not optimistic, nor were the Democratic members of the Joint Committee, that this goal could be achieved. At that time the staff director reported to the Committee chairman that:

"If realized, this expansion would be a substantial accomplishment. It would call for a continuance in succeeding quarters of a rate of advance in economic activity close to that prevailing since the third quarter of 1954. The concensus of views of witnesses appearing before this Committee a month ago was that this rate of acceleration might not be maintained." (1955 Joint Economic Report, p. 83.)

What were the results? How far short of reality were these projections? Namely, these:

1. The political pessimism of the "prophets of gloom and doom" was not realized.

2. The market value of all goods and services created in 1955 exceeded by $12.4 billion that rate the economists told us probably would be necessary to achieve maximum employment, production, and purchasing power.

3. The year-end rate of production was some $12.3 billion in excess of the most liberal expectation—a rate which in 1956 will give us a $400-billion economy.

EMPLOYMENT

During 1955 total employment reached 65 million people. This was a level never before approximated in any period of our history. As President Eisenhower observed:

"Total employment rose by over 3 million and unemployment declined by 1½ million between the last 3 months of 1954 and the corresponding months of 1955, as the civilian labor force increased by over 2½ million. The average workweek was increased, and there was considerable overtime work, particularly during the latter part of 1955. The longer hours, combined with a continued rise in average hourly earnings, brought weekly earnings to record levels in most industries."

Mr. President, the greatest rate of increased employment was sustained during the spring and summer months of 1955. During the fall and early winter months, employment continued to rise, but at a lesser rate, because as production approached full capacity in most industries fewer workers were needed and fewer workers were actually seeking employment. This is made evident by the fact that unemployment, as a percentage of the total civilian labor force, declined from 5.2 percent and 4.1 percent, respectively, during the first two quarters of 1955 to 3.4 percent for the last two quarters of the year. This level of unemployment, Mr. President, which prevailed during the last 6 months of 1955, and which is continuing to prevail here in the first quarter of 1956, is below that of 4 percent, which economists suggest is normal for years not marked by war or severe recession.

Thus, although there were some 2.3 million people unemployed during the last quarter of 1955, they primarily consisted of (1) new entrants into the labor force, (2) those in the process of changing jobs, and (3) those shifting to new industries or occupation because of technological changes and developments.

The present situation, Mr. President, as Dr. Grover W. Ensley, Staff Director of the Joint Committee on the Economic Report, pointed out in his November 1955 address to the 33d Annual Agricultural Outlook Conference, is this:

"Unemployment and unused industrial capacity are today near an irreducible minimum as compared to a year ago. Likewise, the participation rate of the population in the labor force is relatively high."

Most heartening, also, Mr. President, are the following facts concerning the composition of unemployment as noted by President Eisenhower:

1. "On the average, roughly half of those unemployed in any given month were no longer in that status in the following month" (p. 117).

2. "Unemployment declined the most among those unemployed the longest. The number unemployed for 5 to 14 weeks fell by about 20 percent; and the number unemployed for 1 to 5 weeks or more fell by about 40 percent" (p. 117).

3. "The rate of unemployment among married men living with their families declined sharply, from about 3 percent at the end of 1954 to about 2 percent at the end of 1955" (p. 117).

PURCHASING POWER

As the Employment Act of 1946 suggests, one of the best indicators of economic activity is the aggregate income paid to people by industries, agriculture, and Government. By the term "disposable income" is meant that income which people actually have to spend or save after payments of all taxes. In 1955, disposable income increased by $14.4 billion over that prevailing in 1954. The $269.2 billion of disposable income workers, farmers, professional and self-employed people received in 1955 was some $1.5 billion in excess of that which the professional staff of the Joint Committee on the Economic Report projected as possible of attainment in 1955, if maximum employment and production were achieved.

American employees, Mr. President, will be gratified to learn as indicated by the 1956 Economic Report that:

"By far the major dollar addition to personal income in 1955 was in labor income, which rose by $12.6 billion, after a decline of $1.8 billion in 1954. * * * This increase reflected gains in employment, longer average hours of work in manufacturing and other activities, and substantially higher basic rates of pay in major industries and for Government employees" (p. 108).

We should also note that investment income—rent, dividends, and interest—made a net gain of $2.2 billion in 1955; and that business and professional incomes increased $1.4 billion. Although farm income declined by $900 million, farmers can take heart in the President's firm conviction that:

"Many parts of our agricultural policy are working well and require only moderate changes. Together with the nine-point program built around the soil bank put forward in the recent message on agriculture, they constitute a many-sided attack on the ills which beset agriculture. * * * How soon and in what degree the decline of farm incomes and farm spending is checked will largely depend on how promptly the Congress acts on the administration's newly proposed farm program."

This record receipt of disposable income, Mr. President, gave rise to personal consumption expenditures also of record proportions in 1955. Although such expenditures rose by $16 billion in 1955 to $52.4 billion, consumer prices remained relatively stable. In fact, Mr. President, actual consumption in terms of real not money income, increased almost $6.5 billion—the largest such gain in any postwar year since 1946. Indeed, 1955 was a year of prosperity with general price stability. As President Eisenhower so well expressed it:

"Full employment, rising incomes, and a stable dollar have been cherished goals of our society. The practical attainment of these ideals during 1955 was the year's greatest economic achievement."

OUTLOOK FOR 1956

The President's 1956 Economic Report does not contain projected levels of needed employment, production, and purchasing power; nor do I believe that their inclusion, for reasons I discussed in considerable detail in my supplemental views on the 1955 Joint Economic Report, serves any really useful purpose. The science of forecasting is so unreliable, given our present economic knowledge, that I must agree with the views expressed by the Chairman of the Council of Economic Advisers before the joint committee last year:

"Economists who are familiar with statistical vagaries * * *, and who know how difficult it is to measure with tolerable accuracy even experiences of the past, will hesitate to specify numerical goals for the Nation's economy over the next six months * * *. They know that in setting goals some arbitrary assumptions * * * which often are no less reasonable than the particular ones selected, can lead to such a wide range of results, that the calculated goals cannot have great value for policy decisions." (1935 Joint Economic Committee Hearings, p. 44.)

For verification of this fact, we need look no further than many of the projections, which I have already called to your attention, which were made by the professional staff of the Joint Committee on the Economic Report. And I would remind you, Mr. President, that this professional staff is composed of competent and serious-minded economists who are experienced in applying the tools of national income analysis.

However, a thorough study of the 1956 Economic Report will, I believe Mr. President, cause you and all Americans who will take the time to study it to agree with President Eisenhower that 1956 will be a prosperous year, that:

"Taking recent developments all together it is reasonable to expect that high levels of production, employment, and income will be broadly sustained during the coming year, and that underlying conditions will remain favorable to further economic growth" (p. 49).

Mr. CLEMENTS. Mr. President, in conformity with the previous action taken by the Senate, the Senator from Illinois [Mr. DOUGLAS] is entitled to the floor.

Mr. MONRONEY. Mr. President, will the Senator from Illinois yield to me at this time?

Mr. DOUGLAS. I shall be happy to yield to the Senator from Oklahoma.

VISIT TO THE SENATE OF HIS HIGHNESS PRINCE BERNHARDT OF THE NETHERLANDS

Mr. MONRONEY. Mr. President, I thank the Senator from Illinois for yielding to me at this time. It is a high honor and a distinct privilege to be permitted to introduce to the Senate a great friend of the United States, a distinguished representative of one of our finest and most respected allies.

I take pleasure in introducing to the Members of the Senate His Highness, Prince Bernhardt of The Netherlands, who is seated in the gallery.

[Prolonged applause, Senators rising.]

AMENDMENT OF THE NATURAL GAS ACT, AS AMENDED

The PRESIDING OFFICER. The Chair lays before the Senate the unfinished business.

The Senate resumed the consideration of the bill (S. 1853) to amend the Natural Gas Act, as amended.

The PRESIDING OFFICER (Mr. MCNAMARA in the chair). The Senator from Illinois is recognized.

Mr. DOUGLAS. Mr. President, toward the conclusion of my address on yesterday, I was pointing out that under the new contracts which are being negotiated the prices being paid are extremely high. In that connection, I cited an analysis of some 82 contracts which the Sun Oil Co. submitted in justification of its own claim for a 17-cent rate in Louisiana.

I hasten to say, as I made clear yesterday, that the 82 contracts which were submitted were not Sun Oil contracts; they were contracts of a variety of pipelines which were offered in justification of the 17-cent rate which Sun had requested. Incidentally, the Sun rate was 7.2 cents higher than the rate under which it was then operating.

I pointed out that of the 82 contracts, only one was at 11.26 cents; 2 were at 14.5 cents; only one was at 15.75 cents; 43 were at 17 cents; 5 were at 17.4 cents; 1 was at 17.5 cents; 5 were at 18 cents; 9 were at 19.25 cents; 8 were at 21 cents; and 7 were at 21.2 cents.

In order that I may be absolutely fair, Mr. President—as I have tried to be throughout—of course it should be added that these prices include the 1-cent severance tax imposed in the State of Louisiana.

Mr. President——

The PRESIDING OFFICER (Mr. NEELY in the chair). The Senator from Illinois has the floor.

Mr. DOUGLAS. My attention has been called to a very recent application for an increase in rate; it was on the part of the Tide Water Associated Oil Co., which is selling gas to the United Gas Pipe Line Co. in the Hollywood field of Louisiana, in Terrebonne Parish. The application was filed on January 3, 1956, as supplement No. 3 to Tide Water's Federal Power Commission gas-rate schedule No. 34.

The Federal Power Commission has not yet acted on the application for a rate increase. The producer asks that the effective date be January 1, 1956.

The old rate was 10 cents per 1,000 cubic feet—or 9 cents plus the 1-cent Louisiana gathering tax.

The proposed new rate would be 19½ cents—including the 1-cent gathering tax—for the first 5 years; 21½ cents for the next 3 years; and 22 cents thereafter, with a renegotiation clause for 10 years. But there is also a redetermination provision to the effect that the average of the highest prices paid to 3 different purchasers of gas, for resale, in 3 listed parishes shall become the predominant price. So the obligation really contains a favored-nation clause, only the clause bears the alias of "redetermination."

Mr. President, this contract is not a small one. The actual volume of gas purchased by United Gas Pipe Line Co. from Tide Water Associated Oil Co. in 1955 was 14 million thousand cubic feet. It is anticipated that in 1956, that amount will more than double, or will be 28,182,000 thousand cubic feet. The cost on the old volume was $1,300,000; and the increase estimated on the anticipated new volume will bring that to $2,600,000 a year.

I mention this merely to bring my figures up to date, and also to indicate that there are already in the works in these areas, tremendously high rates for new contracts, and that old contracts are being rewritten so as to take account of the newer and higher rates.

REGULATION OF PRODUCERS' INTERSTATE SALES UNDER PRESENT LAW IS ENTIRELY WORKABLE AND CAN BE SIMPLIFIED

Mr. President, at this time let me deal in more detail than I was able to do yesterday, with the contention about regulation. In contrast with the argu-

ment of the exponents of the bill, I think I can prove, this afternoon, that the regulation of producers' interstate sales is entirely workable under present law, and that it can be simplified.

One of the grounds most strongly urged against permitting the Federal Power Commission to proceed under the present law with its regulation of natural gas producers' sales for resale in interstate commerce is that such utility type regulation is so complex and difficult as to be unworkable, and is inefficient, unfair, and subject to endless delays.

When we strip this argument of all of its scare talk or threats about "no incentives," and "no gas," and "can't do it," and look instead at the actual experience of the Power Commission, we find that it can do it, because it has done it—although on a more limited scale, to be sure.

Moreover, any real desire to diminish and simplify the regulatory burden and to give relief to the truly small, independent producers can best be met by adoption of the exemption amendment I am proposing. I shall refer first to this latter point.

EXEMPTION OF SMALL PRODUCERS' SALES IS POSSIBLE WITHOUT SURRENDERING BASIC CONSUMER PROTECTIONS

On May 11, 1955, I introduced S. 1926, a separate bill, which was designed to exempt from Federal regulation, producers of natural gas whose sales in interstate commerce for resale are less in the aggregate than 2 million thousand cubic feet of natural gas a year. When the pending bill reaches the stage where the consideration of amendments is timely, I intend to offer S. 1926 as an amendment in the nature of a substitute.

I discussed that amendment at the conclusion of the session on yesterday when I submitted the amendment. It now lies on the desks of Senators, and is marked "1-24-56—A." When the pending bill reaches the stage where the consideration of amendments is timely, I intend to offer the amendment as an amendment in the nature of a substitute for the bill.

This proposal to exempt small producers from Federal regulation of their interstate sales is based solely on the ground that their regulation is not essential for the protection of the public interest. The exemption would also relieve the Commission and the small producers of many burdens.

This proposed exemption of small producers does not in any way alter my conviction that the large producers who dominate the interstate market should continue to be subject to the jurisdiction of the Natural Gas Act. While I believe it is feasible and possible for the Federal Power Commission to regulate the sales of the small producers, nevertheless, if the public interest may be adequately protected without their regulation, there is no justification for subjecting them to unnecessary regulation, or for subjecting the taxpayers to the financial burden of nonessential regulation.

Let us examine the practical effect of this amendment.

The exemption of producers whose sales in the aggregate are less than 2 million thousand cubic feet of natural gas a year would remove from jurisdiction under the Natural Gas Act more than 96 percent of the producers who made sales to interstate pipeline companies in 1954. While such an exemption would remove all but approximately 197 producers from Federal regulation of their interstate sales, it would leave subject to regulation the interstate sales of the 197 producers who in the aggregate sold approximately 90 percent of the natural gas to interstate pipeline companies in 1954. In other words, it would exempt 96 percent of the producers from regulation, but would retain regulation over 90 percent of the gas.

According to information furnished by the Federal Power Commission, which I earlier placed in the RECORD, 5,557 producers sold natural gas to interstate pipeline companies in 1954. Of these 5,557 producers, 5,360 of them sold less than 2 million thousand cubic feet of natural gas in 1954, and in the aggregate their sales amounted to only 10.48 percent of the total volume of gas purchased by interstate pipeline companies in the year 1954. Thus, if we would relieve these 5,360 producers from regulation under the Natural Gas Act, there would be left subject to Federal regulation only 197 producers. But these are the producers who sold 89.52 percent of the natural gas purchased by interstate pipeline companies in the year 1954.

I do not believe it is necessary to subject these 5,360 small producers' sales to regulation in order to provide adequate protection to the Nation's 21 million natural-gas customers against monopoly prices. These small producers do not control a large enough share of the supplies of natural gas to affect materially the interstate movement of natural gas or the price levels in the gas fields. I believe the elimination of these small producers from regulation is a workable approach to the natural-gas situation which is before this Congress.

Regulating the sales of 197 producers is still a big job. But at least the job will be cut down to a more workable size. The main dam against a flood of high gas-field prices is retained, and the tiny volumes of unregulated interstate sales are not likely to vary much from the fair levels set by the Commission for the main stream.

I noticed in the argument of the able Senator from Arkansas [Mr. FULBRIGHT] a claim for simplicity in regulation under S. 1853 as follows:

> Is it not obviously more efficient to control the prices that some 120 pipelines pay for their gas rather than attempt to fix the prices at which more than 8,000 producers sell the same gas? (RECORD, p. 672.)

But it is a regulation of sales transactions that we are debating. The pipelines buy what the producers sell them. And it must be obvious that the prices paid by 120 pipelines for gas to 5,500—or 8,000, as he claims—producers involve precisely the same bilateral transactions as the prices at which the 5,500 producers sell to the 120 pipelines. I see no magic simplification in this.

If, as he says, they are going to control the prices which the pipelines can pass on to the distributing companies, and can bring under scrutiny the prices which are paid to the producers, it follows that under his plan all the contracts with the 5,500 producers will ultimately have to come before the Federal Power Commission. The pipeline companies will not be prevented from paying certain prices. The suggested procedure would merely be imposed as a pseudo-check to see whether or not those prices can be passed on to the distributors.

My good friend from Arkansas, in drafting his bill, has tied the Federal Power Commission down with the red-tape from which he said he was trying to free it, whereas my proposal would lop off 96 percent of the cases and confine regulation to the 197—the big boys.

If there were any regulation under S. 1853, as he asserts—and as I deny—it would affect and burden the small producers to the same degree as the large ones, and to a much greater degree than is provided for in my amendment in the nature of a substitute.

Compared with the complexity and vagueness of the alleged indirect controls of S. 1853, which I shall analyze shortly, this amendment of mine confining regulation to sales of about 197 producers is simplicity itself. Compared with the ineffectiveness of the controls in S. 1853, my amendment retains real protection for the consumers. Compared with the legal and economic uncertainties of S. 1853, this exemption of small producers offers a clear path ahead.

There is no question about the legality or constitutionality of this proposal for exemption. I placed in the hearing record, and I now ask unanimous consent to have printed at this point in the RECORD, a memorandum dated June 3, 1949, by the Federal Power Commission's Bureau of Law; and also a report written to Hon. JOHN W. HESELTON, Member of Congress, on April 5, 1955, by the American Law Division of the Legislative Reference Service of the Library of Congress, relating to this particular question.

There being no objection, the memoranda were ordered to be printed in the RECORD, as follows:

MEMORANDUM ON CONSTITUTIONALITY OF CLASSIFICATION IN DOUGLAS AMENDMENT TO EXEMPT SMALL PRODUCERS—I

MEMORANDUM FOR THE COMMISSION

JUNE 3, 1949.

Re constitutionality of proposed exemption of producers.

This memorandum is prepared in response to an assignment from the general counsel. It discusses the question of whether the proposed exemption from the jurisdiction of the Commission of sales of natural gas in interstate commerce at the conclusion of production and gathering where such sales, individually or in the aggregate with affiliated producers, do not exceed 2 billion cubic feet during the calendar year, would be constitutional as involving a permissible classification of natural-gas companies.

Such an exemption, in my opinion, would be constitutional since it is based upon a

reasonable classification of regulated and nonregulated companies for legitimate regulatory purposes. While it is estimated that the provision would exempt 97 percent of the 2,300 producers in the country who made sales to interstate pipelines in 1947 and 530 of the 600 producers in the 7 Southwestern States, the remaining 70 producers in the Southwesten States who would not be exempt sold 83.96 percent of the gas sold to interstate pipelines in the year 1947. Those producers, therefore, would be exempt whom it is not important to regulate.

Such reasonable classification and exemption based thereon has been repeatedly upheld by the United States Supreme Court. In *Wilson* v. *New* (243 U. S. 332), a similar classification and exemption was upheld. The rule was stated in the majority opinion on page 354 as follows:

"The want of equality is based upon two considerations. The one is the exemption of certain short-line and electric railroads. We dismiss it because it has been adversely disposed of by many previous decisions. The second rests upon the charge that unlawful inequality results because the statute deals not with all, but only with the wages of employees engaged in the movement of trains. But such employees were those concerning whom the dispute as to wages existed growing out of which the threat of interruption of interstate commerce arose, a consideration which establishes an adequate basis for the statutory classification."

Similarly in the case of *Chicago, Rock Island & Pacific Railway Co.* v. *United States* (284 U. S. 80), the Supreme Court said on page 93:

"The classification which results in exempting railroads less than 100 miles in length from the necessity of making reports of per diem accruals separately to each of the numerous car owners throughout the country is attacked as arbitrary and unreasonable. We think it is neither. It is of a kind frequently made and frequently upheld by this Court. *St. Louis & I. M. Ry. Co.* v. *Arkansas* (240 U. S. 518, 520); *Wilson* v. *New* (243 U. S. 332, 354), and authorities cited. Moreover, the car equipment of the country is substantially in the hands of the trunk lines, that owned by the short lines being almost a negligible proportion of the whole. And this fact affords some additional ground for the classification."

To the same effect, in the case of *Dow* v. *Beidelman* (125 U. S. 680), the United States Supreme Court said, on page 691:

"The legislature, in the exercise of its power of regulating fares and freights, may classify the railroads according to the amount of the business which they have done or appear likely to do. Whether the classification shall be according to the amount of passengers and freight carried, or of gross or net earnings, during a previous year, or according to the simpler and more constant test of the length of the line of the railroad, is a matter within the discretion of the legislature. If the same rule is applied to all railroads of the same class, there is no violation of the constitutional provision securing to all the equal protection of the laws."

See also *New York, New Haven and Hartford Railroad Company* v. *New York* (165 U. S. 628 (1897)); *Chesapeake and Ohio Railway Company* v. *Conley* (230 U. S. 513 (1913)); *Great Atlantic & Pacific Tea Co.* v. *Grosjean* (301 U. S. 412 (1937)); and *Carmichael* v. *Southern Coal & Coke Co.* (301 U. S. 495 (1937)).

For other authorities see dissenting opinion by Mr. Justice Brandeis in which Mr. Justice Holmes and Mr. Justice Stone concurred, in *Louisville Gas & Electric Co.* v. *Coleman* (277 U. S. 32), at pages 42 to 44, and dissenting opinion by Mr. Justice Cardozo in *Stewart Dry Goods Co.* v. *Lewis* (294 U. S. 550), at page 579, both of which gave broad application to the doctrine.

LOUIS W. MCKERNAN,
Chief, Division of Interpretation and Research, Bureau of Law.

Approved:

BRADFORD ROSS,
General Counsel.

MEMORANDUM ON CONSTITUTIONALITY OF CLASSIFICATION IN DOUGLAS AMENDMENT TO EXEMPT SMALL PRODUCERS—II

THE LIBRARY OF CONGRESS,
LEGISLATIVE REFERENCE SERVICE,
Washington, D. C., April 5, 1955.

To: Hon. JOHN W. HESELTON.
From: American Law Division.
Subject: Constitutionality of H. R. 4924.

The above bill would amend section 1 of the Natural Gas Act, to make it inapplicable to "any sale of natural gas in interstate commerce at or prior to the conclusion of production or gathering by a person whose total sales of natural gas in interstate commerce individually or in the aggregate with affiliated producers and gatherers do not exceed on an annual basis 2 billion cubic feet computed at 14.65 pounds per square inch absolute at 60° F. provided such person is neither a natural-gas company by reason of other activities nor affiliated with a natural-gas company."

We are of the opinion that a statute of this character would be constitutional. Exclusions based on differences of degree, stated in terms of differences in numbers, are commonplace in the law. For example, the Fair Labor Standards Act exempts employees of certain newspapers which have a circulation of less than 4,000 (U. S. C. 29: 213). The SEC is authorized to exempt from the Securities Act of 1933, as amended, issues of securities which do not exceed $300,000 (U. S. C. 15: 77 (c)). The Trust Indenture Act of 1939 does not apply, in stated circumstances, to securities issued pursuant to an indenture which limits the aggregate principal amount outstanding thereunder to $1 million or less (U. S. C. 15: 77 ddd). A similar exemption is granted from the provisions governing the issuance of securities by motor-vehicle carriers (U. S. C. 49: 314). Stockyards in which the area normally available for handling livestock, exclusive of runs, alleys, or passageways, is less than 20,000 feet, are exempt from the Packers and Stockyards Act (U. S. C. : 202). The Adamson Act, which established the 8-hour day for railroad employees, exempted certain independently owned lines not more than 100 miles in length (U. S. C. 45: 65). The Federal Unemployment Tax is imposed only on employers of eight or more (U. S. C. 26: 3306).

Occasionally, the objection is raised that a statute is invalid because of exclusions of this character. But the Supreme Court has consistently rejected these arguments. In *Wilson* v. *New* ((1917) 243 U. S. 332, 354), it dismissed the contention that the exemption of short-line railroads made the Adamson Act invalid, with the brief comment that this point "has been adversely disposed of by many previous decisions." In support of this statement it cited a series of cases in which State statutes which exempted small enterprises were sustained against the charge that they violated the equal-protection clause.

"To hold that Congress in establishing its regulation is restricted to the making of uniform rules," wrote Mr. Chief Justice Hughes in *Currin* v. *Wallace* ((1939) 306 U. S. 1, 14) "would be to impose a limitation which the Constitution does not prescribe. There is no requirement of uniformity in connection with the commerce power * * *." In *Mabee* v. *White Plains Publishing Co.* ((1946) 327 U. S. 178, 184) the Court held that the exemption of certain small newspapers from the Fair Labor Standards Act did not constitute an unconstitutional discrimination against other newspapers. It declared:

"The fifth amendment does not require full and uniform exercise of the commerce power. Congress may weigh relative needs and restrict the application of a legislative policy to less than the entire field."

Administrative convenience and the expense of enforcing a law against persons engaged in small-scale operations have been deemed to be adequate reasons for the exclusion of such persons, *Steward Machine Co.* v. *Davis* ((1937) 301 U. S. 548, 584).

MARY LOUISE RAMSEY,
American Law Division.

Mr. DOUGLAS. Both of these legal memoranda make it clear that Congress has power to classify businesses subject to Federal jurisdiction by size and to limit such regulation to those of a certain size. There are many precedents for such classification. I mention as examples the limits in the Fair Labor Standards Act; in various features of the Social Security Act; in the Adamson Act; and in State labor laws the constitutionality of which has been upheld by the United States Supreme Court.

The break off point suggested in my amendment—2 million thousand cubic feet, is reasonable in the light of the objective of the law, which is consumer protection.

The advocates of complete exemption of all producers, regardless of size, have belittled the exemption of the smaller producers. But no small producers to my knowledge appeared before the committees and objected to their exemption, nor did any appear in behalf of the Fulbright bill. It is the big boys who object to the exemption of the little fellows.

The proponents of the Fulbright bill have imagined numerous schemes by which larger producers may be able to evade and avoid Federal regulation by subdividing their interests. But I wonder if the big oil and gas producers are not really more concerned that if Congress should exempt the little fellows, as proposed in my amendment, the industry giants will no longer have any small producers behind whom to hide. If my amendment contained loopholes through which the big producers could escape regulation, would they be trying to dream up reasons why it should not be enacted, or would they complain that the purpose of the bill could be evaded and avoided by subdividing their interests or through other machinations?

The truth of the matter is that the Commission at the present time has classified by size, natural gas companies and electric utilities for accounting requirements and for the furnishing of reports to the Commission. Moreover, it has even prescribed a size classification for the so-called independent producers. Producers whose sales of natural gas subject to the jurisdiction of the Federal Power Commission amount in the aggregate to less than one million thousand cubic feet annually are permitted to use a simplified form of application for Certificates of Convenience and Necessity.

The volume-of-sales test, therefore, is one which the Commission has itself applied for other purposes and cannot be

as difficult as some persons seek to make out. Commissioner Draper, with his long experience, has asserted that such an exemption of small producers, as in the companion Heselton bill, H. R. 4924, "would accomplish relief to the small producers far better than bills of the nature of S. 1853 and H. R. 4560"—hearings, page 1228. The Heselton bill would be much better than the Harris or Fulbright bills.

I now ask unanimous consent to have printed at this point in the RECORD a table furnished to me by the Federal Power Commission, showing the names of all the nontransporting producers who, on the basis of 1954 sales, would, under the terms of my amendment, be subject to the jurisdiction of the Federal Power Commission by reason of making sales in interstate commerce in the year 1954 of natural gas in the excess of a volume of 2 million thousand cubic feet.

There being no objection, the table was ordered to be printed in the RECORD, as follows:

Sales by producers of natural gas to natural gas pipeline companies [1]—1954 producers whose combined sales were 2 million M c. f. or more

[Excludes sales to associated pipeline companies]

[1] Data from reports of purchases by interstate natural gas pipeline companies.
[2] Average for all contracts with natural-gas pipeline companies.
[3] Includes sales by producer named in association with others where producer named appeared 1st on each of the various contracts reported.
[4] Sales to associated pipeline companies excluded.

Mr. DOUGLAS. For all these reasons, the simple amendment which I shall call up at the proper time offers the best alternative for reducing the regulatory job to its essential minimum, yet relieving the maximum number of small producers' sales from regulation, and maintaining the needed degree of protection for consumers.

FPC HAS ALREADY HAD A GREAT DEAL OF EXPERIENCE IN REGULATION OF PRODUCING COMPANIES

I wish now to turn to the claims of proponents of this legislation that regulation of nontransporting producers' sales is infeasible; that the cost of regulation will be staggering and benefits negative. I cannot agree with these assertions. They are totally unsupported, and are in fact contradicted, by actual experience.

First of all, it should be noted that for 16 years the Federal Power Commission has had subject to its jurisdiction and has regulated a large number of natural-gas companies, pipelines, who are engaged in the exploration, development, and production of natural gas in most of the same areas and fields in which the nontransporting, or so-called independent producers, conduct their operations. In addition, several natural-gas companies have producing company subsidiaries or affiliates.

In short, the Commission can do the job if it wants to do it, because already it has done the same job on a smaller scale.

At the end of 1954, 44 natural-gas companies, subject to the jurisdiction of the Federal Power Commission, reported the ownership of 29,239 gas wells. So far as can be ascertained, producing affiliates and subsidiaries owned 1,827 gas wells, making a grand total of 31,066 gas wells, or approximately 43 percent of the total number of gas wells in the United States which were under regulation by the Federal Power Commission so far as the price at which gas could be charged into the pipeline accounts is concerned.

Natural-gas-pipeline companies under the jurisdiction of the Federal Power Commission, reported an investment in natural-gas-production properties as of the end of 1954 of slightly more than $1 billion. This may be compared with their reported investment in transmission facilities as of the same date of $4,489,000,000. Affiliated producing companies also have an estimated investment in production facilities of several hundred million dollars more. Thus, it will be seen that the Federal Power Commission has had many years a substantial segment of the natural-gas-producing industry subject to its jurisdiction, and it is actually experienced in the regulation of the production phase of the industry, which the proponents of S. 1853 argue present such difficult problems.

It is obvious that the Federal Power Commission is understaffed at the present time. To do the effective job which is necessary in the public interest will require more funds. But this will be money well spent in the national public interest.

I believe the staff of the Commission is, in the main, devoted, competent, and sincere. However, I do not honestly believe that the Federal Power Commission, as it is presently constituted, is performing its duties of regulating natural-gas companies in as effective a manner as is possible. It does not appear that a majority of the Commission believe that the Natural Gas Act was really passed for the purpose of preventing exploitation of consumers at the hands of natural-gas companies.

The Commission's decision in the Phillips case, which was later overruled by both the circuit court of appeals and the Supreme Court, is one indication of it, and its decision in the Panhandle Eastern case is another good illustration. In the latter case, a majority sought to junk the Commission's long-standing, proven, ratemaking procedure, thus making it possible—had it been upheld—for the pipeline companies to obtain bonanza profits by selling the gas which they produce themselves to their customers at several times the actual cost of production including a fair return. Fortunately, the United States Circuit Court of Appeals for the District of Columbia unanimously turned down this giveaway of the public interest.

The Commission last year also joined in recommending the successful efforts to reduce its own jurisdiction by the Hinshaw bill. And it is now endorsing the legislative program of the oil and natural-gas industry to amend the Natural Gas Act through passage of the Fulbright bill. Certain Commissioners, from time to time, notably Mr. Draper, a member of the present Commission, have vigorously dissented from the action of the majority of the Commission.

Despite these shortcomings, including the plain disregard of the congressional intent in the Phillips case, the Federal Power Commission is the only instrument we have to carry out the essential purposes of the Natural Gas Act. Moreover, the evidence is clear that the consumers have received some benefits, even in the more recent years from regulation under the Natural Gas Act. This should have been quite apparent from the data to which I referred earlier, showing that in the period from July 1, 1949, to September 1, 1955, the Commission has been responsible for the disallowance and withdrawal of rate increases by pipeline companies amounting to $164,553,000 on an annual basis.

In other words, poor as the Commission is, it has nevertheless served in some degree to protect the public interest. It is the only group we have. As Touchstone, in As You Like It, in referring to a lady, said, it is "an ill-favored thing, but mine own."

It is a poor thing indeed, but it is the only public regulatory body we have. If Congress declines to go along with this determined drive of the industry for amendments to the Natural Gas Act, it would have a very salutary effect, I am sure, at the Federal Power Commission. It might cause some of the timidity at the Commission to be transformed into courage, and it might lead the Commission to believe that public opinion will watch them as it will watch the yea and nay vote on the pending bill.

The Commission would—or should—then recognize that it has a responsibility and a duty to carry out the congressional intent which it can no longer dodge. We might reasonably hope therefore that it would go about its business of regulating both the pipelines and nontransporting producers in accordance with the standards of regulation which were applied so successfully in the public interest during the first 10 years of regulation under the Natural Gas Act.

In any case, as I have said, the Commission is our only instrument to carry

out the general plan of Federal regulation which has been built up to protect consumers of natural gas.

If after backbone is supplied by the courts and Congress, there is timidity or faltering or betrayal, we can only hope that a new administration and "changed appointments," to quote my good friend, the senior Senator from Texas, may breathe new life into it again before it is too late.

It has been a very curious thing that only those who have defended the public interest in the past have been denied reappointment or confirmation by the Senate, and that those who have gone along with the industry have been reappointed and confirmed, or appointed afresh. Possibly next year—one never knows—the political winds may come from a different quarter.

REGULATION OF PRODUCERS' SALES NOW WELL UNDERWAY

Although I have been busy with other duties, I have attempted to keep informed of the Commission's progress in carrying out the law. On the basis of the data supplied by it, I believe the Commission's regulation of producer's sales is now well, though far from perfectly, under way.

Shortly after the Supreme Court handed down the Phillips decision, reversing the Commission, the Commission promulgated rules dealing with independent or nontransporting producers. Originally issued as order No. 174, these rules have been subsequently modified and improved by later orders. Basically, these rules did two things. First, they provided for the filing by each producer of his contracts with the pipeline company or other buyer covering those sales which he made in interstate commerce for resale. Certain supplemental information was requested for the purpose of establishing the rate being charged on June 7, 1954, as the effective rate. The rules also provided means by which supplemental changes in contract rates could be filed.

The second basic requirement applied to certificates of public convenience and necessity, which are required under section 7 (c) of the Natural Gas Act. The rules provided for the making of applications in the nature of "grandfather" applications covering the sales being made on June 7, 1954. Moreover, the producers were classified by size, as I noted earlier, the producers selling less than 1 million thousand cubic feet being required only to file a simplified form in applying for certificates of convenience and necessity.

Independent or nontransporting producers were relieved by such rule from compliance with the accounting and reporting requirements of the Commission's existing rules. Undoubtedly, these rules can be further simplified and improved.

According to a press release issued on March 10, 1955, 10,000 rate schedules of producers had been processed, and the situation was current.

I wish to emphasize that, because it has been stated on the floor in debate that the staff of the Commission has been hopelessly bogged down and they have been away behind in their work. But here is a press release issued by the Commission itself, the members of which are supporters of the Fulbright bill, which says that they were up on their homework on the 10th of March 1955.

This means that producers selling gas in interstate commerce to pipeline companies or others have on file at the Federal Power Commission a legal, effective rate. On January 6 of this year, only 3 weeks ago, the Federal Power Commission issued a further release concerning the processing of rate filings received by it from independent natural-gas producers which disclosed that during the first 18 months of regulation 13,531 rate filings were received by the Commission. It also appears from this press release that 7,038 of the filings were for rates which were in effect as of June 7, 1954. One thousand and ninety-seven filings were for new service, while 4,979 involved rate schedule changes, including increases in rates, and the remaining 397 were for various other filings.

The volume of certificate filings and processing thereof is also impressive. Down to January 1, 1956, less than a month ago, 6,483 independent producer applications for certificates of public convenience and necessity had been filed. Of these 5,207 covered service existing June 7, 1954, while 1,276 were for new service after June 7, 1954. These 1,276 applications, incidentally, seem to show that the highly advertised sitdown strike of producers following the Phillips decision, with which oil and gas spokesmen have tried to scare consumers, is largely a figment of their imagination. The palsy of "uncertainty" and the dread of "utility-type regulation" obviously has not scared these hardy producers out of a willingness to sell for the interstate market under fair regulation.

The Commission on January 1 had disposed of about one-third, or 1,802 of the existing service applications and 437 of the new service applications. But the Chairman's report to me also stated:

> Of the 839 new service applications pending as of January 1, 1956, the large majority have received authority to sell natural gas in interstate commerce for resale pending final disposition of the application for certificate.
>
> Section 157.23 (b) of the Commission's Rules issued by Order No. 174–B covers so-called grandfather operations as follows, "Pending action by the Commission on an application hereunder, the service for which authorization is sought shall be continued." Thus, any sales and operations subject to the Commission's jurisdiction for which application has been made, are in effect authorized by the Commission's Rules.

The processing of the pending applications is going forward at a rapid pace, as evidenced by the daily announcements of Commission orders granting such applications.

The action taken on rate increase applications is also extensive, though far from satisfactory in my opinion. According to the Commission's press release of January 6, 1956, in the 18 months ending December 1, 1955, producers filed 3,229 rate increases, amounting in total to $48,546,537 annually. The Federal Power Commission suspended 221 of these increases totaling $15,798,041 a year—$761,197 of which was later allowed, and $328,975 of which was withdrawn, leaving net $14,707,869 increases pending under suspension on December 1, 1955—but allowed 3,008 rate increases amounting in total to $32,748,496 a year to go into effect. Of this large number of increases which the Commission let go into effect, 1,978 covered increases in the Texas and Louisiana production fields and amounted in total to $6,904,444 per year. It is my understanding that most of the contracts between producers and pipeline companies provide that the purchaser will reimburse the seller for production and gathering taxes paid by the seller in varying percentages up to 100 percent of such taxes. A reasonable severance tax is a cost which can properly be passed on to the pipeline, and apparently many of them have been processed.

The increases which were permitted to go into effect cannot be effected, as I understand it, except after proceedings conducted under section 5 of the Natural Gas Act, and then the rates may be reduced only prospectively. The Commission's failure to suspend these producer increases, however, had made it necessary in one instance for the Tennessee Public Service Commission, municipalities, and distributing utilities, to file complaints with the Commission. It is my information that the Commission has thus far failed to act on such complaints. This is another instance of the Commission's failure to act in the public interest.

Rate increases under suspension when finally acted upon by the Commission are subject to revision from the date they become effective, and refunds may be ordered if the Commission finds that the rates were not justified in whole or in part.

If, instead of letting this regulating process go forward, S. 1853 were passed, note what would happen to these recently approved and pending matters.

Chairman Kuykendall testified before the House committee that if the Harris bill were enacted, the suspended producer rate increases would automatically go into effect. Thus, there are riding on this legislation, immediate definite increases in the cost of gas to pipeline companies, which would bring producers additional revenues of $14,707,869 a year.

A further effect of the passage of the Fulbright bill would be forever to prevent State commissions, municipalities, and distributing utilities from questioning the producer increases aggregating another $32 million, which the Commission, according to its release, has permitted to go into effect without suspension. Thus, customers and consumers would be deprived of any right whatsoever to challenge the reasonableness of the payments made by pipeline companies to producers pursuant to contracts entered into prior to passage of the Fulbright bill, and to secure just and reasonable rates. So the "hit parade" for producers would begin with a tidy little $41.5 million tune—$48.5 million, less the $7 million tax allowance. These are some of the most immediate consequences that passage of the Fulbright bill would bring to the gas consumers of this Nation.

Talk about the $64,000 question. This would lead to an increase of $600 million a year. The public is very much interested in the $64,000 question. I think it should display at least an equal interest in the $600-million question.

In the light of the résumé of Commission action to regulate producers' sales since the Phillips case, however, it is clear they not only can, but are starting to, do this job. But they have both eyes on the Congress, and if it passes the Fulbright bill they will lapse into what Grover Cleveland once defined as a state of innocuous desuetude, although I am afraid it will not be innocuous; I am afraid it will be a malign desuetude.

FPC CAN DETERMINE PRODUCER COSTS, AND COST-BASIS OF REGULATION IS WORKABLE

Mr. President, I wish to defend the thesis that the Federal Power Commission can determine producer costs and that the cost basis of regulation is workable.

It has been contended that the producers' costs are of no consequence and should not be used to determine the amount which the Commission should allow a producer to receive for the gas produced and sold in interstate commerce. And it is further contended that it is impossible to determine the costs of production or apply the cost standard of regulation to nontransporting producers.

The Senator from Oklahoma [Mr. MONRONEY] has made that claim on numerous occasions, asserting that oil and gas are interwoven, and that the costs of the gas cannot be separated from other costs.

I have already pointed out that the Commission can do and has done this kind of regulating of pipeline producers.

It is also a matter of record that the Federal Power Commission staff made an investigation of Phillips Petroleum Co. and determined the profits received from its gas business. I emphasize that: from its gas business. It is not the joint profits from gas and oil, or from oil alone, but from gas alone.

The Chairman of the Commission—whom I have criticized in other respects most harshly—very kindly furnished me with an exhibit in that case which showed a rate base for the company's gas department and its earning thereon. I also was advised by the Chairman that Phillips kept its books of account on a cost basis and measured its profits by relating them to net investment. Moreover, for income-tax purposes each producer must keep records showing capital investment, depreciation, depletion, and operating costs.

The testimony of former Federal Power Commission Chairman Thomas C. Buchanan before the Senate committee pins this point down firmly:

> The staff found that Phillips had excellent records of its gas operations; that such records were kept on the basis of cost, and that depreciation and depletion were properly recorded.
>
> The staff also found that the Phillips management used the rate of return earned on the depreciated original cost investment to gage the earnings performance of each department. In other words, Phillips was using the same basis to test the efficiency and profitability of its various operations as the Federal Power Commission uses to test the reasonableness of utility rates.
>
> I also invite your attention to exhibit No. 20 in the Phillips case which I offer for the record. This exhibit shows that in comparing the economics and the financial results of the Michigan-Wisconsin Pipe Line Co. contract renegotiation, Phillips management used the actual rates of return based on the money invested in that operation.
>
> This is the typical utility regulatory approach voluntarily adopted by Phillips, yet this committee has been advised that the application of utility-type regulation, that is, return on investment, is impractical of application to producers of natural gas (hearings, p. 816).

Here was the largest producer, classifying its accounts to obtain this information for its own use, and the Federal Power Commission got hold of the material. Yet, they want it said that it is impossible for other companies to do it. Of course, the Phillips Co. is a huge, composite company.

It is fantastic to believe that a producer would enter into a contract for the sale of gas without measuring the revenues expected to be received from that sale against the costs which he has already experienced in the development of the property and the costs which he estimates will be incurred in the future.

The 197 big producers are not business fools. They are very able, shrewd men. A small producer might do that, but a big one would not; and I am proposing to exempt small producers.

Furthermore, it is not only important that we have a regulatory method which the Commission and its staff can operate, it is also important to have one so well understood and clear that the producers themselves can measure their own rates in interstate commerce by the statutory requirements and thus be able to plan ahead more certainly. The further voluntary compliance is thus made possible, the less enforcement and litigation will be necessary. The cost-basis of regulation, based on familiar accounting methods, affords just such a measure. It would not involve all the uncertainty and legal paraphernalia of a complicated and burdensome advance determination of the sort which S. 1853 imposes on the Commission to weigh the various vague, new factors affecting the reasonable market price in each new contract.

At the same time it offers the best standard we have yet perfected for testing the fairness of the return on investment.

I wonder if the producers are really concerned about the impossibility or impracticability of ascertaining the true facts of their cost of doing business. Without being uncharitable, I suspect they may be more concerned lest such facts of record disclose the existence of exorbitant profits. In the Phillips material put into the hearings by Mr. Buchanan, these profits amounted to over 16 percent on the staff-computed rate base—hearings, page 821.

I call attention to this. Phillips was making profits amounting to 16 percent. I do not think that 16 percent is a fair rate of return. It is more than a fair rate of return. I am willing to concede that a fair rate of return ought to be more than 6 percent in the gas-producing industry. Possibly it should be 8, 8½, or 9 percent, but not 16 percent. But even 16 percent is not enough for Phillips. They want more.

I am sure that the competent staff of the Federal Power Commission can solve the many problems which were aired in the hearings by proponents of this legislation. Most of these so-called problems have already been solved, as I have pointed out, in the course of regulation of pipeline companies which own gas reserves.

FAIR REGULATION WILL GIVE A POSITIVE INCENTIVE TO PRODUCER AND ASSURE HIM A FAIR PROFIT

I believe one of the greatest incentives which can be given the producer to induce him to engage in exploratory work is the assurance of the recovery of the costs which he incurs, plus a reasonable return, commensurate with the risks taken, on the capital which he invests.

The rate of return must, of course, reflect the degree of risk inherent in the producing business. Constitutional standards require that the return be sufficient to take care of the capital costs of the business, assure confidence in its financial integrity, and induce the attraction on reasonable terms of the capital necessary for expansion of the business.

I would think that from the nature of the producing business, and based upon the testimony before the committee as to the risks involved, the profit margins allowed the natural gas producers would and should be higher than those normally thought of for gas and electric distribution utilities. The Federal Power Commission has allowed pipeline companies owning producing properties rates of returns running from 5½ to 6¼ percent on their overall operations. I want to emphasize the point that that is the overall operation and the capital investment in the transmission facilities vastly outweigh the capital investment in the producing facilities. Such returns may not be high enough for the natural gas producer. It appears that the Federal Power Commission's staff in the Phillips Petroleum Co. case suggested an 8½-percent rate of return for Phillips—hearings, pages 824–825.

"Utility-regulation" has been thrown around in this debate as if it were a dirty word, or at the least an exaction of a penalty which no free American should have to endure. To exempt producers' sales from "utility-regulation" is the constantly repeated aim of this bill. Yet utility regulation has not stifled the initiative or stopped the rapid expansion of the telephone or electric or natural gas pipeline industries. Quite the contrary. They are among our most phenomenally successful and growing businesses. "Utility regulation" are not dirty words. Utility regulation is an honorable way of protecting the consumers as well as producers in a monopolistic or noncompetitive, essential service.

Or the term "utility-regulation" is used by the exponents of the Harris-Fulbright bill to imply a limitation to a 6-percent return; and, in view of the extra risks

in natural gas exploration and development, it is argued that 6 percent is a grossly unfair profit limitation. But this is setting up a straw man. No one, to my knowledge, is proposing such a 6-percent limitation in the utility regulation of gas producers' interstate sales. Former Commission Chairman Buchanan testified—hearings, pages 824–825—that he "never heard any staff member or Commissioner express the view that independent producers should be limited to such rates of return"—that is, 6 or 6½ percent."

I know of no basis for fears of a 6-percent "utility regulation." An 8- or 8.5-percent utility-regulation rate seems much more likely, and I have advocated it before, and now do so again—but not a 16-percent rate of return.

Such utility regulation, moreover, may assist a producer to avoid the effects of any improvidently low contract that does not yield a fair return. Thus, when the junior Senator from Texas [Mr. DANIEL] asked Mr. Buchanan:

> If the Commission finds there are contracts which do not allow a just and reasonable rate of return to the producers, you think, then, the Commission could raise the prices above what is specified in the contracts?

Mr. Buchanan replied:

> I not only think it could, but I think it would.

This is why I say that fair regulation of their interstate sales will give a positive incentive to some producers.

In this connection, I think it is of more than passing interest to note that one producer who testified before the House committee in the 81st Congress on a prior Harris bill expressed the opinion that if everybody who produced oil and gas could be assured of a 6-percent return on their investment throughout the year they might be satisfied. The producer, Mr. B. A. Hardy, of Shreveport, La., recently had occasion to testify before the Arkansas Public Service Commission, and when his attention was called to his testimony before the House committee, he stated that he still held the same view, and felt that producers, on the basis of invested capital, would be lucky to get as much as a 6-percent return.

I would not want to see the producers treated unfairly. However, I do not think there is the slightest possibility that they would be so treated by the Federal Power Commission. Surely the history of regulation of the utilities industries, particularly the companies regulated by the FPC, shows that these companies have become prosperous, their securities are in demand, and their financial reputations are high. The dire prediction of disaster for producers, if their profit margins are held to a reasonable level through regulation of the prices charged for natural gas in the field, appears to be in the same class as those predictions which were made when the holding company and the Federal Power Acts were before the Congress 20 years ago.

Mr. WILEY. Mr. President, will the Senator yield, so that I may make a few remarks at this time in relation to a very important organization called CARE?

Mr. DOUGLAS. Mr. President, I am very glad to yield, with the understanding that the remarks will be printed at the conclusion of my address, that I do not lose my right to the floor, and that the Senator from Illinois may be privileged to add a few remarks of his own on the same subject.

The PRESIDING OFFICER (Mr. CLEMENTS in the chair). Is there objection?

Mr. DANIEL. Mr. President, reserving the right to object, I should like to ask if there is any particular length of time which the Senator from Wisconsin would like to have.

Mr. WILEY. No. I may say to the distinguished Senator from Texas that today marks the 10th anniversary of CARE. My colleagues know what CARE is. Some Senators desire to pay a compliment to that great institution. It is my privilege to make the first statement. I am sure it will not take very long to make statements about the organization.

The PRESIDING OFFICER. Does the Senator from Texas withdraw his objection?

Mr. DANIEL. Mr. President, I made no objection; I merely desired to ask a question.

The PRESIDING OFFICER. The Chair hears no objection to the Senator from Illinois yielding to the Senator from Wisconsin, with the understanding suggested by the Senator from Illinois.

The Senator from Wisconsin may proceed.

(Mr. WILEY and other Senators addressed the Senate on the subject of The 10th Anniversary of CARE. His remarks and those of other Senators appear in today's RECORD, under the appropriate heading, at the conclusion of the speech of Mr. DOUGLAS.)

Mr. DOUGLAS. Mr. President, I am delighted to see in the chair as Presiding Officer, the Senator from Arkansas [Mr. FULBRIGHT]. I send him my best regards and I hope he will continue to preside over the debate but not over the passage of the Fulbright bill.

The PRESIDING OFFICER. The Chair appreciates the remarks of the Senator from Illinois.

Mr. DOUGLAS. Mr. President, thus far I have been discussing the question as to whether the Federal Power Commission could administer the regulation of prices paid to producers of natural gas, and I showed that my amendment would exempt all but 197 and would reduce the regulatory problems to manageable proportions, and that, furthermore, the Federal Power Commission is now regulating the prices at which the gas produced by some 30,000 wells owned by pipeline companies will be charged into the cost of those companies.

Furthermore, Mr. President, I pointed out that so far from being behind in its work on applications since the Phillips decision, the Commission is making good headway, and that the Phillips company, the largest producer of natural gas, following the practice of segregating its gas accounts from the accounts of other branches of its business, has shown a profit of 16 percent.

I said that while we of the opposition are perfectly willing that there be a fair rate of return, and, indeed, would fight for a fair rate of return, which we believe should be in excess of 6 or 6½ percent, and might go to 8, 8½, or 9 percent, we submitted, on the facts brought out in the Phillips case, that some companies were making an exorbitant return, and this might account for some of the opposition displayed by some companies toward the bill.

NO SLACKENING OF DRILLING SINCE PHILLIPS DECISION

Mr. President, I now wish to deal with the second argument which has been brought forward by the advocates of the bill, namely, that if there is regulation of the rates by the Federal Power Commission, either gas will not be developed or that it will not be exported.

I think the figures which I have introduced on previous days indicate that there has been no slackening of drilling since the Phillips decision. It is well known and has been repeated almost ad nauseum in this debate that operators seldom drill for gas. They drill for oil and sometimes find gas. I pointed out that the total number of wildcat drillings in 1955, as reported by the Oil and Gas Journal, amounted to 12,302, or over a thousand more in the year 1954; more than a thousand in excess of the number drilled in 1953; nearly two thousand more than those drilled in 1952; and nearly four thousand more than those drilled in 1950.

So that the drilling of wells has not been diminished by the threat of Federal regulation.

Furthermore, I pointed out that so far as developmental wells were concerned, the total number of developmental wells was over 10,000 more in 1955 than it had been in 1950, over 2,000 more in 1955 than it had been in 1954, and that if we isolate gas wells the total number of developmental gas wells drilled in 1955 was approximately 800 more than in 1950.

A day or two ago the junior Senator from Oklahoma [Mr. MONRONEY] brought forth additional evidence, unwittingly, in support of our contention, when he pointed to the recent development of abundant and rich wells in Oklahoma which he said promise to flood that area with gas.

So, Mr. President, I think the claim of the exponents of the bill that its defeat would dry up drilling has completely collapsed. They have fallen back, therefore, upon the argument that gas would not be shipped freely out of the producing States if the price were regulated; and it is to that argument, ably advanced by the Senator from Arkansas [Mr. FULBRIGHT], that I now wish to address myself.

THREATS OF WITHHOLDING GAS FROM INTERSTATE MARKETS NOW SHOPWORN

I have listened to and read many arguments that producers of natural gas will seek intrastate markets and will refuse to sell their gas in interstate commerce if the Fulbright bill does not become law. I do not expect that the threats now being made that consumers of natural gas

in the nonproducing States will be deprived of natural gas in the future if the producers do not get their bill through this Congress, will be carried out any more than were the threats which were made at the time the Moore-Rizley and Kerr bills were under consideration.

Statements were freely made by producers and proponents of similar legislation in the 80th and 81st Congresses that not another foot of natural gas would be sold in interstate commerce unless those bills were passed. But the producers each year continued to make such sales and have been making more and more sales ever since.

They have been entering into new contracts also under regulation by the Federal Power Commission. This is demonstrated clearly by the press release of the Commission to which I earlier referred, indicating that since the Phillips decision on June 7, 1954, producers had filed rate schedules for 1,097 new sales to the interstate pipeline companies. Furthermore, the Commission is issuing certificates of convenience and necessity every week to producers to make interstate sales, and 1,276 applications covering new service since June 7, 1954, have been filed. This certainly does not indicate that producers are refusing to sell natural gas in interstate commerce under regulation.

Producers are in business to make money and to make as much money as is possible in producing and supplying an essential commodity to the American public. No reasonable business man will refuse to sell his product simply because his prices are controlled by the Government and the possibility is present that they might be less than his idea of a top price. I believe the long-run trends all prove that. The producers have preferred the interstate market because of the availability of an assured income over a long period of years.

General Thompson said, however, that Humble Oil is reportedly sitting on its reputed 18 trillion cubic feet of gas and not committing it to interstate sale—hearings, page 60—which, I add, ought to make them and their parent, Standard Oil of New Jersey, about the biggest little independent beneficiary of this bill.

The Senator from Oklahoma reports that Phillips Petroleum, another timorous giant, has likewise chosen to sell a large volume of gas intrastate for boiler fuel rather than to interstate lines.

Some, like Humble and Phillips, may have felt that if they could stir up enough Halloween ghosts to scare the consumers, they could make it Christmas Day for the producers. Then they hoped the consumers would weakly agree, "Don't turn off grandma's gas. We'll let you charge her all you can get in the market." And some poorly informed groups have fallen for this potentially profitable prank and for the various self-serving declarations and threats.

But that threatened sit-down strike by gas producers is not the picture that has developed over the recent years of such repeated alarums and excursions. Economic factors have driven and will drive ample gas to its most stable and profitable long-run market, and that is the interstate market. Congress should not be influenced or intimidated by these bluffs, threats, and veritable blackmail.

Mr. President, let us look at the disposition of natural gas to see if the claims made by the proponents of this bill that the gas now going to interstate pipelines will be diverted to intrastate use, are valid, if this bill fails to pass.

Earlier, I introduced complete figures on the production and disposition of natural gas. They show that in 1953, 1,470,000,000 thousand cubic feet of natural gas were used in the field; and that in 1954, this use declined to 1,457,000,000 thousand cubic feet. This intrastate use of natural gas certainly constitutes a "saturated market," that is, this use can only expand as the oil and gas industry itself expands. It is not possible to divert the gas now going into interstate pipelines to this field use.

Another important intrastate use of gas is found in the direct sales by producers for industrial purposes. In 1953, these sales totaled 903,000,000 thousand cubic feet and declined to 886,000,000 thousand cubic feet in 1954. Again it is clear that this market for natural gas offers no opportunity to divert large amounts of gas from interstate to intrastate use.

Other uses of gas, except for the amounts sold by utilities, are all incident to the production and distribution of gas, and offer no opportunity for profitable sales.

That leaves the gas that is sold by utilities; that is, retail sales—to use a common commercial term—for residential, commercial, and industrial use. In 1953, utility and pipeline retail sales of natural gas amounted to 5.1 billion thousand cubic feet, of which 4.2 billion thousand cubic feet were shipped interstate, and 0.9 billion thousand cubic feet were consumed intrastate. In 1954, retail sales by utilities and pipelines totaled 5.6 billion thousand cubic feet, of which 4.7 billion thousand cubic feet were interstate sales, and intrastate sales account for 0.9 billion thousand cubic feet. Notice, Mr. President, that the one-half billion thousand cubic feet increase in total utility sales from 1953 to 1954 occurred in interstate sales; intrastate sales remained about the same or less, about 0.9 billion thousand cubic feet. The conclusion from these facts is clear, Mr. President. The markets for natural gas in the producing States are pretty well saturated. All of the expansion in natural-gas sales from 1953 to 1954, took place in the interstate market; none of it in the intrastate market. The producing States cannot expect great increases in sales of natural gas within their States; the expansion of natural-gas sales within the producing States will be a gradual one paralleling the normal economic development and population growth of the country. I hope and expect that the great gas-producing section of the country will continue to enjoy a rapid economic development, but this will not absorb the great quantities of gas now going to the interstate market, any more than the rapid economic development within that section in the last decade has kept the interstate sales of natural gas from expanding.

It is idle to talk of a mass migration of industry to the Southwest in order to find cheap gas. For 30 years, the region has had cheap gas—much cheaper gas than it will have if this bill is passed—and its industrial development, while very impressive, has not interfered with the rapid expansion of natural-gas sales in the interstate market.

The proponents of the bill will argue that there is one industry which can come in and use great quantities of gas, a newly developing industry. That is the petro-chemical industry. But this industry may well find it more profitable to locate along the pipelines than within the producing States. First, they will prefer a stable price, rather than being held up for increases each time more gas is needed. Second, the only way producers can create an economic advantage for the petro-chemical industry to locate near the producing fields, will be to charge less for the gas than the regulated price, not more. But it goes beyond reasonable imagination to suggest the producers—even for spite—will choose this course which would be an economic disadvantage for them. Third, there is a very real technical advantage in being located along the pipeline. Much of the petro-chemical industry extracts only a small part of the gas, the ethane, normally about 20 percent of the gas, and leaves the bulk of the gas, the methane, normally about 80 percent, available for resale for fuel through the pipelines. My State has already seen the construction of such plants along the pipelines, which, incidentally, are being expanded. They are not being expanded in Oklahoma, along the lines of the Panhandle pipelines, or in Texas. But they are being expanded in Illinois, for example, in the town of Tuscola.

My good friend, the junior Senator from Oklahoma [Mr. MONRONEY], has suggested that gas might be exported in the form of electricity. This hope ignores the vast investment in transmission facilities which would be required, and also the higher costs of transmitting electricity. Also, the development of atomic energy for the purpose of generating electricity is very likely to reduce the volume of gas used for that purpose.

Mr. President, the production and sales of natural gas have followed the development of markets for the gas. They will continue to do so. Interstate sales of natural gas will continue and will grow if this bill is defeated, for the very simple reason that that is where the markets are. I do not believe that the gas-producing industry will cut off its nose to spite its face. I do not believe that it will refuse to sell gas in a profitable interstate market because it is denied unlimited profits in that market. That would be stupidity, and I do not believe that the heads of the great oil and gas producing companies are stupid. Quite the contrary. They are very able men.

Mr. President, we have been hearing an idle threat. It is not the first time we have heard it. We heard it in 1938 when we were told that not another foot of gas would be sold in interstate commerce if the Natural Gas Act was passed. We heard it again when the Moore-Rizley bill was before Congress in 1947

and 1948, and again when the Kerr bill was under consideration in 1950. And now we hear it again. Mr. President, the threat is just as empty now as it was on all those previous occasions. There is, of course, no way to conclusively disprove a prediction of what will happen in the future except to wait. There may be no ironclad guaranty against men doing odd and erratic things. But, when the same prediction has been made repeatedly under the same circumstances, and has repeatedly been proved false, and when the economic advantage of producers is to continue to serve the interstate market, reasonable men are likely to conclude that it is again false.

Mr. MONRONEY. Mr. President, will the Senator yield for an interruption in regard to the point he just made, that there is probably no danger of a shortage of gas?

Mr. DOUGLAS. I am very glad to yield for that purpose.

Mr. MONRONEY. The authoritative Oil and Gas Journal, in its current issue, makes available for the first time statistics for the full year 1955. It seems to me that those statistics should clear up the confusion in the minds of some Senators as to the effect of Federal price control on drilling for new gas supplies.

The distinguished senior Senator from Illinois himself has cited this publication as a source of industry facts, and it is universally recognized, I am advised, as the most reliable source of reports on this vital phase of the industry.

Some of the opponents of the Fulbright bill have persisted, however, in expressing doubt that the existing controls on natural gas production would have any appreciable effect upon the future supply of this highly valuable fuel. The caption of the editorial, in which the full report for 1955 is set forth, gives them their answer: "Drilling for Gas Has Dropped Alarmingly."

Because of the effect of future supply upon some 25 million consumers and the ability to meet steadily increasing demands, I believe that the full text of this latest report and editorial should be read by every Member of the Senate.

If I have the permission of the Senator from Illinois, I should like to read the full text of the editorial.

The text of the Oil and Gas Journal, issue of January 23, 1956, reads as follows:

The paralyzing effect of Federal price control in reducing the supply of a commodity is demonstrated emphatically in the statistics on drilling gas wells last year.

Drilling for gas dropped sharply while drilling for oil increased. The explanation is simple: The price of oil is free to fluctuate with supply and demand; the price of gas is held down by utility-type regulation of the Federal Power Commission under the Supreme Court mandate in the Phillips decision.

That decision came in the middle of 1954, and had an immediate result in slowing down drilling for gas. But when they made their 1955 drilling schedules, operators as a whole shifted heavily away from gas prospects and put major emphasis on looking for oil instead.

The grievous result is shown in the final figures for 1955. Oil-well completions increased 1,794, or 6 percent, over 1954, while gas-well completions dropped 364 wells, or 9.2 percent.

In 1953, 7.72 percent of all wells drilled were completed as gassers. The figure dropped to 7.27 percent in 1954. Last year it was only 6.37 percent. This is obviously a decided trend toward a diminishing supply of natural gas.

Even more telling are the figures on wildcatting—the search for new reserves. Wildcat wells completed as oilers increased 13.4 percent last year, while those completed as gas wells declined 11.5 percent. Only 2.9 percent of successful wildcats were gas producers last year, whereas the percentage was 3.5 in 1954. Will this convince advocates of price control that drillers can tell in advance whether they are looking for gas or for oil?

The story on wells drilled to developed already-discovered reserves is equally alarming. Here many operators are under various obligations to drill, whether they like the price or not. Yet development gas wells declined 8.9 percent while development oil wells increased 5.6 percent. The picture would have been far worse except for big gains in New Mexico, Colorado, and Wyoming where partially developed gas reserves were long ago committed to a new pipeline which did not start construction until 1955.

New gas supplies can't be got without drilling, and few people will drill for gas if its price is subject to an arbitrary reduction.

Unless the Harris-Fulbright bill is passed, drilling for gas wells will continue to decline. In contrast, gas consumption increased 7.3 percent last year. Congress must decide between diminishing supplies at fixed low prices or expanding supplies at competitive prices.

I thank the distinguished Senator from Illinois for the courtesy he has shown me in yielding to me.

Mr. DOUGLAS. I thank the Senator from Oklahoma for introducing that material.

The figures I have collected from the Oil and Gas Journal—the same source the Senator from Oklahoma has quoted—which are based on the weekly well completions, and cover the year 1955, tell a somewhat different story from the one the Senator from Oklahoma has just quoted. They show an increase in total wildcat drilling, namely, from 11,280 in 1954 to 12,302 in 1955.

I wish to point out to my good friend what has been repeatedly stated on the floor, namely, that when drilling is done, it is not known whether oil or gas will be found. The drilling is done primarily for oil, but sometimes gas is found.

Mr. MONRONEY. Mr. President, will the Senator from Illinois yield further to me?

The PRESIDING OFFICER (Mr. LEHMAN in the chair). Does the Senator from Illinois yield to the Senator from Oklahoma?

Mr. DOUGLAS. Yes, Mr. President; I am glad to yield.

Mr. MONRONEY. What the Senator from Illinois has just said would be true generally when applied to strictly wildcat oil operations. However, the extensions of known gas fields, going out 5 miles beyond where known gas fields exist, would be, in terms of drilling, "new pool wildcat" operations wells. Consequently, since more wildcat wells have been drilled on the outer perimeter of oil fields than have been drilled on the outer perimeter of gas fields, there has been a decline in what is, in fact, wildcatting for gas.

I agree with my disinguished friend, the Senator from Illinois—and that is one of the arguments we have used against the utility type of control—that the undeveloped wildcat acreage cannot be separated or divided in advance as between oil and gas; they are like the Siamese Twins.

Mr. DOUGLAS. I merely point out to my friend the Senator from Oklahoma—who is making a very tenuous argument—that so far as wildcat drillings are concerned, there was an increase of approximately 1,000 this past year.

So far as the developmental wells are concerned, it is true that, although there was an increase of approximately 750 in the number of oil wells, there was a decrease of 152—or about 5 percent—in gas wells. The Senator from Oklahoma said there had been a decrease of 364, or 9.2 percent, in the number of gas-well completions. All I can say is that the figures we have used give a different number. I shall be very much interested in reconciling the differences which the Oil and Gas Journal itself seems to have created.

Furthermore, I should like to point out that in connection with gas reserves, as they are stated, the reserves are stated by the large companies; and in 1955 the addition of new reserves was greater than had occurred, on the average, during the 4 preceding years. What declined was the volume shown in the reappraisal of old reserves. I should like to point out that the reappraisals of the old reserves are made by the companies themselves; they do not have to file any supporting data, and that material is a little tenuous and unreliable.

Mr. MONRONEY. Mr. President, will the Senator from Illinois yield further to me?

Mr. DOUGLAS. Yes; I am glad to yield.

Mr. MONRONEY. I know the Senator from Illinois wants to have as authoritative a record as can be had, made in connection with this matter, and I am sure he knows that the continuing reappraisal of reserves is made every year by oil and gas operators, both large and small, who desire to know what they really have in the form of reserves beneath the ground. So there was not a sudden reappraisal, as might be assumed by a reader of the RECORD who had not actually followed the entire discussion of this matter. As I recall, the reappraisal, in the form of extensions and revisions, in 1954, although it increased reserves, was 8.7 trillion cubic feet less than the amount in 1953. The discoveries of new fields and of new pools in old fields added 4.9 trillion feet, estimated, of proven reserves, also substantially less than 1954.

Mr. DOUGLAS. In other words, the companies in making their reports wrote down the figures for their existing reserves?

Mr. MONRONEY. Yes; as they do each year.

Mr. DOUGLAS. I merely wish to point out—and I am not making any charges at all—that if they were trying to have the Harris-Fulbright bill enacted into

law, they would not have done any differently from what they did. Let it be understood that I am not making any charges against them; I am merely saying that what they did served their purpose so far as this legislation is concerned.

Mr. MONRONEY. Mr. President, the Senator from Illinois is assuming that such persons would wish to falsify their records.

Mr. DOUGLAS. Oh, no, Mr. President.

Mr. MONRONEY. However, those figures arose merely from the endeavor to show, in connection with their financing and their flotation of bonds, what their reserves are. The oil companies and the gas companies in their regular annual reappraisals are merely following good, established business practices. Yet the Senator from Illinois would assume, as regards the year for which he would like to question the figures, that it was the year for which the oil companies and the gas companies decided to show a phony figure.

Mr. DOUGLAS. Insofar as new reserves discovered are concerned, I merely wish to point out that the volume in 1954 was 5.0 trillion cubic feet, whereas the average for the previous 4 years was 4.9 trillion cubic feet. So the volume discovered in 1954 was just a little bit more than the average volume for each of the previous 4 years, and there was not a falling off. That is the important point; namely, that there was no decline in the volume of gas in the newly discovered reserves.

There is another very interesting circumstance. I hold in my hand the record of the ratio of reserves to current production, both with respect to oil and with respect to gas. It shows that the ratio of the reserves of oil to the current production of oil over the past 16 years has been remarkably steady, running between 13 and 14 times.

Mr. President, I ask for unanimous consent that this table be inserted in the RECORD at this point in my remarks.

The PRESIDING OFFICER. Without objection, it is so ordered.

Reserve increase estimates for 1954

	Ratio of reserves to current production (years' supply)	
	Oil	Gas
1938	14.3	23.6
1939	14.6	24.5
1940	14.1	25.5
1941	14.0	32.0
1942	14.5	29.7
1943	13.3	23.0
1944	12.2	29.5
1945	12.0	30.5
1946	N. A.	32.5
1947	12.3	29.5
1948	12.3	28.9
1949	14.1	28.9
1950	13.6	26.9
1951	13.0	24.3
1952	13.0	23.1
1953	13.2	22.9
1954	13.6	22.5

Source: Computed from Gas Facts.

Mr. DOUGLAS. These figures computed from Gas Facts show also that, with the exception of the years 1945, 1946, 1947, 1948, 1949, the ratio of gas reserves to current use of gas has been remarkably steady, at around a figure of 23 times. In other words, there seems to be some mysterious force which keeps oil reserves at about 13 times annual production, and gas at around 23 times, except for the years when the east Texas field blew in, and there was a deluge of gas. This suggests that the drillings may be controlled so as to keep the reserves in a given ratio to current production.

Mr. MORSE. Mr. President, will the Senator yield for a question?

Mr. DOUGLAS. I am glad to yield to the Senator from Oregon.

Mr. MORSE. I have been trying to do my homework each night on this historic debate. I mean no flattery when I extend to the Senator from Illinois and the Senator from Rhode Island [Mr. PASTORE] my very high compliments for what I think has been one of the most outstanding jobs of debating I have witnessed in my 11 years in the Senate.

I wish to say to our good friend of the opposition, the Senator from Oklahoma [Mr. MONRONEY], that I know when we are up against a very able antagonist. I think he and his colleagues have done a great job in presenting the point of view of the advocates of the pending bill.

I ask the Senator from Illinois whether or not he thinks I am correct in the tentative conclusion which I have reached after studying the record of the debate thus far, namely, that, although they do not say so in so many words, the real objective of the proponents of the bill is to pass a bill which would permit the charging of prices higher than they fear they would be allowed to charge if the Federal Power Commission had jurisdiction.

Mr. DOUGLAS. In my judgment that is the purpose of the driving forces behind the bill, although I credit the Senator from Oklahoma [Mr. MONRONEY], the Senator from Arkansas [Mr. FULBRIGHT], and other proponents of the bill with perfectly good intentions.

Mr. MORSE. So do I. However, I believe that in the last analysis this great issue will have to be decided by the American people, because no matter what happens to the pending legislation, the final decision will be rendered by the American people, in a variety of ways.

I wished to inquire whether or not the Senator from Illinois shared my tentative conclusion that the driving purpose of the proponents of the proposed legislation is to permit higher prices outside of Federal regulation, if they can get away with it.

Mr. DOUGLAS. I agree with the Senator from Oregon. I have said that I think the increase, according to a reasonable estimate, will very shortly be equal to 10 cents per thousand cubic feet, which, at present rates of consumption, would be a little more than $600 million a year increase, and which would lead, at a minimum figure, to an increased capitalization of reserves of $12,600 million. Those are reasonable estimates.

Mr. MONRONEY. Mr. President, will the Senator yield?

Mr. DOUGLAS. I yield.

Mr. MONRONEY. I enjoy and appreciate very much, as I always do, the comments of my distinguished colleague from Oregon, who has a searching, analytical, and judicial mind. There is a threat posed by one of the two types of regulation which we are debating—and I think any reasonable man will say that there are two types of regulation, the first being the one advocated by the Supreme Court, the utility cost formula, and the second being the "reasonable market price." The latter is based upon a normal market, as in the case of a parcel of land being taken for a military reservation, for which the owner receives the reasonable market price. We from the oil- and gas-producing territory think we know a little more about the difficulties—in fact, the impossibility—of establishing any type of utility cost formula. Therefore, with the uncertainty involved in trying to ascertain the cost of many thousands of gas wells in various parts of the country, having varying quantities of production, and being operated under various types of leases, I feel that such a system of regulation would become completely unworkable, and that probably the Federal Power Commission would never succeed, during my lifetime, in extricating itself from the bog in which it would find itself.

The first imponderable is that of cost. The second imponderable is the question of what is a fair return. It is easy to say arbitrarily that it should be 6 percent, when there is nothing involved but steel and iron. The distinguished Senator from Illinois, who is probably the greatest authority in the Senate on his side of the case, told our committee that he did not know whether a fair return was 6, 8, 9, or 10 percent. I thought he was very fair in his presentation.

There is no strict rule; but a rule under which these 2 unknown factors, 2 imponderables, would have to be taken into consideration would be unworkable.

Under the formula based on reasonable market value, there would be but one variable. The rule has become well-established law over a period of 160 years. The question is, What is the product worth on the open market, when supply and demand are in reasonable balance, and the competitive situation is normal? It is not a question of regulation or no regulation.

Mr. DOUGLAS. Mr. President, will the Senator permit me to propound a question to him at this point?

Mr. MONRONEY. Certainly. I shall do my best to answer it.

Mr. DOUGLAS. Earlier in the debate, when the Senator was not in the Chamber, I cited one of the most recent applications before the Federal Power Commission, namely, a case in which the United Gas Pipeline Co. is buying gas from the Tidewater Associated Oil Co. in the Hollywood field of Louisiana.

This is supposedly an arm's-length purchase. There is no collusion. The present rate is 10 cents per thousand cubic feet, including a severance tax of

1 cent. The proposed new rate is 19½ cents for the first 5 years. The Senator says he wants a reasonable market price. I ask him if that is a reasonable market price.

Mr. MONRONEY. Let me tell my dear friend, who has done a great deal of statistical work in connection with this bill, and in connection with other matters, that yesterday I had the pleasure of occupying the chair of the Presiding Officer of the Senate while the Senator from Illinois was delivering that portion of his speech in which he made quite a point of this issue. His remarks were filled with statistics as to the rates at which certain amounts of gas had been purchased. I believe he said the figures he gave represented 6.6 percent of the total gas moving in the pipelines.

Mr. DOUGLAS. I merely selected a few contracts.

Mr. MONRONEY. They were examples.

Mr. DOUGLAS. I produced more contracts than the Senator from Oklahoma has produced.

Mr. MONRONEY. The quantities of gas cited by the Senator from Illinois, the rates for which, as I recall, ranged from 16 to 21 cents, according to my figure amounted to only 4.5 percent of the deliveries to pipelines. Granted that in these cases the gas may have been propitiously located astride a pipeline, where it is not necessary to build connecting lines, or to reach out into the Gulf of Mexico——

Mr. DOUGLAS. It is very interesting that the Senator from Oklahoma has not come in with thousands of other contracts to prove that the ones which I cited were not correct.

Mr. MONRONEY. I am taking the Senator's own figures. The rates which it was said would double the cost of gas in the field were based upon 4.5 percent of the deliveries to pipelines, when there is a weighted national average when the other 95.5 percent is included of 10.5 cents.

Mr. DOUGLAS. I used contracts covering 6.6 percent of the volume of gas sold by utilities. It would have been a higher percentage of sales to pipelines. We have weighted averages for past prices, but they do not indicate the contracts under which gas is now being sold. The statistics are for the past. They do not cover the current situation, in which high prices are being paid. That will mean that the past contracts will be written up.

Mr. MONRONEY. The Senator knows that the national average for the year 1954 is the latest that can be obtained.

Mr. DOUGLAS. That was 2 years ago.

Mr. MONRONEY. It was 1 year ago.

Mr. DOUGLAS. We are in 1956 now.

Mr. MONRONEY. It is impossible to strike a total average for 1954 until January 1, 1955. Let us not become confused in that regard.

Mr. DOUGLAS. I have figures for 1956.

Mr. MONRONEY. Mr. President, I am now beginning to wonder about his statistics if it is possible to establish national averages after a few days.

Mr. DOUGLAS. Not national averages.

Mr. MONRONEY. We are talking about national averages.

Mr. DOUGLAS. No; I am talking about samples, and large samples at that, which indicate what is happening, and which will soon become averages due to escalation, redetermination, and renegotiation.

Mr. MONRONEY. Even the price figures cited by the Senator from Illinois, on the basis of 4.5 percent, would have very little effect on the national average of 10½ cents for 1954, which is the latest year for which we have the figures. That is just 1 penny above the cost in 1926. If the Senator wants us to go back to 30-cent wheat, nickel, cotton, and 5-cent hogs, and put the producers of gas and oil under that kind of price, he may have the votes to do it. However, I do not believe the country or the Senate wishes to roll us back to the prices in the deadly depths of depression, when gas was selling at 4½ cents.

Mr. DOUGLAS. No one is proposing to do that. However, we do ask that the Senate take knowledge of the fact that what is happening in the field now is a tremendous increase in the contract prices. I have cited some 82 contracts covering large amounts. I now wish to take up a contract of the Texas Co.

Prior to June 1, 1955, the United Gas Pipe Line Co. was buying gas from the Texas Co. at 13½ cents. That price was increased by 1 cent on the 1st of June 1955. Then on the 1st of November it went up to 21⅕ cents. In other words, in the space of 5 months the price rose from 13½ cents to 21⅕ cents.

These movements do not enter into the 1954 statistics, of which the Senator from Oklahoma seems to be so fond, but are current happenings. The Senator from Oklahoma closes his eyes to them. We are not proposing to send the country back to 2-cent gas. Of course not. We do say that the sellers are holding the whip hand, and unless there is some Federal regulation the average price, which was 10 cents a few years ago, will go up to 20 cents very quickly. I have cited the Daniel Boones who are leading the way.

Mr. MONRONEY. Mr. President, will the Senator yield further?

Mr. DOUGLAS. I yield.

Mr. MONRONEY. The junior Senator from Oklahoma has constantly relied on Bureau of Mines statistics. We have tried our level best to search, as the Senator from Illinois has, for the overall averages on an annual basis, so as to determine where the price of gas is going. Once the Bureau has completed its statistical work for 1955, I am sure the Senator will find the junior Senator from Oklahoma using those statistics.

Mr. DOUGLAS. The Senator from Oklahoma always intends to be a year and a half behind, as I understand.

Mr. MONRONEY. I do not understand how it is possible to have such figures for 1956.

Mr. DOUGLAS. 1955. I now offer to the Senator from Oklahoma, for his inspection, photostatic copies of figures derived from the Federal Power Commission, as submitted to it by the Sun Oil Co. The table shows rates which other producers are receiving from pipeline companies.

Mr. MONRONEY. In how many fields?

Mr. DOUGLAS. In southern Louisiana.

Mr. MONRONEY. In how many fields?

Mr. DOUGLAS. In quite a number of fields.

Mr. MONRONEY. What quantities of gas are involved?

Mr. DOUGLAS. If the Senator would only read the RECORD, he would find that I have put those figures in the RECORD.

Mr. MONRONEY. Is this the same group the Senator was talking about yesterday?

Mr. DOUGLAS. Yes, very much the same.

Mr. MONRONEY. As I figured out the percentage, it is 4.5. That is the figure I arrived at with my own little lead pencil.

Mr. DOUGLAS. It is 6.6 percent of total retail sales. It would be a higher percentage of deliveries to pipelines.

Mr. MONRONEY. I figured it at 4.5 percent.

Mr. DOUGLAS. It is 6.6 percent.

Mr. MONRONEY. I had my staff work on it, and they cannot come up with the 6.6 figure. However, even if it is 6.6, that is a very small proportion of the total gas moving. It does not even check out like that. That is not the fault of the Senator, but of the method which is used.

Mr. President, I should like to ask permission to insert a table in the RECORD at this point, inasmuch as the Senator from Illinois said a moment ago that the gas supply has been constant. These figures are from Natural Gas Statistics, a Supplement to Economics of Natural Gas in Texas, issued by the Bureau of Business Research of the University of Texas. That publication shows that for the year 1954 the ratio of reserves to net production is at an all-time low, and that it has fallen consistently in the past 10 years from a 30½-year supply to a 22½-year supply. Since 1940, the year 1954 is the lowest reserve against the demand we have had in those years. I ask permission to insert the table in the RECORD.

Mr. DOUGLAS. I am delighted to have the Senator do that. I have a table. If the Senator will go back to 1938, he will find that the ratio in that year was 23.6; in 1939, 24.5; in 1940, 25.5. It is now 22.5. It is approximately the same now that it was in 1938.

Mr. MONRONEY. That was before there was any demand for interstate shipment of gas.

Mr. DOUGLAS. There was also a big jump in 1944, 1945, and 1946. I believe the Senator will find that was when the big east Texas gas field came in.

Mr. MONRONEY. There was not any gas in east Texas. I believe the Senator is referring to west Texas.

Mr. DOUGLAS. Very well; west Texas.

Mr. MONRONEY. There is a reason for everything, Mr. President, and the

reason for the big production during that period was that we were stepping up our search for oil for war purposes. The greater the number of wells drilled the greater chance of getting gas, because oil and gas are Siamese twins; they are found together.

Mr. DOUGLAS. I am glad the Senator admits that.

Mr. MONRONEY. That is why it is difficult to separate the twins, although the opponents of the bill say that the Supreme Court has performed a very successful operation. We seriously doubt that.

Mr. President, I ask that the table to which I have referred be printed in the RECORD at this point.

There being no objection, the table was ordered to be printed in the RECORD, as follows:

Ratio of proved reserves of natural gas to net production, United States, 1940–54

Year	Estimated reserves Dec. 31 (trillions of cubic feet)	Net production (billions of cubic feet)	Ratio of reserves to net production
1940	85.0	3,331	25.5
1941	113.8	3,459	32.9
1942	85.0	3,701	23.0
1942	110.0	3,701	29.7
1943	90.0	4,336	20.8
1943	110.0	4,336	25.4
1943	130.0	4,336	30.0
1944	133.5	4,731	28.2
1944	135.0	4,781	28.5
1944	140.9	4,731	29.8
1945	144.3	4,840	29.8
1945	147.8	4,840	30.5
1945	156.0	4,840	32.2
1946	160.6	4,943	32.5
1947	165.9	5,630	29.5
1948	173.9	6,008	28.9
1949	180.4	6,245	28.9
1950	185.6	6,893	26.9
1951	193.8	7,967	24.3
1952	199.7	8,640	23.1
1953	211.4	9,239	22.9
1954	211.7	9,427	22.5

Sources: For individual sources of estimates of reserves see table 46. Net production data: 1940–45, U. S. Bureau of Mines; 1946–54, American Gas Association and American Petroleum Institute.

Mr. DOUGLAS. Mr. President, I have prepared a rather full argument on the question of the bonanza which the Fulbright bill would give to the pipelines. It is my intention to summarize it and then have it placed in the RECORD.

I believe the Senator from Oklahoma has left the Chamber. I should like to clear up the difference between the 4½ percent which the Senator gave for the reserves and the figure of 6.6 percent which we gave. His figure was computed from what he terms to be marketed production. That includes 1,470,000,000 thousand cubic feet of gas used in the field but not sold to utilities. It includes various losses, such as losses in transmission and compressed fuel, and so on. Our figure is based on balances available for use, sale by producers directly, and sales by pipelines and local utilities. Although the figure is only 6.6 percent on a yearly basis, these are 20-year contracts. Therefore, the total amount of gas purchased under them is more than was sold by utilities and pipelines in 1954. That is a big chunk of gas. And the average price is 18.45 cents.

FULBRIGHT BILL PROVIDES BONANZA FOR PIPELINE COMPANIES OWNING GAS RESERVES

Mr. President, we have pointed out again and again in our discussion of the Fulbright bill that one of its worst provisions is subsection (f) of section 5, providing that the Commission shall allow to a pipeline company as an operating expense the "reasonable market price" of any gas which the pipeline itself or which an affiliate produces from its own reserves.

It will be noted that the Fulbright bill exempts from utility regulation the sale of certain gas produced by pipeline companies which everyone admits are utilities.

Outside a brief description of the legal effect of this provision, on pages 5 to 9 of the report, the majority of the committee do not at any place in the report attempt to justify this treatment of gas produced by pipeline companies.

PIPELINES WOULD BE ALLOWED "REASONABLE MARKET PRICE" FOR GAS THEY PRODUCE

Mr. President, one of the most unjust and inexcusable provisions in the Fulbright bill is subsection (f) of section 5 which provides that the Commission shall allow to a pipeline company as an operating expense the "reasonable market price" of any gas which the pipeline itself—or an affiliate—produces from its owned reserves.

Here you will note, Mr. President, the Fulbright bill exempts from utility regulation of sales of its own produced gas the pipeline companies which everyone admits are utilities.

Outside of two brief descriptions of the legal effect of this provision—pages 5 and 9—the majority of the committee do not at any place in the report attempt to justify this treatment of gas produced by a pipeline company or its producing affiliate or subsidiary. All justification is centered upon the exemption of the independent producer and the differentiation of his situation from that of the regulated utilities. The sole implied support for this provision is in one word, "only," in the phrase that the Commission shall allow "only the reasonable market price"—page 9, report. This is a little like saying they shall not let the price allowed go any higher than the sky.

The action of the Committee majority in including this subsection in the bill results in a gross injustice to the natural-gas consumer. It would permit the regulated pipeline stockholders to reap the benefit of the over $150 million charged to gas consumers in rates specifically for the purpose of defraying the costs of exploration and dry holes experienced by the regulated pipeline companies over a period of more than 16 years.

Under the traditional rate-making method which the Federal Power Commission consistently used from the time it obtained jurisdiction over natural-gas companies in 1938, these pipeline companies have secured rates based upon their cost of production, including all exploration and dry hole costs, depletion and depreciation costs, taxes and a fair return, not only on their investment in producing properties, but also on their investment in nonproducing leaseholds held for future use. These pipeline companies stand on a footing very different from that of the independent producers.

The pipeline companies have not stood the risk of exploration and dry holes. That risk has been shouldered by the rate payers, who over the years have financed, through the rates they have paid, the acquisition of leases, the dry holes, and the development of gas reserves which now aggregate approximately 29 trillion cubic feet. Under this bill, the customers of these pipeline companies would be compelled to pay for that gas, not on the the basis of what it cost the pipeline companies, including a fair return on the money which they invested, but on the basis of what the "reasonable market price" for that gas would be. This, as I have shown, is a constantly rising figure, unrelated to actual costs. In other words, under this provision of the bill, production by pipeline companies and their affiliates is exempted from regulation in the same manner as is the production of an independent producer.

FULBRIGHT BILL GOES BEYOND KERR BILL

As I have pointed out, Mr. President, the Kerr bill in 1950 did not contain any such gold mine for pipeline companies. It dealt only with the so-called independent producers. The Fulbright bill is a throwback to the old Moore-Rizley bill of the 80th Congress. That bill failed to come out of committee primarily because of the disclosure that the pipeline companies would reap a harvest of the same character permitted by the Fulbright bill. The bonanza was then estimated at $40 million annually, if computed on the basis of a 7-cent-field price. We now have an average field price of approximately 10 cents per thousand cubic feet, with prices in new contracts ranging upward of 20 cents, and 30-cent gas in the near future being talked of.

Mr. President, I have prepared a very thorough discussion of this matter. However, since I must yield the floor at quarter of 5, I now ask unanimous consent that the remainder of my discussion of the bonanza given to the pipeline companies may be printed in full-size type at this point in the RECORD.

The PRESIDING OFFICER (Mr. MORSE in the chair). The Chair is advised that, under the printing rule, the material referred to must be printed in smaller type; but under that arrangement it can be printed at this point in the RECORD.

Mr. DOUGLAS. I thank the Presiding Officer.

The PRESIDING OFFICER. Is there objection?

There being no objection, the matter referred to was ordered to be printed in the RECORD, as follows:

POWER COMMISSION GAVE IMPETUS TO PIPELINE DEMANDS FOR FIELD PRICE

On April 15, 1954, a majority of the Federal Power Commission handed down a decision, Opinion No. 269, in the case of Panhandle Eastern Pipeline Co. In the decision the majority abandoned the prudent investment method of ratemaking with respect to gas produced by Panhandle Eastern Pipeline Co. They substituted what is called the "com-

modity value" or "field price" method. The Commission's decision in that case was, in my judgment, an indefensible discrimination against the consumer. The disregard of the rights and equities of natural-gas consumers was shocking.

It is this decision of the Commission that proponents of the Harris-Fulbright bill cite in support of their subsection (f) for the pipeline companies. I shall show, however, that this bill goes far beyond even the Commission's unwise Panhandle decision.

One Commissioner, who could well be called the voice of experience after 35 years in the field of utility regulation and 25 years on the Federal Power Commission, stood by his deepest convictions and refused to participate in this giveaway of the public interest. Commissioner Claude L. Draper, who was appointed by President Hoover in 1930, at the time the Federal Power Commission was created, wrote a vigorous dissent from the decision of the majority. He exposed the fallacies of the majority's position in plain, everyday language.

The Panhandle case was taken to the Court of Appeals for the District of Columbia by the city of Detroit, Mich., and the county of Wayne, Mich. On December 15, 1955, the court handed down its decision and remanded the case to the Federal Power Commission. By a unanimous opinion, the court refused to accept the reasons advanced by the Commission why Panhandle should be granted a rate increase based upon the valuation placed upon its gas by the Commission. The position taken by Commissioner Draper and the city of Detroit and the county of Wayne, Mich., was vindicated. The position taken by the majority of the Commission in the Panhandle case decision in which they overruled the recommendations of their own staff was discredited by the court.

Thus, we have in connection with this section of the bill another effort to override a court decision, which presently stands in the way of exploitation of consumers by natural-gas companies.

COMMISSION'S JUSTIFICATION FOR FIELD PRICE DOESN'T HOLD WATER

The reasons which were advanced by the Federal Power Commission for departing from the rate base method of regulation and allowing Panhandle the weighted average field price is that the rate-base method has discouraged pipeline companies from engaging in exploration and the acquisition of gas reserves. I have assembled figures that show on the contrary that pipeline companies have not been so discouraged, but have been increasing their reserves and expenditures for such purposes year by year. I have also shown that pipeline companies and their affiliates in 1954 in the Southwest produced 43.5 percent more gas from their own reserves than they did in 1947.

The spokesman for the Independent Natural Gas Association failed to support the assertion that the Commission's rate-base method had driven the pipeline companies out of the production business. Mr. John F. Merriam, president of Northern Natural Gas Co., which would be a large beneficiary under this section of the bill, was asked by Senator MONRONEY during the hearing, page 251, whether under the pre-Panhandle holding of the Commission his company had curtailed its search for gas. Mr. Merriam replied, "No, we did not."

The previous sections of this debate have also proved that the exploration is carried on for oil primarily, and gas-discovery rates depend not on gas-regulatory action but on the speed of oil drilling and development.

"REASONABLE MARKET PRICE" ALLOWANCE IN S. 1863 IS WORSE THAN PANHANDLE DECISION OF COMMISSION

The "reasonable market price" standard incorporated in the Fulbright bill would provide the means of increasing natural-gas rates to consumers even above the level which the weighted-average-field-price method used by the Commission in the Panhandle case would permit. Under the method used in that case, low prices in old contracts were averaged in with the more recent contracts, and thus the weighted-average field price was less than the market price which the Fulbright bill prescribes.

The "reasonable market price" standard for pipeline-produced gas provides no protection for consumers against unfair, high prices. To the contrary, it provides a positive incentive to pipeline companies to pay higher prices for the gas they purchase from other producers, since by so doing they create a higher base by which their own produced gas is to be valued.

The "reasonable market price" standard is contrary to all utility regulatory principles. It provides no objective standards by which the reasonableness of the rates may be tested. If cost of production should be greater than market value, it will not work since, if only the market value were allowed, the utility would receive less than a fair return on its investment and the regulatory agency would run afoul of the constitutional limitation on confiscation. Thus we have in effect a proposed standard of cost or market value, whichever is the higher.

The "reasonable market price" is an unregulated price as I have shown in pointing out the weaknesses of the alleged consumer protections in the bill. This is recognized by the Chairman of the Commission in a recent speech he made before the annual convention of the National Association of Railroad and Utilities Commissioners in Nashville, N. C., last October 26. Chairman Kuykendall said:

"No one has suggested, insofar as I know, the use of a fair-value rate base. It seems clear that such a method would only be a roundabout way of arriving at the current value or market price of gas, which would, in effect, be an unregulated price."

The price under that formula would be based upon what the traffic could bear. The supply-demand relationship would be the governing factor. The fixing of utility rates on the basis of supply and demand is the very antithesis of utility regulation. The reason for this is obvious. There is no free market in utility services. It is a monopoly market.

COMMISSION'S PRIOR FORMULA FOR PIPELINES IS FAIR

There is nothing wrong with the rate-making standard which the Federal Power Commission applied to pipelines for 16 years prior to the Panhandle decision. The Natural Gas Act provides that rates shall be "just and reasonable" and the Commission is directed to order a decrease in rates "where existing rates are unjust, unduly discriminatory, preferential, otherwise unlawful, or are not the lowest reasonable rates."

The legislative history as well as the decisions of the United States Supreme Court interpreting the Natural Gas Act hold that the act provided for regulation along recognized and more or less standard lines. The method of regulation then being universally used by State regulatory agencies was the rate base method, under which a utility is permitted to recoup through rates its proper operating expenses, depreciation, taxes, and a fair return. The State commissions as standard practice included the gas production properties in the rate base and allowed the utility to recover costs of exploration and development, including dry holes.

The rate base method is still standard practice among the State regulatory commissions. For example, the Oklahoma Corporation Commission in December 1954, was using the rate base method. It included the producing facilities of the company in the rate base and the actual cost of the exploring and developing the producing properties in operating expenses. It allowed the Oklahoma Natural Gas a 6 percent return on its rate base. If the rate base method of regulation is fair and good enough for the gas consumers of Oklahoma, surely it should be good enough for the consumers of other States.

It is argued by proponents of this provision of the bill that the Commission's rate base method has had an ill effect on the natural-gas pipeline industry. But the evidence points to the contrary. It is clear that the industry has boomed ever since the Commission obtained jurisdiction under the act. Companies owing producing properties and those without producing properties have prospered. Profits have been high, and stocks have been selling at substantial premiums above book value. It would be difficult to find a more prosperous industry.

I have seen no plausible excuse for discarding "utility-regulation" methods for these admitted utilities.

ENORMOUS PIPELINE PROFITS WOULD RESULT FROM THIS FORMULA

Let me now turn to specific instances which show the effect of the "market price" standard on the rates of pipeline companies and the enormous profits which they would thereby secure.

Earlier in the debate I referred to information which was furnished me by the Federal Power Commission showing that 11 pipeline companies have filed rate increases with the Federal Power Commission in which there is a claim for the allowance of a field price or commodity value for the gas which they or their affiliates produce. Three of these companies are now on their second round of rate increases based upon the use of this method of regulation. Data were available only with respect to 8 of these 11 companies. Some of the increases have been acted upon and have gone into effect, including the Panhandle case, to which I referred earlier, that has now been reversed by the United States Court of Appeals for the District of Columbia.

The aggregate annual increase in rates of these 8 companies is $31,206,675 according to information furnished me by the Commission. The field prices claimed have ranged from 6.85 cents per thousand cubic feet through 10.41 cents per thousand cubic feet.

The spread between the actual cost of production, including a fair return, and the claimed field price is quite substantial for some of the companies. In the case of Panhandle Eastern Pipeline Co., the original decision of the Commission allowed Panhandle a field price of 8.4389 cents per thousand cubic feet. It was costing Panhandle an average of 2.34 cents per thousand cubic feet to produce the gas, including a return on its investment of 5¾ percent. Thus the field price method would have given this pipeline on the first round pure gravy in the amount of 6 cents per thousand cubic feet, and of course the "reasonable market price" formula will make the gravy even deeper.

The opportunity for enormous profits under this method of regulation was so great that within 2½ months after Panhandle had secured an increase in rates from the Commission of approximately $3,500,000 over and above a fair return, it returned to the "gold mine" and filed another rate increase, claiming that field prices had increased and that they were entitled to further "extra profits." In its most recent case Panhandle claimed a weighted average field price of 10.417 cents, an increase of approximately 2 cents over the price allowed by the Commission 2½ months earlier. The annual "take" by Panhandle now would become $4,939,000, according to information furnished me by the Federal Power Commission. This annual increase of

$4,939,000, and much more, will follow if the Fulbright bill is enacted with subsection (f) of section 5 included therein. Natural-gas consumers in Missouri, Illinois, Indiana, Michigan and Ohio, supplied with Panhandle's gas, will be confronted with rate increase after rate increase under the "reasonable market price" formula as it spirals upward.

Another company which has a large rate increase pending at the Federal Power Commission, based on substituting the field price or commodity value for the cost of production, is Colorado Interstate Gas Co. If this company obtained the same favorable treatment from the Federal Power Commission as did Panhandle, it would secure approximately $9 million of additional annual income from gas consumers in Colorado, Wyoming, Iowa, and Illinois. The company claimed that the average field price to which it was entitled was 9.403 cents per thousand cubic feet, which compares with its cost of production of approximately 2.23 cents per thousand cubic feet. This increase in rates, which is being collected under bond pending a final decision of the Commission, has already brought about an increase in the rates to residential and commercial consumers of Denver of 19.3 percent, according to testimony of the mayor of Denver before the committee.

The honorable Quigg Newton, then the mayor of Denver, pointed out that the use of the field-price method would increase the cost of gas to consumers in the city and county of Denver by approximately $4 million a year. He also pointed out that the company is contending that the current market price of gas which Colorado Interstate produces in the Texas Panhandle field is 15 cents per thousand cubic feet at the present time and that another huge increase in gas rates to the city of Denver would be possible if the Fulbright bill becomes law. Mayor Newton said (record, p. 656):

"The enactment of the Fulbright bill would require the FPC to allow the market value of the Panhandle field gas and thus deprive Denver of the rights granted under the conditions attached to the merger decree and also deprive Denver of the right to oppose the FPC's use of the value basis of regulation. This would result in a grave injustice to Denver gas consumers who had rights which they surrendered and who have invested an estimated $150 million in gas-burning appliances under an assurance from the FPC that gas rates would remain at a fairly stable level. It is a great shock to be confronted with prospective doubling of our city-gate rates based upon an act of Congress in utter disregard of all past relationships and considerations between Denver, the Federal Power Commission, and Colorado Interstate Gas Co. Because of this situation, Denver is compelled to actively protest with all the means at our command the passage of a bill which would sanction the exploitation of our consumers and perpetuate this rank injustice upon our citizens."

Gas consumers in my own State of Illinois would be adversely affected by this blue sky provision in the bill. Colorado Interstate Gas Co. supplies one-quarter of the natural gas requirements of Natural Gas Pipeline Company of America, which is the pioneer line connecting the Panhandle gas field with the city of Chicago. In addition, Natural Gas Pipeline Company of America has a rate-increase case pending before the Federal Power Commission in which it is also claiming the commodity or field value of the gas which it produces. According to information furnished to me by the Chairman of the Federal Power Commission, the allowance of the claimed field value will increase the company's rates by $5,787,338 a year. Part of this increase would fall upon citizens of the States of Iowa and Indiana, but the bulk of it would fall upon consumers in the State of Illinois, principally in Chicago. Natural Gas Pipeline Company of America is claiming a field price of 8.15 cents per thousand cubic feet. Market price would of course be higher, if the Fulbright bill passed.

Cities Service Gas Co. has two rate cases now pending before the Federal Power Commission. In the first case it claimed an average field price for its produced gas of 8.294 cents per thousand cubic feet. The cost of production is approximately 3 cents per thousand cubic feet. According to information furnished me by the Federal Power Commission, use of the 8.294-cent price would result in an increase in the company's rates of approximately $4.5 million a year. In the most recent case the company is claiming a field price of 9.444 cents per thousand cubic feet. The increase of only 1.15 cents per thousand cubic feet has the effect of increasing rates over $700,000 a year to consumers in the States of Kansas, Missouri, and Nebraska.

Other companies which have increases presently pending, or have had increases granted, include El Paso Natural Gas Co., which serves Texas, New Mexico, Arizona, and California; Southern Natural Gas Co., which serves Alabama, Georgia, and South Carolina; Kansas-Nebraska Natural Gas Co., which serves Kansas and Nebraska; Northern Natural Gas Co., which serves Nebraska, Iowa, South Dakota, and Minnesota; United Gas Pipeline Co., which supplies markets in Louisiana, Texas, Mississippi and also sells to other interstate pipeline companies which serve Alabama, Georgia, South Carolina, Missouri, Illinois, Ohio, Pennsylvania, New Jersey, New York, Massachusetts, Rhode Island, and Connecticut.

Municipalities served by natural gas supplied by Panhandle, Colorado Interstate and Natural Gas Pipeline Co., including Denver, Kansas City, Missouri, Chicago, and Detroit, are actively opposing before the Federal Power Commission these increases in rates based upon the use of the field price or market price method of valuing the gas produced by these pipeline companies. Passage of the Fulbright bill would completely nullify their efforts in this regard.

FULBRIGHT FORMULA WOULD GREATLY INFLATE PIPELINE RESERVE VALUES AS WELL AS ANNUAL PROFITS

The profits which these pipeline companies owning gas reserves will be assured of on their production operations if the Fulbright bill becomes law, and the decision of the Court of Appeals of the District of Columbia is thereby nullified, are fantastic. It is no wonder that some of these big pipeline companies have joined forces with big oil to put this bill across. This is a potent and profitable partnership. It means hundreds of millions of dollars in additional profits for the pipeline stockholders.

This can be demonstrated by reference to the fact that in 1954 interstate pipeline companies and their producing affiliates produced over a trillion cubic feet of natural gas. If the difference between cost of production and field price, or commodity value, were only 5 cents per thousand cubic feet, the additional profit which these pipeline companies could secure through the enactment of the Fulbright bill would amount to $50 million annually. If the difference becomes 10 cents per thousand cubic feet, the profit becomes $100 million annually.

Pipeline companies and their producing affiliates own 29 trillion cubic feet of gas. A 10 cent difference between the cost of production and the reasonable market price would add $2.9 billion to the value of their gas reserves.

The pipeline companies are licking their chops over the killing they will make. In its annual report to stockholders, Panhandle Eastern Pipeline Co. brags of the fact that its proven gas reserves are carried on the books at a cost aggregating less than $3 million, which the company estimates is approximately 1 percent of their replacement cost under present conditions. In other words, Panhandle envisions a profit of $297 million, for an investment of $3 million, if it receives the current market value of those reserves through rates authorized by the Federal Power Commission. This would seem to set something of a record for a regulated utility.

Data are included in opinion 269 of the Commission in the Panhandle case to show that based upon the allowance the Commission gave Panhandle for its produced gas it would earn on its production properties an annual profit of 24.54 percent after all taxes.

In the Cities Service Gas Co. rate case the staff of the Commission presented evidence to show that Cities Service Gas Producing Co., the hundred-percent-owned subsidiary of Cities Service Gas Co., which owns all of the production properties of Cities Service Gas Co., would receive an annual profit on its production properties of 69.47 percent after taxes. According to figures placed in the record by the company in the Colorado Interstate Gas Co. case, the field price which they are claiming would secure to it an annual profit on its investment in production properties of more than 60 percent after taxes.

The financial benefits of section (f) of the Fulbright bill will, of course, redound to the benefit of the common stockholders of the pipeline companies owning gas reserves. These stockholders are already earning ample returns of from 9 to 15 percent per annum based upon the allowance by the Commission in rate cases of a return of approximately 6 percent on the overall rate base. These stockholders have received generous returns under regulation and in no instance can they claim that the Commission's rate base method of regulation had deprived them of an ample return on their investment.

The common stocks of these pipeline companies have been selling in the market at levels away above their book values. All of these pipeline companies have prospered under regulations by the Federal Power Commission without having received the fantastic additional profits from their producing properties which the Fulbright bill would guarantee them. What possible justification can there be for this section of the bill?

Incidentally, when I review the figures of cost of production—including a fair return—for some of these poor, unfortunate regulated pipeline companies, 2.34 cents per thousand cubic feet, 2.23 cents per thousand cubic feet, 3 cents per thousand cubic feet, I cannot help wondering what the comparable figures would be for the sturdy, independent producers. If Phillips and Stanolind and Humble and the rest are anywhere nearly as efficient, it makes a 20-cent field price look mighty good. This is another reason I wish these companies had been willing to come forward with the facts about the economics of their gas production. But for the pipelines at least we can know the windfall which subsection (f) will give them.

The outlandish profits which the Fulbright bill thus makes available to the pipelines on their own gas production—profits proven by their financial data on file with the Commission—would seem to be worthy of a little notice by those whose hearts have been so woefully wrung by the depredations of the big bad distributors against the gas consumer. Or can these enormous prospective pipeline profits be another reason why it has seemed preferable to talk about something else?

I introduced S. 1248 in this Congress for the purpose of amending section 6 (a) of the Natural Gas Act to provide that in determining the just and reasonable rate or charge to

be observed by a natural-gas company, the Commission shall use the actual legitimate cost of its property as a basis therefor. In view of the decision of the court of appeals in the Panhandle case, S. 1248 appears to be unnecessary. At the appropriate point in the course of the debate, however, when we reach the stage of considering amendments, I shall offer an amendment to strike from the bill, section (f) thereof, and I hope that the consumers can be saved from this crowning exaction at least.

This section of the bill is nothing more nor less than a grand giveaway of the public interest and a serious set-back to responsible and fair utility regulation. It does not have the slightest semblance of equity or justice. As I have said earlier, it would be far better to repeal the Natural Gas Act in its entirety rather than let it be used as a vehicle for the exploitation of consumers.

ALLEGED CONSUMER PROTECTIONS IN FULBRIGHT BILL ARE WORTHLESS

Mr. DOUGLAS. Mr. President, now let me turn to a discussion of the alleged consumer protections in the Fulbright bill, which, in my judgment, are worthless.

The proponents of this proposed legislation point with pride to the provisions which they say will provide adequate protection to the consumer and at the same time will relieve the producer from the burdens of Federal regulation.

First. This is a neat stunt if they can do it. Then we can eat our cake and have it, too; the producers' interstate sales will not be regulated, but the consumers will be fully protected from exorbitant producers' sales prices. Everybody will be happy, and the hard facts of basic conflicts in interest will disappear, like the morning dew.

The proponents urge that the opponents study these provisions, and say that if we do so, we cannot help but come to the conclusion that the consumer is properly protected. Before appearing in opposition to the bill before the Senate committee, I made an analysis of these alleged protections, and examined analyses which had been made by others. I have done so again, in the light of the committee changes. It was and is my considered judgment, and nothing which would modify that judgment has been put forward by the proponents, that the proposed controls are of no protection whatsoever to the consumer. They give the appearance of regulation, but have none of its substance.

Second. Either we have here one of the true wonders of modern, statutory invention and improvisation, or—as I believe, and shall try to show—a very cumbersome and complex formulation of legal abracadabra, the net effect of which is no regulation of those interstate sales, and no consumer protection.

SUMMARY OF PROTECTIONS

Mr. President, let us now consider, in summary form, the various so-called "protections," and let us see what they actually amount to. The alleged protections may be briefly summarized as follows:

5 (b): In connection with new or renegotiated gas purchase contracts, the pipeline in rate increase proceedings will not be allowed by the Commission to charge as an operating expense anything more than the reasonable market price of the gas at the point of delivery into the pipelines.

5 (c): In connection with new and renegotiated gas purchase contracts, before execution the Commission may make a prior determination regarding whether the contract price is the reasonable market price; and the pipeline thereafter can charge as an operating expense only such reasonable market price.

5 (d): In connection with rate increase applications based on escalation clauses—except "step," or tax increases—in existing contracts, the Commission shall permit the pipeline to charge as an operating expense only so much as does not exceed the reasonable market price at the point of delivery into its interstate line.

5 (e): In connection with such an escalation-clause action, the pipeline shall be obligated to pay only the part of the increase not above the reasonable market price, and its gas purchase contract shall otherwise be in effect unchanged.

"REASONABLE MARKET PRICE" IS NO PROTECTION

The principal point to be noted in these alleged protections is that all of them rest on the standard of "reasonable market price," as if this were an effective limiting or restricting factor on gas-purchase-contract prices.

If it is not a test which limits the prices in gas purchase contracts—and I shall show that it is not—then the whole structure of these alleged protections falls like a house of cards. The meaning of "reasonable market price" is therefore, crucial.

What is the clear meaning of these words? "Market price" means "market price." The dictionary says it means: "the price for which anything sells in the market; the selling price." That is the definition in Webster's New Twentieth Century Dictionary, issued by the World Publishing Co. in 1951. Or it means "the price given in current market dealings," according to Webster's New Collegiate Dictionary, published by Merriam & Co. in 1953.

The simple truth is that "market price" is the current price, the going price, the selling price.

Mr. President, in connection with the use in the bill of the term "market price," let me repeat what I said earlier in the debate, namely, the bill's use of that term is similar to Gertrude Stein's famous line "A rose is a rose is a rose." Many unwary persons concluded from that, that there was deep meaning in Gertrude Stein—who, to my mind, Mr. President, was a geyser of pishposh.

Similarly, by saying "reasonable market price," which upon definition turns out to be a "reasonable market price," I believe that the people will think there is profundity in the definition. But when that phrase is coupled, as the bill now does, with the further words "at the point at which the gas is delivered" into the pipeline, the current or selling price at that point must almost necessarily be the price in the very purchase contract that is being tested.

I submit that when we test the validity of a price provision in a contract by seeing if it corresponds to itself, all the legalistic mumbo jumbo cannot conceal the fact that there is no independent guaranty of justice or fairness or reasonableness which the Commission can impose on that contract price. The contract is the test of its own validity. The lid is completely off. Commissioner Draper—who is not exactly a neophyte in these matters—in his able analysis recommending against enactment of this legislation put this whole point very well when he stated—hearings, page 1227:

> Price agreed upon in the very transaction under scrutiny would be the measure of its own lawfulness. The going price would thus be the reasonable market price and the sky would be the limit insofar as regulation is concerned.

Commissioner Draper's comments, made when the bill was more broadly phrased—the phrase was "reasonable market price thereof in the field" on page 3 of Senate bill 1853, as introduced—apply even more forcefully to the bill as passed by the House and reported in the Senate, for the phrase is "reasonable market price thereof at the point" of delivery.

HOUSE DEBATE AND COMMITTEE REPORT CONFIRM THIS INTERPRETATION OF REASONABLE MARKET PRICE

The legislative history of the bill thus far does not contradict the interpretation I have given, based upon the plain meaning of the words, or the importance I have attributed to this point.

The proponents of this bill deliberately chose the standard "reasonable market price." This is evident from the committee reports in the Senate and the House as well as the debate on the House floor. The author of the bill in the House, Mr. OREN HARRIS, of Arkansas, described—10304—the "reasonable market price" as the "heart of the legislation."

Mr. HARRIS also said:

> The words "market price" have a definite and well-established legal meaning. It is the price at which a commodity is currently selling, or has been recently sold for.

In simple language, the market price even as modified by the word "reasonable" means the prices which are being paid in current transactions. In other words, whatever the traffic will bear. It means a price unregulated other than by the law of supply and demand. This is made very clear by Mr. HARRIS, who stated—page 10305:

> Under our system of a free economy, it is only fair that those who have commodities to sell should be permitted to sell them at the market price, whether the commodity be gas in the field, wheat in the bins, corn in the crib, or merchandise on the shelves. As regards gas, however, a governmental agency will have the power to determine what is the reasonable market price if the producer sells the gas to an interstate pipeline company. Such power does not exist with reference to other commodities.

Now this is what Mr. HARRIS expects the Federal Power Commission to do in determining the "reasonable market price."

> If the Government is to regulate the price which a producer receives for gas sold to an interstate pipeline, it should not regulate the price below what the gas will bring as

a commodity in the open market. To reduce the price below the market would be unfair, and would be a discrimination against the producer who had gas to sell instead of steel, automobiles, or other commodities.

There we have it from the author of the bill. Can there be any question what the proponents of this legislation expect from it? They expect the contract prices which the producers have entered into with pipeline companies to be the reasonable market prices, because those contracts themselves reflect the current prices being paid for natural gas in the field in so-called arms-length transactions.

These current prices in new contracts will in turn trigger the escalation clauses in existing contracts, set off chains of renegotiation and redetermination, and another round of rate increases will commence.

There is no regulation involved in these alleged consumer protections as we know the term "regulation." These provisions will simply result in the endorsement of the prices which the producers and pipeline companies have agreed upon. Current prices will continue to increase and the Federal Power Commission, under the provisions of this bill, will be helpless to do anything about it.

We should always remember that there is to be no regulation, even under the term "reasonable market price," of the amounts which the pipeline companies are to pay the producers. There is to be regulation only as to the amount the pipeline companies will be able to pass on to the distributors.

We have seen how contract prices have jumped in the last several years. Is there any reason to believe that this spiral will not continue in the future? No. There is every reason to believe it is going up at an accelerated rate. Certainly there is nothing in the alleged consumer protections in this bill which would prevent that from happening. As a matter of fact, the proponents could not, if they had tried, have designed the language of the bill more effectively so that it would be impossible for the Federal Power Commission to prevent producer price increases.

The report of the House committee, which the Senate committee reprints in its report, discussed the meaning of the term "reasonable market price." The report defined everything that is not the reasonable market price. It is not to be an average of prices in the field. It is not the highest price. It is not to be the lowest price, nor the latest highest price or other price arrived at by the mechanical application of a single criterium. The report says the Commission must take into consideration the quality of the gas being purchased, the conditions of delivery, the level of prices established currently by generally comparable contracts, prices in different fields and producing areas, whether such prices in the contract have been established by arms-length bargaining and the variation of competitive market prices. After discussing the things that reasonable market price is not, the report states:

> Market prices in the vicinity arrived at in arms-length bargaining would appear to be reasonable in the absence of clear and convincing evidence to the contrary.

Thus, the committee in the House expects the contract prices to be the reasonable market price in the absence of clear and convincing evidence to the contrary. The impossibility of obtaining clear and convincing evidence to the contrary simply means that the contract price must be accepted as the reasonable market price.

There are vague directions to the Commission set forth in the bill itself in section 5 (b) applying to determinations of "reasonable market price" under that section only—pages 5 and 6, "competitively arrived at," "effect upon the assurance of supply," and "reasonableness as they relate to existing or future prices." But these do not clarify the matter as much as the report, and they certainly do not change the basic meaning of "market price."

If it were intended by the proponents to have the "reasonableness" of the market price be determined even in part on the basis of (a) the effect of such gas purchase contracts on consumer prices, or (b) the justice and fairness of the return to the producer on his gas production operations, it would have been a simple matter to write that into the bill and into the report. Without these considerations being permitted to the Commission, "reasonable market price" is no protection at all to the consumer.

Commissioner Draper in the opinion to which I have referred—hearings, page 1223—put it bluntly when he wrote:

> Legislation exempting producers' sales or regulating them indirectly by limiting prices paid to them by pipeline companies to a "reasonable market price"—which is in reality no regulation—would be contrary to the public interest and detrimental to the welfare of millions of consumers throughout the Nation.

INDIRECT CONTROLS WOULD BE INEFFECTIVE

From my earlier summary of the alleged consumer protections, it will also be noted that they all apply explicitly to pipelines, and not to gas producers.

But there are fatal weaknesses and defects in these provisions also, even if some way could be found of breathing some protecting force into reasonable market price as a standard.

If that standard is not a limiting one, but rather a blank check one, then, of course, the alleged protection does not exist, and direct or indirect controls are meaningless.

For the purposes of this analysis, therefore, we must assume that somehow reasonable market price at the point of delivery might be lower than—and thus limit—the actual gas purchase contract price. This strains my imagination, but for the sake of argument let us do it.

EXISTING PRICES EXEMPTED

The first major defect in the bill's protective machinery is that it does not apply to most existing gas-purchase contract prices.

Section 5 (b) and 5 (c) expressly apply—with further limitations—only to contracts executed or renegotiated after the date the bill becomes effective. This at best is locking the barn door after the horse has been abstracted.

Section 5 (d) applies to future rate-increase applications under most escalation clauses in existing contracts, but excludes step-rate escalation increases and tax-increase escalator provisions. As this section now stands, the Commission is forbidden to ascertain whether the prices paid under step-up escalation clauses and tax reimbursement clauses exceed the reasonable market price and to make any adjustment should the Commission find them to be excessive.

These so-called consumer-protection provisions forever foreclose the Federal Power Commission from inquiring into the reasonableness of prices paid under contracts executed or renegotiated prior to the day the bill becomes law and which are being paid on that date. That may help to explain the frantic rush to increase prices in the gas fields, which we have noted in the current contracts that we have submitted for the RECORD.

This has the effect of riveting into the economy practically all existing contract prices, as a base, and of granting all of the producer rate increases pending at the Federal Power Commission.

These alleged consumer protections forbid any of the customers of pipeline companies, State commissions, and municipalities from prosecuting their pending complaints at the Federal Power Commission concerning excessive producer prices, which the Commission has already allowed to go into effect. No opportunity whatsoever is given representatives of the gas consumers who are alleged to be protected by these provisions to object, or have corrective measures taken, with respect to the prices which are being paid on the day the bill becomes law. How can it be conscientiously said that adequate protection is given to consumers by these provisions? These alleged protections are pure hokum.

MEANING OF 5 (C) IS UNCERTAIN

Next there is a vagueness in section 5 (c)—the prior approved section—which might well defeat effective use of that control machinery in future—new or renegotiated—gas purchase contracts.

Let us also assume that a producer submits a contract to the Commission for prior approval and that the contract contains an initial price of 20 cents per thousand cubic feet plus annual step-up increases of one-half cent per thousand cubic feet, plus a two-party favored-nation clause, plus required renegotiation at the end of each 5-year period at prices not less than the highest of the three average prices in a certain Texas railroad commission district, and plus a tax-reimbursement clause. The Commision would be required to determine whether the price to be paid under the provisions of the contract is the reasonable market price. Would the Commission be expected to approve all of the pricing provisions of the contract, not only with respect to the initial price but the step-up provisions as well, the tax-reimbursement clauses, the favored-nation clauses, and the renegotiation clauses; or would the Commission's prior approval be confined to ascertaining whether the initial price of 20 cents per thousand cubic feet was the reasonable market price? The report of the com-

mittee throws no light upon this element of uncertainty.

If the meaning of the subsection is to confine the Commission's approval to the initial price, then any increases subsequently arising by reason of annual step-up provisions of the contract, favored-nation provisions, and renegotiation or tax clause provisions would fall under subsection 5 (b), but only in the event the operations of any of such clauses of the contract would require the pipeline company to file a rate increase application with the Federal Power Commission. If the proponents intend that the prior approval by the Commission would cover all of the pricing provisions of the contract, then the Commission's prior approval would be nothing less than signing a blank check for the producer.

LIMITATION ON PIPELINES EXPENSING EXCESS IS QUESTIONABLE, AND PROBABLY ILLEGAL

Sections 5 (b) and (c) also provide as follows, with respect to the Commission's determination of the reasonable market price.

After such determination, the natural-gas company shall be allowed to charge as an operating expense for natural gas purchased under the contract only such part of the contract price as does not exceed such reasonable market price.

This identical provision of sections 5 (b) and (c) purports to deny to the pipeline company the right to recover its cost of gas purchased under arm's length transactions in the event the prices called for by such contracts are found to be in excess of the reasonable market price by the Federal Power Commission.

That is about the only set of teeth provided in the act—and those teeth are not even there.

Adoption of these provisions is predicated upon the supposition that the Commission can legally deny recovery through rates, of payments made by the pipeline company where the Commission finds that they are in excess of the reasonable market price of the gas. This incorrect assumption ignores completely the constitutional limitations on ratemaking authority. A utility is constitutionally entitled to recover through rates its operating expenses, taxes, depreciation, and a fair return and the income taxes associated with that return. If the regulatory Commission does not so permit, the utility has a remedy in the courts under the fifth amendment. The authority of the courts to set aside decisions of regulatory commissions for failure to allow the utility to earn income sufficient to pay its costs of operations, plus a fair return on the invested capital or fair value of the utility's property, are legion. Thus, there is a grave constitutional impediment to the proposal of proponents that pipeline companies be denied recovery of the amounts paid for natural gas in arm's length transactions over and above the so-called reasonable market price.

It is true that regulatory commissions have disallowed items of operating expenses and refused to include expenditures made in the rate base, but it will be found that in practically every such instance, the sums disallowed were not arm's length payments but were payments made to affiliates, and to both sides at the bargaining table. The rate case opinions of the Federal Power Commission will be searched in vain for any disallowance by the Commission of bona fide expenditures in arm's length transactions because the prices charged the utility were thought by the Commission to be excessive.

One of the principal reasons that these proposed alleged protections will not work is that no regulatory commission, Federal or State, would deliberately forbid the recovery through rates of lawful payments paid by a utility in good faith under contracts entered into at arm's length, since to do so would jeopardize its financial stability. It is incomprehensible that the Federal Power Commission would require the pipeline companies to suffer financial loss while the producers selling the gas to the pipeline companies were able to secure excessive profits. Any such proposal is illogical, unfair, and completely contrary to sound principles of utility regulation.

To avoid these results, therefore, as well as for the reasons I have previously outlined, contract prices will be found by the Commission to be the "reasonable market price" in every case unless it can be clearly proved: First, that the contract was not at arm's length; second, that there was collusion between the parties; or, third, that comparable reserves could have been purchased at a much lower price. With producers maintaining corporate independence from the pipeline companies, it will be impossible to prove no "arm's length bargaining." Collusion in the legal sense is easy to avoid and difficult to prove, and with the demand for gas exceeding supply, the situation of available reserves at a lower price will never be encountered.

In other words, constitutional grounds might well knock such regulation down if attempted by the Commission, and to avoid such unconstitutional effects the Commission would in all probability allow the pipeline to expense the contract price—which means no regulation.

SECTION 5 (E) HAS FURTHER LEGAL CONTRADICTION

Another legal absurdity, or at least contradiction, in the bill is section 5 (e). This section provides:

Whenever, in connection with an increase in the price of natural gas under the provisions of an escalation clause, the Commission, pursuant to subsection (d), has made a determination as to the reasonable market price of such natural gas, the natural-gas company shall be obligated to pay only such part of the increase in price as results in a price which does not exceed such reasonable market price; and, except as otherwise provided in this subsection, the contract containing such escalation clause shall continue in effect according to its terms as though this subsection had not been enacted. No provision of any such contract shall be construed to authorize its cancellation because of the enactment of this subsection or subsections (d) and (f).

This provision purports to protect the pipeline company in a price squeeze in the event the Commission should determine that the contract price as under a favored nation, renegotiation, or spiral escalation clause should exceed the reasonable market price. In other words, the pipeline company is forbidden to collect an increase in rates from consumers of any excess above the reasonable market price, and it is also relieved from the obligation to pay to the producer any such excess.

This is the only section of the bill that purports to place any burden on the producer. This effort to authorize control over a contractual money obligation of the pipeline to the producer, however, runs the Commission head-on into the provisions of the bill which define transportation of natural gas in interstate commerce and sale in interstate commerce of natural gas to exclude the very transactions between producers and the pipeline companies which the bill attempts to regulate under section 5 (e).

By enacting proposed paragraphs (10) and (11) of section 2 of the act, Congress would declare that the sales taking place before transportation are not sales in interstate commerce. Yet, section 5 (e) of the bill attempts to provide regulation of these sales. At the very least, these provisions seem clearly contradictory and to furnish ready fuel for future litigation.

It seems to me that in the event the Commission sought to enforce section 5 (e) and should determine that the contract price under an escalation clause exceeds the reasonable market price and forbade the pipeline company to increase its rates based thereon, and the pipeline company refuses to pay the producer that part of the contract price which was in excess of the reasonable market price, the producer would have no difficulty in securing relief from the courts. This is for the simple reason that unless the sale is in interstate commerce for resale, no authority exists under the Natural Gas Act to diminish the producers' income which is provided by contract.

If the National Government cedes authority over the price of gas entering a pipeline, how can it subsequently come in and say it can regulate the price which the pipeline company can then pass on to the distributor?

Thus the proponents of these alleged consumer protections seem to me to have placed the Commission and the consumers in this neat dilemma: (a) If section 5 (e) is applied to reduce the gas contract price to the producer, he can complain and probably prove its illegality since by definition he is placed outside of regulated commerce; (b) if the contract revision part of section 5 (e) is knocked out by the producer, then the pipeline is faced with legal contract obligations which the bill says the pipeline cannot "expense," and for the reasons mentioned above in connection with 5 (b) and 5 (c), the pipeline can probably knock this attempted regulation out. The net result of the legal tangles, therefore, may well be—and I believe is—that the consumer is defenseless—even if "reasonable market price" had some limiting meaning, which it does not.

One is tempted to ask the proponents, if they believe section 5 (e) would be effective and be upheld as a valid change in the price in gas purchase contracts,

why did they not insert a similar provision in section 5 (b)? These are mysteries of draftsmanship too deep for one seeking consumer protection to understand. And since the new provisions of section 5 (e) were put into the bill after the hearings were ended, there is no testimony from outside witnesses in the hearings to help us solve this knotty riddle.

THE ADMINISTRATIVE LOAD

The burden which would be cast upon the Federal Power Commission under section 5 (c) as proposed, is tremendous. It would far exceed the burden imposed on the Commission under the Natural Gas Act as it now stands. There is no doubt in my mind but that a pipeline company entering into a new or renegotiated contract with a producer would seek to secure advance approval of the price to be paid as provided in that subsection.

I have previously shown that since June 7, 1954, 1,097 contracts were filed with the Federal Power Commission by producers making new sales to pipeline companies. Since rates for new service are not subject to suspension under the Natural Gas Act, these 1,097 contracts became lawful rate schedules without any formal proceeding, hearing, or other action of the Commission. However, if pipeline companies were to submit 1,097 producer contracts to the Federal Power Commission for approval, the Commission, unless it were to simply rubberstamp the price, would be compelled to give notice and opportunity for hearing to all parties and the Commission staff would necessarily be required to make an investigation in each of the cases to determine whether the new or renegotiated contract price was the "reasonable market price."

Based on the activity of intervening municipalities, State commissions, and distributors in the present producer rate increase cases before the Federal Power Commission, it can be fairly anticipated that most of the applications would require formal proceedings. As I visualize the inevitable result of the advanced determination as to new or renegotiated contracts and determinations in rate increase cases of pipeline companies of the reasonable market price with respect to contract escalation clauses, as proposed in the bill, it would be completely negative and would provide no protection whatsoever to the consumer against unreasonable natural gas rates.

Commissioner Draper has described the probable effect of this provision in the following terms, in the hearings, at page 1228:

> The Commission would thus be required to pass in advance upon each and every executory contract entered into between pipeline companies and producers, for it is not to be supposed that a pipeline company would bind itself to a gas purchase contract without getting a stamp of approval. The administrative burden of having to issue a declaratory order passing upon the lawfulness under the act of all these contracts would be staggering. In addition, procedural prerequisites are left unspecified. Even more important, in practical operation this procedure could well give the parties an inducement initially to agree upon a higher price than they thought would be acceptable to the Commission, and then, if necessary, by successive steps to reduce it to the permitted level. As to prices paid the producer, this would turn the present standard of the act requiring the lowest reasonable rates upside down, substituting instead the highest reasonable rates.

Section 7 (e) of the Harris-Fulbright bill is another section which throws a heavy administrative burden on the Federal Power Commission, by requiring the Commission to examine every contract, submitted in support of an application by a pipeline company for a certificate of convenience and necessity, to determine whether the price paid under the contract is "the reasonable market price" at the point at which the gas is transferred to the pipeline. This would delay the granting of certificates, and is an administrative burden which the Harris-Fulbright bill would impose on the Commission in excess of any burden which now exists.

The way to lighten the burden of the Federal Power Commission is to pass my bill S. 1926 which would require regulation of the sales of the 197 producers who sell 90 percent of the gas and which would exempt the 5,360 producers who together sell only 10 percent of the gas.

SUMMARY

Mr. President, the indirect controls, the alleged consumer protections, are in my opinion, ineffective and futile. They are worthless for providing safeguards to the consumer. The "reasonable market price standard" in itself absolutely negatives any hope of consumer relief from increasing gas prices.

The heart of the foregoing argument is: there are no regulatory teeth whatsoever in reasonable market price. And if there were any teeth in that standard, the alleged protective provisions would probably prove illegal.

Unless the drive of producers to secure from their sales of natural gas all that the traffic will bear is restrained by direct regulation under the act, it would be far better in my judgment to repeal the act in its entirety than to delude the natural gas consumer into believing that he is protected by Federal regulation under the Natural Gas Act as thus amended.

If the cost of gas to the interstate pipeline company is free from regulation, all subsequent regulation becomes an exercise in futility. This was recognized by the Supreme Court in the *Interstate* case (331 U. S. 682) where it said:

> Unreasonable charges exacted at this stage of the interstate movement become perpetuated in large part in fixed items of costs which must be covered by rates charged subsequent purchasers of gas, including the ultimate consumer. It was to avoid such situations that the Natural Gas Act was passed.

Mr. President, in the long argument which I have made I have shown, I think, that the passage of the Fulbright bill would inevitably mean a large increase in the price of gas in the field, amounting to at least 10 cents per thousand cubic feet; that the increase would be passed on to the pipelines; that the protections in the bill are grossly inadequate, indeed, almost nonexistent; that the pipelines would pass the price increases on to the distributing companies; that the distributing companies would have to pass them on to the consumers, and that the burden would fall upon the residential customers, 21 million families, who would have to pay most, if not all, of the $600 million a year which would be charged.

This bill is an unconscionable attack upon the pocketbooks of the American people. I hope the Senate will defeat it by a resounding vote.

Mr. President, I yield the floor.

Mr. DANIEL. Mr. President, I merely wish to state for the RECORD that although I have not interrupted the distinguished Senator from Illinois except once or twice, there are particular points on which our silence should not be interpreted as being a sign of assent or agreement. Before the debate is concluded, the proponents of the bill, including the junior Senator from Texas, will undertake to answer the points which have been made.

Mr. DOUGLAS. Mr. President, as the RECORD will show, I submitted myself to questions at all points in my address and I was perfectly willing to yield for any statement which was challenged. I think that is the proper way to conduct parliamentary debates, and I shall be very much interested in any future statement which may be made.

The PRESIDING OFFICER (Mr. MONRONEY in the chair). The Chair would like to say that he followed the statement of the distinguished Senator from Illinois and that the Senator from Illinois conducted his arguments on a high level, after long and close study of the statistics available.

While we have differed on the conclusions which should be drawn from some statistics, the Chair would like to join with other Senators in complimenting the Senator from Illinois for his masterly presentation of the argument on his side of the question. The fact that we wind up with different conclusions is in the true spirit of our democratic processes. The Chair is grateful to the Senator for the contribution he has made, and hopes that in due course, as the proponents of the bill further present their side of the case, the debate will continue, as the Chair feels sure it will, at the highest possible level of Senatorial courtesy and consideration.

Mr. DOUGLAS. Mr. President, may I thank the Senator from Oklahoma for the splendid way in which he conducted himself throughout the debate. I compliment him on his genuine, good sportsmanship. I have occupied the floor for 4 days, but I enjoyed it, and, after a little rest, I shall be ready to resume the debate next week.

I am happy to have served under the Senator from Rhode Island [Mr. PASTORE] who is the floor leader against the bill. We shall continue the battle at Phillipi.

Mr. PASTORE. Mr. President, although the Senator from Illinois is anxious to get away, I wish to join my colleagues in paying him tribute for the fine presentation he has made of our side of the case. I wish to say to him that he has always been an inspiration

to the liberals of this body. He is the great champion of the average American, and every time he comes into this Chamber the consumers of America feel that much more safe.

TENTH ANNIVERSARY OF CARE

During the delivery of Mr. DOUGLAS' speech,

Mr. WILEY. Mr. President, it is a real honor for me today to pay tribute to a remarkable organization which has performed magnificently for the people of our country and of the world. I refer to that splendid nonprofit organization whose title is Cooperative for American Remittances to Everywhere—familiarly known as CARE.

This week it is our pleasure to help, so to speak, "blow out the 10 bright candles in CARE's birthday cake." By doing so, we help focus attention on this young, vigorous organization which already has literally made a difference between life and death to uncounted number of distressed people abroad.

CARE'S REMARKABLE RECORD

Yes; within this short decade, CARE has furnished packages which have fed 76 million people. The food value of those packages alone represents 2,100,000,000 meals.

More than a fifth of a billion dollars has been contributed to CARE in the last 10 years. As a consequence, there have poured forth, under CARE auspices, enormous shipments of food, clothing, blankets, and self-help tools.

All this constitutes one of the most remarkable outpourings of good will in our history—remarkable even for so generous a country as the United States, considering the fact that simultaneously all of us, as taxpayers, were helping to contribute necessary aid on a government-to-government basis.

INTRODUCTION OF MISSION CHIEFS IN SENATE GALLERY

Mr. President, it is my particular purpose now to pay tribute to some of the men and women who are the "front-line combat soldiers," so to speak, in this peaceful army. They are soldiers of an army of good will, an army whose only enemies are mankind's age-old enemies—disease, illiteracy, poverty, starvation.

Seated in the Senate gallery at this moment are 22 mission chiefs from CARE's overseas missions. They have just visited the White House, where they met with Mrs. Eisenhower—a further indication of the warm support of the United States Government and the people of the United States for CARE.

I point out that three of the chairs in that part of the gallery, which might otherwise have been filled, are vacant this afternoon. Those vacant chairs represent lives lost in CARE overseas duty during the last 10 years.

I should like to ask that the CARE overseas mission chiefs stand now, so that they may receive an expression from the Senate and from the members of the public seated in the other galleries.

The PRESIDING OFFICER (Mr. JACKSON in the chair). Is there objection to the request of the Senator from Wisconsin? The Chair hears none.

[The delegation rose from their seats in the gallery, and there was applause by Members of the Senate and by the general public in the gallery.]

Mr. WILEY. Later, Mr. President, I shall ask that the individual names and missions of each of these persons be listed in the CONGRESSIONAL RECORD.

CARE SHOULD HAVE STILL MORE RESOURCES

As we survey the work of CARE, our only regret is that infinitely more resources have not been made available to it, not just as regards food, but also as regards self-help materials which CARE is also wisely distributing.

Just think how infinitely greater would have been the past results, and how much greater would be the results still to come, if more resources were made available to CARE by the American Government, in the form of surplus food; and by the American people, in the form of contributions for everything from plows to books to hospital equipment to suiting material and midwifery kits.

I hope, therefore, that as CARE completes its first decade, we shall give it the birthday present it would most enjoy, namely, by making available increased facilities, so it can further increase its service.

I have been pleased to be in contact with Mrs. Olive Clapper, Director of the Washington office of CARE. She rightly points out that if all Americans were to become more familiar with CARE's self-help program, particularly for the distressed areas of southeast Asia—

> We could be sending many millions of dollars worth of help, instead of only a few millions, and CARE could be the instrument of raising the standard of living in villages and towns in acute areas. A rise in the standard of living of 5 percent in the next 2 years is all that is needed to firm up a determination to hold on to freedom and turn thumbs down on communism, because these people are voters for the first time in their lives.

EACH PASSING DAY IS PRECIOUS IN FOOD DISPOSAL

Under these circumstances, Mr. President, time is precious. Each passing day means 1 million more dollars in storage charges for United States government surpluses. This means also, 1 additional day during which millions abroad live on the ragged edge of starvation.

Surely, this administration and the Congress will recognize, as they should, that our surplus disposal program, which has been moving ahead in first gear, should be shifted into high now—immediately. That means increasingly utilizing CARE and other efficient, constructive private means to do the job abroad which must be done.

I am pleased now to ask unanimous consent for the listing in the RECORD of the names of CARE's overseas mission chiefs who are present today in the Senate gallery.

There being no objection, the list was ordered to be printed in the RECORD, as follows:

Mr. Richard Reuter, executive director of CARE; Mr. Paul W. Gordon, (Yokohama, Japan), Far East; Mrs. Mary Elmendorf, Mexico; Mrs. Mary Lowrie, Panama; Mr. Derek Singer, Bolivia; Mr. Irwin Rubenstein, Honduras and El Salvador; Mr. Oden Meeker, Laos; Mr. Wells Klein, Vietnam; Mr. George Mathues, West Germany; Mr. Bertram Smucker, Berlin; Mr. Robert Meyer, West Germany; Mr. Raymond Izbicki, Italy; Mr. Edward Greaves, Greece; Mr. Fred Devine, Egypt; Mr. David Jack, Finland; Mr. Van Bowen, Yugoslavia; Mr. Frank Thomas, Israel; Mr. Milo Kamstra, Vietnam; Mr. Jeremy Boissevain, India; Mr. Barry Borden, Pakistan; Mr. Rudolph Adams, Egypt; Mr. John Standish Alden, assigned to Indochina.

Mr. WILEY. Mr. President, CARE is, of course, a nonprofit, nonsectarian, private American agency for person-to-person, international assistance. Because it is nongovernmental and goes from an American to a person in need, every CARE gift tends to be more effective than aid from a relatively, impersonal government.

Moreover, because CARE is nonsectarian, CARE aid often proves particularly adaptable in the rising nations whose cultural and religion patterns have tended to differ markedly from ours in the West.

CARE'S ADAPTABILITY TO CHANGING NEEDS

I point out that CARE has shown commendable flexibility in all its operations. As fast as new needs have arisen, CARE has responded to them.

Immediately after the war, when Europe was almost in chaos—with its cities battered, and vast populations homeless—CARE relief packages were rushed in to feed the starving. CARE's first shipload of food packages left the port of Philadelphia in May 1946, unloading at Le Havre, France, 2 weeks later.

Subsequently, whenever and wherever in the world natural disasters struck, CARE was always promptly on the scene, to rush in emergency aid.

In Europe, as the flow of refugees from behind the Iron Curtain mounted, CARE always proved available, to aid refugees in Germany, Greece, or elsewhere.

As the focus of the problems of the free world shifted to the plight of South Asia, particularly to amputated, refugee-swollen South Vietnam, CARE wisely responded to the area's special needs.

Likewise, nearly the whole of Latin America has come to be included in the realm of CARE's service.

SELF-HELP TOOLS

CARE early recognized that "man lives by more than bread alone." Men need to work out their destiny in their own way; they need to realize their dignity through earning their own daily bread by their own efforts.

CARE tool packages, therefore, enabled a carpenter apprentice of West Germany to follow his chosen trade, or a Pakistani farmer to exchange his crude inefficient wooden implements for a new tool. CARE plows have helped Greek youngsters or Indian lads in Peruvian vocational schools to improve farming practices in their home villages. CARE sewing machines permitted Italian and West German welfare organizations to set up sewing circles for unemployed women.

CARE books have brought the latest scientific and technological literatures to underdeveloped countries in desperate need of them. CARE midwifery kits have helped both as teaching aids and of course, in direct use in facilitating the birth of children in depressed lands where unfortunately, even the most elementary medical facilities have so often been lacking.

AID TO BATTERED KOREA

Perhaps nowhere on the face of the earth has CARE aid been more needed or more appreciated than in the Republic of Korea. There, almost one-third of the 21 million population have been homeless; two and a half million refugees fled before the Communist aggressor, and in the backwash of cruel war have been nearly a quarter of a million helpless orphaned youngsters, as well as countless maimed and wounded, sick and undernourished—all in the sacred cause of freedom.

THE FREEDOM VILLAGE PROGRAM

It is appropriate that CARE's latest form of effort—its Freedom Village program—integrating self-help, sent from abroad, and started in Korea.

To one village of 1,000 war refugees resettled by the Korean Civil Assistance Command, CARE brought plows, farm tools, and pigs; sewing, knitting, and weaving machines, plus cloth and thread; carpentry and other craft tools; books, stationery and stoves for the village school. The result was increased crops and farm income, year-round earnings for cottage industries, a livelihood for the village craftsmen, better educational opportunities—in short, a village put on its feet.

Freedom villages are now slated for southeast Asia, for the Middle East, and for Latin America, Korea, Peru, India, Pakistan, to name a few specific countries. Technicians from United States Government, United Nations and local government missions, or private foundations, teach the know-how for economic, health, and social improvements. CARE brings the villagers the go-with to make the know-how work.

But now, it may be asked: Who is responsible for the bold imaginative CARE work, for this intelligent program of efficient, economical, careful use of funds?

MEMBER AGENCIES OF CARE

The following is a list of the member agencies of CARE:

American Aid to France, Inc.; American Baptist Relief; American Friends of Yugoslavia; American Fund for Czechoslovak Refugees, Inc.; American Relief for Poland; Brethren Service Commission; Congregational Christian Service Committee; Cooperative League of the United States of America; Credit Union National Association, Inc.; General Conference of the Seventh Day Adventists; Greek War Relief Association, Inc., United States of America; United HIAS Service, Inc.; International Rescue Committee; Labor League for Human Rights, AFL; National CIO Community Services Committee; National Grange; Paderewski Testimonial Fund; Tolstoy Foundation, Inc.; Unitarian Service Committee; United Lithuanian Relief Fund of America; United Ukrainian American Relief Committee; World University Service; YWCA World Emergency Fund.

TRIBUTES BY PRESIDENT EISENHOWER AND OTHERS

Inevitably, the leaders of the United States have responded enthusiastically to CARE's great work. I quote some of the tributes by American leaders in tribute to CARE:

DENVER, COLO., *September 30, 1954.*

Mr. PAUL CONLY FRENCH,
Executive Director, CARE,
New York, N. Y.

DEAR MR. FRENCH: In its 9 years of activity, CARE has written a remarkable chapter which reflects our citizens' understanding of the new importance of their international role.

I wish there were more who understood the significance of America's international role. One of the purposes of these remarks is to acquaint our people with this most wonderful institution, which has alleviated pain and suffering among millions.

The President further stated:

It is a chapter which brightly reflects the philosophy which guides our actions: the assumption that the best way to help others is to help them help themselves.

CARE still provides direct aid to the victims of natural and manmade disasters—to the 500,000 refugees, for example, who fled before Communist aggression to the south of Indochina, and to the sufferers from the recent Danube flood in Austria. But CARE no longer brings food and clothing alone; it brings also the tools of reconstruction and rehabilitation. Its books are providing the student and scientist in many lands with food for the mind. Its plows are aiding the farmer in Korea and Pakistan, Greece, and India. Its tools are giving the carpenter in West Germany and the shoemaker of Haiti the chance to build economic freedom for themselves and their families. Its equipment of civic centers is aiding the Philippines farmer on the road to a better future.

Everywhere CARE is strengthening the belief and confidence in democratic processes.

Made possible through the voluntary contributions of countless individual citizens and civic groups in all parts of the United States, CARE aid in all of its forms is a magnificent symbol of good will and understanding among freemen.

Sincerely,

DWIGHT D. EISENHOWER.

Further tributes are as follows:

The CARE campaign to bring help from the people of America to the Vietnamese refugees is a vital humanitarian and national effort. * * * Government-to-government assistance, important as it is in long-range plans, cannot be as personally effective as the simple idea of people helping people.

RICHARD M. NIXON,
Vice President of the United States.

Through CARE the American people have a channel for assisting peoples in need overseas and for expressing their goodwill and feelings of brotherhood.

JOHN FOSTER DULLES,
Secretary of State.

The warmhearted activities of CARE justly deserve the grateful appreciation and support of the people of New York.

THOMAS E. DEWEY,
Former Governor, State of New York.

Fortunately, there is a way we can all help and that is by contributing to CARE which distributes to the Vietnam refugees, in the name of the American people.

ADLAI E. STEVENSON.

CARE has become a symbol of America's interest in the welfare of individual neighbors overseas.

CHESTER BOWLES,
Former United States Ambassador to India.

CARE aid * * * furnishes the most convincing proof to the rest of the world of the deep and lasting concern of the American people for those throughout the world who are hungry and in want.

JOHN S. FINE,
Former Governor, Commonwealth of Pennsylvania.

Inevitably, too, as regards Korea and elsewhere, the CARE program has aroused the sympathetic support of the widest variety of American and international organizations.

A look at CARE's record contains many proud chapters of cooperation written by the General Federation of Women's Clubs, the CIO and AFL, the Credit Unions National Association, the National Education Association, 4–H Clubs of America.

So, too, the National Advisory Committee for CARE represents an outstanding group of American leaders.

I ask unanimous consent that the list of members of the National Advisory Committee for CARE be printed in the RECORD at this point as a part of my remarks.

There being no objection, the list was ordered to be printed in the RECORD, as follows:

The National Advisory Committee for CARE. A committee of business leaders consulting with CARE on agricultural surplus, self-help and overseas disaster relief and rehabilitation programs:

Chairman: Gardner Cowles, president, Cowles Magazines, Inc.

Members of the committee: Harry A. Bullis, chairman of board, General Mills, Inc.; John S. Coleman, president, Burroughs Corp.; George H. Coppers, president, National Biscuit Co.; Philip Cortney, president, Coty, International; Chester Davis, consultant, Pasadena, Calif.; A. L. Hammell, president, Railway Express Agency, Inc.; H. J. Heinz II, president, H. J. Heinz Co.; Paul G. Hoffman, chairman of board, Studebaker-Packard Corp.; Roy C. Ingersoll, president, Borg Warner Corp.; Eric Johnston, president, Motion Picture Association of America; Ward Melville, president, Melville Shoe Corp.; John Nuveen, investment broker, Chicago, Ill.; Warren Lee Pierson, chairman of board, Trans-World Airlines, Inc.; W. A. Roberts, president, Allis Chalmers Manufacturing Co.; F. F. Rondeau, president, Mutual Service Life Insurance Co.; George A. Sloan, president, Nutrition Foundation; Robert B. Smallwood, president and chairman of board, Thos. J. Lipton, Inc.; Joseph P. Spang, Jr., president, The Gillette Co.; J. D. Zellerbach, president, Crown Zellerbach Corp.

CARE COMBATS COMMUNISM

Mr. WILEY. Even if the Communist problem did not exist in the world, the American people would be glad to contribute to CARE, because there has never been an occasion in our history when our people—with their great hearts—have not gladly responded to humanitarian needs throughout the world. We know full well that two-thirds of the people of the world live today in underdeveloped

areas where average income is pitifully less than $1 per week.

But because the Communist problem does exist, because communism is contesting with the free world for the minds of men, especially, in these depressed lands, because communism tries to destroy the image of America and to smear the American character, CARE has become a particularly important instrumentality in the free world's effort to preserve itself from subversion and destruction.

Someone said the other day in analyzing the world situation that the world has been contracted by man's ingenuity so that every nation is in every other nation's backyard. Someone may ask, "What does that mean? What does it mean to you and to me?

The answer is that in applying the old rule of national self-preservation we must also apply the rule which Abraham Lincoln applied. He said, "The dogmas of the quiet past are inadequate for the stormy present."

Mr. President, one of the great weapons to preserve America is the very agency we have been talking about, CARE. It is one of the real arms which reaches out and, in its generosity and Christian spirit, creates a barrier against communism.

I conclude with this sincere word of tribute and thanks to Mr. Murray D. Lincoln, president of CARE, Mr. Richard W. Reuter, National Executive Director, Mr. Leo Perles, Secretary, Mr. Harold S. Miner, Treasurer and, Mr. Paul Comly French, formerly Executive Director.

I wish for CARE the highest degree of success in its further humanitarian efforts as it enters its second fruitful decade.

Mr. KENNEDY. Mr. President, I congratulate the Senator from Wisconsin on his fine statement, and I wish to associate myself with his remarks. I join him in complimenting CARE on what it has done over the years. America owes it a great debt of gratitude.

Mr. WILEY. I thank the distinguished Senator from Massachusetts. He is one who fully appreciates the significance and the extent of the grand job which is being done for suffering humanity by this great institution.

Mr. BARKLEY. Mr. President, I wish very briefly to associate myself with the remarks just made by the Senator from Wisconsin [Mr. WILEY] with regard to the great organization known as CARE. I congratulate it upon a full decade of activities, services, and benefactions to mankind all over the world.

We have in our country many organizations—charitable, eleemosynary, and non-profit—which are based fundamentally upon the heartthrob of mankind, particularly in our own country, and are pulsated by a desire to be of service to unfortunate men and women in other areas of the world.

Nearly every night over the radio, and every day in the press, we hear requests to respond, through the opportunity which is afforded by this agency to the need to serve mankind.

I believe it is rather a tribute to the comprehensive view that our own people take of their obligation that there are many organizations in the Nation dedicated to the service of men and women, devoted to propagating the ideals of charity, of religion, and of Christianity, and all that they mean, in the service of mankind.

It is rather strange that all of them, regardless of their name and their origin, fit into a little different niche. I believe that is particularly true of CARE.

I shall not sermonize, although I am sometimes tempted to do so. However, I do wish to quote one of my favorite passages from the Bible. It is in Revelation, and all Senators will recognize it. It is one of the most beautiful passages in the entire Scriptures:

> Behold, I stand at the door, and knock: if any man hear my voice, and open the door, I will come in to him, and will sup with him, and he with me.

That brief quotation epitomizes and sums up in a most beautiful way the situation which confronts the world, and which always confronts it, and confronts us as individuals.

All over the world men and women are knocking at our doors, not merely the doors of our homes and our abodes, but the doors of our hearts, no less, asking if we will hear their voices and if we will open the door, that they may come in.

CARE is doing as much as any other organization in America to respond to that impulse and to that impetus.

In distressed lands everywhere millions of men, women, and children are knocking at our doors and asking whether we hear their voices and whether we will open our doors, so that they may come in.

CARE, through its efficiency, its broadmindedness, and its wonderful work and ministrations, is hearing the voices of humanity and is opening the door. Into that door men and women are coming and supping, "I with him, and he with me."

Therefore, I am very glad to join the Senator from Wisconsin in paying tribute, on its 10th anniversary, to this great organization, and I wish for it continued strength, growth, and health, as well as the satisfaction that comes not only to an organization of that kind as a group, but to the individual members of it, who have responded to the call, and have opened the door, and have admitted millions of people.

That of itself is a tribute to our democracy. It is a tribute to our willingness to accept personal responsibility, and not lean upon the arm of Government to do all the things which are essential to be done in preserving the spirit of service and the devotion to the ideals which we cherish.

Mr. DOUGLAS. Mr. President, I should like to join the Senator from Wisconsin and the Senator from Kentucky in the tributes they have paid to CARE. It so happens that a former student of mine, Mr. Murray Lincoln, was one of the organizers of CARE. It has been a privilege of Mrs. Douglas and me to have been contributors to CARE every year for the past 10 years. Nothing has given us greater pleasure than the opportunity to offer such small help as we have been able to extend.

The great merit of CARE is that it is much more flexible than government can be. It can go into situations and deal with people in a way government cannot do. Furthermore, it is much more personal than government can ever be.

Actions of government tend to be impersonal. Motives of government, even when pure, tend to be suspected. However, the voluntary fellowship which individuals accord to other individuals transcends national lines and builds friendships.

I am very happy that my own community of Hyde Park in the city of Chicago was, I believe, the first community in the country which adopted a Korean village. I know it gave our community a deep sense of participation, and brought the Korean problem much closer to the some 60,000 residents of the community. I have watched CARE very closely. So far as I can tell, it has a good sense of dollar values. It does not waste money. It joins to high aspirations and Christian motives businesslike acumen and a sense of responsibility.

In short, it is one of the best developments of the last decade. I wish to express my own personal thanks to the devoted men and women who have carried on and are continuing to carry on in its work.

Mr. LEHMAN subsequently said: Mr. President, unfortunately, I could not be on the floor earlier this afternoon when the distinguished senior Senator from Wisconsin [Mr. WILEY] introduced the heads of mission of that great organization CARE, who were in the gallery. I should have been very happy at that time to have associated myself with his remarks and to have had the opportunity of expressing my admiration and appreciation for that splendid organization, which has done so much for the welfare of humanity.

CARE was organized in 1946; and while I have not had an active part in the administration of CARE, I had a very considerable part in launching it and in making it possible to function effectively during the early months of its existence.

I was at that time Director General of UNRRA, which, as my colleagues know, was composed of 46 nations, under an agreement signed at the White House on November 11, 1942.

After the war, when the United States Army was disposing of its surplus supplies, UNRRA purchased from the Army about 5 million "K" and "C" rations for the purpose of distributing this very much needed food to the starving people abroad.

I was approached by the head of CARE, which had just been organized, and, at his request, UNRRA released to CARE about 2½ million of those rations, making it possible for that organization to proceed immediately to carry on its work.

Since then I have followed the course of the operations of CARE with great interest and with deep appreciation. Since its organization, CARE has served 54 countries around the world. I believe it now operates in 23 countries. It has served many millions of people, and has

shipped supplies with a value of more than $200 million, all of which was provided by the generous people of this country and other countries in different parts of the world.

In addition to providing food packages addressed to designated individuals, CARE also has handled large quantities of undesignated packages, which have gone into a pool for the relief of the general population in countries which needed help so greatly at the end of World War II, and which, in many instances, continue to need help.

In addition to supplying food and clothing, CARE has made it possible for people to help themselves by supplying them with large quantities of items, such as plows, medical supplies, tools, sewing machines, and similar equipment, all of which were of very great assistance to the people, and which helped put them back on the road to recovery.

As former head of the greatest relief organization in the history of the world, I have watched with admiration and approval the continuing operations of CARE. The organization supplied a very great need at the time UNRRA was liquidated in 1947–48. CARE has merited the appreciation and the gratitude of hundreds of millions of people throughout the world.

I take this opportunity to express my greatest admiration and gratitude to Mr. Murray Lincoln, who is now president of CARE, and his able and devoted associates. I am very glad, indeed, to take this opportunity to give expression to my sentiments and my appreciation and to wish this great organization further and larger success in their work of real brotherhood among the free countries of the world.

Mr. MONRONEY subsequently said: Mr. President, I should like to be permitted to join in the statements made about CARE by my distinguished colleague the Senator from New York. I think the work of CARE is one of the really great efforts being made to follow the true spirit of religion in foreign affairs. This country has spent billions of dollars in government-to-government aid, but it seems to me that the policy followed by CARE of people-to-people assistance for those who are hungry, without clothing, and without resources, benefits not only the receiver but the giver.

I doubt very seriously if the true spirit of brotherhood, which the people of the United States have demonstrated to the rest of the world, could have become evident to underprivileged people of other nations and areas without the fine work which has been carried on by CARE and various church and religious groups in this country.

I am most happy to join my distinguished colleague, who has had great experience in helping in such operations while he was at the head of UNRRA, and was connected with other relief organizations.

Mr. LEHMAN. I wish to thank the Senator from Oklahoma.

Mr. HUMPHREY subsequently said: Mr. President, I should like to make a statement on a matter of deep concern to the Senator from Minnesota and the Presiding Officer [Mr. MORSE]. This is the 10th anniversary of CARE, a great organization and a great program.

I should like to pay a high tribute to CARE—an organization for people-to-people friendship — an organization which brings the heart of America home to many foreigners.

Some of us may find it difficult to realize that the great work which has been done by this organization has been going on for 10 years. Some of us may not even recall the circumstances attending its early existence, the terrible conditions which it sought to alleviate in a war-devastated Europe, and the disheartening obstacles which it had to overcome.

There was so much need in so many places for so many things, all at once. CARE, along with other international relief organizations, brought a message of hope to multitudes who had lost hope. CARE restored self-respect to individuals whose self-respect had dissolved in a nightmare of physical suffering, cold, hunger, and the struggle to survive. It became a household word to millions of persons overseas.

But the most significant thing about CARE, so it seems to me, is that it continues to exist. This fact alone attests the great need it satisfies. Indeed, if it were not now in existence, before long responsible persons would doubtless be moved to create it. It still labors to reduce suffering, to help the poverty stricken, and to raise standards of living among those whose pitiable existence can hardly be said to constitute a standard at all. And because too many of us in the United States may not be aware of the vital postwar work which CARE has done and is continuing to do, it is proper that we take due notice of its magnificent accomplishments on this floor. It is essential that we should be fully aware of the extent to which the activities of CARE are in the national interest of the United States, and in some respects even more effective than work by Government agencies ever could be.

In addition to food packages for 76 million people, CARE has sent abroad in the 10 years of its life an impressive quantity of self-help items, among which are over $2 million worth of hospital equipment, including 19 iron lungs, and $1.5 million of technical and educational books.

Surely we all recognize, by this time, that CARE is not just another relief organization, whatever may have been its major purpose initially. No, Mr. President, to a substantial degree CARE has become a mechanism for the survival of freedom in areas where freedom has less meaning than tomorrow's bread. It is incumbent upon all of us, upon Americans everywhere, to aid its program and to support its distinguished director, whose late husband, one of America's great war correspondents, was killed in the invasion of the Marshall Islands.

I am sure Senators know that I am referring to Mrs. Olive Clapper, wife of the late beloved Raymond Clapper.

I, for one, feel that, as essential as was the work of CARE during the immediate postwar years, today its program is even more important. For at a time when the Soviet Union is redoubling its seductive efforts to win over the underdeveloped, poverty-stricken areas of the world, the humanity and compassion of CARE are a potent instrument in the struggle to keep freedom alive.

Many of us in the Senate have searched for means which would achieve the goals of our foreign-aid program more effectively. It has been repeatedly impressed upon us that private initiative and investment of capital must be encouraged as a preferred alternative to continued Government aid. Experience has shown that private assistance to underdeveloped areas carries with it advantages which are not shared by any Government-aid program—partly because no such program radiates the personal, people-to-people touch. How many of us are aware that CARE has been engaged in this type of activity, in vital measures of self-help to raise standards of living where conditions are most acute?

CARE's overseas missions, on restricted budgets, are furnishing precisely the kind of technical assistance which is best suited to the sociological and cultural mores of the community. One of its most exciting projects is the sponsorship of freedom villages. In these villages CARE matches the technical supervision available through our own and United Nations missions—or through local agencies—with the means required to put impoverished villages on their feet. It has contributed plows, farm tools, weaving machines, carpentry, and other craft implements . Five hundred villages have been selected by CARE for help in Southeast Asia, in the Middle East, and in Latin America.

The program is an ambitious one, but it furnishes the link which is often missing when technical assistance is blocked by the absence of capital to purchase necessary tools. Those who contribute to CARE are furnished information on the recipient village and progress reports. The village likewise receives the names of its donors, and thus a common bond is established between them. I cannot help thinking that we in the Senate would welcome similar evidence of progress being made on projects we are called upon to underwrite each year.

Under the CARE freedom-village program, it is possible for an organization or group in the United States to adopt a complete village, and to contribute to it by funds devoted to the special need of the community. In this way, when a farmer in a village receives a plow with the name of his American friend, that plow keeps right on working long after the money donated for it has been spent. The plow itself becomes the symbol of food for his children, a symbol of friendship for America, while it serves to dilute and to narrow the promise and appeal of communism in communities where nationalism is rising. At the same time, because CARE is nonsectarian, it is inoffensive to those people who are jealous of their own religious and cultural heritage. Through the means which are provided on an individual, personal basis, CARE's efforts raise living standards without arousing emotions of indebtedness or resentment at the activities of a foreign government. On the other hand,

because the self-help and village programs are realistically geared to the capacities as well as the needs of a people, there is less likelihood that the benefits achieved will vanish when the community falls back upon its own resources.

These, I submit, are precisely the objectives of our own foreign policy of aiding less fortunate peoples. I consider CARE an essential adjunct of any enlightened technical-assistance program.

I wish to point out, Mr. President, that it is a very important adjunct to the United Nations technical-assistance program, our own technical-assistance program, and other programs.

The only trouble with CARE, so far as I can see, Mr. President, is that there is not enough of it. I think we have to care a lot more about CARE. This program is, indeed, an inspiration, and I think it carries with it the full spirit of American compassion, American charity, and American feeling of kinship and fellowship for our fellow human beings all over the world.

CARE's resources are, regrettably, too limited. I sincerely hope that on this 10th anniversary, the citizens of our great Republic, by nature generous and sympathetic to the dire needs of others, will be moved to recognize that the important work of CARE should be strengthened and supported in the cause of freedom.

AMENDMENT OF SMALL BUSINESS ACT OF 1953

During the delivery of Mr. DOUGLAS' speech,

Mr. MORSE. Mr. President, will the Senator from Illinois yield, with the understanding that in doing so, he will not lose his right to the floor? I wish to have the Chair lay before the Senate a privileged matter; and I ask unanimous consent that the proceedings in connection with it be printed in the RECORD following the remarks of the Senator from Illinois.

Mr. DOUGLAS. With that understanding, Mr. President, I am glad to yield.

The PRESIDING OFFICER. Is there objection? The Chair hears none, and it is so ordered.

Mr. MORSE. Mr. President, I ask that the Chair lay before the Senate a message from the House of Representatives which now is at the desk.

The PRESIDING OFFICER (Mr. LEHMAN in the chair) laid before the Senate a message from the House of Representatives, disagreeing to the amendments of the Senate to the bill (H. R. 7871) to amend the Small Business Act of 1953, and requesting a conference on the disagreeing votes of the two Houses thereon.

Mr. MORSE. Mr. President, I move that the Senate concur in the request for a conference, and that the Chair appoint the conferees on the part of the Senate.

The motion was agreed to; and the Presiding Officer appointed Mr. MORSE, Mr. ROBERTSON, Mr. SPARKMAN, Mr. LEHMAN, Mr. IVES, Mr. BEALL, and Mr. PAYNE the conferees on the part of the Senate.

Mr. MORSE. Mr. President, I thank the Senator from Illinois very much indeed for yielding.

Mr. DOUGLAS. Mr. President, I congratulate the Senator from Oregon upon getting his flood-control measure so nicely along.

Mr. MORSE. I thank the Senator from Illinois very much.

WHITE HOUSE CONFERENCE ON EDUCATION

Mr. HUMPHREY. Mr. President, one of the aftermaths of the recent White House Conference on Education was the development of a great deal of public discussion and increased awareness of the needs of our public-school system in the State of Minnesota. A very interesting journalistic enterprise was conducted in December 1955 by the Waseca Journal and Herald, of Waseca, Minn., edited by Mr. James Cowan, which brought to the readers of this fine newspaper an account of the conference by Mr. B. E. Youngquist, principal of the Southern School of Agriculture at Waseca, who had attended the White House Conference.

I wish to cite this to my colleagues as an example of outstanding journalistic enterprise on the part of a community newspaper and on the part of responsible public education officials. This is the kind of grassroots discussion which I hope will be forthcoming throughout the entire United States.

I ask unanimous consent to have the series of seven articles from the Waseca Journal and Herald printed in the CONGRESSIONAL RECORD.

There being no objection, the articles were ordered to be printed in the RECORD, as follows:

[From the Waseca (Minn.) Journal and Herald of December 8, 1955]

ONE THOUSAND SEVEN HUNDRED REAFFIRM AIMS OF PUBLIC EDUCATION

(EDITOR'S NOTE.—Bernard E. Youngquist, principal of the University of Minnesota's Southern School of Agriculture in Waseca, attended the White House Conference on Education in Washington, D. C., November 28 through December 1. This is his report to the people of Waseca—in seven chapters—on what the country is doing about its education problems.)

CHAPTER 1

(By B. E. Youngquist, as told to Jim Cowan, Journal and Herald news editor)

First of six questions studied at the White House Conference on Education was concerned with "What Should Our Schools Accomplish."

As set up, the 1,700 delegates divided into 166 discussion groups, each around a table, discussed the questions. Each table elected a chairman and met for 2 hours. Each table then came up with a set of recommendations which were brought to a next group of table discussions. This group was composed of chairmen of each of the tables in the original discussion group. Each chairman brought with him written recommendations from his group. The 17 groups further distilled the thinking and elected another chairman.

Two groups, composed of these chairmen, then met and distilled the thinking down to two sets of recommendations. These were combined into a single report which was presented to the conference general assembly and which will go to the President.

The first question was placed logically since the conferees felt that in order to discuss education they must first arrive at the why of education—to put down on paper a national philosophy regarding education.

One of the first things that came out was that the conferees reaffirmed the fact we are committed to free public education regardless of physical, intellectual, social, or other differences, as a primary civic responsibility to our children.

They expressed a strong belief that education should be controlled locally and financed as much as possible from the local and State level.

The conferees felt that any centralized control over education should be completely avoided.

That education is essential for the fullest development and enrichment of the individual was another belief expressed. It is further essential to our democratic way of life. They indicated that education is a sound and necessary investment in the future of our Nation, and that we have to expect to make that investment.

The question of private schools came up and the group felt that it is part of the American tradition of education that citizens should have the right to choose any school they may desire. However, the group felt that public funds should not be used to support private schools.

Fourteen points were boiled down from the original discussion groups and included in the final report.

I think the most remarkable thing about the conference is that the thinking of 2,000 people could be distilled down to a group of basic ideas upon which most any group of solid Americans would believe are essential to good, sound, public education. Even the educators thought they were good.

I don't want to change the wording of the ideas. They really get the point across.

In the President's report they appear this way:

"It is the consensus of this conference that the schools should continue to develop:

"1. The fundamental skills of communication—reading, writing, spelling—as well as other elements of effective oral and written expression; the arithmetical and mathematical skills, including problem solving. While schools are doing the best job in their history in teaching these skills, continuous improvement is desirable and necessary.

"2. Appreciation for our democratic heritage.

"3. Civic rights and responsibilities and knowledge of American institutions.

"4. Respect and appreciation for human values and for the beliefs of others.

"5. Ability to think and evaluate constructively and creatively.

"6. Effective work habits and self-discipline.

"7. Social competency as a contributing member of the family and the community.

"8. Ethical behavior based on a sense of moral and spiritual values.

"9. Intellectual curiosity and eagerness for lifelong learning.

"10. Esthetic appreciation and self-expression in the arts.

"11. Physical and mental health.

"12. Wise use of time, including constructive leisure pursuits.

"13. Understanding of the physical world and man's relation to it as represented through the basic knowledge of the sciences.

"14. An awareness of our relationships with the world community."

A very interesting point to note is that point 14 appears for the first time in any general set of objectives for public education. Certainly the citizenry of the country would accept this in fact but it is about time we are formally introducing this idea into the objectives we're striving toward in the schools.

Those who are engaged in education will note particularly the lack of direct reference to vocational education. However, as one goes through the entire report one senses

that vocational education is part of this whole process of general education.

The text of the report to the President made special reference to the need for active guidance and counseling of students in preparation for the world of work. I am convinced that this is absolutely essential to any effective program of public education.

The delegates expressed concern that by and large public education is not paying enough attention to the brilliant student and the retarded student with the least attention being paid to the brilliant student.

The conference did another thing. It went on record to encourage public schools to find their place in community organizations and to relate their program more closely to the community in which they exist. For instance, teachers should become a part of the community through active participation in civic affairs.

The community, on the other hand, should make more effort to include the teaching staff of the local schools in its community life. This idea has been accepted in word for the last 20 years and it is heartening to see it included in the report to the President.

I believe this relationship between educators and the community is absolutely essential if we are to do the best job in developing human resources.

One of the very heartening things about the conference and about the report is included in the last paragraph dealing with the report on this question:

It is titled "New Challenge in Education":

"Consideration must be given to the need for continuing growth and development in education at all levels in amount and scope, to keep up with the economic, social, and moral implications resulting from the advances in technology and science."

This is indeed a very significant statement in that one of the real problems in education is to stay up to date in what we teach and how we teach.

New ways of doing things move very slowly in education—a study was made in Michigan as to how long it takes for a new idea to gain general acceptance in a social institution like public education. The answer was about 24 years.

It is a good thing our industrial economy doesn't function at this rate.

We who operate in the social sciences might well take this lesson to heart. It is gratifying to see that the delegates want to keep our schools abreast of change—or putting it differently, want schools to keep up to date with social and technological changes.

In the past when people have sat down to consider the purposes of public education, the people sitting down have been educators by and large. They usually have come out with a list of objectives comparable to this list.

Our basic thinking still is the same. But the conference did recognize that we have a much more worldwide responsibility than previously has been interjected into the objectives of education.

And we as citizens must make greater efforts to keep our public education abreast of change.

These two things I believe were additional basic ideas which have been missing in previous considerations on the question of "What Should Our Schools Accomplish."

[From the Waseca (Minn.) Journal and Herald of December 12, 1955]

SCHOOL ORGANIZATION HELD UNDER MICROSCOPE

CHAPTER 2

(By B. E. Youngquist, as told to Jim Cowan, Journal and Herald news editor)

Once the conference had decided what the Nation's schools should accomplish in education, the next logical step was to examine the best ways that materials, buildings, and teachers can be brought together in schools—or "In What Ways Can We Organize Our School Systems More Efficiently and Economically."

Two attitudes seemed to emerge from the delegates in the early discussions of this particular topic.

A school district must be large enough if it is going to provide an all-around educational program, if it is going to be able to attract and hold good teachers and if it is going to be able to finance its operations.

The group felt rather strongly that public education is not organized as well as it might be at any level—national, State, or local—to provide the greatest amount of education for the tax dollar spent.

Enlarging from these basic topics, the delegates began discussing parts of the problem.

At this point I have a confession to make. The observers at the conference were not allowed to participate in the small discussion groups. Yours truly was able to filter into one of the groups, however, carrying my "observer" badge in my pocket. While I sat with the group a monitor came up and asked where my badge was. I told him it was in my pocket but also informed him it wasn't the right kind of badge.

He winked and said it was okay but that I'd better not be there when he came around again. I was there long enough to hear firsthand a lively discussion on school district organization.

Boiled down, the group felt that to adequately accomplish the goals set forth at the discussion of the first conference question, a school district should:

1. Include a well-defined community or interrelated communities.

2. Have resources and pupils sufficient to offer efficiently and economically a comprehensive educational program of elementary and secondary education.

3. Be able to maintain a competent, well-balanced staff of teachers.

4. Be able to marshal sufficient wealth to finance a school program.

5. Be small enough so as not to lose the advantages of community contact and local control, nor the response to public will. Avoid over-standardization. In meeting these criteria, every effort should be made toward intelligent long-range planning.

This is good information for Waseca or any community. The people in the Waseca community who are interested in school reorganization problems will find these recommendations worth their study.

You will notice the group said nothing specifically about reorganization of schools but it is obvious that a school organized on the recommendations of 20 years can't possibly accomplish the goals as outlined by the White House Conference on Education.

Notice, too, the reference to over-standardization. Many schools as they are now organized are just like machines and they expect to turn out a standardized product using a standardized method. Children all are different and do not lend themselves to this kind of mass production process.

Schools must pay more attention to the individual and the individual's differences must be considered in the organization and planning of school activities.

I would have liked to attend the discussion group which brought out the fact that men do not pay enough attention to school activities. The women in this group really got hot on this subject, I understand.

In any discussion group there are subjects which are discussed with more general agreement than others. The only subject which received unanimous support of this group was that if the schools are going to achieve the goals set up, the public must overcome the apathetic attitude which has been apparent.

A man in the group from Ohio put it this way: The American people have one of the most powerful forces for human good in public education. If this force is to remain strong and grow the American public must be better informed and more interested in education.

It is my belief that this is the most important thing as far as the future of public education is concerned. Most of the changes that need to come about in our schools require public support and the experience in progressive communities has been that an informed public has supported its schools, in generous measure.

The public must understand the school and its essential character within society and it must evaluate properly the school system. The public must adequately support the school system and must choose carefully the members of the board of education. These board members should be selected because of their ability and not because they represent special interest groups. And they should be nonpartisan.

The groups of conferees felt also that the citizen has the further responsibility to serve on citizen's committees working positively in behalf of the schools.

Responsibilities of the board of education were laid down by the conference too. The board has the responsibility for exercising leadership, for interpreting the schools to the people and for conveying the desires of the community to those who administer the schools.

The board, conferees decided, must exercise care and responsibility in the selection of a competent and professionally qualified administrator, and must establish the climate that will make possible the oppointment and retention of a competent staff.

The question of how teachers fit into the school community pattern was aired at some length. Conferees felt there exists a definite barrier between the community and professional school people, a stumbling block to more effective relationship between the school and community.

Teachers should be participating citizens in the community. At the same time, the people in the community should welcome the teacher as a fellow citizen who is interested in civic responsibilities as well as his professional responsibilities.

Summing up, there were two ideas which seemed to be most crucial in the thinking of the delegates at the conference. These ideas relate to almost any local school district in the country. Some communities have made more progress toward solving these problems than others.

Number one is the need for a large enough local school district so that it may be able to provide an all-around program of public education, and yet small enough so that it is close to the people.

Number two is the barrier between professional educators and community life, which must be lowered in order to attain the best possible results from the efforts of both and that both might be happier in the process.

Up to now the 1,700 conferees had explored only 2 of the 6 problems confronting education, but isn't it interesting to note the similarity between these problems concerning public education over the Nation and those problems which are of concern to those of us right here in the thriving community of Waseca.

[From the Waseca (Minn.) Journal and Herald of December 15, 1955]

PROBLEM OF FACILITIES RECEIVES NO ARGUMENT

CHAPTER 3

(By B. E. Youngquist, as told to Jim Cowan, Journal and Herald news editor)

Without any argument against the need for more school buildings, delegates to the White House Conference attacked the third question directly—"What are our school-building needs?"

Nntil now the conference had dealt with the question of what should our schools accomplish and the ways of organizing public education more efficiently. The conference was really beginning to roll.

There isn't very much present planning for facilities to take care of the heavy bulge coming in the number of schoolchildren. It was soon discovered by the conferees that under present plans that have been drawn up it will be impossible for most of the States to meet the coming crisis.

The extreme exponents of Federal aid were, of course, loud and vociferous in presenting the idea that the only solution to school-building problems was to let Uncle Sam foot the bill.

There even were a few who went so far as to say the Government ought to dictate what kinds of buildings and materials should be provided.

As the conferees dug deeper into the problem it soon became apparent that there wasn't a State represented at the conference which had really demonstrated an inability to build the schools that are going to be needed in the next 5 years.

In other words, we really haven't studied our problem as far as planning for adequate facilities for the next 5 years. Bringing this problem close to home, our Minnesota school-building problems need understanding and study by the citizens.

Some studies have been made on school-building needs, but most citizens have not interested themselves in the problems or are not aware that the problems exist. School leaders have been so busy administrating the internal problems of schools they have forgotten that the school is part of a community and that the people in the community must be kept informed at all times and not just when there is a bond issue to float.

Even though there were a few who said the problem could not be solved without Federal aid, the feeling of the majority by far was that very few States would require Federal aid to solve their school problems. The rest of the States (well over 40 of them) the conference felt, could handle their own school-building problems.

Conferees used a different approach to this question than to the rest of the series. First, there was no argument as to the seriousness of the problem, and secondly, they started out by listing several existing obstacles to meeting building needs.

1. School building codes are obsolete in most States.

2. The size of the local district too often is too small and prohibits the building of a school plant which is economical to operate.

3. Few communities have done effective long-term planning.

4. Extreme differences of tax evaluation practices prevent sound and equitable school building finance. There is too much dependence on the property tax as it now exists.

5. Few communities understand their school building needs.

There were others listed, including community resistance to additional taxation.

In connection with the obstacle caused by building codes, conferees thought the codes should be revised at intervals of not more than 5 years to make full use of newer building materials and methods. School leaders should be more willing to consult with industrial consultants before building in order to iron out certain architectural problems.

There isn't an item listed above that can't be corrected. In the eyes of President Eisenhower, and others who planned the conference, the reason for the conference was to provide a stimulus. If building problems had been discussed and talked about at local levels before the conference began, the conference probably moved delegates to return to the local levels and start work.

Some States did an outstanding job of holding community and State conferences at which building needs were brought out. The State of Minnesota had only one or two of these community conferences and was not one of the aggressive States in rising to the challenge of a close examination of the problems in education.

We in Minnesota have a way to go when it comes to understanding these problems on a local level.

The next phase of the conference discussion was suggesting of possible ways to overcome these obstacles. Heading the list was this:

That graphic presentations of accurate factual data be given to the public in the hope that an intelligent electorate will meet the problem on a local and State level.

Other suggestions included more realistic bonded indebtedness, equalized tax evaluation on statewide basis, State planning commission for public buildings and others.

On the Federal and State levels, suggestions included:

1. States should establish minimum building standards. This has been done but the standards are archaic for the most part and not up to date.

2. States should pursue research, and provide leadership through consulting services, for school districts on building construction with special emphasis on new building materials and techniques.

3. The Federal Government should have no control whatsoever over school building plans and specifications.

4. These people who put more trust in the Federal than State and local abilities to solve the problem suggested that the United States Office of Information engage in research in all areas of school building materials and construction and make results available to schools.

Conferees felt also that present buildings can be more effectively used for school and community purposes and suggested specific ways of doing this.

The possible use of buildings for the entire 12 months by children and adults should be explored for educational, civic, and recreational purposes, it was suggested. Buildings should be open for adult evening classes, recreation, and general civic and community purposes with school purposes having high priority. Proper supervisory control over use should be exercised so as to cause no interference with school operation. There should be supervision and budget provision for this extra use.

Some felt that activities should include use of buildings during school hours, on holidays, and weekends.

Double shift use of school buildings is highly undesirable but the conferees felt it may have to be tolerated in an emergency situation. It is no subsitute for an adequate building program, however.

Another point discussed was that the conferees felt that problems will not be solved until enough classrooms are available to make it possible to reduce the pupil-teacher ratio which will provide a more ideal teaching situation. The tremendous shortage of classrooms was a main point which was recognized.

The conference pointed out, in summary, that the floodtide of children coming along will make this school-building problem a very crucial one in nearly every community in the Nation.

To date, some communities have seriously studied the problem and have launched out boldly with bond issues and building programs. Too often these plans have been lacking the foresight of long-range planning and have been based on outmoded and unrealistic school-building codes.

Another general observation and a very encouraging one is the strong opinion of the delegates to the conference that while Federal aid may be necessary in a few instances to solve acute school-building needs, most school-building problems in the next decade can be solved at the State and local level.

A farmer from Iowa made the remark which may well set the tone of the conference finding on this question.

"With some more understanding on the local level and some real public interest I don't see anything about these school buildings that we can't lick right at home."

[From the Waseca (Minn.) Journal and Herald of December 19, 1955]

TEACHER PROBLEM MUST BE SOLVED RIGHT NOW

CHAPTER 4

(By B. E. Youngquist, as told to Jim Cowan, Journal and Herald news editor)

Assuming that adequate facilities are provided, that school organizations are set up properly and that the goals of education are well-defined, none of these can be effective without a solution to the problem of "How Can We Get Enough Good Teachers—And Keep Them."

The seriousness of this fourth question, considered by the White House conferees, was aptly illustrated when the conference was told that by 1960 the United States would be short about 1½ million teachers.

The figure is based on the shortages which have been developing for the past 5 years. If the trend continues for another 5 years, and if the population increases like it has since 1950, 1½ million teachers will have to be found.

Private liberal arts colleges have said they aren't going to be able to increase their enrollment much above present levels. The heaviest load is going to fall on public-supported universities and teachers colleges.

Some rather unusual solutions are going to have to come into the picture in order to deal with this crisis.

One of the basic attitudes of the conferees was this: The American public must be reawakened to the fact that teachers work with our most precious resource—our children.

We hear a lot about conserving our resources—soils, minerals, forests, water, etc.—but there is much less concern about conserving the most important of all resources. Our children's growth and development certainly have not been uppermost in the realm of public understanding and consideration.

Had the public taken a better look earlier at this many-sided picture, the problems facing education would not be as serious in degree nor as great in number as they are today.

A good educational system, the conferees believe, requires good teachers and enough of them in each locality to meet its needs. The belief was expressed that to increase the supply of good teachers from any source, three basic considerations must be kept in mind:

The prestige and status of teaching must be comparable to other professions within the community.

The salary structure must be high enough and flexible enough to compete effectively with other fields bidding for quality manpower.

The teacher's job must be so defined as to challenge and attract the interest of talented people.

One of the few times during the conference when the educators kept quiet was during the discussion of these three considerations. They wanted to see how the rest of the conferees would react to this part of the problem. In general, educators were pretty quiet on the entire discussion of this question.

As a result the group came out with practically the same feeling about the teaching profession as the teachers feel themselves. This is significant because it makes the statements mean more. Had the statements been stated by educators instead of lay people, the charge could have been made that

educators were trying to glorify their positions.

Right off the bat the discussion centered around "What is a good teacher?"

A good teacher is one who has an active, sincere interest in your youngster. He or she has a broad educational background and is professionally qualified and competent. The teacher possesses good physical and mental health, has good moral character and manifests a desire for self-improvement. The good teacher can work constructively with other professional workers, parents, and the community and is proud of teaching as a profession.

There must be enough good teachers in the classrooms to develop each child to his full potential.

But how can we get them?

There are several avenues of supply. One is by working with high school youths, stimulating them to an interest in teaching by presenting an example of dedicated and inspired teachers. Future teachers clubs are another way of interesting youths in the profession, and guidance activities focused on teaching can help provide a stimulus.

Private and public scholarships and other grants and the enlistment of all community agencies in recruiting high school teacher candidates must be called to help.

Programs of teacher preparation must be improved. Teacher training institutions must rebuild their program to include more effective teacher candidate selection and recruitment. Strong programs of broad, general background information to keep the teacher graduates from being narrow in their thinking should be planned.

Professional training of teachers is too often unreal and theoretical—bookish if you will. This must become more realistic and more closely related to the classroom problems the teacher meets in everyday teaching in the community.

It was brought out by the conference that evidence—lots of it—shows that lowering teaching standards doesn't make the profession any more attractive. It results in lowering the general competency of the profession and speeds up the process of driving out the good teachers.

Former teachers who have dropped from the profession were considered a source of help in the recruitment program. State surveys could be made to uncover this supply. These former teachers might be interested in returning to the profession if retraining program which were practical and dynamic were offered at convenient locations; if scholarships were available; if laws governing tenure and employment were made more reasonable; if working conditions and salaries were brought up to an attractive standard.

One other potential which I believe is fully as large as the former teacher group is the group of college graduate people who would be interested in teaching if special training programs were available. These programs would be streamlined to orient these people in the essential skills of teaching.

At best, this is an emergency measure and certainly shouldn't be considered a permanent source of teachers.

There was a feeling on the part of some of the conferees that the supply of good teachers can be increased by employee benefit plans comparable to those in industry. There is a real danger, I believe, in this approach going too far.

[From the Waseca (Minn.) Journal and Herald, of December 22, 1955]

FINANCING OF SCHOOLS NEEDS MODERNIZATION

CHAPTER 5

(By B. E. Youngquist, as told to Jim Cowan, Journal and Herald news editor)

The most widely publicized question studied during the White House conference on education was the one which dealt with financing our schools.

This issue was a crucial point and one which had the most vigorous opponents, the biggest group of exponents, and a large group in between which wanted to talk over and think about the question.

In chapter four the teacher problem was referred to as being the most immediate problem, the one which needs to be solved right away. There are many ways in which the teacher shortage problem can be attacked, one of which is included in the question of finance.

While this conference was not a voting body, or a decision-making conference designed toward some immediate action, several groups of lobbyists which moved into Washington and stood ready to influence the thinking of the conference if the opportunity presented itself. This seemed particularly true in the discussion on finance more than on the other questions.

One of the gratifying things about this conference to me was that there were not any conclusions drawn before the conference, as these groups expected and in some instances had accused.

Federal aid for the support of public schools was the most closely watched issue. In fact the feeling was so high that some of the reports which came out in the press were unbalanced. There was not the amount of time spent in discussing this as the amount of coverage would have you believe.

Press reports noted that the participants in the conference approved by a ratio of more than 2 to 1 the proposition that the Federal Government should increase its financial participation in public education. This was a true statement.

But the statement of financial participation in public education was not defined by the press. It was defined in the discussions by the conferees, however.

In my opinion the majority of delegates believed that the present participation of the Federal Government should be limited to that of building schools. A substantial majority felt that this applied to just a few States. But to recall a statement made several chapters ago, most States have not begun to explore their own resources as far as financing school building.

This was not brought out in its proper light in press reports of the discussions. Many people were led to believe that it was generally true that every State in the Union needed Federal aid to build schools as well as to operate them.

On the issue of Federal funds to the States for local school operation, the participants divided almost evenly. A very small minority was opposed to Federal aid for education in any form.

A generally accepted idea which was supported by the conferees was that Federal aid should never be permitted to become a deterrent to State and local initiative in education.

The proper State agency, the conferees felt, should administer Federal funds for education. The agency should determine the relative needs of local school districts. There was some opinion that Federal administration of financial grants for education should be vested in the United States Office of Education.

Almost unanimously opposed by the delegates was any Federal control over educational use of funds in local school districts. Accounting by the States to the Federal Government for fiscal purposes was not interpreted as Federal control of education, however.

One aspect which doesn't affect us in Waseca but which was very interesting was how the question of Federal aid should be treated in States where segregation is a problem. About a tenth of the conferees recommended that Federal aid should be made available to States only for those districts certifying that they are conforming to the Supreme Court decision prohibiting racial segregation in school systems.

Some felt the question of segregation should not be considered in discussions on Federal aid for support of education.

The key to the conference findings on State school aid was the consensus that State aid should be increased to provide, after a fair local levy, a basic program on an equalized basis. Some favored a combination of equalization and flat grants. There was general agreement that initiative on the local level to exceed the basic program should be encouraged.

Conferees felt a reexamination should be made in each of the constitutional and statutory restrictions on the bonding and taxing power of the State governments. These should be eased to the extent necessary to provide an adequate program of education. There was some opinion that, if necessary, constitutional restrictions should be removed.

On the subject of local schools support there were two basic tenets as I see it:

Many local school districts aren't getting as much education for their local dollar as they should.

The primary responsibility for control of education must come from the local school district and as such the problem of school finance is one which needs greater local understanding.

The way people live on farms and in towns changes over a period of time. School finance policies must be altered from time to time to fit these changes.

The major alteration on the local level concerns school district reorganization. Administrative units must eliminate or reduce to a minimum the inefficient and ineffective school districts in both the grade and high school levels.

Districts should be organized on the basis of natural areas of communication, geographic manageability and in keeping with the best interests of all those served by the school district.

[From the Waseca (Minn.) Journal and Herald of December 26, 1955]

PUBLIC APATHY MUST BE OVERCOME IN EDUCATION

CHAPTER 6

(By B. E. Youngquist, as told to Jim Cowan, Journal and Herald news editor)

"How Can We Obtain a Continuing Public Interest in Education?" was the sixth and final topic on the agenda of the White House Conference on Education.

Here was a question which pointed up a dangerous gap in American public education.

After 5 tiring workshop sessions crowded into morning, afternoon, and evening meetings for 3½ days, there were a few rumors floating about that this last question would not get the full treatment.

The rumor spreaders were pleasantly surprised.

It turned out that here was a subject on which the laymen were more expert and seemingly more informed than the educators. And the 166 groups went to town on the question.

"Do we believe that a continuing public interest is necessary?" conferees asked themselves and the answer was a roaring "Yes." If so, "Why?" they added.

"What activities can be listed which have been helpful?" "Which of these should be encouraged?" "What new ones can be thought up?

The conferees heard hundreds of examples of what had been done back home and what remained to be done. In fact, if the original 166 reports on this subject were published in their undistilled form there would be

enough material for the busiest of school publicity committees across the country.

An interesting sidelight on this topic is that the final report was written by a housewife from New Jersey and a young farmer from Ohio.

First of all, conferees said public education is a public enterprise and responsibility, basic to the welfare of our Democracy, and as such requires for its wholesome growth the active concern, support, and participation of the public.

"Too often the tenor of interest in the school goes up and down with the fortune of the local athletic team," was the comment of one prominent leader in field of labor. "Higher interest when the team is winning and 'Get the coach out of town' when the team hits a losing streak * * *," he said. This kind of slap-happy attitude wasn't considered adequate public interest.

Conferees felt that the best ambassador for the public school is a fine-quality educational program that sticks out all over by the enthusiasm and interest of its teachers and pupils.

However, the delegates felt that there were many activities at the citizen level which will create a continuing public interest in education. Some of the more common activities listed were:

Parent-teachers' associations.

Observance of special education days.

Newspaper reports on the local school, with an occasional feature article.

Formation of study groups.

Local lay citizen educational conference.

School board appointed lay advisory committees.

Parent-teachers' conferences.

School newspapers.

Illustrated annual reports by the board of education.

Teacher participation in community activities.

Conferees had rather caustic criticism for any PTA which spends its time raising nickels to buy wrestling mats, band uniforms, or what have you. The group felt strongly that the most worthwhile activity for any community PTA was to expend its efforts to increase the understanding of the local school, to widen its understanding of children, and to study at the problems of education on the State and national level.

If the problems and needs of the local schools are understood by enough people, there need be little worry as to how we can provide the needed band uniforms, wrestling mats, and any other equipment.

Certain other recommendations were suggested as being helpful and encouraging to continuing interest in education on the local level.

1. The community should use school buildings more.

2. School board meetings in all communities should be open to the public and citizens encouraged to attend them.

3. All citizens should be encouraged to participate more in school campaigns and to the polls on school elections.

4. There should be greater emphasis on instruction of students in the organization, financing, and purposes of public and nonpublic schools.

5. Boards of education should initiate programs that relate to educational matters.

6. Cooperative relationship should be encouraged between schools and public libraries.

7. Local and national publications should be encouraged to publicize the names and accomplishments of outstanding students in the community in the same manner as they do outstanding athletes.

8. Public relations should be an organized and planned part of every school program.

9. The setting aside and more effective use of additional channels for educational television should be accomplished.

10. A continuation of the White House conference should be held periodically at National, State, and local levels.

11. Legislative interim commissions, including both laymen and legislators, should be set up to study problems in education.

12. Educational programs of civic, service, labor, business, agricultural, and other organizations should be encouraged.

13. Study and dissemination of information on public education should be made by groups and organizations which are broadly representative of all parts of our society.

This group of recommendations applied to more than just the local level but applies in greater or less degree to every group having anything to do with education.

There isn't much which is new in the list of recommendations. About the only new thing about it is that some of the ideas haven't been used.

The all-too-common thinking is, "I've got too much to do already to be worrying about the schools, I'm too busy."

The question is, "What are you busy at?"

School authorities are on the firing line but their efforts fall short unless the firing line receives the interest and support of an informed public.

The American school system is a gigantic, constructive force—it merits some of your time.

In some respects this is the most important question of them all. It undergirds every other question of the conference.

Without a continuous public interest, it will be impossible to change a local school program of studies and activities to fit the needs of the pupils and of the community. Without an informed and interested public it will be near impossible to organize, or reorganize if such is needed, school systems into efficient school districts.

Public interest is essential to provide needed school facilities, to attract and hold an adequate supply of qualified teachers, and to pay for these things out of the public pocket.

All the way through the discussions, the term "public interest" crops up. Maybe there is some misunderstanding of the term.

By public interest, the conferees meant more than a casual concern. They meant special attention. They meant informed understanding. They meant willing cooperation. They meant, above all, a faith and a belief in American public education on the part of the greatest majority of American people.

They felt that public education is too crucial an item to swing and sway with the breeze.

[From the Waseca (Minn.) Journal and Herald of December 29, 1955]

CONFERENCE FINDINGS NEED THE LONG LOOK

CHAPTER 7

(By B. E. Youngquist, as told to Jim Cowan, Journal and Herald news editor)

An estimated 20 million words of earnest, across-the-table "grass-roots" conversation was reduced to something like 9,000 words of written reports at the White House Conference on Education held in Washington, D. C., November 28 to December 1.

The conferees, coming from all walks of American life, recommended many things, all aimed at improvement of the public school system. Nobody would hold that all school problems could be described—much less solved—in 9,000 words of report to President Eisenhower.

For those who like a bird's-eye view of what the conference recommended:

A list of goals for schools so that citizens and educators can have a clear and a commonly accepted understanding of what the American public wants the schools to accomplish.

A list of practices aimed at more efficient and economical operation of school systems.

A list of practices aimed at catching up with the overwhelming classroom shortage.

Proposals to attract and keep an adequate supply of good teachers.

Listed ways and means of improving local and State financing of education (limited Federal aid was endorsed for needy areas).

Proposed means of maintaining and furthur developing a continuing interest in education.

Bone-weary after 3 days and 4 nights of persistent, prolonged digging into facts, figures and points of view sometimes extreme, the conferees sized up what they had done. The press and other onlookers as well as the conferees themselves were surprised they had done so much.

"Soberest convention in my 22 years in Washington—they do nothing but work" growled a veteran Washington cab driver. He was correct about the hard work but wrong about calling it a convention—it was a giant workshop.

Few will deny that this conference made history. It will go on making history for sometime to come.

By no means is all of the history contained in the six brief reports which were made as summaries. These reports are each backed by 166 other reports all containing the thousands of ideas which must not—cannot—be allowed to get lost in the shuffle. The short final reports could be fairly criticized as the New York Times put it, as distillations of distillations (because the opinions of conferees at 166 tables went through 3 stages of condensation). Nevertheless the newspaper went on to say, "The conference also was a success to the extent that many of the recommendations in these reports will serve as guideposts for persons concerned with education at all levels."

President Eisenhower will get a three-part report on this gigantic stocktaking which began over a year ago and continued through the White House conference. The first part of the report will be the 53 official reports submitted by the States and Territories. The second part will be the 6 topic reports of the White House conference's 1,800 delegates as has been reported in this newspaper in the 6 previous articles.

The third part will be a summing up of the foregoing, the 996 individual Committee reports and the conclusions of the National Committee for the White House Conference on Education. The Committee is scheduled to meet in Washington, D. C., January 16 to formulate this third part of the report. What is contained in the entire report to the President will be under the microscope of the public eye and will be worked over for a long time to come.

Looking at the conference in general—a great many people, from many walks of life, spent several days thinking about the increasingly severe problems of the Nation's schools, teachers, and schoolchildren. Half a million people participated in the local meetings. The thinking of many people has been affected.

A southern judge remarked that he had thought his State was doing a pretty good job; now he knew that much more needed doing. A Midwestern State senator planned to go home to work for improved school organization. A scientist who had long been interested in school affairs said he was now much better informed on some of those matters. State governors and legislators, businessmen, club women, school officials, teachers, a few students, a few scientists, and others added their analysis of the Nation's interest in schools.

Millions of other persons read or heard news reports and had their interest stirred a bit more than usual. Even if the formal report is thrown away, the simple fact that the conference was held can be of lasting benefit to education in the United States.

For the great majority of Americans who really believe in democratic action, the conference was more than a success.

One top newspaper reporter of the more than 300 newspapermen who covered the conference said he had many doubts about the conference before it opened on Monday night. One of his chief doubts was that the voice of the people would be heard. Long before the conference was over, this reporter's doubts were gone.

The conferees said what was on their minds—they said it well—the Chairmen were faithful in recording, and the final judgment on each question was printed, broadcast, televised, and will go unaltered to the President of the United States.

Now that the conference is over, what next?

Look for a greater and a continued interest in public education. This is a must, the conferees said, if education is to do its job of training the human resources needed to maintain the best welfare of this Nation.

You can look for changes in the financing of education. Nobody wants Federal control of schools, but most agree that, as a nation, we must take care of areas who demonstrate they cannot provide adequate schools.

This kind of "giant workshop where all voices can be heard" may well set a pattern for the exploration of a problem which is of such general national concern as public education.

The American public has deep faith in education. It seems determined to get it and is willing to reshuffle the public moneys so this service can be financed.

A group of high-caliber lay people have had a good look at American public education and have come out with a set of ideas which will chart much of the near-future thinking on educational problems and should blueprint the policymaking relative to educational decisions at local, State, and national levels.

The method used at this conference has been criticized by some as "distillations of distillations or "as compromise to the fourth power." Actually, no information was lost in the process. All the thinking is on file in the 996 individual discussion reports, made before any distilling of ideas took place.

Already, 19 major national organizations of business, industry, and professional have included in their agenda for their next national conference a "consideration of the White House conference recommendations." This is hopeful for that continuing public interest the conferees recommended.

Can the lay citizen help?

Actually some of the significant reforms in American public education have been conceived in the minds of persons outside of the field of professional education. Benjamin Franklin's academy, Thomas Jefferson's blueprint for universal education, Horace Mann's design for State and local control of education are examples of how lay citizens have helped.

"If a nation expects to be ignorant and free in a State civilization, it expected what never was and never will be"—Thomas Jefferson.

"I continue to be amazed and favorably impressed by the quality of thinking and planning citizens do when they are fired by understanding and have an opportunity to do so"—Superintendent of Schools, Woodstock, Ill.

"It is an old but ever-vital truth that upon our schools rest much of the hope for the future of freedom. For to love freedom is, first of all, to understand it"—President Dwight D. Eisenhower.

There are some things you can do as a result of this "stock taking of education" that has culminated in the White House Conference on Education.

Interest yourself in local schools to the point of understanding what is really happening.

Take time to study issues on the local, State, and National levels. Sure you are busy—but what are you busy at?

Use your influence as a citizen to see that all the information brought together by the White House Conference on Education will be carefully preserved for research and study purposes. Further, that this information shall be available to any citizen or citizen group in the country who will need the White House Conference on Education information to round out their understanding of local educational problems or of public education on the State or national levels.

THE DULLES ARTICLE IN LIFE MAGAZINE

Mr. HUMPHREY. Mr. President, since the controversy over the Secretary of State's article in Life magazine arose 2 weeks ago, the fluctuations of Life's own official attitudes toward the controversy have been amusing to watch. They would be even more amusing if they were not tinged with serious questions going to the roots of Life's responsibility to its enormous worldwide readership for the impression of American attitudes and behavior which Life carries with it everywhere it goes.

Most of last week I am sure other Senators heard, as I did, the immodest exploitation of the Dulles article which repeatedly came over Washington radio stations. The editors of Life bought radio time to broadcast the following advertisement:

If you or someone in your family is about 21 years old, you may feel like writing a note of thanks to Mr. Secretary of State Dulles after you read Life magazine. Because Life tells how Mr. Dulles has kept us out of three potential wars. You probably remember 'em—Korea, Indochina, and Formosa * * * And Life's story of how Dulles staved off a full-scale war each time makes reading as lively as a good mystery.

As I noted on the Senate floor last Wednesday, January 18, Life did not limit its sales campaign to radio advertising. A full page ad was taken in the Washington Post and Times Herald, and I do not know in how many other newspapers, stressing the four interviews which Life had had with Mr. Dulles as a basis for the article.

Over the weekend, Life's editor-in-chief, Mr. Henry Luce, entered the Dulles controversy directly with quite a new approach. The four interviews have vanished now. Mr. Luce says the article was not an interview, was not cleared by the Secretary or anyone else at the State Department, and was based instead on "background conservation" with Mr. Dulles and on Life's "own review of the historical record." Mr. Luce took personal responsibility for approval of the article, adding that his editors were responsible for the vivid headlines, phraseology, and substance. Mr. Luce's statement complained that critics of the articles "put prejudice or personal advantage above the best interests of the United States." But he must be fully aware by now of the long list of distinguished and nearly unanimous editors, columnists, and commentators and public leaders who have condemned the Life article in the strongest possible terms both at home and abroad.

Mr. Luce concluded his statement by quoting some garbled but carefully selected excerpts from an editorial in the New York Times. None of us would quarrel with the theme of the Times statement quoted by Mr. Luce, that it is advisable to make known our position in advance to prevent miscalculations on the part of a potential aggressor.

But many of us differ strongly with Mr. Luce's final comment that the Life article gave concrete and vivid meaning to this theme. Our reasons for differing are contained in the paragraphs of the very New York Times editorial which Mr. Luce omitted from his quotation. The Times itself on Sunday, January 22, reprinted its editorial alongside the Luce statement, and the comparison itself shows what editorial liberties Mr. Luce has taken—and, I may say, apparently taken for the second time, this time with a New York Times editorial, the first time having been with Mr. Dulles.

Mr. President, I ask unanimous consent that the account may be printed at this point in the body of the RECORD.

There being no objection, the articles were ordered to be printed in the RECORD, as follows:

[From the New York Times of January 22, 1956]

LUCE DISCUSSES DULLES ARTICLE—ASSERTS EDITORS OF LIFE ONLY ARE REPONSIBLE FOR THE SUBSTANCE OF STORY

Henry R. Luce declared yesterday that the editors of Life magazine and no others had been responsible for the "substance and phraseology" of the controversial article "How Dulles Averted War."

The article, which appeared in the magazine's January 16 issue, quoted Secretary of State John Foster Dulles, as claiming mastery of the "necessary art" of going to the "verge of war," without getting into it.

Mr. Luce, the editor in chief of the magazine, said in a press statement that the attacks on Secretary Dulles because of the article had made an explanation "necessary and appropriate."

In his explanation he made these points:

The article was not an interview, but "our own review of the historical record" based on a "background conversation" with Mr. Dulles.

It was shortened and edited before publication and had not been cleared by Secretary Dulles "or any other official."

The use of the words "verge of war" and "brink" in headlines was "unfortunate" because they did not reflect Mr. Dulles' emphasis on a vigorous pursuit of peace.

Mr. Luce said the Life editors "heartily regret" any misunderstanding caused by the article, but added that "any fault of ours was furiously compounded by those who, for the moment, put prejudice or personal advantage above the best interests of the United States."

He quoted an excerpt from a New York Times editorial on January 18 as defining the true basis of United States foreign policy.

Mr. Luce's statement and the full New York Times editorial follow:

STATEMENT BY LUCE

"In view of the attacks made on Secretary of State John Foster Dulles because of an article in Life entitled 'How Dulles Averted War,' I believe it is necessary and appropriate for me to make a few simple points.

"First, the article as a whole was not an interview and it was not cleared by the Secretary or any other official. The article was based on background conversation with the Secretary and on our own review of the historical record.

"Second, the article originally written by Life's Washington bureau chief, James Shepley, was much too long for publication. It was shortened and edited, then approved by me. Responsibility for the published article, both as to substance and phraseology, belongs to the editors of Life and to no others.

"Third, most of the attacks on Secretary Dulles are based on one paragraph of direct quotation from the Secretary containing the words 'verge of war' and 'brink.' Taken in the context of the whole article, there is nothing in Secretary Dulles' words which is contrary to commonsense. For the Secretary is stating in vivid terms the perils of appeasement which should be understood by free men everywhere.

"Nevertheless our use of these particular words in the headlines was unfortunate in that they did not fully reflect the main emphasis of the lengthy conversation which was on the administration's vigorous pursuit of peace.

"Ever since its first year of publication in 1937 when war was already raging in Asia, Life has devoted its major effort to helping its readers achieve a clear view of the world crisis. We have always believed, in the darkest moments, that crisis can be overcome. We have repeatedly stated that what is most of all necessary is realistic analysis of the facts. This is one of the principles which has guided Secretary Dulles and which we desired to make plain. That President Eisenhower, advised by Secretary Dulles, did avert war we have no doubt. And that their courageous action achieved other objectives is also plain as day.

"If anything in our account of the Secretary's position caused any misunderstanding among our readers or the public, we heartily regret it. At the same time, we are bound to say that any fault of ours was furiously compounded by those who, for the moment, put prejudice or personal advantage above the best interests of the United States.

"The basis of American policy remains clear. The New York Times puts it as follows: 'As constantly emphasized by both President Eisenhower and Mr. Dulles, the United States is ready to adopt every honorable course to avoid war and achieve a just and lasting peace [and it has given ample proof of this]. But as also emphasized by both the President and the Secretary, the United States rejects appeasement and is determined to resist aggression whenever [wherever] basic moral values and its own vital interests [interest] are involved, even to [at] the cose of [a] calculated risk. Our Government further believes that the best way [to avoid aggression and war] is to make its position known in advance to prevent miscalculations on the part of a potential aggressor.'

"That is the general theme to which Life's article gave concrete and vivid meaning.

"HENRY R. LUCE."

THE TIMES EDITORIAL

"Taking notice of the storm aroused by a professedly authorized magazine article in Life extolling him for his 'artistry' in a personal 'verge of war' diplomacy, Secretary Dulles now offers a clarification of his own views on the issues involved. This clarification should allay some of the more reckless criticism of his whole conduct of foreign policy and may be welcomed as far as it goes. But it does not and cannot relieve him of all responsibility for another diplomatic faux pas.

"In this clarification, Mr. Dulles backs away from both the bulk and the tenor of the contested article and from a previous State Department endorsement of the 'substance' of his quoted remarks. He now declares that he did not write, read, or censor the article or know of its startling title, that the article expresses primarily the views of the author and that in dealing with complex subjects of foreign policy it inevitably tends to oversimplification and special emphasis. He also declares that the quotation about his 'art' of getting the United States three times to the verge of war without getting into it, while still true 'in substance,' was ambiguous in that it did not stress the defensive aspect, and that he would never have expressed the idea underlying it in quite that way, and certainly not for publication.

"In point of fact, the State Department did try to correct some of the wrong impressions conveyed by the Life article, but it was too late. This correction is now made by Mr. Dulles in a formal statement. In it Mr. Dulles reaffirms the two fundamental aspects of what is long-established American foreign policy. As constantly emphasized by both President Eisenhower and Mr. Dulles, the United States is ready to adopt every honorable course to avoid war and achieve a just and lasting peace, and it has given ample proof of this. But, as also emphasized by both the President and the Secretary, the United States rejects appeasement and is determined to resist aggression wherever basic moral values and its own vital interest are involved, even at the cost of a calculated risk. Our Government further believes that the best way to avoid aggression and war is to make its position known in advance to prevent fateful miscalculations on the part of a potential aggressor. That policy is amply demonstrated by our rearmament and by our alliances with other free nations to meet the aggressive designs of the Communist bloc.

"Stated in this way, the policies outlined by Mr. Dulles are, as he says, not personal but national policies which have had the endorsement of both parties and the great majority of the American people. But Mr. Dulles has an unfortunate knack for stating these policies not merely in ambiguous but in misleading and provocative phrases which arouse personal attacks on him and do a great disservice to the policies themselves. It is to be hoped, therefore, that the latest case of this kind will be the last one."

[From the New York Times of January 23, 1956]

BUTLER HITS LUCE ON DULLES STORY—DEMOCRATIC CHIEF CALLS LIFE GOP HOUSE ORGAN THAT TRIED TO GLORIFY SECRETARY

WASHINGTON, January 23.—Paul M. Butler, Democratic national chairman, said today that Life magazine's "brink of war" article was a "partisanly inspired effort to glorify" John Foster Dulles, Secretary of State, by a "house organ" for the Eisenhower administration.

Mr. Butler characterized as an "amazing performance" what he termed the "embarrassed backtracking" by Henry R. Luce, editor-in-chief of Life and Time, on the Life article.

"It now appears that both Life editors and Mr. Dulles himself went overboard in this effort at glorification, and the kickback was one of the worst reversals this administration has experienced," Mr. Butler said in a statement, which added:

"So Mr. Luce seeks to put the blame on Life editors. This is a most unconvincing maneuver in view of the fact that Mr. Dulles has already assumed responsibility for the quotes and views expounded in Life."

LUCE'S REMARKS RECALLED

Mr. Luce said Saturday Life was responsible for the "substance and phraseology" of the article that was based on an interview with Mr. Dulles. He described as unfortunate Life's choice of words in the headline and in a caption on the front cover that read: "Three times at brink of war; how Dulles gambled and won."

"If anything in our account of the Secretary's position caused any misunderstanding among our readers or the public, we heartily regret it," Mr. Luce said.

The article stirred criticism of Mr. Dulles by a number of Democrats and some segments of the British press. Mr. Dulles said last week that the article was necessarily oversimplified in its emphasis on some aspects of foreign policy.

Mr. Luce also said that any fault on the part of Life "was furiously compounded by those who, for the moment, put prejudice or personal advantage above the best interests of the United States."

RECKLESS JINGOISM CHARGED

Alluding to that statement, Mr. Butler said that Mr. Luce was assailing "the Dulles critics for hitting at the reckless jingoism for which Mr. Luce himself now apologizes."

Mr. Butler declared that what he called "Mr. Luce's attempt to explain away the shocking remarks" of Mr. Dulles was "nothing more than a continuation by the Luce publications of an editorial policy blindly dedicated to support of the Eisenhower administration."

"It seems to me," Mr. Butler added, "that Time and Life have become excellent media for keeping up with Republican Party propaganda lines, but the public should be warned that they cannot be depended upon for a factual and objective reporting on the Republican Party and the Eisenhower administration.

"The Luce magazines consistently prove themselves to be house organs for the Eisenhower administration and the Republican Party."

FOREIGN POLICY DEBATE—APPRAISAL OF WASHINGTON DISPUTE OVER DULLES' LIFE MAGAZINE ARTICLE

(By James Reston)

WASHINGTON, January 23—the foreign policy debate in Washington has taken a bad turn into angry personal and political recrimination.

What started as a legitimate inquiry into the policy decisions taken by the Eisenhower administration to avert war is now developing into a partisan argument that may very well influence congressional consideration of the administration's foreign aid and other overseas policies.

This is what often happens in the Capitol: Debate does not clarify, but obscures the central issue. Congress is now dividing for and against John Foster Dulles, Secretary of State, and the main question about the President's policy decisions in the Korean, Formosan, and Indochina crises is getting lost.

The main question raised by Mr. Dulles' interview in Life magazine was not whether he had consciously developed the "art" of carrying the country to the "brink" of war.

The main question—still unanswered after all the noise of the last few days—is whether the President of the United States "decided" on a policy of atomic retaliation against Manchuria and South China if the Communists made open war again in Korea and Indochina.

DULLES ATTACKED PERSONALLY

The Democrats, who control the congressional committees, and have the power to get an answer to this question, in private session, if necessary, have not kept to the central point. They have insisted on attacking Mr. Dulles personally and calling for his repudiation or dismissal.

Paul Butler, chairman of the Democratic National Committee, carried the inquiry further off the main track today by attacking Henry R. Luce, editor in chief of Life, for running what Mr. Butler called a house organ for the Republican Party.

The main facts in the case are these:

John R. Beal, the State Department correspondent for the Luce publications, who was doing a book on Mr. Dulles, and James Shepley, the chief Washington correspondent

for the same publications, had several meetings with Mr. Dulles, which were tape recorded.

These two veteran correspondents showed the transcript of the talks to their editors in New York, and Mr. Shepley wrote an article based partly on the transcript of Mr. Dulles' remarks and partly on other material, some of which was secret State Department memoranda made available to them by the Secretary of State.

Mr. Luce has apologized for the headlines on the article—"How Dulles Averted War * * * Three Times at the Brink of War: How Dulles Gambled and Won"—but he stands by the written article and the article contained these statements:

"In order to save lives in the U. N. command [in Korea], Eisenhower decided on the tactical use of atomic arms [against Communist bases in Manchuria] should hostilities be renewed. Our allies in the U. N. command would be informed of these decisions when and if the time came to implement them. * * *"

"Dulles recommended that the dangers be faced [in the Indochina crisis] and that if the Chinese Communists intervened openly, their staging bases in south China be destroyed by United States air power. President Eisenhower concurred. * * *"

"Dulles has never doubted, incidentally, that Eisenhower would have regarded an attack on Quemoy and the Matsus as an attack on Formosa."

MAIN QUESTION DEFINED

The main question, then, concerns, not Mr. Dulles' theories about the art of diplomacy, but whether the American Government took these decisions, whether the President concurred in a policy of aerial bombardment against Manchuria and south China under certain circumstances, and whether these decisions were concealed from the congressional leaders and the allies whose security would be involved in the outbreak of an atomic war.

There is no doubt that these alternate policies were considered. Everybody knew that. Nor is there any doubt that the presence of American power in the Pacific area and the danger of provoking America into an atomic war were major, if not the main, deterrents to further Communist conquest in Korea, Indochina, and the Formosa Straits.

The Democrats know this, and concede it in private, but what they do not know is whether the United States Government reached momentous policy decisions involving the prospect of a much wider war.

Mr. Shepley and Mr. Beal are not amateur reporters. They know the fundamental difference between the consideration of a policy involving the possibility of atomic war and decisions to follow such a policy.

They had a tape recording of the remarks by the Secretary of State to guide them, and their reports involve the most serious act a government can take.

The debate is not centering on this at all, however. It is centering on Mr. Dulles brink statement, which, after all, is scarcely a new charge against a foreign secretary.

Richard Cobden once made almost precisely the same charge against Lord Palmerston. "I do not believe in war," he said. "Palmerston likes to drive the wheel close to the edge, and show how dexterously he can avoid falling over the precipice. Meanwhile he keeps people's attention employed, which suits him politically * * *."

The Democrats don't really think of Mr. Dulles as a reckless man who enjoys looking brinks in the face. But they are angry with him. They have always looked askance at him, ever since he was in the Senate, and they are focussing their fire on his brink remarks, which they know to be essentially true.

Meanwhile, the bipartisan front, so essential to Mr. Dulles' foreign-aid program, has been weakened, and the main question—whether decisions were or were not taken—has been brushed aside by the President and Mr. Dulles and overlooked by Democrats.

Mr. HUMPHREY. Mr. President, the Secretary of State in his news conference last week and Mr. Luce in his weekend statement have jointly left a large twilight zone, not only over the responsibility for this unfortunate article, but over the far more important issues of policy involved. These central issues are among the most basic questions in the whole field of foreign policy.

I digress to say that the junior Senator from Montana [Mr. MANSFIELD], gave to the Senate recently a very fine exposition and explanation of the great basic issues in foreign policy. His remarks deserve most thoughtful, mature, and constructive consideration by the Senate. I point out, further, that that is the kind of consideration which those of us who discuss these subject matters should give. There should be no emotional, hysterical argument; we should argue on the basis of thoughtful, constructive analysis of the vital issues which affect our country.

It is in the national interest that the appropriate Senate commttees, in executive session if necessary, go to the root of Mr. Dulles' actual statements to the Life correspondents.

At a later date, as soon as the action on the pending bill had been completed in the Senate, it is my intention to discuss in considerable detail the issues of foreign policy—the issues in the Near East and Far East which affect us; the issues in the NATO alliance which affect us; the issues confronting us in other areas throughout the world, particularly in the Mediterranean.

We need to know—

First. Did President Eisenhower decide on the tactical use of atomic weapons in Manchuria if the Korean truce broke down, as the Life article says he did?

Second. If so, were our allies informed? The Life article says no.

Third. Did Secretary Dulles recommend that if the Chinese Communists intervened openly in Indochina, their staging bases in South China be destroyed by American air power?

Fourth. If so, did President Eisenhower concur, as the Life article says he did?

Fifth. Is it true, as the Life article says, that Secretary Dulles has "never doubted" that President Eisenhower would regard an attack on Quemoy and Matsu as an attack on Formosa?

Sixth. If so, is this assumption of Mr. Dulles about the President's attitude justified? Is this simply a general feeling, or is it an attitude based upon comment or discussion with the President?

It is essential that these questions be explored. If the answers to them are the answers Life supplied, then the administration has concealed the most important kind of far reaching decisions, both from Congress and from our Allies.

There is a simple method, Mr. President, of ascertaining the truth so far as Mr. Dulles' own contribution to the Life article is concerned. There exists a recorded transcript of the original interviews which the Life reporters had with the Secretary of State. Up to now, Mr. Dulles has categorically refused to release this transcript. Perhaps in the interest of bipartisan policy-making, he can now be prevailed upon to reconsider, because there is no better way to answer the arguments of those of us who have been deeply concerned about the situation than to have a full display of the statements, comments, and discussions of the Secretary as recorded. That will put at rest, once and for all, the whole question which we have debated during the past two weeks.

Mr. DOUGLAS. Mr. President, will the Senator from Minnesota yield for a question?

Mr. HUMPHREY. I am happy to yield to my friend from Illinois.

Mr. DOUGLAS. Would the Senator from Minnesota suggest that Mr. Dulles be invited to play the tape recording in the Senate Caucus Room, with admission by ticket to be afforded all Members of the Senate and the House?

Mr. HUMPHREY. I may say most sincerely to my friend from Illinois that in the light of the controversy which has grown and which continues to grow over the alleged statements, it seems to me that every Member of Congress is entitled to know what the facts are. I am saying this with the very thoughtful consideration that statements were attributed to the Secretary in the Life article which apparently were so open to controversy that the editor of Life magazine had to apologize not only for the journalistic technique—format, headlines, and so forth—but also for the substance, and to take responsibility for the substance.

The situation would be different if the article had appeared in a small publication, having very limited circulation. But I respectfully suggest that it appeared in one of the larger publications of the world, a very fine magazine.

In this instance, I feel that a disservice has been done either to the Secretary or to the people, and we ought to ascertain exactly what the facts really are.

As I said, I shall return at a later date to discuss foreign policy matters in much more overall detail. I am deeply concerned about what is happening in the Middle East. I could ask the question again and again: What is our policy in that area? I am deeply concerned about the political situation in France, a nation which is the keystone of the North Atlantic Treaty Organization. I am deeply concerned as to what the attitude of the United States will be on the question of Cyprus, which is involving our allies in bitter controversy, a question which has almost wrecked, or at least has severely tested—I will withdraw the word "wrecked"—the alliance of Yugoslavia, Turkey, and Greece.

I think there are still many unanswered questions as to how we are going to proceed in South Vietnam, in order to strengthen that fine country in its efforts to achieve full scale and permanent independence.

I cannot relinquish the floor without saying that anyone in his right mind today must be deeply concerned as to our relationship with India, the second larg-

est nation in the Asian area, a nation having a population of 375 million.

There are other matters of deep concern which the press brings to our attention every day, including the influence of Soviet economics and propaganda in the Latin-American sphere, the Soviet moving right into our hemisphere. The problem is growing more serious every day.

I should like to know more about the use of Czechoslovakia as a sort of spearhead for the introduction of Soviet armament to troubled areas in the world.

All these occurrences require most thoughtful, considerate, and nonpartisan explanation and study. The Secretary of State suggested yesterday that we consider these matters in a bipartisan tone and a bipartisan manner. I assure him that that will be done. I am proud to say, as one Member of the Senate, after having checked my voting record recently, that I voted in support of 93 percent of the issues presented by the President on foreign policy, as to appropriations and authority to be granted. I think I have a record of bipartisanship. I have a record of supporting long-term economic aid when members of the President's party could not see fit to do so.

I feel that the Democratic Party has been exceedingly responsible, all to its credit, in the discussion of foreign policy.

I suggest that the Secretary of State, as he asks for nonpartisan consideration of these great issues of foreign policy and bipartisan support, might very well go back and look at the platform plank of the Republican Party in 1952 on the subject of foreign policy. According to all accounts, that plank was primarily written by Secretary of State John Foster Dulles. That plank is filled with partisanship and a bit of irresponsibility.

Furthermore, I might say that to brand a party as a party of treason is partisanship of the most violent character.

There is one way in which to gain bipartisanship. There is one way to get a mature and constructive approach to all these questions. That is to come with clean hands and with the desire to have a truly bipartisan and nonpartisan discussion in terms of the welfare, security, peace, and freedom of the United States. I pledge myself to that particular objective, but certainly I feel there are questions which are unanswered, questions which deserve our most personal, direct, and continuous consideration. We are not talking about something small or of the little consequence; we are talking of something which affects the very life of our Nation itself, and also the lives of hundreds, thousands, yes, millions of individuals in the United States and throughout the world.

AMENDMENT OF THE NATURAL GAS ACT, AS AMENDED

The Senate resumed the consideration of the bill (S. 1853) to amend the Natural Gas Act, as amended.

Mr. PASTORE. I suggest the absence of a quorum.

The PRESIDING OFFICER. The clerk will call the roll.

The Chief Clerk proceeded to call the roll.

Mr. PASTORE. Mr. President, I ask unanimous consent that the order for the quorum call be rescinded.

Mr. POTTER. Mr. President, reserving the right to object, I think the Senator from Massachusetts [Mr. KENNEDY] is about to speak on a most important subject, the natural-gas bill, and that there should be a quorum present. If it were not for the late hour, and the persuasiveness of the Senator from Rhode Island, I would insist on a quorum tonight, but, seeing that the hour is late, I withdraw my reservation.

Mr. PASTORE. I could never agree more with the Senator from Michigan in his desire to have a greater number of Senators present than are now in the Chamber, in order to hear the eloquence of the Senator from Massachusetts, but, nonetheless, we are all hopeful they will read the RECORD.

The PRESIDING OFFICER (Mr. DANIEL in the chair). Is there objection to the unanimous-consent request of the Senator from Rhode Island? The Chair hears none, and it is so ordered.

Mr. KENNEDY. Mr. President, the debate on S. 1853, the so-called Fulbright bill to amend the Natural Gas Act of 1938, has been extensive and most illuminating. Every aspect of this controversy has been thoroughly probed by the very able proponents and opponents of the bill here in the Senate. I should, however, like to take a few moments to explain my own strong opposition to the bill.

The problem before the Senate today, it seems to me, is not whether the Supreme Court in the Phillips case should have spoken on this subject, or whether the Court accurately interpreted congressional intent in rendering its decision. Rather, we must resolve the policy question of whether the bill before us now is in the public interest and should be passed.

As I understand the position of the bill's proponents, there are four principal grounds upon which they seek to justify S. 1853: First, regulation of a commodity such as natural gas is not proper, necessary or desirable; second, if producers are regulated their normal incentives to discover new sources of natural gas will be lost and as a nation we will lose the benefit of the discovery of new gas fields; third, regulation of producers and gatherers present tremendous mechanical and administrative difficulties—in short, the industry is not suitable for regulation; and, fourth, the bill provides protection for the consumer of natural gas which is not available under the present act and such protection is adequate. Permit me to discuss each of these points.

First, I agree with the general principle that regulation by the Federal Government of any business activity should be undertaken only where there is the clearest demonstration that such regulation is absolutely necessary to protect the interest of the public. Applying that principle to the natural gas situation now before us, it seems to me abundantly clear that the nature of the industry calls for regulation. Indeed, the supporters of S. 1853 concede that there must be some regulation at each of the three basic phases of the industry's activity: the production and gathering of natural gas, the transmission of it into the States other than the producing State, and the distribution of the gas in the States of its ultimate consumption. Direct regulation of the distributor who sells to the consumer is, of course, maintained by every State. Similarly, the pipeline companies, which purchase the gas in the fields and transport it across State lines to the distributors, are directly regulated by the Federal Power Commission. The advocates of the Fulbright bill admit that indirect regulation of the price charged by the producers and gatherers to the interstate pipelines, through the power of the FPC to disallow the amount by which the price paid for the gas might exceed a reasonable market price, is desirable and agreeable to them. They insist that such regulation is sufficiently protective of the consumers' interest.

The willingness of the proponents to accept the principle of partial regulation of the producers and the gatherers seems to me to weaken severely any argument that this bill should be passed to restore to unregulated free enterprise, a segment of our economy which has been traditionally free of governmental intervention and which should not be regulated because of its competitive nature, a contention which incidentally is seriously weakened by a true picture of the producing portion of the industry. Free enterprise or Government regulation is not the issue in this debate. The question is how much regulation and what kind.

Second, let us examine the argument that without the passage of this bill, the gas production of the wildcatters, whose quests for profitable strikes are essential to the development of new sources, would dwindle to nothing. From all of the evidence that has come to my attention, it appears that the discovery of these gas fields has resulted, not from searches for gas, but, rather, as incidental results of searches for the more profitable oil which is found in the same general geographical areas. The bill will not affect those searches. Moreover, the 27½ percent depletion allowance provision in our internal revenue laws provides a very healthy incentive to continue the search for new gas fields. Finally, a return of 6 percent on one's investment—and included in that investment are the costs of all reasonable efforts to find gas, whether resulting in failures or strikes—should be a considerable inducement for many persons, and such a return will be possible under even the strictest regulation.

Third, the contention that producers and gatherers should be removed from direct regulation because regulation of them is administratively difficult, if not completely impracticable, is unconvincing. The Government has undertaken difficult regulatory functions in the past; if direct regulation is in the public interest, it should be undertaken even if difficult. The claim that reporting and other burdens of regulation fall particularly heavily upon the smaller producers could quickly be met—if the

proponents would agree—by adoption of the substitute proposal offered on the floor of the House, which would have expressly exempted producers and gatherers whose sale of natural gas for resale in interstate commerce does not exceed 2 billion cubic feet in any calendar year—a proposal which would exempt 90 percent of the producers.

Mr. PASTORE. Mr. President, will the Senator from Massachusetts yield at this point?

Mr. KENNEDY. I yield to the distinguished Senator from Rhode Island, who has been a leader in the fight against the bill.

Mr. PASTORE. Is the Senator from Massachusetts familiar with that fact that the proposed exemption from Federal regulation of small producers, including all those who produce up to 2 billion cubic feet of natural gas a year, was set forth in an amendment which in the committee was opposed by the very ones who are the proponents of the pending bill? Is the Senator from Massachusetts aware that the very ones who now are advocating the enactment of this bill because, so they say, the present situation works a hardship on the small independent producers, are the ones who, in the committee, opposed that amendment.

Mr. KENNEDY. It is difficult to realize that that is so, but I believe the record supports the Senator's statement. Obviously, if the proponents are genuinely concerned about the regulation of the small wildcat producers they should be glad to accept the offer of the opponents of the bill to have those producers exempted from regulation. It is difficult for the proponents to use the burden on the smaller producers as an argument in favor of the enactment of the bill and a major reason why the bill should be passed in view of their failure to support the effort made to free the small producer.

Furthermore, when we consider the complicated regulatory functions which the Government fulfilled during World War II, for example, it is a little ridiculous to argue that it would be difficult for the Government to regulate the producers in this field, particularly if 90 percent of them—namely, the small ones—were to be exempt from regulation by the Government.

Last, I am not convinced that the argument that the bill provides much needed protection to the consumer is advanced seriously. That assertion, when it is made, apparently rests upon the assumption that if the bill is not enacted, no new gas fields will be discovered, the supply will not match the increased demand, and prices will necessarily go up. I have already pointed out that the evidence does not support the claim that there would be no further discovery of new gas fields, because nearly all the witnesses, particularly Mr. Thompson, from Texas, made the point that the discovery of gas is only incidental to the major efforts directed toward the discovery of oil.

The other day, the figures cited by the Senator from Illinois [Mr. DOUGLAS] for the income of the major companies involved in this field showed that their major income is from oil, rather than from gas.

Far from protecting the consumer, Senate bill 1853 is more detrimental to consumer interests than any measure brought before this body in recent years. I say this for the following reasons:

First, enactment of the bill is certain to result in higher prices. No one disputes this. Indeed, one of the proponents' arguments—namely, that without increased prices there will not be exploration for new gas fields—rests squarely on that assumption. There is no real competition to keep it down. Although there are between 4,500 and 8,000 producers of natural gas in the country, 70 percent of the production is in the hands of 43 producers. Moreover, the nature of the industry is such that the interstate pipelines cannot shop for the lowest competitive prices, for the expensive, immobile pipelines cannot be wheeled about from field to field. With the increasing demand and diminishing reserves, the gas industry, the sixth largest in the United States, is destined to continue as a sellers' market.

Even the use of some new standard, such as "reasonable market price," cannot help but permit increased prices to consumers. As I understand it, the Federal Power Commission—whose authority, it should be remembered, would be limited to disallowing as expenses only the portion of the price paid by the pipeline above the reasonable market price—would be restricted to, in effect, ascertaining the market price paid for gas, without inquiry into its inherent reasonableness. No one yet has a clear idea of how that "market price" would be determined. Conceivably, it could be based on no more than the price paid by any pipeline to any producer.

The price of gas is of concern to all gas-consuming areas of the country. But it is a special problem in New England. There the competitive positions of gas and oil are quite close. While the cost of natural gas in Chicago is 90.8 cents, as compared with a cost of $1.13 for the equivalent heat from fuel oil—and the Memphis figures are 58 cents as against $1.09; the Kansas City figures are 51.8 cents, against 86.5 cents; Cleveland, 60 cents against $1.09—the Boston figures are $1.42 for gas, against $1.07 for the equivalent heat from fuel oil. The Springfield figures are $1.35 for gas against $1.11 for fuel oil; and in Worcester the figures are $1.27, against $1.10.

This New England price structure is explained by the fact that (a) we are at the end of the natural gas pipeline, and (b) fuel oil which reaches us by ship has no heavy transportation charge. There is a heavy investment by New England consumers in gas appliances; and, of course, our utilities have long-term obligations with the pipelines. But additional increases in the cost of gas could well result in causing the natural-gas industry to price itself out of the New England market, and in creating serious difficulties for the consumers and utilities of our area, where the competitive positions of natural gas and fuel oil are quite close, and where there is a very small margin between their prices. Thus price is a crucial matter to us in Massachusetts and, I believe, in all of New England.

Mr. PASTORE. Mr. President, will the Senator from Massachusetts yield further to me?

Mr. KENNEDY. I am glad to yield to the distinguished Senator from Rhode Island.

Mr. PASTORE. In addition to what the Senator from Massachusetts has just said, in view of the fact that the fuel oil industry is controlled by the same companies that control the natural gas industry, is it not inevitable that if the price of natural gas rises to such an extent that it no longer is competitive with fuel oil, then the price of fuel oil will rise, and then the prices of both natural gas and fuel oil will continue to go up and up and up, and the public will be unable to obtain relief?

Therefore, is it not fair to conclude that the result of such an increase in the price of natural gas will be an increase in the price of fuel oil?

Mr. KENNEDY. Of course.

Mr. President, the domestic oil industry has been in the forefront in urging the administration to limit the importations of residual fuel oil, upon which New England is heavily dependent. So, on the one hand, we have reduced importations of residual fuel oil—importations upon which we depend, in order to provide heat to a large portion of our area—and, on the other hand, we are faced with an increase in the price of natural gas, upon which we are equally dependent. Our area does not have large natural resources, Mr. President, but is particularly dependent upon importations from other areas. Therefore we are particularly sensitive to increases in the price of importations of this type.

Second. If, as has been suggested by lawyers and competent students of this complicated subject, the proposed indirect regulation of rates charged by producers turns out to be unconstitutional, we shall find ourselves without any regulation at all in a field of enterprise demonstrated to be monopolistic in character. The Court could well find that Congress could not delegate the right to determine rates to uncontrolled negotiations between producers and pipeline companies; or the Court might find that the vagueness of the criteria for ratemaking might raise constitutional issues. Mr. President, I am concerned lest we be left without any regulation.

Third. Passage of Senate bill 1853 would dignify and give congressional support to the escalation clauses which have become so much a part of the natural gas industry. Thus if, for example, a contract containing a most-favored-nation clause automatically results in an increase in the cost of gas, due to an increase negotiated on another contract between different parties, the Federal Power Commission would be precluded from finding that the automatically—yet artificially—induced increase was not a reasonable market price. The inclusion of escalation clauses in natural gas contracts has had a harmful effect upon the industry and should be eliminated or at least severely restricted. I recog-

nize the problems involved in securing long-term commitments from producers, and I know that they must be afforded some protection; but that protection should not be a one-sided affair with limited bargaining strength held by the ultimate consumer and distributor.

Fourth. The indirect regulation imposes its burden upon the pipeline rather than the producer; and there is no assurance that it will not result in financial destruction of the pipeline, instead of lower wellhead prices. Since S. 1853 would permit the FPC only to disallow part of the cost of natural gas as an expense, the pipeline may be saddled with a contractual obligation at one end of its operation and a price restriction at the other end. Certainly the interest of the consumer and of the Nation at large is not served by legislation which could result in the failure of interstate pipelines while leaving the price paid producers uncontrollable.

Mr. PASTORE. Mr. President, will the Senator yield?

Mr. KENNEDY. I yield.

Mr. PASTORE. I think the Senator from Massachusetts very graphically described and interpreted subsection (b) of section 3. It distinctly provides that the Federal Power Commission shall not be brought into this situation until such time as the pipeline company files application for a rate increase. Before it can file an application for a rate increase the escalation clause will have already been triggered off. The pipeline company will already have been compelled, under the contract, to pay a price which later the Federal Power Commission may determine to be above the reasonable market price. Therefore, the money will already have been paid out by the pipeline company. There is nothing in the bill which would compel the producer to pay it back.

There would be nothing the pipeline company could do about having its rates determined, because it would require a certain amount of time; and the whole effect of the operation would be to punish the pipeline company which, in good faith, paid under the conditions of an escalation clause, and later had to file with the Federal Power Commission an application to have the reasonable market price established. Then it might be told, "While you may have paid the money in good faith under the terms of your contract, we are sorry you cannot charge it off against the cost. We are very sorry, but you cannot recover the money."

Mr. KENNEDY. The Senator has put it succinctly. The control is on the pipeline; and in many cases they will not have the power themselves to enforce what we might consider a reasonable price from the producer. Therefore, the Federal Power Commission will be faced with the choice either of agreeing with the decision the pipeline company has made, or else not permitting the pipeline company to include the full cost of the gas as a proper expense, thereby imperiling the financial security of the pipeline.

Mr. PASTORE. Would the Senator go so far as to say that the proponents of the bill have not only proposed to free the producer from any Federal supervision, but have gone a step further and actually have inserted a provision which is punitive against the pipeline companies?

Mr. KENNEDY. Yes; and not against the producer.

Mr. PASTORE. And not against the producer.

Mr. KENNEDY. Fifth, the supporters of the bill have failed to set forth abuses or other conditions which justify the legislative changes they urge. They do not claim that regulation by the FPC under the Phillips decision has unduly depressed prices, or that the burdens of regulation have driven producers out of business or caused them not to sell their gas in interstate commerce. The necessity for such change has not been demonstrated.

When the interests of 29 million consumers are weighed against the interests of 8,000 producers and, as I have stated, all but 197 or 200 of them could be exempted because of the small amount of gas they produce if the supporters of Senate bill 1583 should agree, it is not difficult to see how the question should be decided, especially when a substantial percentage of the 197 or 200 producers are major companies, all of which have enjoyed the most profitable period in their history during the past 2 years or more. They enjoy a depletion allowance of 27½ percent, and would enjoy a return of at least 6 percent on their investment.

It does not seem to me that it can be successfully argued that the public interest would not be affected by freeing from all control 197 or 200 of the wealthiest companies in the United States.

Mr. PASTORE. Mr. President, will the Senator yield?

Mr. KENNEDY. I yield.

Mr. PASTORE. Does the Senator have any fear that, if the producers were under supervision, the Federal Power Commission would do anything but equity between the producer and the consumer?

Mr. KENNEDY. I think the argument has been made by some that if this bill is not passed, those of us in certain areas of the country who are dependent upon gas will find our supplies curtailed.

It seems to me the answer is obvious, for three reasons.

First, gas is found, in the main, as a secondary product in the search for oil.

Secondly, because of the depletion allowance given the producers, and finally because of the rate of return which would be allowed by the Federal Power Commission under the present law, the search for natural gas would continue. So far as the tax situation is concerned, it is by far the most profitable industry, as compared with the other industries of this country. It seems to me that there is no doubt that even under the present law, the major oil companies—and we are concerned only with the major companies—would continue their search for oil, and therefore would discover gas, and the natural-gas industry would continue to expand, even under the present situation. Therefore the bill is not necessary.

Mr. PASTORE. Mr. President, will the Senator yield?

Mr. KENNEDY. I yield.

Mr. PASTORE. Of course, the Senator understands that the Federal Power Commission would not be limited to an allowance of a 6-percent return. It could allow a greater return if it felt that it was necessary under the circumstances.

Mr. KENNEDY. That is correct. In other words, the Federal Power Commission would be concerned, as all of us are concerned, with developing new sources of supply. Therefore it would allow the producers of natural gas a sufficient return on their money to insure an increased supply of natural gas. If 6-percent plus the depletion allowance would accomplish that purpose, very well. If more were necessary, the FPC could allow more. But it is a great mistake to use the threat that natural gas will not be available to many parts of the country as a reason for supporting the bill.

When we talk about the public interest, and when we weigh the interests of the 29 million consumers dependent upon natural gas against the interests of the major companies which control the great percentage of production of natural gas, it seems to me there is no doubt that the interest of consumers would best be served by the defeat of the bill. The companies which would be subject to regulation have all flourished in recent years, and their future prospects are excellent.

The interests of the public demand that this bill be defeated.

Mr. PASTORE. Mr. President, will the Senator yield?

Mr. KENNEDY. I yield.

Mr. PASTORE. I wish to compliment and congratulate the Senator from Massachusetts upon the very graphic and clear presentation he has made of this subject. Because the Senator and I come from sister States, we realize what this issue means to us. In our area there are thousands of captive customers.

I think the Senator will agree with me when I say that we do not want any injustice done to the producers or gatherers. We do not want the Federal Power Commission to invoke any regulation which would confiscate their property or do other than encourage them in their desire to search for more gas.

Mr. KENNEDY. It seems to me that the suggested amendment, which would remove a great percentage of them from regulation by the Federal Power Commission, would take care of that basic argument.

Mr. PASTORE. It would be a great step in that direction. After all, the captive consumers found in the congested areas of the country at the end of the line have spent a great amount of money in converting their appliances so as to be able to use this fine product, natural gas. All we are saying is that there must be some supervision on the part of the Federal Power Commission, not only to insure a supply of gas, but to see to it that reasonable prices are charged the consumers, and that reasonable profits are made by the producers.

All the Supreme Court said in the Phillips case was that Federal control

should be invoked only at the time when the gas is sold for resale in interstate commerce.

Mr. KENNEDY. That is correct.

Mr. PASTORE. It is as simple as that.

Mr. KENNEDY. As I said earlier, in weighing the interests of the consumers, who number 29 million, or 30 million, against the interests of 200 major companies, if the amendment proposed by the distinguished Senator from Illinois [Mr. DOUGLAS] is accepted, our course of action is clear. The major companies, which have been making unprecedented profits in recent years, will not be harmed. Their interests will be well protected.

Mr. POTTER. Mr. President, will the Senator yield?

Mr. KENNEDY. I yield.

Mr. POTTER. I commend the Senator for his very able speech, and for his profound knowledge of this subject. I know that the citizens of Massachusetts are well aware of his defense of their position. The Senator's constituents are captive consumers.

The proponents of the bill have stressed the fact that the Supreme Court's decision is an infringement upon free enterprise and free competition. The Senator will agree with me, I am sure, that free competition means competition for the buyer and for the seller.

Mr. KENNEDY. Yes. The point is that the consumer cannot switch to oil or to coal or to wood.

Mr. POTTER. The consumer is tied. It is not free competition as we normally understand that term. I should like to state again that the Senator from Massachusets has made a very able address in the public interest.

Mr. KENNEDY. I thank the Senator.

Mr. HUMPHREY. Mr. President, will the Senator yield?

Mr. KENNEDY. I yield.

Mr. HUMPHREY. I was deeply interested in the colloquy between the Senator from Massachusetts and the Senator from Rhode Island on the subject of the powers of the Federal Power Commission with respect to the regulation of the price. The present situation would permit the Federal Power Commission to regulate the price at the producer's level.

My question is this. Can the Senator from Massachusetts recall any instance when the Federal Power Commission, in its regulation of utility rates—whether electric rates or gas rates—has in any way imposed a price schedule or a rate structure which has caused the companies involved or the companies under regulation to lose money because of an inadequate price or unfair price, or has in any way caused them any serious economic injury because of an inadequate price under the regulatory powers of the Commission?

Mr. KENNEDY. Of course not. It would be self-defeating for the Federal Power Commission to do that. It has the responsibility not only to maintain a reasonable price, but also to encourage development of new sources of natural gas. The Commission is under an obligation to encourage the development of new sources of natural gas.

Therefore, in addition to the depletion allowance, the Commission will have to give producers an adequate return in order to encourage exploration and development by them. It is because of that fact that I believe those who support the bill because they feel there will be less gas provided in the future if there is Federal regulation are laboring under a misapprehension. There will be a higher price if the bill is passed. It is my opinion there will be additional gas if the bill is not passed, because there is no reason to believe that there will not be additional sources of gas discovered under the regulation now in effect.

Mr. HUMPHREY. Mr. President, will the Senator yield further?

Mr. KENNEDY. I yield.

Mr. HUMPHREY. As I recall, there will be no change in the tax structure relating to exploration and development and depletion allowances for gas and oil.

Mr. KENNEDY. That is correct.

Mr. HUMPHREY. There is no other industry in the United States which has so favorable a tax schedule as the gas and oil industry. There are differences of opinion among us as to whether that is desirable. The proponents of the depletion allowance in the tax schedule say, "If you alter the depletion allowance, or if you reduce it"—as some of us have suggested it be reduced, to 15 percent, from the present 27½ percent—"you will dry up the exploration and development which come from a favorable tax structure."

The whole purpose of the depletion allowance from its inception in the 1920's has been to encourage people to explore for oil. In most instances gas is a byproduct of oil.

The depletion allowance is still on the tax books. As the Senator from Illinois has pointed out, it is a very generous tax deduction. Would that more American citizens had the privilege of being in that great privileged class and had the right to deduct exploration costs.

If a company drills dry holes, it can deduct the cost as a business expense. None of those provisions in the tax structure are being tampered with. All those provisions are left intact, to encourage new development and new exploration. The Federal Power Commission is not known as a Scrooge when it comes to fixing rates. The Federal Power Commission has been very generous with respect to rates. It has been so generous of late as to raise the cost of gas in my section of the country. The rates have been raised considerably.

We have not protested the raise in the rates. We have felt that there must be some justification for it. However, I believe it is incumbent upon the sponsors of the bill to produce evidence that the Federal Power Commission has acted in an arbitrary and almost economically tyrannical manner in adjusting rates to a point where the industry has suffered.

According to market quotations, the stocks of oil and gas companies are gilt-edge stocks. The big companies, which have the lion's share of the gas resources, are doing quite well. I have not noticed their taking up any relief collections. I have not noticed that they are complaining about their low profit margin or about their gross profits. Does not the Senator agree with me?

Mr. KENNEDY. The Senator from Illinois read into the RECORD yesterday or the day before the profit and loss statements of the major companies involved in this field. I must say that last year was the most profitable year they ever had. Few other leading companies in American industry showed such a good record. There is no reason why they should not continue to do as well. They cannot afford not to continue to expand their resources. Some producers have the feeling that we in the northeast are exploiting the producing areas. We in New England, who are trying to sell our shoes all over the country, are not attempting to exploit consumers in other parts of the country. It seems to me, that weighing all the factors involved, there is no doubt about where the public interest lies.

Mr. HUMPHREY. Mr. President, will the Senator yield?

Mr. KENNEDY. I yield.

Mr. HUMPHREY. The Senator from Rhode Island [Mr. PASTORE], who presided as subcommittee chairman when the testimony on the bill was taken—and I may say he did a very commendable job in so presiding, and was congratulated on it by both the proponents and the opponents of the bill—pointed out that there is no desire on the part of those of us who oppose the Harris-Fulbright bill to deny the producer even a very generous profit. We believe in free enterprise so far as the gas producers are concerned. If we saw that regulation was driving the gas producers out of business, we would be the first to stand up in behalf of both the consumers and the producers, and make whatever alterations in the law which might be necessary. However, I believe the evidence is very clear, insofar as we have been able to discover any evidence, that the Federal Power Commission has been reasonable and objective and has, in fact, leaned over backward in an attempt to be fair and reasonable in all its regulations relating to gas rates.

Mr. KENNEDY. I thank the Senator.

Mr. PASTORE. Mr. President, will the Senator from Massachusetts yield?

Mr. KENNEDY. I yield.

Mr. PASTORE. Since the proponents of the bill have recognized certain evils—and they must have recognized them, because otherwise they would not have included in the bill section 3, dealing with the escalation clauses which have been triggered off, from time to time and have allowed gas prices to rise even when there was no economic justification for it—do not the Senator from Minnesota and the Senator from Massachusetts agree with me that the Supreme Court, regardless of whether it was an error, did us a favor when it said the producer must be under Federal supervision in view of what he had done in the past? In other words, if he had not been under supervision, or was released from supervision, he would return to the kind of wild escalation clauses which in some cases have triggered off the price of gas astronomically in one area of the country only because of a wholly unrelated

situation which developed in another area of the country.

Those facts were brought out before our committee. When certain of the pipeline companies were interested in buying natural gas, they—together with other persons who were also anxious to get such gas—were asked to bid the price they would pay for such gas. They told us at the hearings that this price was the result of artificial increases in price from time to time. That is the situation which today affects the captive consumers. The consumers in this situation have no choice. Their only choice, if any, is to throw out their gas kitchen ranges and perhaps install coal-burning or oil-burning ranges. They certainly cannot go to their distributor and say, "Get your gas from some other pipeline company," when there is only one pipeline coming into the particular city—and that one pipeline goes right down to the gathering point, the place where the gas is gathered from the various producers.

When we realize the character of this proposal and the fact that there are captive consumers, we must reach the conclusions that if we are going to supervise at all, we must supervise from the beginning to the end. If we are not going to do that, then we should repeal the Natural Gas Act.

Mr. KENNEDY. The Senator from Rhode Island has spoken directly to the point, as he always does.

Mr. CLEMENTS. Mr. President, I see the Senator from Minnesota [Mr. HUMPHREY] is on the floor, and I should like to ask him if it is his intention to speak on the bill tomorrow?

Mr. HUMPHREY. That is correct.

Mr. CLEMENTS. Is it the desire of the Senator from Minnesota that unanimous consent be obtained at this time that he may have the floor tomorrow at the conclusion of the morning business?

Mr. HUMPHREY. As I understand that has been the practice which has been followed in recent days.

Mr. CLEMENTS. This is a very important measure, and it has been the desire of the leadership to move it along as rapidly as may be possible and, certainly, in such a way that every Senator who desires to speak on the measure will have ample opportunity to do so, saving time by not having quorum-calls, and so forth.

Mr. President, if it is agreeable to the Senator from Minnesota, I ask unanimous consent that when the Senate completes its morning business tomorrow the Senator from Minnesota may have the floor.

The PRESIDING OFFICER. Without objection, it is so ordered.

Mr. HUMPHREY. I thank the Senator from Kentucky.

RECESS

Mr. CLEMENTS. Mr. President, I move that the Senate now stand in recess until 12 o'clock noon tomorrow.

The motion was agreed to; and (at 5 o'clock and 43 minutes p. m.) the Senate took a recess until tomorrow, Thursday, January 26, 1956, at 12 o'clock meridian.

NOMINATIONS

Executive nominations received by the Senate January 25 (legislative day of January 16), 1956:

DIPLOMATIC AND FOREIGN SERVICE

George H. Emery, of North Carolina, now a Foreign Service officer of class 1 and a secretary in the diplomatic service, to be also a consul general of the United States of America.

The following-named Foreign Service officers for promotion from class 2 to class 1:

Elmer H. Bourgerie, of Maryland.
Daniel M. Braddock, of Michigan.
Aaron S. Brown, of Michigan.
Augustus S. Chase, of Connecticut.
Warren M. Chase, of Indiana.
Theodore J. Hadraba, of Nebraska.
Howard P. Jones, of New York.
John H. Madonne, of Texas.
Thomas C. Mann, of Texas.
Robert B. Memminger, of South Carolina.
Marselis C. Parsons, Jr., of New York.
Arthur R. Ringwalt, of Nebraska.
Laurence W. Taylor, of California.
E. Paul Tenney, of Washington.
Sheldon Thomas, of New York.
Ray L. Thurston, of Wisconsin.
Clare H. Timberlake, of Michigan.
Rolland Welch, of Texas.
Clifton R. Wharton, of Massachusetts.
Woodbury Willoughby, of Virginia.

The following-named persons for appointment as Foreign Service officers of class 1, consuls, and secretaries in the diplomatic service of the United States of America:

Frank A. Waring, of California.
Glenn G. Wolfe, of West Virginia.

T. Eliot Weil, of California, now a Foreign Service officer of class 2 and a secretary in the diplomatic service, to be also a consul general of the United States of America.

The following-named Foreign Service officers for promotion from class 3 to class 2:

Leonard Lee Bacon, of New York.
James D. Bell, of New Mexico.
W. Wendell Blancké, of Pennsylvania.
Byron E. Blankinship, of Oregon.
William C. Burdett, of Georgia.
Frank P. Butler, of New Jersey.
Ralph N. Clough, of Washington.
Wymberley DeR. Coerr, of Connecticut.
Earl T. Crain, of Virginia.
William A. Crawford, of Pennsylvania.
Robert B. Elwood, of Iowa.
Thomas S. Estes, of Massachusetts.
Herbert P. Fales, of California.
Ernest H. Fisk, of Ohio.
Albert B. Franklin, of Massachusetts.
A. David Fritzlan, of Kentucky.
Paul F. Geren, of Arkansas.
John Goodyear, of New York.
Martin J. Hillenbrand, of Illinois.
Douglas Jenkins, Jr., of South Carolina.
Coburn B. Kidd, of Oklahoma.
William Koren, Jr., of New Jersey.
William Leonhart, of West Virginia.
Raymond E. Lisle, of New York.
William Bruce Lockling, of Arizona.
Edwin W. Martin, of Ohio.
Robert H. McBride, of Michigan.
Sydney L. W. Mellen, of Pennsylvania.
William J. Porter, of Massachusetts.
Milton C. Rewinkel, of Minnesota.
Robert W. Rinden, of Iowa.
Terry B. Sanders, Jr., of Texas.
Richard M. Service, of the District of Columbia.
John C. Shillock, Jr., of Oregon.
Harold Shullaw, of Illinois.
Harold Sims, of Tennessee.
C. Allan Stewart, of Arizona.
Wallace W. Stuart, of Tennessee.
John M. Vebber, of Wisconsin.
William A. Wieland, of New York.
William Witman 2d, of Pennsylvania.

The following-named persons for appointment as Foreign Service officers of class 2, consuls, and secretaries in the diplomatic service of the United States of America:

R. Gordon Arneson, of Virginia.
Miss Ruth Bacon, of Massachusetts.
Norman Burns, of Ohio.
William E. F. Conrad, of Ohio.
Carl D. Corse, of Maryland.
John E. Fobes, of Virginia.
Henry J. Kellermann, of Maryland.
Jeffrey C. Kitchen, of Oregon.
Geoffrey W. Lewis, of Virginia.
Graham N. McKelvey, of Illinois.
Daniel F. Margolies, of Maryland.
Jack D. Neal, of Texas.
Theodore B. Olson, of the District of Columbia.
Earl D. Sohm, of California.
Robert L. Thompson, of Maryland.
Edwin Elliott Vallon, of Maryland.
Joseph A. Yager, of Maryland.

Ralph H. Hunt, of Massachusetts, now a Foreign Service officer of class 3 and a secretary in the diplomatic service, to be also a consul general of the United States of America.

The following-named Foreign Service officers for promotion from class 4 to class 3:

J. Wesley Adams, Jr., of Illinois.
Stewart G. Anderson, of Illinois.
Donald C. Bergus, of Indiana.
Thomas D. Bowie, of Minnesota.
Mrs. Katherine W. Bracken, of Florida.
Robert A. Brand, of Connecticut.
Howard Brandon, of Georgia.
Clarence T. Breaux, of Louisiana.
Lewis D. Brown, of New York.
Rolland H. Bushner, of Oklahoma.
Edward W. Clark, of New York.
G. Edward Clark, of New York.
Ralph S. Collins, of Tennessee.
Alfred P. Dennis, of Virginia.
Dwight Dickinson, of New Jersey.
Miss Eileen R. Donovan, of Massachusetts.
Robert J. Dorr, of California.
Leon G. Dorros, of New York.
E. Allen Fidel, of Wyoming.
Seymour M. Finger, of New York.
Richard B. Finn, of New York.
John I. Fishburne, of South Carolina.
John F. Fitzgerald, of Pennsylvania.
William J. Ford, of New Hampshire.
William N. Fraleigh, of New Jersey.
John C. Fuess, of Massachusetts.
Francis J. Galbraith, of South Dakota.
Michael R. Gannett, of New York.
William F. Gray, of North Carolina.
Norman B. Hannah, of Illinois.
John W. Henderson, of Iowa.
Deane R. Hinton, of Illinois.
John D. Iams, of Oklahoma.
Samuel Owen Lane, of California.
G. Wallace LeRue, of Missouri.
Charles K. Ludewig, of the District of Columbia.
Scott Lyon, of Ohio.
James V. Martin, Jr., of Illinois.
Thomas W. McElhiney, of Maryland.
William A. McFadden, of New Jersey.
David D. Newsom, of California.
W. Paul O'Neill, Jr., of Pennsylvania.
Givon Parsons, of Texas.
Leon B. Poullada, of California.
James W. Pratt, of California.
Henry Clinton Reed, of Ohio.
Edward F. Rivinus, Jr., of Pennsylvania.
Randolph Roberts, of Virginia.
Peter Rutter, of Massachusetts.
Lubert O. Sanderhoff, of California.
Joseph A. Silberstein, of New York.
Herbert D. Spivack, of New York.
Emory C. Swank, of Maryland.
Nicholas G. Thacher, of New York.
Robert W. Tucker, of California.

The following-named persons for appointment as Foreign Service officers of class 3, consuls, and secretaries in the diplomatic service of the United States of America:

Herman H. Barger, of Virginia.
Louis C. Boochever, of Maryland.
John F. Buckle, of Utah.

Philip M. Burnett, of Maryland.
Thomas Patrick Carroll, of New York.
Frederick R. Carson, of Virginia.
Howard E. Chaillé, of Virginia.
Earle A. Cleveland, of Illinois.
John Hugh Crimmins, of Virginia.
William J. Crockett, of Nebraska.
Robert R. Cunningham, of California.
Theo E. Hall, of Kansas.
William G. Jones, of Maryland.
Neal E. Kimm, of Iowa.
Thomas B. Larson, of Maryland.
Richard E. Morrissey, of New York.
Carmen Richard Pasquale, of Pennsylvania.
Donald L. Ranard, of Virginia.
Irving W. Salert, of New York.
Norvelle H. Sannebeck, of Virginia.
James H. Sherrerd, of Nebraska.
Ben S. Stephansky, of Illinois.
Edward C. Wilson, of Florida.

The following-named Foreign Service officers for promotion from class 5 to class 4:

Robert M. Beaudry, of Maine.
Charles C. Carson, of Mississippi.
Thomas A. Cassilly, of Maryland.
David C. Cuthell, of Connecticut.
Delano McKelvey, of the District of Columbia.
Robert A. McKinnon, of Michigan.
Karl E. Sommerlatte, of Florida.
Robert W. Weise, Jr., of Minnesota.

The following-named Foreign Service officers for promotion from class 5 to class 4 and to be also consuls of the United States of America:

Charles C. Adams, of New York.
Thomas W. Ainsworth, of New Hampshire.
Arthur B. Allen, of the District of Columbia.
John Campbell Ausland, of Pennsylvania.
John A. Baker, Jr., of Connecticut.
John H. Barber, of California.
Robert J. Barnard, of Wisconsin
Harry G. Barnes, Jr., of Minnesota.
Raymond J. Barrett, of New York.
Carl E. Bartch, of Ohio.
Frederic H. Behr, of New Jersey.
Alf E. Bergesen, of New York.
Jules E. Bernard, of New York.
Slator C. Blackiston, Jr., of North Carolina.
Vincent S. R. Brandt, of Rhode Island
Robert C. Brewster, of Nebraska.
Emerson M. Brown, of Michigan.
Robert R. Brungart, of Maryland.
William A. Buell, Jr., of Rhode Island.
William B. Buffum, of New York.
Miss Patricia M. Byrne, of Ohio.
William C. Canup, of Michigan.
William A. Chapin, of Illinois.
Christian G. Chapman, of New York.
Peter R. Chase, of Massachusetts.
Albert C. Cizauskas, of New York.
Carroll E. Cobb, of Colorado.
Stephen A. Comiskey, of Colorado.
Richard H. Courtenaye, of California.
W. Kennedy Cromwell 3d, of Maryland.
Oliver S. Crosby, of Washington.
Donald M. Davies, of Virginia.
Arthur R. Day, of New Jersey.
Jonathan Dean, of New York.
Morris Dembo, of New York.
Walter H. Drew, of Colorado.
Theodore L. Eliot, Jr., of California.
Warrick E. Elrod, Jr, of Illinois.
Lawrence B. Elsbernd, of North Dakota.
James B. Engle, of Iowa.
Richard A. Ericson, Jr., of Minnesota.
John M. Farrior, of North Carolina.
Benjamin A. Fleck, of Pennsylvania.
Robert C. Foulon, of Illinois.
A. Eugene Frank, of Illinois.
John N. Gatch, Jr., of Ohio.
Seymour H. Glazer, of Louisiana.
Culver Gleysteen, of Pennsylvania.
Howard C. Goldsmith, of California.
Raymond E. González, of California.
Herbert I. Goodman, of Pennsylvania.
John G. Gossett, of Oklahoma.
Pierre R. Graham, of Illinois.
Lindsey Grant, of New York.
James C. Haahr, of Minnesota.
William N. Harben, of New York.
Harry W. Heikenen, of Minnesota.
William A. Heiseth, of Florida.
Gregory Henderson, of Massachusetts.
Converse Hettinger, of Wisconsin.
Thomas F. Hoctor, of New York.
Max E. Hodge, of New York.
Lewis Hoffacker, of Arizona.
John H. Holdridge, of California.
Jerome K. Holloway, Jr., of Maryland.
Robert B. Houghton, of Michigan.
Robert B. Houston, Jr., of Missouri.
Wharton Drexel Hubbard, of New York.
Paul R. Hughes, of California.
Mansfield L. Hunt, of Maine.
Robert A. Hurwitch, of Illinois.
Edward C. Ingraham, Jr., of New York.
Heyward Isham, of New York.
Alan G. James, of the District of Columbia.
Walter E. Jenkins, Jr., of Massachusetts.
Alexander C. Johnpoll, of New Mexico.
William M. Johnson, Jr., of Massachusetts.
James R. Johnston, of Ohio.
Howard D. Jones, of Oklahoma.
Abraham Katz, of New York.
Warren A. Kelsey, of Massachusetts.
William M. Kerrigan, of Ohio.
Bayard King, of Rhode Island.
David Klein, of Michigan.
Lowell Bruce Laingen, of Minnesota.
Francis X. Lambert, of Massachusetts.
Earl H. Luboeansky, of Missouri.
Dayton S. Mak, of Iowa.
LeRoy Makepeace, of Connecticut.
Philip W. Manhard, of California.
Doyle V. Martin, of Oklahoma.
Walter M. McClelland, of Oklahoma.
James H. McFarland, Jr., of Michigan.
John A. McVickar, of New York.
Francis J. Meehan, of the District of Columbia.
Kermit S. Midthun, of Michigan.
Paul M. Miller, of Maryland.
William B. Miller, of Ohio.
Lawrence C. Mitchell, of California.
Robert E. Moberly, of Idaho.
Sam Moskowitz, of Missouri.
Grant E. Mouser 3d, of Ohio.
Jacob M. Myerson, of the District of Columbia.
E. Jan Nadelman, of New York.
Joseph W. Neubert, of Washington.
Daniel O. Newberry, of Georgia.
John F. O'Donnell, Jr., of Massachusetts.
Robert L. Ouverson, of Minnesota.
Stephen E. Palmer, Jr., of New York.
Richard B. Parker, of Kansas.
John M. Perry, of Massachusetts.
Peter J. Peterson, of California.
Chris G. Petrow, of Massachusetts.
Paul M. Popple, of Illinois.
Clifford J. Quinlan, of Minnesota.
Lawrence P. Ralston, of Connecticut.
James R. Ruchti, of Wisconsin.
David T. Schneider, of Massachusetts.
Peter A. Seip, of Iowa.
Matthew D. Smith, Jr., of South Dakota.
Paul A. Smith, Jr., of Virginia.
Richard E. Snyder, of New Jersey.
C. Melvin Sonne, Jr., of Pennsylvania.
Moncrieff J. Spear, of New York.
William F. Spengler, of Wisconsin.
Daniel Sprecher, of New York.
Thomas C. Stave, of Washington.
Kenedon P. Steins, of Pennsylvania.
William N. Stokes, of North Carolina.
Lee T. Stull, of Pennsylvania.
Kenneth P. T. Sullivan, of Massachusetts.
Jack A. Sulser, of Illinois.
Godfrey Harvey Summ, of New York.
Kingdon W. Swayne, of Pennsylvania.
Robert J. Tepper, of New York.
Herbert B. Thompson, of California.
Malcolm Thompson, of Massachusetts.
David R. Thomson, of the District of Columbia.
Edward J. Thrasher, of New York.
Theodore A. Tremblay, of California.
Edward J. Trost, of New York.
Thomas T. Turner, of Washington.
William N. Turpin, of Georgia.
Philip H. Valdes, of New York.
George S. Vest, of Virginia.
Theodore A. Wahl, of New York.
Peter C. Walker, of New York.
Herbert S. Weast, of California.
Sidney Weintraub, of New York.
Alfred W. Wells, of New York.
Orme Wilson, Jr., of New York.
Stanley B. Wolff, of New York.
Wendell W. Woodbury, of Iowa.
Charles G. Wootton, of Connecticut.
Arthur I. Wortzel, of New Jersey.

The following-named persons for appointment as Foreign Service officers of class four, consuls, and secretaries in the diplomatic service of the United States of America:

Ellis K. Allison, of Maryland.
Lawrence H. Backs, of Washington.
St. John Bargas, of Louisiana.
Josiah W. Bennett, of Maryland.
Mrs. Isabel G. Blackstock, of Utah.
James E. Bowers, of North Carolina.
John A. Bywater, of the District of Columbia.
James S. Cunningham, Jr., of California.
Frank A. Davis, of Ohio.
Jefferson Dix, Jr., of Maryland.
Culver E. Gidden, of Texas.
Robert Whitcomb Heavey, of California.
Michel M. Ivy, of Washington.
Charles M. Johnston, of Maryland.
William Kane, of Virginia.
Andor Klay, of Ohio.
Walter E. Kneeland, of Texas.
Archie S. Lang, of New York.
Chas. E. Laurendine, of Alabama.
Mrs. Ruth A. Lovell, of California.
R. Glynn Mays, Jr., of Maryland.
Carl J. Nelson, of Virginia.
William V. M. Owen, of the District of Columbia.
James C. Powell, Jr., of Texas.
Miss Catherine A. Rock, of Pennsylvania.
Lawrence W. Sharpe, of Ohio.
Charles G. Sommer, of Ohio.
Donald S. Spigler, of Pennsylvania.
Erwin C. Thompson, of California.
Henry T. Unverzagt, of Virginia.
Jack L. Vrooman, of California.

The following-named Foreign Service officers for promotion from class 6 to class 5:

Miss Gloria E. Abiouness, of Virginia.
James E. Akins, of Ohio.
Robert N. Allen, of Oklahoma.
Daniel N. Arzac, Jr., of California.
G. Michael Bache, of Maryland.
George M. Barbis, of California.
Robert E. Barbour, of Tennessee.
Richard W. Barham, of Texas.
Malcolm R. Barnebey, of Texas.
Robert S. Barrett IV, of Virginia.
John A. Billings, of Missouri.
Richard J. Bloomfield, of Virginia.
Lewis W. Bowden, of the District of Columbia.
William G. Bradford, of Illinois.
William R. Brown, of Ohio.
Robert T. Burns, of Indiana.
Charles B. Cook 3d, of Pennsylvania.
Joseph H. Cunningham, of Nebraska.
Thomas A. DeHart, or California.
Walker A. Diamanti, of Utah.
Thomas I. Dickson, Jr., of Texas.
William B. Edmondson, of Nebraska.
Alfred J. Erdos, of Arizona.
Leo Espy, of Oregon.
Miss Barbara C. Fagan, of New York.
John E. Feissner, Jr., of the District of Columbia.
Robert T. Follestad, of California.
Wiliam Lee Frost, of Connecticut.
Fred J. Galanto, of Massachusetts.
Samuel R. Gammon III, of Texas.
John L. Gawf, of Colorado.
Charles A. Gendreau, of Minnesota.
H. Kent Goodspeed, of California.
Richard C. Harmstone, of the District of Columbia.
Donald S. Harris, of Connecticut.

William C. Harrop, of New Jersey.
Roy T. Haverkamp, of Missouri.
Robert T. Hennemeyer, of Illinois.
Martin B. Hickman, of Utah.
Howard Hill, of Missouri.
David C. Jelinek, of Wisconsin.
Robert W. Kent, Jr., of California.
C. Dirck Keyser, of New Jersey.
Burton Kitain, of New Jersey.
Miss Paulina C. Kreger, of Ohio.
Paul H. Kreisberg, of New York.
Lyle F. Lane, of Washington.
Myron Brockway Lawrence, of Oregon.
Edwin D. Ledbetter, of California.
Samuel W. Lewis, of Texas.
Charles E. Lilien, of Illinois.
Ralph E. Lindstrom, of Minnesota.
John A. Linehan, Jr., of Massachusetts.
John Lloyd 3d, of New Jersey.
Alan W. Lukens, of Pennsylvania.
John G. MacCracken, of California.
Julian F. MacDonald, Jr., of Ohio.
John C. Mallon, of Kentucky.
Timothy M. Manley, of Connecticut.
David P. Mann, of the District of Columbia.
S. Douglas Martin, of New York.
H. Freeman Matthews, Jr., of Virginia.
Nicholas V. McCausland, of California.
Miss Ruth A. McLendon, of Texas.
John E. Merriam, of California.
Dudley W. Miller, of Colorado.
S. Paul Miller, Jr., of California.
John L. Mills, of Georgia.
Harry J. Mullin, Jr., of Kentucky.
Michael H. Newlin, of North Carolina.
Emmit E. Noland, Jr., of Georgia.
Donald R. Norland, of Iowa.
Hugh B. O'Neill, of Connecticut.
Frank V. Ortiz, Jr., of New Mexico.
Richard B. Owen, of Michigan.
Russell R. Pearson, of Minnesota.
Frederick P. Picard III, of Nebraska.
Laurence G. Pickering, of Nebraska.
Richard St. F. Post, of Connecticut.
Arthur W. Purcell, of Massachusetts.
Jess F. Reed, of Washington.
James F. Relph, Jr., of California.
Robert A. Remole, of Minnesota.
Don W. Rogers, Jr., of Ohio.
Leo J. Ryan, of Florida.
Theodore Sellin, of Pennsylvania.
Robert G. Shackleton, of Ohio.
Allen C. Siebens, of Ohio.
Paul K. Stahnke, of Illinois.
Joseph F. Starkey, of California.
Lawrence L. Starlight, of New York.
Francis R. Starrs, Jr., of California.
Birney A. Stokes, of New Jersey.
William A. Stoltzfus, Jr., of Minnesota.
Jean R. Tartter, of Massachusetts.
Charles W. Thomas, of Illinois.
Richard D. Vine, of New York.
Robert B. Warner, of Michigan.
Robert H. Wenzel, of Massachusetts.
Lewis M. White, of New York.
Victor Wolf, Jr., of New York.
Dan A. Zachary, of Illinois.

The following-named persons for appointment as Foreign Service officers of class 5, vice consuls of career, and secretaries in the diplomatic service of the United States of America:

Robert M. Balthaser, of Pennsylvania.
William D. Calderhead, of Texas.
Robert Alexander Campbell, Jr., of the District of Columbia.
Miss Kathryn O. Clark, of the District of Columbia.
Miss Alice W. Clement, of Pennsylvania.
Eiler R. Cook, of Florida.
Jeffery R. D. Crockett, of the District of Columbia.
Robert W. Day, of Maryland.
George Falk, of Maryland.
Jack Friedman, of the District of Columbia.
Robert J. Gibbons, of Ohio.
Clifford H. Gross, of New York.
Ernest S. Guaderrama, of California.
Nez C. Hallett, Jr., of Texas.
Alfred Harding IV, of New York.
Gerrit J. W. Heyneker, of Massachusetts.
Edward C. Howatt, of Virginia.
Miss Marie A. Johnson, of Minnesota.
John Edward Karkashian, of California.
Kenneth W. Knauf, of Wisconsin.
Charles W. McCaskill, of Virginia.
Allan F. McLean, Jr., of Texas.
Miss Mary Louise Manley, of the District of Columbia.
Charles Willis Naas, of Massachusetts.
James M. E. O'Grady, of the District of Columbia.
Onesime L. Piette, of Virginia.
William R. Roof, of South Carolina.
Gerald Schwab, of New Jersey.
Richard G. Smith, of Florida.
Edward O. Stellmacher, of Maryland.
Raymond Thomsen, of Colorado.
Vladimir I. Toumanoff, of New Hampshire.
Ray E. White, Jr., of Virginia.

The following-named persons for appointment as Foreign Service officers of class 6, vice consuls of career, and secretaries in the diplomatic service of the United States of America:

Craig Baxter, of Ohio.
Arthur E. Breisky, of California.
Thomas R. Buchanan, of Illinois.
Miss Helen E. Kavan, of Ohio.
Robert V. Keeley, of Virginia.
Stephen Low, of Ohio.
David A. Macuk, of New Jersey.
Charles E. Marthinsen, of Pennsylvania.
Byron B. Morton, Jr., of New Jersey.
David W. K. Peacock, Jr., of New Jersey.
Miss Allene M. Roche, of Connecticut.
Samuel H. Weaver, of New York.
Miss Suzanne S. Williams, of Ohio.
Raymond W. Eiselt, of California.

The following-named Foreign Service staff officers to be consuls of the United States of America:

Arthur A. Bardos, of California.
Henry L. Davis, of New Jersey.
Elmer S. Dorsay, of Colorado.
John V. Lund, of California.
Stanley J. Prisbeck, of Pennsylvania.
Garland C. Routt, of Indiana.

The following-named Foreign Service Reserve officers to be consuls of the United States of America:

William A. Krauss, of California.
Irvin S. Lippe, of Ohio.
George A. Tesoro, of Maryland.

The following-named Foreign Service Reserve officers to be secretaries in the diplomatic service of the United States of America:

Saxton E. Bradford, of Arizona.
David W. Smyser, of Maryland.

The following-named Foreign Service Reserve officers to be vice consuls of the United States of America:

Basil A. Beardsley, of Ohio.

DIRECTOR, GEOLOGICAL SURVEY

Thomas B. Nolan, of Nevada, to be Director of the Geological Survey.

HOUSE OF REPRESENTATIVES

WEDNESDAY, JANUARY 25, 1956

The House met at 12 o'clock noon.

The Chaplain, Rev. Bernard Braskamp, D. D., offered the following prayer:

Most merciful and gracious God, Thou art always willing and ready to hear and help all who come unto Thee with honest minds and humble hearts.

Make us eager to appropriate and worthy to receive the spiritual resources which Thou hast placed at our disposal.

Show us how we may be calm and courageous in a world that is shaken by storms and strife.

Inspire us with a faith that is faithful and brave enough to remain steadfast when the winds are contrary.

May we daily rededicate ourselves to the task of safeguarding those principles of righteousness and justice which will hallow and dignify the life of all mankind.

Hear us in Christ's name. Amen.

The Journal of the proceedings of yesterday was read and approved.

MESSAGE FROM THE SENATE

A message from the Senate, by Mr. Ast, one of its clerks, announced that the Senate agrees to the amendment of the House to the amendments of the Senate to a bill of the House of the following title:

H. R. 1496. An act for the relief of Leong Ding Foon Quon and Ken C. Quon.

WHITE COUNTY BRIDGE COMMISSION

Mr. DENTON. Mr. Speaker, I ask unanimous consent to address the House for 1 minute and to revise and extend my remarks.

The SPEAKER. Is there objection to the request of the gentleman from Indiana?

There was no objection.

Mr. DENTON. Mr. Speaker, I have today introduced a bill which would terminate the White County Bridge Commission and transfer its assets, liabilities, functions, and authority to the United States Commissioner of Public Roads.

Members will recall that on May 25 of last year the House, after some debate, approved a resolution creating a select committee which was directed to conduct an investigation of the finances of this federally established bridge commission and to ascertain when the toll bridge which it operates might become free of tolls.

This work has been carried forward by my two able colleagues the gentleman from Illinois [Mr. PRICE] and the gentleman from Illinois [Mr. SIMPSON], and myself, as members of the select committee. The first phase of its activities has been largely completed and the second phase of the select committee's work is under way. No conclusive statement by the committee as to its findings would be appropriate until this work has been completed and a report is prepared for the House.

But, for my own part, I think our study thus far has clearly shown a need for remedial legislation, and it is for that reason that I have introduced this bill today. Other legislation relating to this subject will be proposed by me at such time as it may appear to be warranted.

RELIEVE FARMERS FROM EXCISE TAX ON GASOLINE USED FOR AGRICULTURAL PURPOSES

Mr. MCCORMACK. Mr. Speaker, I ask unanimous consent that it be in order on Monday next for the Speaker to recognize the chairman of the Committee on Ways and Means, or any Member that the Chair might designate, to move to suspend the rules on the bill reported out of the Committee on Ways and Means to relieve farmers from the excise tax on gasoline used for agricultural purposes.

The SPEAKER. Is there objection to the request of the gentleman from Massachusetts?

There was no objection.

SMALL BUSINESS ACT OF 1953

Mr. SPENCE. Mr. Speaker, I ask unanimous consent to take from the Speaker's table the bill (H. R. 7871) to amend the Small Business Act of 1953, with Senate amendments thereto, disagree to the Senate amendments, and request a conference with the Senate.

The SPEAKER. Is there objection to the request of the gentleman from Kentucky? [After a pause.] The Chair hears none and appoints the following conferees: Messrs. SPENCE, BROWN of Georgia, PATMAN, RAINS, WOLCOTT, GAMBLE, and TALLE.

EXEMPTING FARMERS FROM TAX ON GASOLINE USED IN AGRICULTURE

Mr. DOLLIVER. Mr. Speaker, I ask unanimous consent to address the House for 1 minute and to revise and extend my remarks.

The SPEAKER. Is there objection to the request of the gentleman from Iowa.

There was no objection.

Mr. DOLLIVER. Mr. Speaker, the unanimous-consent request which was just made by the genial majority leader of the House, namely, to provide for the consideration of the tax-exemption bill on gasoline used on farms by farmers, gives me a great deal of satisfaction.

President Eisenhower in his recent farm message advocated this measure. The House Committee on Agriculture unanimously endorsed it. And now the Ways and Means Committee has reported the bill and requested its consideration under a suspension of the rules. This indicates that the leadership of this House considers the bill sure of passage by at least a two-thirds vote.

This is a measure which I have advocated for a good many years. I introduced such a bill in the 83d Congress. I also introduced a similar bill in the 1st session of the 84th Congress. It is long overdue and should be passed unanimously under suspension of the rules on Monday.

Mr. TALLE. Mr. Speaker, will the gentleman yield?

Mr. DOLLIVER. I yield.

Mr. TALLE. Mr. Speaker, the gentleman from Iowa, my colleague [Mr. DOLLIVER], deserves a great deal of credit for the interest he has taken in this matter. Iowa farmers and their organizations have been supporting this measure eagerly for quite some time. I may say for myself that I have urged action eagerly, too, and will support the repeal measure wholeheartedly.

Mr. DOLLIVER. Mr. Speaker, farmers and farm organizations support it. It is only a matter of simple justice to make this bill the law of the land.

I believe most of the Representatives from the farm areas of the United States consider this as a measure which is of benefit to the farmers and that it should be passed without any question by this body.

THE LATE ARTHUR B. ROUSE

The SPEAKER. The Chair recognizes the gentleman from Kentucky [Mr. SPENCE].

Mr. SPENCE. Mr. Speaker, within the last hour I have heard with profound regret of the death last night of Hon. Arthur B. Rouse. For 16 years he represented the district in Kentucky which I now have the honor to represent. He was a Member of Congress from March 4, 1911, to March 3, 1927, when he decided not to seek reelection. Thereafter he was appointed clerk of the United States District Court for the Eastern District of Kentucky, where he served with distinction almost to the time of his death.

Arthur Rouse was greatly beloved by his people. He was a faithful, conscientious public servant and, no doubt, he could have remained in Congress as long as he desired. Because of his deep devotion to his family and his great interest in the education of his sons he desired to return to his home in Kentucky. I know the few Members now here who served with him will remember him with affection for he was a genial, companionable, and friendly gentleman. He was a good man and fulfilled his duties in every relationship in life. His Nation and his State are indebted to him for his long and faithful service. His wife and sons have lost a devoted husband and father. He was my friend and I feel a sense of personal loss. May the Lord's face shine upon him and give him peace.

Mr. Speaker, I ask unanimous consent that all Members may extend their remarks on the life and service of the late Arthur B. Rouse.

The SPEAKER. Is there objection to the request of the gentleman from Kentucky?

There was no objection.

THE LATE DR. FRANCIS E. FRONCZAK

Mr. RADWIN. Mr. Speaker, I ask unanimous consent to address the House for 1 minute and to revise and extend my remarks.

The SPEAKER. Is there objection to the request of the gentleman from New York?

There was no objection.

Mr. RADWAN. Mr. Speaker, in the closing days of the old year, Buffalo lost one of its most distinguished sons. Probably no other living resident of the Niagara frontier has ever had so full and varied a life. Dr. Francis E. Fronczak, first and foremost, won international recognition as one of the outstanding public-health authorities in the United States. But that only scratches the surface of his accomplishments. His contributions were so varied, his career so colorful, his influence so universal, that, documented as they are, they tax the credulity of mankind. Such a man passes through our midst rarely, and we in Buffalo are humbly grateful to have had him with us.

By vocation, Dr. Fronczak was a journalist, a doctor, a scientist, a lawyer, a

philosopher, a teacher, a soldier, a statesman, and a diplomat. Yet, his many diplomas did not remove from him a homespun simplicity and keen sense of humor which caused his books and countless papers to be widely read both here and abroad. This man truly possessed the common touch. In the field of public health, he pioneered in the treatment of alcoholism as a disease and championed many innovations in the field of tuberculosis, school nursing, and use of vaccines, to mention a few. But he will be best remembered as Buffalo's health commissioner under 9 separate mayors and 4 city charters.

Born in Buffalo in 1874, he was as early as 1902 recognized as a leader of the distinguished Polish community in that city. Dr. Fronczak's outstanding qualities as a civic leader and a humanitarian were just beginning, however. In 1914 he became president of the newly organized Central Relief Committee in this country to bring relief to war-stricken Poland. Shortly thereafter, his distinguished military career began when he became a major in the United States Army Medical Corps. While abroad, he was appointed by the Secretary of State to membership on the Polish National Committee in Paris, to represent the Poles in America. This committee represented Poland in the Council of the Allies, and Dr. Fronczak was designated director of the department of physical, moral, and material welfare of the Polish Army. He was also placed in charge of Polish war prisoners, refugees, expatriates, and orphans in France, Siberia, northern Russia, Morocco, Italy, Algeria, and England. He even served as ex officio member of the Cabinet of Premier Ignaz Paderewski, his close personal friend.

Although a medical officer, he saw action on several fronts, and was wounded and gassed at the Marne, and was designated to serve as one of the three members of the Council of War of the Polish Forces in France. Later, Dr. Fronczak was appointed a commissioner and medical advisor on the first American Red Cross Commission to Poland. In these assignments he devised many sweeping and revolutionary methods of ridding Poland of its unsanitary conditions and pestilence. On one such occasion he experienced an exciting episode in a life crowded with excitement. He was captured by the Bolsheviks, condemned to death at midnight, but rescued a few minutes before the fatal hour by a counterattacking Polish battalion. His outstanding contributions during this period brought Dr. Fronczak high honors, including knighthood in the French Legion of Honor, the French Croix de Guerre and Medaille Militaire, the Cross of Valor of Poland, the Gold Cross of Merit, Haller's Swords, the commander in the Order of Polonia Restituta, and others. In 1949 he received the papal decoration as a Knight of St. Gregory, and distinguished service citations from the American Public Health Association in 1950.

His awards and honors are far too numerous to list. Every chief executive of the United States from President McKinley to Franklin D. Roosevelt appointed this Buffalo doctor to represent his country as a public health specialist and delegate to national international congresses. In 1946 he became an official member of the Polish mission of the United Nations Relief and Rehabilitation Administration, as advisor in public health. In civic affairs, veterans' affairs, in the rehabilitation of displaced persons, his interest never waned. We in Buffalo are particularly grateful for his 81 colorful, vital, and creative years in our midst. His vision and his fearlessness in expounding new and untried ideas, his constant search for improvement of the welfare of the common man, his boundless energy and versatile talents—all of these place him among our Nation's truly great pioneers.

ATTACKS ON OUR PRINCIPLES OF GOVERNMENT BY GENERAL RIDGWAY

Mr. YOUNGER. Mr. Speaker, I ask unanimous consent to address the House for 1 minute and to revise and extend my remarks.

The SPEAKER. Is there objection to the request of the gentleman from California?

There was no objection.

Mr. YOUNGER. Mr. Speaker, it seems to me that it is extremely unfortunate for a general of the Army to attack our principles of government, especially that portion of our constitutional system which places civilian control over the military.

General Ridgway certainly is entitled to his recommendations, which he undoubtedly made as Chief of Staff. He is entitled to differ with his Commander in Chief if he so wishes to set himself up as a better informed and more experienced soldier than the Commander in Chief.

But when he starts to tear down our system of civilian control in government he is going far afield and flying in the face of lessons learned throughout history by all free governments.

It is strange what three generations of West Point with its military life will do to the thinking of what otherwise might be a very solid citizen of a free civilian government.

I am reminded of the very sound advice given by Premier Clemenceau, the tiger of France, when he said: "War is too important to leave to the generals."

BANK PROXY LEGISLATION

Mr. MULTER. Mr. Speaker, I ask unanimous consent to extend my remarks at this point in the RECORD.

The SPEAKER. Is there objection to the request of the gentleman from New York?

There was no objection.

Mr. MULTER. Mr. Speaker, I am today introducing a bill to authorize the regulation of the solicitation of proxies in respect of securities issued by certain banks.

Nothing in existing law regulates the practice of procuring proxies in connection with the operation of the banks of the country. It is just as important that the solicitation of proxies of such institutions be regulated as the solicitation of proxies of publicly owned corporations.

Most bank stock is publicly owned. More important, however, banks are quasi-public institutions. Even though their relationship with their depositors is that of debtor and creditor, it bears the indicia of a high trust.

This type of legislation is particularly important when mergers and consolidations have become the order of the day.

GENERAL RIDGWAY

Mr. HAYS of Ohio. Mr. Speaker, I ask unanimous consent to address the House for 1 minute and to revise and extend my remarks.

The SPEAKER. Is there objection to the request of the gentleman from Ohio?

There was no objection.

Mr. HAYS of Ohio. Mr. Speaker, I listened with interest to the gentleman from California [Mr. YOUNGER] talking about General Ridgway. As I heard him I wondered how he felt about it when the same kind of controversy arose over General MacArthur.

GENERAL RIDGWAY

Mr. FLOOD. Mr. Speaker, I ask unanimous consent to address the House for 1 minute and to revise and extend my remarks.

The SPEAKER. Is there objection to the request of the gentleman from Pennsylvania?

There was no objection.

Mr. FLOOD. Mr. Speaker, in further reference to the controversy in connection with General Ridgway I must take diametric opposition to the gentleman from California [Mr. YOUNGER]. I am convinced because of these and other matters developing in the Defense Department appropriation hearings, that the time has come for this House to give very serious consideration to military legislation and to examine the advisability without delay of removing the Joint Chiefs of Staff from civilian jurisdiction, and have the Joint Chiefs report directly to the President. At the time the bill was passed we debated this joint but decided to try it out, but obviously it will not work and hence should be changed in the national interest.

HOME RULE FOR THE DISTRICT OF COLUMBIA

Mr. STAGGERS. Mr. Speaker, I ask unanimous consent to address the House for 1 minute and to revise and extend my remarks.

The SPEAKER. Is there objection to the request of the gentleman from West Virginia?

There was no objection.

Mr. STAGGERS. Mr. Speaker, I know there is a great division of opinion on the statements of General Ridgway, but I would like to make a statement which I believe can be supported by Members on both sides of the aisle. In their platforms before the American people made in the last campaign both par-

ties promised home rule for the District of Columbia.

This morning I dropped a bill into the hopper providing just exactly what the platforms of both major parties promised to the District of Columbia: home rule. I call this to your attention for prompt action so that we can fulfill our promise to the residents of the District of Columbia.

Mr. YOUNGER. Mr. Speaker, may I have the privilege of addressing the House, my name having been mentioned?

The SPEAKER. No; not without unanimous consent of the House.

Mr. YOUNGER. Then, Mr. Speaker, I ask unanimous consent——

The SPEAKER. The Chair cannot recognize Members to speak for 1 minute more than once before the business of the day has been dispensed with. That has been the policy heretofore.

DISASTER ASSISTANCE

Mr. O'NEILL. Mr. Speaker, by direction of the Committee on Rules, I call up House Resolution 388, and ask for its immediate consideration.

The Clerk read as follows:

Resolved, That upon the adoption of this resolution it shall be in order to move that the House resolve itself into the Committee of the Whole House on the State of the Union for consideration of House Joint Resolution 471, to permit Federal Housing Administration title I repair assistance to new homes damaged by major disasters. After general debate, which shall be confined to the joint resolution, and shall continue not to exceed 1 hour, to be equally divided and controlled by the chairman and ranking minority member of the Committee on Banking and Currency, the joint resolution shall be read for amendment under the 5-minute rule. At the conclusion of the consideration of the joint resolution for amendment, the Committee shall rise and report the joint resolution to the House with such amendments as may have been adopted, and the previous question shall be considered as ordered on the joint resolution and amendments thereto to final passage without intervening motion except one motion to recommit.

Mr. O'NEILL. Mr. Speaker, House Resolution 388 will make in order the consideration of House Joint Resolution 471 to permit FHA title I repair assistance to new homes damaged by major disasters.

House Resolution 388 provides for an open rule and 1 hour of debate on House Joint Resolution 471.

This joint resolution provides for the removal of the present restriction preventing the use of title I insurance authority with respect to new residential structures which have not been occupied for at least 6 months, if such new residential structures are damaged by a disaster which the President has determined to be a major disaster under Public Law 875.

During the recent floods many new homes were damaged. The owners of these homes are precluded from obtaining title I insurance loans to finance repairs if they have not occupied their homes for longer than 6 months. If House Joint Resolution 471 is enacted, title I FHA insurance authority could be made available to assist the financing of repairs to both old and new homes in major disaster areas.

Mr. Speaker, I yield 30 minutes of my time to the gentleman from Illinois [Mr. ALLEN].

Mr. ALLEN of Illinois. Mr. Speaker, this House joint resolution has been reported unanimously by the Committee on Banking and Currency. I know of no objection to it and reserve the balance of my time.

Mr. O'NEILL. Mr. Speaker, I move the previous question.

The previous question was ordered.

The SPEAKER. The question is on the resolution.

The resolution was agreed to.

Mr. SPENCE. Mr. Speaker, I move that the House resolve itself into the Committee of the Whole House on the State of the Union for the consideration of House Joint Resolution 471 to permit FHA title I repair assistance to new homes damaged by major disasters.

The motion was agreed to.

Accordingly the House resolved itself into the Committee of the Whole House on the State of the Union for the consideration of House Joint Resolution 471, with Mr. MILLS in the chair.

The Clerk read the title of the House joint resolution.

By unanimous consent, the first reading of the House joint resolution was dispensed with.

Mr. SPENCE. Mr. Chairman, I yield myself 5 minutes.

Mr. Chairman, the purposes of this resolution are so clear and obvious that it seems unnecessary to indulge in any lengthy discussion.

Title I of the National Housing Act provides that before an applicant may obtain a loan under that section the house must have been built and occupied for a period of 6 months.

This resolution does not repeal that section but merely gives the Administrator, when he thinks conditions justify, the opportunity to waive that requirement on houses in disaster areas. This resolution is largely the result of recent floods both on the east and west coasts where a large number of new houses have been devastated and where the owners are in great need for funds to repair these houses. Under the law now, unless an occupant had been in possession of the house and had occupied it for 6 months, the loan would not be obtainable. The reason for the enactment of this provision in the law is to prevent the borrower from resorting to title I to obtain funds for the first down payment. Under this resolution we are considering the great necessity of the people in disaster areas would justify the waiving of the 6-month provision. It would give many people the opportunity to get loans, probably under better conditions than they could obtain elsewhere, to repair their houses after the disaster. I am sure there is no controversy about the bill. It was voted out of the committee by unanimous vote, and I am quite sure it could have been put through the House by unanimous consent.

Mr. McVEY. Mr. Chairman, will the gentleman yield?

Mr. SPENCE. I yield to the gentleman from Illinois.

Mr. McVEY. I want to commend the gentleman for his splendid presentation of this subject and to associate myself in support of this measure. I think it meets a very pressing need for those districts devastated by floods.

Mr. SPENCE. I may say that when disaster comes to America it drives us closer together, and it does not make any difference where we live. We have a common interest in restoring our own people to the position which they occupied before these tragic disasters struck. I think it is a privilege to be of service to the people on both the Atlantic seaboard and the west coast and give them the help that they so greatly need.

Mr. TALLE. Mr. Chairman, I yield myself such time as I may require.

Mr. Chairman, every member of the Committee on Banking and Currency recognizes that the pending bill should be enacted promptly. It was reported by a unanimous vote of the committee, as the chairman, the gentleman from Kentucky [Mr. SPENCE], has stated. There is no danger in this legislation, for the President must declare an area a disaster area before this proposed change in the law can apply, and we surely can trust the Administrator to administer the law with genuine discretion.

Mr. Chairman, I yield 2 minutes to the gentleman from California [Mr. BALDWIN].

Mr. BALDWIN. Mr. Chairman, I would like to congratulate the chairman and members of the Committee on Banking and Currency on the speed with which they have acted on this problem and brought this resolution before the House. On behalf of many residents of northern California, we who represent the northern California area appreciate the interest and the consideration that this committee has given to the problems that have arisen as the result of the floods in the latter part of December and early January. It happened that many of the new subdivisions were in the areas most badly flooded, and those people who already have a burden of financial problems in moving into a new home, have this added problem of having silt, dirt, and debris of all types deposited in their homes and on their lots. I think this legislation and the prompt action on the part of the committee and the House is most worthwhile, and I certainly join in supporting this measure.

Mr. TALLE. Mr. Chairman, I yield 1 minute to the gentleman from California [Mr. SCUDDER].

Mr. SCUDDER. Mr. Chairman, I made two inspection trips viewing the damage wrought in California as the result of the recent floods, and I can assure you members of this committee that there were a great number of homes under construction, many of them with barely the foundation in place, when this catastrophe occured. Therefore, I feel that this legislation is highly needed to take care of the many homes the construction of which had just started, some half finished, many ready for occupancy. The law must be amended to assist

these owners. I feel that this amendment will be very beneficial to carry out the intent of the framers of the original law.

Mr. SPENCE. Mr. Chairman, I yield 3 minutes to the gentleman from California [Mr. Moss].

Mr. MOSS. Mr. Chairman, I want to express the gratitude of the people of my district to the chairman and the members of the Committee on Banking and Currency for the expeditious handling of this most important resolution. I represent probably the major disaster area of California. There are many hundreds of my fellow citizens who have had their homes destroyed or severely damaged. Many of those people will be able to undertake repairs under the terms of this resolution. It would be of material benefit to the area.

I am again stating the feeling of sincere gratitude of many of the people I represent for the splendid handling of such an important item of legislation.

Mr. SPENCE. Mr. Chairman, I yield 3 minutes to the gentleman from Massachusetts [Mr. PHILBIN].

REPAIR ASSISTANCE TO DISASTER-DAMAGED HOMES

Mr. PHILBIN. Mr. Chairman, I rise in support of this very meritorious bill and heartily commend the committee for its fine, expeditious work in bringing the measure so promptly to the consideration of the House.

Great damage and destruction to homes of very many people was inflicted by ravaging floods which visited the Northeast, Massachusetts, and my own district last summer and fall which resulted in serious loss of life and huge property damage. Just recently our fellow citizens in the great State of California suffered a similar fate.

As I have pointed out in other speeches and statements, extensive Federal programs will be necessary, in fact urgent, to rehabilitate stricken areas and prevent future floods. It is also true that we must here greatly broaden our concepts to include speedy implementation of effective remedial measures in all disasters.

This bill, while limited in scope, moves in the right direction, and I urge its immediate, unanimous enactment.

Mr. TALLE. Mr. Chairman, I yield such time as he may require to the gentleman from Connecticut [Mr. SADLAK].

Mr. SADLAK. Mr. Chairman, I, too, join my colleagues in congratulating the rapidity with which the Banking and Currency Committee reported this worthwhile and needed resolution. The fact they reported it unanimously bespeaks the merit of the program.

I lend particular emphasis to endorsing House Joint Resolution 471 because it will mean badly needed relief to my people of Connecticut who have had the sad misfortune to be struck, not with 1, but 2 terrible flood disasters, last August and October. Many of these victims from all sections of the State had just moved into newly completed homes, which were either damaged or lost. Without this resolution amending title I of the Federal Housing Act, these unfortunate homeowners could not avail themselves of Federal loans to repair their residential structures.

There is no need to go further into the problem created by the recent flood disasters which have caused devastation and destruction throughout the Nation. The need for immediate and effective remedies is clear; not so clear is the method of curative and preventive measures.

But if the unanimity and benevolent intent of House Joint Resolution 471 is any criteria, I feel confident that subsequent legislation of this nature, which I have introduced and support, will receive the same approval.

Mr. TALLE. Mr. Chairman, I yield such time as he may require to the gentleman from Connecticut [Mr. SEELY-BROWN].

Mr. SEELY-BROWN. Mr. Chairman, I rise in support of House Joint Resolution 471. This resolution will permit FHA title I repair assistance to new homes damaged by major disasters.

As one who witnessed the very real damage done to many homes in the State of Connecticut as a result of the hurricanes and floods of last fall, I am well aware of the importance of this legislation to the people of my State. I urge the passage of this resolution and hope that prompt action may be taken by the other body so that final action may be completed with the least possible delay.

Mr. TALLE. Mr. Chairman, at the moment I have no further requests for time and I reserve the balance of my time.

Mr. SPENCE. Mr. Chairman, I yield 5 minutes to the gentleman from New York [Mr. MULTER].

Mr. MULTER. Mr. Chairman, as the committee has already been told, this resolution has been unanimously approved by the Committee on Banking and Currency. It is a very simple amendment and yet it carries with it certain dangers. Since I am certain that all of the Members of this House who represent areas that were visited by the recent disasters, will get inquiries about it, I should like to alert the Members to the danger that may be present after the passage of the resolution.

Title I provides for what are called high interest rate loans. Those who borrow for home improvement and repairs, under title I usually pay 9.7 percent interest on the money borrowed and the term of the loan is limited to 3 years. Later in this session, there may be an effort to lengthen the term to 5 years.

Anyone who qualifies for a disaster loan does not have to apply for or try to get it from a bank under title I. He can get it under the disaster-loan program. Under that program he pays only 3 percent. He pays the interest only on the unpaid balances, and the term of the loan may be as long as 10 years. You must bear in mind that while we are permitting by this resolution disaster loans to be made under title I for repairs of homes, any homeowner who can qualify for a dsaster loan can qualify under the disaster-loan program and get a 10-year loan at 3 percent interest, and will not have to pay any bank 9.7 percent on a 3-year loan.

On that score, we wrote into the committee report a very specific direction to the agencies involved. Let me read it to you. It is brief. I quote:

The committee wishes to make clear its intent that these FHA and SBA programs—

And the disaster loan program is an SBA program—

be maintained independent of each other. To this end the committee directs that the rejection or disallowance of a FHA title I insured home loan—

Such as permitted under this bill—

shall not be established as a condition precedent to the obtaining of a disaster home loan from the Small Business Administration.

That direction was adopted by the committee unanimously. Obviously there is no dissent in this House to that direction.

May I at this point, ask our distinguished chairman of the committee if it is not the intent of the committee in putting this direction into the report that it apply not only to the Federal Housing Administration but also to the Small Business Administration and to its loan policy board, so that they cannot make as a condition precedent to granting a disaster loan, disapproval of an application under this title as amended?

Mr. SPENCE. I think the gentleman has stated the situation. Whatever help we have given to the people is given without conditions.

Mr. MULTER. That is the American way.

Mr. TALLE. Mr. Chairman, I have no further requests for time.

Mr. SPENCE. I have no further requests, Mr. Chairman.

The CHAIRMAN. The Clerk will read the joint resolution for amendment.

The Clerk read the joint resolution, as follows:

Resolved, etc., That section 2 (a) of the National Housing Act, as amended, is hereby amended by striking the period at the end thereof and inserting a colon and the following:

"*Provided*, That this clause (iii) shall not be mandatory with respect to the period of occupancy or completion of new residential structures where such structures have been damaged in a disaster which the President, pursuant to section 2 (a) of the act entitled 'An act to authorize Federal assistance to States and local governments in major disasters, and for other purposes' (Public Law 875, 81st Cong., approved September 30, 1950), as amended, has determined to be a major disaster."

The CHAIRMAN. Under the rule, the Committee rises.

Accordingly the Committee rose; and the Speaker having resumed the chair, Mr. MILLS, Chairman of the Committee of the Whole House on the State of the Union, reported that that Committee, having had under consideration the joint resolution (H. J. Res. 471) to permit FHA title I repair assistance to new homes damaged by major disasters, he reported the joint resolution back to the House.

The SPEAKER. Under the rule, the previous question is ordered.

The question is on the engrossment and third reading of the joint resolution.

The joint resolution was ordered to be engrossed and read a third time, and was read the third time.

The SPEAKER. The question is on the passage of the joint resolution.

The joint resolution was passed, and a motion to reconsider was laid on the table.

LIARS ARE NOT ALL FISHERMEN

Mr. HOFFMAN of Michigan. Mr. Speaker, I ask unanimous consent to address the House for 1 minute, to revise and extend my remarks, and include an editorial.

The SPEAKER. Is there objection to the request of the gentleman from Michigan?

There was no objection.

Mr. HOFFMAN of Michigan. Mr. Speaker, while all fishermen are not liars, neither are all liars fishermen. If they were, in the annual contest to award a prize to the fishermen who come up with the biggest lie, I would be forced to vote for Drew Pearson, even though he is the top smear artist, and, in my opinion, the most cowardly of any who ever wrote for a newspaper.

This opinion is confirmed by his morning piece in the Washington Post—which will print almost anything for a dollar—which charges President Eisenhower, Lyndon Johnson, Senate leader, many Congressmen, including myself and Representatives Wolcott, Bentley, Thompson, Cederberg, and Dondero, from Michigan, with having been influenced and bought by the natural-gas lobby.

Read his piece.

[From the Washington Post and Times Herald of January 25, 1956]

THE WASHINGTON MERRY-GO-ROUND

(By Drew Pearson)

FUND OF $1.5 MILLION BACKS GAS BILL

Whether you are for or against the bill to exempt natural gas from Federal regulation, you can't help but rub your eyes at the clockwork precision of the lobby which is bent on pushing the Harris-Fulbright bill through Congress.

Never in the many years I have covered Washington have I seen such a skillful job of backstage manipulation. Whether the public wants natural gas regulation or not, it probably isn't going to get it. The Southwest oil and gas boys appear too powerful.

They have organized themselves into a lobby which 2 years ago began operating very quietly for the present Senate showdown. No detail was overlooked. Everything was geared originally to get the gas bill to a vote by last summer.

There was only one thing the lobby didn't figure on—the heart attack of the able Senate leader, LYNDON JOHNSON, the real godfather of the bill. Without his deft guidance, the bill missed out last summer, but JOHNSON has now made it the first order of business in the current Senate, despite opposition from many of his own Democrats, and despite the fact that Republicans welcome this debate as a chance to show that Democrats are in on the giveaway business, too.

Here are details of how the gas lobby quietly laid the groundwork for the showdown vote now about to come up in the Senate.

Stacked committee

First, Senator JOHNSON asked Mr. Eisenhower to appoint a Cabinet advisory committee to study the question of energy, including natural gas and its exemption from Federal regulation. Second, Lyndon switched his Texas colleague, PRICE DANIEL, though a freshman Senator, from the Interior Committee, where he had helped to pass the tidelands oil bill, to the Judiciary Committee, where he could help pass the natural gas bill.

Meanwhile Mr. Eisenhower, taking advice from his Texas friends, pretty well stacked the advisory committee with friends of the gas industry. Consultants to the natural gas section included Richard Gettell of Texas Oil; Richard Gonzales of Humble Oil; Minor Jameson, Jr., of the Independent Petroleum Association of America; and Serge Jureney of Continental Oil.

Jureney, incidentally, is assistant to the chairman of Continental Oil, L. F. McCullum, who is also head of the Natural Gas Industry Committee, mainspring behind the gas lobby.

This committee, at this point, proceeded to raise a total of $1.5 million with which to pressure and propagandize Congress.

Next step was to get their bill introduced in Congress under the best possible auspices. To do this they picked PERCY PRIEST, of Tennessee, chairman of the House Interstate Commerce Committee.

Work begins

Tennessee is a State which does not produce gas and does not relish an increase in the price of gas. Despite this, the lobby figured they could control PRIEST and even reported in advance in the Oil and Gas Journal that "once his bill is ready, PRIEST plans to hold prompt hearings."

Introduction of the bill was timed to coincide with the report of the Cabinet Advisory Committee, which in view of its heavy industry membership was sure to recommend against Federal regulation.

It did.

The lobby slipped up on one minor matter, however. Congressman OREN HARRIS, of Arkansas, was finally picked to be author of the gas bill, instead of PRIEST. HARRIS has long been close to the Arkansas public utilities and Pan American Airways. His wife was even the recipient of nylon stockings from Ham Moses, of Arkansas Power & Light during the war when they were scarce.

So HARRIS introduced the gas bill, while PRIEST pushed it. PRIEST did a remarkably efficient job.

When the final vote came up in the House, it squeaked through by a 209 to 203 vote margin, only because it had the powerful support of popular Speaker SAM RAYBURN and Republican leaders.

The fact that RAYBURN was for the bill was easy to understand. He comes from Texas. And the big oil boys have long been able to redistrict RAYBURN'S congressional district and defeat him if Sam doesn't go down the line for gas and oil.

GOP roll call

With Republican leaders, however, it was different. Former Speaker JOE MARTIN comes from Massachusetts, which needs cheap gas. CHARLEY HALLECK, the assistant GOP leader, comes from Indiana, also in need of cheap gas.

However, they came bustling down the House aisle as the vote was being taken, whispering to fellow Republicans, urging them to get in line for the gas bill.

"There'll be plenty of campaign funds to support any Congressman who votes right," was the word passed through the lobbies.

Here are some of the Congressmen who bowed to the lobby, despite the fact that they come from gas-consuming areas where housewives want low-priced gas:

Maryland: MILLER, DEVEREUX, HYDE, Republicans.

Maine: HALE, NELSON, MCINTIRE, Republicans.

Massachusetts: ROGERS, BATES, NICHOLSON, CURTIS, MARTIN.

Michigan: HOFFMAN, WOLCOTT, BENTLEY, THOMPSON, CEDERBERG, DONDERO.

Nebraska: CHASE, HARRISON, MILLER, Republicans.

New Jersey: WIDNALL, OSMERS, Republican.

New York: Mrs. ST. GEORGE, COLE, MILLER, KEARNEY, GWINN.

Ohio: MCCULLOUGH, BROWN, BETTS, JENKINS, BOLTON, F. P. VORYS, HENDERSON, BOW, MINSHALL, MCGREGOR, Republicans.

Illinois: MCVEY, HOFFMAN, SHEEHAN, CHURCH, REED, MASON, ALLEN, ARENDS, VELDE, SIMPSON, SPRINGER, VURSELL, CHIPERFIELD.

Only three northern Democrats voted for the bill: GRAY, of Illinois; WALTER, of Pennsylvania; and ASPINALL, of Colorado. In California four Democrats who usually vote with the consumers, this time voted with the lobby: MILLER, of Oakland; KING, of Los Angeles; DOYLE and SHEPPARD.

A BILL TO ESTABLISH A PRESIDENTIAL COMMISSION ON NURSING SERVICES

Mrs. FRANCES P. BOLTON. Mr. Speaker, I ask unanimous consent to address the House for 1 minute and to revise and extend my remarks.

The SPEAKER. Is there objection to the request of the gentlewoman from Ohio?

There was no objection.

Mrs. FRANCES P. BOLTON. Mr. Speaker, for many years my colleagues in the House have known of my deep concern with the needs of the American people for adequate health care in general, and for nursing services in particular.

Significant changes have come about in this vital area during the past two decades. Medical knowledge has surged ahead in new drugs, more refined distinctions of diagnosis, early ambulation of patients, better methods of hospital and home care.

Americans are growing increasingly aware of their health, as evidenced by their interest in publications, movies, and television programs with medical themes. What is even more significant, today over a hundred million people in the United States hold some form of voluntary hospital and health insurance. In 1940 the figure was only 10 million. These people have a right to expect that medical care is efficient and that nurses are available who are in tune with the changing concepts of medical and nursing care.

Another measure of the increasing demand: In 1954 11 people out of every 100 of our population were admitted to general hospitals. In 1930 it was only 5 out of 100.

All of this has had its effect on the essential role of the nurse on the health team. Her duties have become more complex, her responsibilities more diverse. The call for her services is not only at the bedside, but in the operating room, and in the all-important training schedule as teachers and supervisors. The public health nurse, in her turn, is not only a key person in the health program, but one of the leading educators of the need for better health methods.

But the supply of nurses has not kept pace with the increasing demand, this despite the fact there has been a relative and actual increase in the number of graduate nurses during the past 20 years.

Throughout this country every day there are people who are in immediate need of medical care who cannot get it because there are not enough nurses to take care of them. People have to wait. Admissions to hospitals are put off.

Mr. Speaker, a long study of the nursing situation and familiarity with its dilemmas and difficulties warranted my raising the question of the shortage in 1953.

Last year I introduced House Joint Resolution 171, to establish a national commission to study the subject of nursing services. At that time I proposed that the Commission be composed of 12 members, 2 from the Senate, 2 from the House, 2 from the executive branch of the Government, and 6 from private life. Among the latter would be representatives of the nursing, medical, and hospital administration professions.

I am today introducing a new bill, Mr. Speaker, which amends the provisions of the original bill with respect to the composition of the Commission. My new bill proposes the establishment of a Commission of 15 people, to be appointed by the President of the United States. It proposes that "included among the members of the Commission shall be individuals from the nursing and medical professions, persons experienced with the administration of hospitals and of public health agencies providing nursing services, and recognized authorities in the field of social science, education, accounting, and business management."

I made this change in the suggested composition of the Commission because I felt it might be difficult for Congressmen and Senators to take enough time away from their legislative responsibilities to function properly as Commission members. Under the terms of the amended bill, however, the President can appoint a Congressman or a Senator to the Commission if he so desires.

The presence on the Commission of recognized authorities in the fields of social science, education, accounting, and business management would give proper recognition to the interests of the patient. Such qualified people who are not concerned with the specialized interests of nurses, doctors or hospital administrators, but with the welfare of the public at large will act as a catalytic agent to develop areas of agreement which may lead toward constructive action.

In my new bill I have also succeeded in reducing to simple language the definition of the purpose of the Commission. The new bill states:

> The Commission shall gather by scientific methods authoritative data relating to problems of the patient and the public in securing adequate nursing services, and shall make recommendations to the President with respect to ways and means for solving such problems.

It is my hope that the Committee on Interstate and Foreign Commerce will schedule a hearing on this proposal at the earliest practicable time. Unless constructive steps are soon taken, the country will face a nursing crisis. This Commission on Nursing Services will make action possible.

Mr. Speaker, may I remind you that in 1953 I sent out a questionnaire to some 10,000 representative nurses, nursing associations, and nursing schools, doctors, hospital administrators, educators, laymen, State governors, Federal and State health authorities, and others. I wanted to get their views as to what was causing the shortage and what they thought could be done about it. More than 4,000 of these leaders and educators in the health-care field replied to that questionnaire.

The main substance of the replies can be summed up in these two sentences:

Everybody agreed that there was an urgent need for more nurses;

But there was absolutely no agreement within or among the related professional groups as to what should be done about it.

Let me give you some examples of the conflicting answers I received.

Some people said that Federal aid to nursing was imperative. Others said that Federal aid was the worst possible course of action.

Some people said that what we needed was more nurses with graduate degrees. Others said that this was ridiculous and that what we needed was more practical nurses.

Some people said that nurses should be educated in high schools. Others said that public education of nurses was wrong and nurses should be educated in hospital training schools.

Some people felt that government should assume more responsibility for training nurses, and others said that this was not government's business and government should stay out of it.

Some people insisted that the chief difficulty was that nurses were not being paid enough, and others said that "nurses are pricing themselves out of their profession."

Some people talked about the need for developing a special class of technical assistants to handle modern hospital equipment and apparatus, and others felt that such technical problems should remain a responsibility of the nursing profession.

Some people suggested that the restaurant, laundry, and recordkeeping functions of nurses might well be relegated to other people, thereby leaving nurses free for more actual nursing. Others had a different point of view.

There were opposing comments on the subject of the accrediting of nurses. Some people felt that the tightening up of licensing provisions was excellent, and others believe that this resulted in closing training schools that had been very valuable.

In short, there was absolutely no clear-cut pattern as to any indicated solution. And yet, on behalf of the public interest, a constructive course of action was imperative.

But could the nurses, the hospital administrators, the doctors, or all three put together, come up with the right answer?

The inescapable conclusion was that although this problem had been up to these professions for solution over a period of many years, they had not come up with any constructive answer. In view of the divergent views which they expressed in answer to my questionnaire, I saw little likelihood of their doing so unless some agency were created which would stimulate action and reconcile differences of opinion.

At this point I decided that the whole matter should be put up to an impartial commission which would be composed not only of representatives of the nursing, medical, and hospital administration professions, but also representatives of the general public who would attack the problem from the standpoint of the patient—that is, the person who gets sick and is immediately in need of nursing care.

As evidence of the need for a commission, I quote the following paragraph from the January 1, 1956, issue of Hospitals:

> No one denies there is a problem. No one really knows exactly why there is a problem today and whose fault it is. The doctor, nurse, and hospital administrator each tend to blame the other two parties. Accusations of shifting medical duties to nurses, hospital penury and poor working conditions, and raising the standards of nursing education beyond the fundamental requirements of bedside nursing are commonly heard.

Mr. Speaker, this new resolution which I have introduced today is to establish a Presidential Commission on Nursing Services. Under unanimous consent, I insert herewith this joint resolution and a list of the members of the national committee, chairmaned by Mr. Samuel Horwitz, trustee, Mount Sinai Hospital, Cleveland, Ohio, which has been formed to support the Commission plan:

House Joint Resolution 485

Joint resolution for the establishment of a Commission on Nursing Services

Whereas public confidence in the medical profession, including hospitals and nursing services, has been augmented by the increased longevity of the people which is the result of such services; and

Whereas it is generally recognized that the consequent demand for nursing services is increasing faster than the supply which is available for the health services of the people; and

Whereas the combined efforts of the recognized representatives of the medical and nursing professions and associations of hospital and public health agencies have not been successful over the past decade in supplying that demand; and

Whereas the economic status of nursing, the professional skills required, and the existing personnel shortage demand study in the light of the need of the public for nursing services; and

Whereas many segmental and unilateral studies of health service problems have been made, but none takes an overall multidisciplinary view of the situation on behalf of the patient; and

Whereas existing reports, studies, and knowledge could be utilized by a central task force organized to study the demand for nursing services in relation to the overall health of the Nation: Therefore be it

Resolved, etc.—

DECLARATION OF POLICY

SECTION 1. (a) It is hereby declared to be the policy of the Congress to promote the health of the American people by assisting them in securing improved nursing services. It is the purpose of this joint resolution to implement that policy by providing for the establishment of a commission which shall gather by scientific methods authoritative data relating to the needs for services ren-

dered by all types of nursing personnel (including professional and practical nurses, nursing aides, and nursing administrators, supervisors, and teachers) and shall make such recommendations to the President with respect thereto as it deems advisable in the interest of improving patient care.

(b) Nothing in this joint resolution shall be construed as authorizing or intending any interference with the programs of study and improvement of patient care which are being carried forward by the professional nurses' organizations, or by public or private endeavor, but rather this joint resolution shall be construed as an effort to augment such programs through the marshaling of resources for a multidisciplinary approach to the problem on behalf of the patient and in the public interest.

ESTABLISHMENT OF COMMISSION ON NURSING SERVICES

SEC. 2. (a) To carry out the purpose of this joint resolution there is hereby established a Commission on Nursing Services (hereinafter referred to as the "Commission").

(b) Service of an individual as a member of the Commission or employment of an individual by the Commisison as an attorney or expert in any business or professional field, on a part-time or full-time basis, with or without compensation, shall not be considered as service or employment bringing such individual within the provisions of section 281, 283, 284, 434, or 1914 of title 18 of the United States Code, or section 190 of the Revised Statutes (5 U. S. C., sec. 99).

MEMBERSHIP OF THE COMMISSION

SEC. 3. (a) Number and apopintment: The Commission shall be composed of 15 members appointed by the President. Included among such members shall be individuals from the nursing and medical professions, persons experienced in the administration of hospitals and of public health agencies providing nursing services, and recognized authorities in the fields of social science, education, accounting, and business management, to the end that the Commission will be qualified and dedicated to accomplish constructive results in the public interest.

(b) Vacancies: Any vacancy in the Commission shall not affect its powers, but shall be filled in the same manner in which the original appointment was made.

ORGANIZATION OF THE COMMISSION

SEC. 4. The Commission shall elect a chairman and a vice chairman from among its members.

QUORUM

SEC. 5. Eight members of the Commission shall constitute a quorum.

COMPENSATION OF MEMBERS OF THE COMMISSION

SEC. 6. (a) Members from private life: The members of the Commission appointed from private life shall each receive $50 per diem when engaged in the actual performance of duties vested in the Commission, plus reimbursement for travel, subsistence, and other necessary expenses incurred by them in the performance of such duties.

(b) Members of Congress: Members of Congress, if appointed as members of the Commission, shall serve without compensation in addition to that received for their services as Members of Congress; but they shall be reimbursed for travel, subsistence, and other necessary expenses incurred by them in the performance of the duties vested in the Commission.

(c) Members from the executive branch: Persons who are in the executive branch of the Government, if appointed as members of the Commission, shall serve without compensation in addition to that received for their services in the executive branch; but they shall be reimbursed for travel, subsistence, and other necessary expenses incurred by them in the performance of the duties vested in the Commission.

STAFF OF THE COMMISSION

SEC. 7. (a) The Commission shall have power to appoint and fix the compensation of such personnel as it deems advisable, without regard to the provisions of the civil-service laws and the Classification Act of 1949, as amended.

(b) The Commission, without regard to the civil-service laws and the classification laws and without regard to section 3709 of the Revised Statutes, may—

(1) secure data from agencies, organizations, and individuals and pay therefor in advance or by way of reimbursement; and

(2) procure temporary and intermittent services to the same extent as is authorized for the departments by section 15 of the Administrative Expenses Act of 1946 (5 U. S. C., sec. 55a), but at rates not to exceed $50 per diem for individuals.

EXPENSES OF THE COMMISSION

SEC. 8. There is hereby authorized to be appropriated, out of any money in the Treasury not otherwise appropriated, so much as may be necessary to carry out the provisions of this joint resolution.

DUTIES OF THE COMMISSION

SEC. 9. (a) The Commission shall gather by scientific methods authoritative data relating to problems of the patient and the public in securing adequate nursing services, and shall make recommendations to the President with respect to ways and means for solving such problems.

(b) Report: The Commission shall submit to the President interim reports at such time or times as he deems necessary and shall submit to the President its final report not later than 2 years from the date of the enactment of this joint resolution. The Commission shall cease to exist on the day on which it submits its final report.

POWERS OF THE COMMISSION

SEC. 10. (a) Hearings and sessions: The Commission or, on the authorization of the Commission, any subcommittee or member thereof, may, for the purpose of carrying out the provisions of this joint resolution, hold such hearings and sit and act at such times and places as the Commission or such subcommittee or member may deem advisable.

(b) Obtaining official data: The Commission is authorized to request from any department, agency, or instrumentality of the Government any information it deems necessary to carry out its functions under this joint resolution, and each such department, agency, and instrumentality is authorized to cooperate with the Commission and, to the extent provided by law, to furnish such information to the Commission upon request made by the chairman or by the vice chairman when acting as chairman.

The Bolton resolution is endorsed and supported by the national committee for a Commission on Nursing Services, 3088 Mayfield Road, Cleveland 18, Ohio.

Chairman: Samuel Horwitz, trustee, Mount Sinai Hospital, Cleveland, Ohio.

MEMBERS

H. E. Alberti, administrator, Winchester Memorial Hospital, Winchester, Va.

David B. Allman, M. D., chairman, committee on legislation, American Medical Association, Atlantic City, N. J.

Herbert A. Anderson, administrator, Lincoln General Hospital, Lincoln, Nebr.

Edith D. Bossie, president, Practical Nurses of West Virginia, Inc., Dunbar, W. Va.

Esther Lucile Brown, director, Russell Sage Foundation, New York, N. Y.

Victoria T. Burblis, R. N., director of nursing education, Springfield State Hospital, Sykesville, Md.

Arthur G. Burns, acting director, Tampa Municipal Hospital, Tampa, Fla.

Sally Butler, past president, National Federation of Business and Professional Women's Clubs and International Federation of Business and Professional Women, Indianapolis, Ind.

James Russell Clark, director, the Brooklyn Hospital, Brooklyn, N. Y.

Dorothy H. Cobb, director, School of Nursing, Sacramento Junior College, Sacramento, Calif.

E. M. Collier, administrator, Hendrick Memorial Hospital, Abilene, Tex.

Carrie Mae Crew, president, Licensed Practical Nurses' Association of Alabama, Inc., Birmingham, Ala.

Gertrude E. Cromwell, supervisor of nursing, Denver Public Schools, Denver, Colo.

R. S. Cunningham, M. D., professor anatomy emeritus, Albany Medical College, Sullivan's Island, S. C.

Jean A. Curran, M. D., associate executive dean for medical education, State University of New York, Brooklyn, N. Y.

Graham L. Davis, hospital consultant, Straits, N. C.

R. B. Davis, M. D., secretary-treasurer, the Tri-State Medical Association, and editor of Tri-State Medical Journal, Greensboro, N. C.

Wm. J. Donnelly, administrator, the Greenwich Hospital Association, Greenwich, Conn.

Harry O. Dudley, administrator, Bourbon County Hospital, Paris, Ky.

Mrs. Howard H. Egert, president, Federation of Women's Clubs of Greater Cleveland, Cleveland, Ohio.

Harold M. Erickson, M. D., State health officer, Oregon State Board of Health, Portland, Oreg.

Stanley Ferguson, director, University Hospitals, Cleveland, Ohio.

Chas. W. Flynn, executive director, Mississippi Hospital Association, Jackson, Miss.

B. Shulley Freeman, director of nurses, the Central Dispensary and Emergency Hospital, Washington, D. C.

F. B. Freeman, Neale, Newman, Bradshaw, Freeman & Neale, Springfield, Mo.

James A. Greig, editor, the A. S. T. A. Journal, Chicago, Ill.

Hartford E. Grugan, M. D., Williamsport, Pa.

H. Close Hesseltine, M. D., professor of obstetrics and gynecology, the University of Chicago, Chicago, Ill.

Charles Higley, M. D., past president, Cleveland Academy of Medicine, Cleveland, Ohio.

Frederick T. Hill, M. D., Waterville, Maine.

Dana Hudson, R. N., chairman, committee on legislation, Georgia State Nurses' Association, Atlanta, Ga.

Arnold S. Jackson, M. D., Jackson Clinic, Madison, Wis.

T. K. Leinbach, superintendent, Community General Hospital, Reading, Pa.

W. H. Lewis, M. D., director, Floyd Hospital, Rome, Ga.

John R. Mannix, director, Cleveland Hospital Service Association, Cleveland, Ohio.

Moir S. Martin, M. D., member of the North Carolina Board of Nurse Registration and Nursing Education, Mount Airy, N. C.

Robert P. Mathieu, secretary, Hospital Association of Rhode Island, assistant administrator of Memorial Hospital, Pawtucket, R. I.

Betty L. McCarver, R. N., Research Hospital, School of Nursing, Kansas City, Mo.

Peggie McKay, R. N., Abilene, Tex.

R. Louise McManus, director, Division of Nursing Education, Teachers College, Columbia University, New York, N. Y.

Karl P. Meister, executive secretary, Board of Hospitals and Homes of the Methodist Church, Chicago, Ill.

Joseph F. Munn, R. N., president, Brooklyn State Hospital Alumni Association, Brooklyn, N. Y.

W. S. Murphy, administrator, Good Samaritan Hospital, Lexington, Ky.

Russell C. Nye, administrator, Northwestern Hospital, Minneapolis, Minn.

Bessie E. Oakes, R. N., director, Nursing Service, assistant administrator, Central Michigan Community Hospital, Mount Pleasant, Mich.

William A. Phillips, acting executive director, Holsten Valley Community Hospital, Kingsport, Tenn.

Robert T. Pottenger, M. D., Pasadena, Calif.

Henry N. Pratt, M. D., director, the New York Hospital, New York, N. Y.

Ethel G. Prince, R. N., executive secretary, Nurses Association of the Counties of Long Island, Inc., District No. 14, Brooklyn, N. Y.

Josephine Rappaport, R. N., director of nursing education, Rowan Memorial Hospital, Salisbury, N. C.

R. D. Reekie, M. D., Spokane, Wash.

D. C. Reynolds, administrator, Madison General Hospital, Madison, Wis.

Beatrice E. Ritter, R. N., director of nursing, District of Columbia General Hospital, Washington, D. C.

David H. Ross, M. D., executive director, The Jewish Hospital Association, Cincinnati, Ohio.

George L. Sackett, M. D., past president, Academy of Medicine of Cleveland, Cleveland, Ohio.

Kathleen Y. Sands, R. N., director of nursing, Evangelical Deaconess Hospital, Detroit, Mich.

W. T. Sanger, president, Medical College of Virginia, Richmond, Va.

George C. Schicks, director, Hospital of Saint Barnabas and for Women and Children, Newark, N. J.

James T. Shelton, M. D., superintendent and medical director, Porterville State Hospital, Porterville, Calif.

H. J. Short, business manager, Southern Pacific Hospital Department, San Francisco, Calif.

Vera B. Sligh, president, Licensed Practical Nurses Association of Florida, Inc., Division No. 11, Lakeland, Fla.

Mrs. Leo Smith, member of legislation committee, Women's Auxiliary to the American Medical Association, Waycross, Ga.

Herbert L. Spencer, executive director, Samuel H. Kress Foundation, New York, N. Y.

Virginia S. Stastny, director of nursing, Midland Memorial Hospital, Midland, Tex.

Melvin L. Sutley, superintendent, Wills Eye Hospital, Philadelphia, Pa.

Dorothea Thompson, R. N., supervisor, practical nurse program, Richmond Public Schools, Richmond, Va.

Hilda M. Torrop, R. N., executive director, National Association for Practical Nurse Education, New York, N. Y.

Kathryn Trent, R. N., director of nursing, Memorial Hospital, Charleston, W. Va.

Bryce L. Twitty, administrator, Hillcrest Medical Center, Tulsa, Okla.

Dorothy A. Vernstrom, director, School of Nursing, Nursing Service, Peter Bent Brigham Hospital, Boston, Mass.

Dudley P. Walker, M. D., past president, the Medical Society of the State of Pennsylvania, Bethlehem, Pa.

Grace A. Warman, director, School of Nursing and Nursing Service, the Mount Sinai Hospital School of Nursing, New York, N. Y.

Samuel Whitman, director, Cleveland Mental Health Association, Cleveland, Ohio.

Lillian H. Whittemore, treasurer, Maine Licensed Practical Nurses' Association, Old Orchard Beach, Maine.

Mrs. Robert W. Woodruff, Atlanta, Ga.

SECRETARY BENSON ADDS INSULT TO INJURY OF AMERICAN FARMERS

Mr. JONES of Missouri. Mr. Speaker, I ask unanimous consent to address the House for 1 minute and to revise and extend my remarks.

The SPEAKER. Is there objection to the request of the gentleman from Missouri?

There was no objection.

Mr. JONES of Missouri. Mr. Speaker, adding insult to injury, President Eisenhower's Secretary of Agriculture in a letter to the editor which appears in the February issue of Harper's magazine gives expression to what I believe may be interpreted as his lack of concern for the plight of the American farmer.

Day by day we begin to understand why the Secretary of Agriculture appears to have less interest in the welfare of the farmers of this Nation, for within the last few days the Honorable Ezra Taft Benson has written that he looks upon the American farmer as "Our pampered tyrant" who "is about to get his boots licked by both political parties."

Not only does the Secretary look upon those whose interest he is supposed to represent, as "tyrants," but he concurs in the slanderous libel that has been given nationwide circulation, to the effect "that the farmer is generally eager to sell his vote to the highest bidder, and that city people are too indifferent" or benumbed "to resent this legalized corruption, even when the bribe is lifted right out of their own pockets."

Now I know, Mr. Speaker, that someone will deny that the Secretary of Agriculture feels this way about the farmers of America, and they will point out that the Secretary did not make the statements which I have just read, but I respectfully submit at this point a letter which appears in the February 1956 issue of Harper's magazine, in which the Secretary himself praises the article The Country Slickers Take Us Again, which appeared in the December 1955 issue of this same magazine, and which the Secretary apparently read with great satisfaction for he wrote the editor and author, stating among other things, "It"—the article—"is excellent."

When one states that a thing is excellent, I believe we can interpret this to mean concurrence, and approval in the superlative degree. Anyway this is how the Secretary expressed himself in writing to editor in Chief John Fischer to commend Mr. Fischer's slanderous and libelous article which should be, and I believe is resented by every red-blooded American farmer:

> I have read the article by John Fischer in the December issue of Harper's with a great deal of interest. It is excellent.
>
> EZRA T. BENSON,
> *Secretary of Agriculture,*
> *Washington, D. C.*

Now, Mr. Speaker, let us look to some of the other statements made by the author of this article, in which the Secretary concurs:

> For 20 years—from 1920 until 1940—the farmers were in pretty bad shape. During these decades, city people got in the habit of giving them handouts.

Can you imagine, Mr. Speaker, a Secretary of Agriculture having no more respect for the farmers of America than to accuse them of accepting handouts, or doles? Yes; he has accused the farmers of accepting doles, for the article states:

> The farmer not only got in the habit of accepting his dole; he came to believe that it belonged to him permanently, as a matter of right.

But, listen to this, and again I quote from the article to which the Secretary lends his endorsement:

> When any hog keeps his jowls in the trough long enough, he gets to thinking he owns the trough.

I want my Iowa colleagues to listen to this next statement. True, things may be better in Iowa than they are in other parts of the country, but I doubt very seriously if my Iowa friends concur in the statement:

> The ordinary—

Yes, it says ordinary—

> Iowa farmers * * * has a minimum—

And note the use of the word "minimum"—

> of two new cars and they are usually brand-new Buicks or Oldsmobiles or Cadillacs.

And this too, is a part of the article that our Secretary says is excellent, and I presume he believes that the ordinary farmer in Iowa has two brand new cars.

He also believes, if we are to take his words at face value, that, and I again quote from the Harper's article:

> The individual farmer isn't much worse off—only about 5 percent—than he was at the peak of his scandalous wartime prosperity.

Get that, if you will, "scandalous wartime prosperity." Does not the Secretary read and believe the statistics prepared by his own economists, or would he prefer to take the slanderous inaccurate statements of a "city slicker" who is out to build up public sentiment against the very segment of our economy that the Secretary should be trying to protect?

And listen to this statement which the Secretary endores in his letter to the author of the article, which reads:

> The farmers are being subsidized to produce millions of tons of things—cotton, wheat, rice, butter, and so on—which we don't need, can't possibly use, and can't even give away.

Does President Eisenhower's Secretary of Agriculture believe that "At least 40 million of our 350 million acres of cropland ought to be taken out of production"? and that "At least 1 million out of our 5½ million farm families ought to be nudged gradually off the land, and helped to find some useful (?) occupation"? He must believe this, for these are words taken directly from the article which Secretary Benson says is excellent.

Secretary Benson, by endorsing the article in Harper's magazine, says that—

> Fundamentally * * * our whole political structure, on every level, is stacked in favor of the farmer.

He bemoans the fact that the smaller populated agricultural States have the same number of United States Senators as do the larger industrial States. The article states:

> A grand-scale reshuffling of districts, both for Congress and the legislatures, seems to be the only long-range remedy—

And goes on to state that—

We can make a start next November, however, by throwing eggs at every candidate who poses as the farmer's friend. That will help get rid of one surplus, and a lot of political hypocrisy at the same time.

So, here we have the opinion of President Eisenhower's Secretary of Agriculture, who, in effect says that he believes any Member of Congress who poses as the friend of the farmer is a hyprocrite, and presumably the Secretary wants to make it clear that he is no hypocrite, for certainly he is demonstrating day by day and week by week, that he has less concern for the plight of the American farmer.

OUR FOREIGN POLICY INVOLVES RISKS

The SPEAKER. Under previous order of the House, the gentleman from Michigan [Mr. BENTLEY] is recognized for 30 minutes.

Mr. BENTLEY. Mr. Speaker, a recent article in Life magazine entitled "How Dulles Averted Wars" has stirred up a great deal of comment and controversy. Most of the dispute seems to center around the following paragraph from the article which appears therein as a direct quotation from the Secretary of State:

Says Dulles, "You have to take chances for peace, just as you must take chances in war. Some say that we were brought to the verge of war. Of course we were brought to the verge of war. The ability to get to the verge without getting into the war is the necessary art. If you cannot master it, you inevitably get into war. If you try to run away from it, if you are scared to go to the brink, you are lost. We've had to look it square in the face—on the question of enlarging the Korean War, on the question of getting into the Indochina war, on the question of Formosa. We walked to the brink and we looked it in the face. We took strong action."

As Mr. Dulles, in his news conference of January 17, made perfectly clear, such statements are, for the most part, either quotations or close paraphrases of what he has already said publicly. At this point, Mr. Speaker, I request permission to insert in the RECORD the complete text of Mr. Dulles' news conference insofar as it pertains to the magazine article in question.

The SPEAKER. Without objection, it is so ordered.

There was no objection.

(The matter referred to is as follows:)

[Department of State press release of January 17, 1956]

SECRETARY DULLES' NEWS CONFERENCE OF JANUARY 17

(The following is the transcript of today's news conference by Secretary of State John Foster Dulles. It is authorized for direct quotation:)

Secretary DULLES. I have a brief statement to make about a matter which I judge to be of current interest.

An article in Life magazine has attracted much comment. Let me say this: I did not write the article, I did not review or censor the article, or know of its title. I did not know in advance of its publication date and, in fact, I did not read the article until after it was released for publication. Having read it, I authorized our press officer to say that the statements specifically attributed to me did not require correction from the standpoint of their substance.

Most of the statements specifically attributed to me are quotations or close paraphrases of what I had already said elsewhere. One is somewhat ambiguously phrased but the ambiguity can easily be resolved if read in context and with reference to the many public statements which I have made.

I believe that the United States should adopt every honorable course to avoid engagement in war. Indeed, I have devoted my whole life to the pursuit of a just and durable peace. I believe, however, that there are basic moral values and vital interests, for which we stand, and that the surest way to avoid war is to let it be known in advance that we are prepared to defend these principles, if need be by life itself.

This policy of seeking to prevent war by preventing miscalculation by a potential aggressor is not a personal policy; it is not a partisan policy; it is a national policy. It is expressed in mutual security treaties which we now have with 42 nations and which the United States Senate has overwhelmingly approved. It is expressed in Public Law 4, whereby the Congress, by an almost unanimous bipartisan vote, authorized the President to use the Armed Forces of the United States in the Formosa area, if he deemed it necessary for the protection of Formosa and the Penghus.

This policy of making clear our position in advance, of course, involves risks. As Senator Vandenberg said about the North Atlantic Treaty, it is a calculated risk for peace. But as we have learned by hard experience, failure to make our position known in advance make war more likely because then an aggressor may miscalculate. The policy of deterrence is only one aspect of the task of maintaining a just and durable peace. It is necessary to be patient; it is necessary to be conciliatory; it is necessary to make our peace a vital force for justice and human welfare so that all men will aspire to share that kind of peace.

My views with respect to peace have been made known on many, many occasions and there is no reason to think that they have altered because articles dealing with complex subjects of foreign policy inevitably tend to oversimplification and special emphasis.

Question. Mr. Secretary, the article, however, said that it was based on information hitherto undisclosed. I was wondering if you could tell us what the occasion was that—it did say that new information that it was presenting had been submitted by you and the State Department.

Answer. There is no substantive information in there which I know of which has not been generally a matter of public knowledge and found in the press.

Question. Mr. Secretary, do you believe that President Eisenhower would regard an attack on Quemoy and Matsu as an attack on Formosa?

Answer. That question stands today where it has stood ever since Public Law 4 was adopted and since our treaty of security was made with the Republic of China. As you recall, the treaty area is defined, but the President is authorized to use the Armed Forces of the United States in relation to related areas if he believes that is important for the defense of the treaty area.

Question. Well, in fact, Mr. Secretary, this article says that you never had a doubt that the President would regard an attack on Quemoy and Matsu as an attack on Formosa. Is that correct?

Answer. As I said before, I did not read the article in advance and I will not here discuss the views of the author.

Question. Mr. Secretary, you said that there is no information here which has not already been made public. Where can one find the statement that the President agreed on your recommendation and on the second occasion decided again when you telephoned him during the night that if there was no truce in Korea, the United States would bomb across the Yalu into Manchuria?

Answer. Well, I have seen that often times in the public press. You will recall that there had already been drawn up at that time the statement by the 16 nations who were in the war there, that if the war should be resumed it would probably not be possible to confine it to Korea. I think it is a fair inference that the same thing would have been true if the war would have gone on.

Question. Mr. Secretary, in the same connection, the article states that President Eisenhower concurred in your recommendation that the Communist forces in Indochina be opposed on the ground, and that if the Chinese forces intervened openly, that staging bases in South China would be destroyed by United States airpower. Did the President concur in a recommendation by you?

Answer. I am not going to discuss the views of the author. Views of that sort have been expressed and counterviews have been expressed. That is a source of public discussion, I would say.

Question. But did you make such a recommendation, sir?

Answer. I am not going to discuss the contents of the article because that would make it into a sort of state paper. When I have state pronouncements to make, I make my own speeches.

Question. A year and a half ago both you and the President told press conferences that you hoped to put out a white paper on the Indochina affair. Nothing yet has appeared until this article. When are we going to get the facts?

Answer. There have appeared many articles that I am aware of—some written by you.

Question. Mr. Secretary, you have just said that our views should be made clear lest the enemy miscalculate and get into war. Why do we not make our position clear on Matsu and Quemoy?

Answer. I think it is clear.

Question. It is not clear to me, sir.

Answer. It is not clear to you because you, like me, cannot read the minds of the Chinese Communists. But, to them, I think it is quite clear.

Question. What do you think they think we mean to do?

Answer. I think that they think that if an attack is started there which comprehends a claim to take by force Formosa and the Penghus that we will fight.

Question. Mr. Secretary, you have said I think in the beginning that most of the article which didn't—where you were not quoted correctly, were paraphrased or were close statements of what you have said, but you have also just said that you were not going to discuss any aspects of the article which may be the views of the author. I am simply asking you, sir, is there no way to clarify what you do and what you do not accept in the article? Well, let me put it this way: Are there things in the article that you do not accept as statements of fact attributed to you?

Answer. I said—perhaps I didn't make it as clear as I should—that most of the statements specifically attributed to me are quotations or close paraphrases of what I have already said publicly. That should be made clear.

Question. You said, except for one ambiguous statement. What was that ambiguous statement?

Answer. That was a phrase—I don't have the text here with me, which went on to say that, which implied that the getting to the brink of war might be our choice rather than a choice that was forced upon us. The whole paragraph I think is perfectly clear. But

one phrase taken out of context could be ambiguous.

Question. Could you state now what is the proper concept that you were trying to get across there?

Answer. Yes; we have faced a situation where in many parts of the world, in Europe and more recently in the Far East, there has been a threat of armed attack against what I referred to here as basic moral values and vital interests. Now, we had the choice of retreating in the face of those threats or making it clear that if they were pursued that it would involve a war. We believed that the best way to avoid a war was to make that clear. That meant that we stood firm at a point where there was a threat. But I have believed very strongly, as a result of my study of history, particularly the history of this century, that the greatest risk of war comes from not making it clear that you are prepared to defend the moral values and vital interests of the United States. We have had a history of wars which we got into despite the fact that we were always very eager for peace. I believe that it is not enough to want peace—which surely we all do—but that to get peace requires taking what Senator Vandenberg referred to as a calculated risk and making clear that certain things cannot be attacked with impunity.

Question. Mr. Secretary, is this the sentence that you considered ambiguous: "The ability to get to the verge without getting into the war is the necessary art"?

Answer. Will you read the preceding sentence, I think.

Question. The preceding sentence is—it is two sentences: "You have to take chances for peace, just as you must take chances in war. Some say that we were brought to the verge of war. Of course, we were brought to the verge of war. The ability to get to the verge without getting into the war is the necessary art."

Answer. Yes, that second sentence if read out of context does, I think, give an incorrect impression. The important thing is that we were brought to the verge of war by threats which were uttered in relation to Korea, in relation to Indochina, and in relation to Formosa.

Question. Mr. Secretary, in order to help some of us judge whether your past views on the Indochina armistice remain what they were, could you tell us whether you regard the armistice as it was negotiated as a major save for the free world in that it kept some of the country from going Communist or whether we just took no view and in effect refused to sanction it by not signing it?

Answer. Well, we did not, as you know, sign the armistice agreement because we were not a party to the war nor did we want to countenance some of the provisions of that armistice which we believed were very injurious, particularly with relation to the dislocation of the hundreds of thousands of Catholics in the northern area who had to be displaced under very rigorous conditions. We believe, however, that the event has proved that the losses which were taken by that armistice can be limited and do not necessarily involve what was one time feared—that is, the loss of the whole Indochina peninsula.

Question. Mr. Secretary, could you tell us what foreign policy considerations have guided you to collaborate with the writing of this article, why you agreed to it at this time, and whether these conclusions included the fact that Sir Anthony Eden would shortly come to this country?

Answer. It had no relationship to that whatsoever. My so-called collaboration involved nothing more than what I have done with a good many people here in this room—that is, from time to time have informal chats with certain of you. This particular one took place, I think, about the first of December. I had no knowledge at that time as to when an article would be issued, if indeed it would be issued at all.

Question. Mr. Secretary, the Herald-Tribune says in a front-page editorial today that this Life magazine article was submitted to the State Department before publication, and that one major change was requested, and that the magazine found it was too late to do that. And the second point is that the article contains at least one error of fact, namely that a British change of heart prevented the proposed meeting in Washington during the Indochina crisis. I would like to ask whether you or any of your aids suggested the change in the article which could not be made, and whether or not you believed the British change of heart did prevent the Indochina meeting?

Answer. Well, I am not going to go into the last question because that relates to past history where there obviously have been differences of opinion and it is not desirable, I believe, to revive possible differences and misunderstandings which may have occurred at that time.

As far as the other question is involved, that is something I have no personal knowledge of, and was undoubtedly handled by the Public Relations Division of the Department.

Question. Mr. Secretary, was any verbatim record kept of this conversation in whole or in part?

Answer. I believe that notes were made of the conversation.

Question. No, I mean in terms of either a recording or a stenographic account.

Answer. I believe that there was, yes, but I did not see it and it was understood that that was merely for the purpose of refreshing the recollections of the author and not for the purpose of supplying any material that could be quoted.

Question. Can that be made available to the press, Mr. Secretary?

Answer. No.

Question. Mr. Secretary, how did you determine—how did the writer determine what things you said that were to be quoted directly? Did you guide him on that?

Answer. I was not conscious at the time that anything that I said would be quoted directly.

Question. Then, are you saying, sir, that the quotations attributed to you were made on the writer's own authority and responsibility?

Answer. I said on that, I think, that the quotations in the main were actual reproductions of what I had previously said publicly and that otherwise I had no reason to question them from the standpoint of their broad substance.

Question. Well, you understand the difficulty that everyone is in, sir, because, as you remember yourself, when some questions have been put to you, that it has been impossible for you to discuss those questions because this is the author's point of view.

Answer. Right.

Question. On the other hand, you have said that the substance of what he said represents your point of view. At what point are we to determine that the author is speaking and at what point are we to determine that you are speaking? How are we to know?

Answer. Well, I suppose that you would know because of the fact that the only portion of the article on which I have commented was where certain statements were attributed to me in quotation marks, and I have felt, as I said, I think in my last press conference, that in view of that attribution to me in quotation marks of certain statements, I felt that if there was anything that was seriously wrong with them I had a duty to call attention to that lest harm be done. I, therefore, read the article and came to the conclusion that, broadly speaking, the substance of what had been attributed to me was substantially accurate and in line with what I previously had said. Therefore, I saw no reason to issue a repudiation or a correction.

Question. Mr. Secretary, in regard to this passage which contains the sentence used here before—I will read it again: "The ability to get to the verge without getting into the war is the necessary art." That passage is set in quotes, as though it were a direct quote from you. Can you tell us whether that passage is taken from a public statement of yours or was quoted from you in the course of that conversation?

Answer. I have said the substance of that, I think, on a good many occasions—that I believe that peace is not won by seeming to retreat when an aggressor threatened; that it was important to make clear the fact that we were going to stand firm, even though that might involve war. That is a sentiment which I have expressed a good many times over a great many years, and I think that this particular statement attributed to me, when read in the light of its context, is a fair reflection of my views.

Question. It is a reflection, then, but not a direct quote as it stands?

Answer. I would never myself have expressed myself in quite that way for publication.

Question. Mr. Secretary, what is your reaction to congressional reaction to this article?

Answer. Well, the article, I'm sorry to say, gives me a great deal more credit than is my due. The title of it gives me too much credit; the article, as a whole, gives me too much credit; and, as such, it was bound to attract criticism in some quarters.

I regret the fact that some people have given me too much credit, although I do not regret the fact that there are some people who seem to approve of what I have done.

Question. Sir, in regard to these three episodes discussed in the article, whether we might have gone to war and did not, were there, in each case, other factors leading to nonwar which were overlooked in the article?

Answer. I have said that articles such as this, dealing with a complex subject, inevitably oversimplify and, in that process, tend to overemphasize. I think, undoubtedly, there were a good many factors in the equation—not all of them are mentioned in this article.

Question. Mr. Secretary, in those same three instances, are you satisfied that our allies had a clear impression of what we had planned to do in the event that the talks broke down, or that the war in Korea was renewed? Had we made clear to them the drastic steps that we proposed to take in that event?

Answer. I think our policy was made clear to our allies; yes.

Question. Are you satisfied, sir, that it was made clear to the responsible committees of the Congress?

Answer. Well, it was made clear to the congressional leaders. Now, I think we have discussed this particular subject enough. It has been half an hour, and I would like to get on—if you have any questions about any other matters.

Question. Mr. Secretary, you and the President recently, particularly, have both emphasized the need for an expanded foreign aid on a longer-range basis. There has been some congressional opposition, notably that of Senator GEORGE and Senator KNOWLAND. Over the weekend there was speculation printed that the administration was prepared to pull back. My question is, sir: How hard, how vigorously, is the administration prepared to fight for this principle that you and the President have enunciated?

Answer. Well, I don't think it is a principle that we will have to "fight for," as you put it, although it is a principle which we believe in, and which we believe that Congress will concur in once the full picture has

been given to them. Under Secretary Hoover is, I think, this morning giving some of the story to the Foreign Relations Committee. I would like to, if I could, just take a moment off of just answering questions to say a few words about our philosophy on this whole subject.

The Soviet Union, as a result of its policies of the last 30 years, particularly the last 10 years, has made considerable strides in developing itself into an industrial state, which has considerable heavy industry, and it is among those which have developed atomic energy, both for peacetime and wartime purposes.

Now that evolution of the Soviet Union has made a considerable impression upon the neighboring countries of Asia, that development has occurred through very cruel and inhumane processes. The needs of the people have been largely ignored; there has been a very large amount of compulsory and slave labor. The methods by which industrialization has been achieved cannot be approved by any right-thinking person who believes in the dignity of man. Nevertheless, there is a result there, and it is a result which has an appeal to the less-developed countries who feel that their own independence will not be complete unless they can have a measure of not merely political independence, but, also, a measure of economic independence. And when the Soviet Union sends its emissaries to them, and says, "Now see what we have done; and we will help you do the same thing," that has a certain appeal to countries which are primarily producers of raw materials, and which are dependent upon other countries, heretofore the western countries, for industrial goods.

Now that kind of Russian competition I do not think can be met merely by the kind of economic aid which helps to meet emergencies—famine, floods, and the like—or helps to balance current budgets. It is necessary to help these countries to move forward along the path to which they aspire, and along which one neighboring country has largely done; that is, the Soviet Union.

Now, I believe that these offers of the Soviet Union are coupled with political purposes, and that their acceptance would involve untoward political results. Nevertheless, a temptation is there, the need is there; and, even if it were not for the Soviet example, I believe that the United States ought to try to help in ways which will not merely relieve on a year-to-year basis, but help to transform these economies into better-integrated economies of the kind that the people aspire to.

Furthermore, if our Government can engage in some of these long-term projects, they not only will have great value in catching the imagination of the people, and meeting their aspirations, but, also, it may make it possible to get from those countries themselves, or from other countries, or from organizations like the World Bank, a considerable amount of money. So our own money will go further—through some kind of a matching process.

I believe that when the nature of the problem is understood that there will be a realization that the enlightened self-interest of the United States requires that we should go forward to meet this situation in terms of projects on the assumption that we would continue to give them some support over a period of years.

Question. Mr. Secretary, do you consider that the passage of the enactment of the authority, which the President has requested, is of vital importance at this session?

Answer. I think it is vitally important at this time that we and indeed the whole world understand that what we really are engaged upon here is not just a single-shot operation, but that it is something which is apt to be continuing. Now I realize full well that it is a difficult problem in that one Congress cannot bind a second Congress, and that each Congress is free to make its own appropriations—free of any commitments made by a prior Congress.

The Marshall plan, as I recall, was carried through with year-by-year appropriations, but there was a recognition by the Congress of the importance of carrying through a 4- to 5-year program there. But it is always difficult to work this thing out.

I recall I was in the Senate at the time the first MDAP bill, the military-assistance bill, was passed. And I recall that there we worked on a basis of an appropriation, I think, for the first fiscal year, with contract authority for the next year. The working out of these things is difficult and complicated under congressional procedure, but I have no doubt that it will find a result which will, on the one hand, take account of the problem of the Congress; and, on the other hand, take account of the national importance of proceeding here on a long-range basis.

Question. Mr. Secretary, Senator KNOWLAND proposed that a neutralist be required to join collective-security agreements against communism in return for such long-term aid from the United States. Would you concur with that view, Mr. Secretary?

Answer: We believe that each case of aid needs to be considered on its own individual merits, and while, broadly speaking, there is a closer bond of sympathy between the United States and countries who have stood up to be counted with us; nevertheless, I would not want to exclude the possibility of giving some economic assistance to other countries.

Question. Mr. Secretary, how did Congress recognize the importance of continuing or carrying out the Marshall plan? How did it express that recognition?

Answer. My recollection is that it was expressed primarily in the report of the Foreign Relations Committee, and, possibly, the Appropriations Committees, in which they recommended the first installment. I must admit that my memory is somewhat vague on that point.

Question. Mr. Secretary, in another national magazine today, already printed and on the market, General Ridgway says that budgetary and domestic political considerations overrode purely military considerations in the formation of, or the writing of the Army budget. Would you care to comment on that?

Answer. I would make only this comment—not having seen the article. The budget-making process is a very complicated process, and each Department of the Government asks for the amount of money that it thinks it needs, looking at the situation merely from its own standpoint. And that goes for the different services. Finally, these are all put together, and then the request from one source has to be balanced against requests from another source, and then the whole has to be considered in terms of the national economy, and the values to be derived from a balanced budget, from a stable dollar, and the impact upon our domestic economy. The people who act only for one branch, or Department, or Agency of Government are unable alone to take into account all of these considerations. The man who finally makes the decisions about the budget—and that is, in the end, the Presidential decision—the President makes the decision, in consultation with the Cabinet, with the National Security Council. He evaluates many, many elements of the problem; among other things, the fact that national security depends not merely upon military power, but upon a whole complex of factors, including the vitality of your economy.

As you all know, the Communists for many, many years counted as a principal weapon, a principal opportunity, the likelihood of the collapse of the capitalistic system, and some sort of a boom-bust event. They figured that they would make more progress, perhaps, that way than they would, perhaps, by force of arms. So that when you are considering the national security you have to take into account many more factors than the point of view of any particular Department. And that total decision is one which is generally accepted by everyone because it is recognized that there is only one person in the country who can adequately take account of all of the factors, and that's the President of the United States.

Question. Mr. Secretary, do you believe that Latin America should be included among the areas to be considered for long-range planning?

Answer: Latin America is very much considered, particularly in the policies and activities of the Export-Import Bank.

Question. Mr. Secretary, why was the nomination of Mr. Bowie as Assistant Secretary of State withdrawn?

Answer. It has not been withdrawn.

Question. It said so in the RECORD this morning.

Answer. Well, if so, it's news to me. I do not think you are correct.

Question. Mr. Secretary, have you had time, in your preoccupation with the events of our current history, to form an impression of the new Soviet 5-year plan, especially in relation to the struggle—the competitive struggle of which you spoke last week?

Answer. The impression I have is that it dedicates the Soviet Union to continue to put its primary emphasis upon heavy industry, and that the trend toward more consumers' goods, which was forecast 2 years ago when Malenkov was temporarily Premier there—that that tendency continues to be submerged, with the primary emphasis upon heavy industry, which does not necessarily mean exclusively war industry, but, undoubtedly, is, in very large part, war industry.

Question. Mr. Secretary, has the administration made up its mind on the exact nature of what it would like the International Atomic Energy Agency to be; that is, an actual operating agency, or merely a broker between bilateral agreements?

Answer. Well, it isn't just a question of making up our mind, our views, as to the optimum result. Our views were set forth pretty fully in the speech that President Eisenhower made to the General Assembly of the United States in December. What was it, 1953?

Question. 1953.

Answer. That, as you know, contemplated having a world bank into which contributions of fissionable material would be made, and out of which material for industrial purposes would be drawn.

Now, for the first year and a half, the Soviet Union refused to go along with that program, and, therefore, it tended to develop along other lines. Belatedly, last July as a matter of fact, the Soviet Union indicated that it would be prepared to put up some fissionable material. Now the question as to how it will work out is a matter for international discussion at the present time. I believe that a further conference will be held soon, I think in February, and I will not be able to know until that time just what line will be developed. A good deal depends upon the views of other countries, and not just for our own. From our own standpoint we would still think it preferable if the original concept could be carried out.

Question. Mr. Secretary, have events caused you to change your mind about taking to the stump this year—the political stumps that is?

Answer. No, I think I will stand on what I said before on that subject.

Question. Thank you, sir.

Mr. BENTLEY. Some of the criticism of the Secretary of State appears to have been engendered by individuals who, deliberately or otherwise, took one sentence out of the above-quoted paragraph completely out of context. This, if read by itself, would make it appear that Mr. Dulles is gambling with the national security of this country by trying to see how close we can get to war without taking the final, fatal step. Such a misrepresentation is a complete distortion of the facts.

In the first place, ever since the cold war began, we have been taking a certain amount of calculated risk in our dealings with the Soviet Union. The Truman doctrine of military aid to Greece and Turkey involved certain risks. The North Atlantic Treaty, according to the late great Senator Vandenberg from my own State, was a calculated risk for peace. Our reaction to the Soviet blockade of Berlin definitely was such a risk. Any positive action on our part in this cold war period could be considered a calculated risk. But, during the last 10 years of the cold war, years which might appropriately be termed the "dangerous decade" we have not been afraid to take such risks because we believed that taking a strong stand where the circumstances warranted offered the best chance of averting a hot war, a shooting war.

On the whole, our foreign policy and the conduct of our foreign relations has been regarded as a bipartisan affair. It would now seem that some of our friends who belong to the other political party wish to make the Secretary's attributed remarks the occasion for a partisan debate. I think this would be regrettable but I am sure that the members of my party would not run away from the debate if it is forced upon us.

If certain public officeholders and would-be officeholders of the other party want to attack Mr. Dulles for having averted war, albeit by a narrow margin, I would like to ask them where he erred. Do they mean to say that he should not have averted war? That he should have gone over the brink? At least our Republican Secretary of State had sense enough to recognize the brink when he saw it. He has never invited Communist aggression by placing a vital area or country specifically outside of our defense perimeter. I wonder if our friends on the other side had sense enough to recognize the brink in 1950. From the record, it would appear that they did not.

Perhaps on the other hand, our friends are attacking Mr. Dulles for having permitted us to come so close to the brink in the first place. Does this mean that they wanted to stop so far short of the brink that there could be no possible risk of war? Or do they object to our having stated our own position in advance whenever aggression threatened? If they object to this policy, they must object to Public Law 4 which we passed last year by almost a unanimous vote, regarding the Formosa area. They evidently prefer to leave the Communists completely in the dark as to our plans and to permit the risk of miscalculation on the part of the aggressor, a risk which is infinitely more dangerous than any which Mr. Dulles may have taken.

Mr. ROGERS of Colorado. Mr. Speaker, will the gentleman yield?

Mr. BENTLEY. I yield.

Mr. ROGERS of Colorado. Do I understand that in your reference to the situation in 1950, the Democrats determined that war?

Mr. BENTLEY. I said with reference to 1950 that I was not sure that certain people in the administration realized how close we were to war before we started.

Mr. ROGERS of Colorado. Did not all parties agree that President Truman took the right step at that time?

Mr. BENTLEY. That was the right step after the aggression commenced. That is correct. I am talking about the steps leading up to the war. I think that is when the recognition was not general on the part of the administration.

Mr. ROGERS of Colorado. Do you feel that the Secretary of State should have the right to determine when we go over the brink and when we come back?

Mr. BENTLEY. No, of course I do not. Apparently some people think he has the right, and that is what I am trying to point out, that he does not have. That is up to the Congress.

Mr. HALLECK. Mr. Speaker, will the gentleman yield?

Mr. BENTLEY. I yield.

Mr. HALLECK. I was here in 1950 and I was a Member of the House. I did not know we were going to war with Korea until I heard it announced. No one consulted me or talked to me about it and I had absolutely no information about it; no intimation that we were that close to war.

Mr. BENTLEY. If the gentleman will permit me, I would like to proceed with my statement before I yield further.

If you gentlemen on the other side will think back into history for a moment, you will remember that our last three wars were all started as a result of miscalculation on the part of aggressors. The German Kaiser miscalculated American intentions when he renewed open submarine warfare in 1917. Hitler and Tojo certainly miscalculated in 1941 when they decided to embroil this country in World War II. And I have already mentioned the tragic miscalculation on the part of the Communists in 1950, a miscalculation for which they can hardly be blamed.

Other examples of international miscalculation run throughout history. I was in Germany in 1939 when Hitler marched into Poland. I remember Germans telling me, "There will be no war. The British will not fight." Of course, they were thinking of how the British and French had reacted to the partition of Czechoslovakia the previous year. And World War II, one of the most tragic episodes of human history, resulted through miscalculation by a dictator.

Mr. Speaker, none of us can see into the future; none of us know whether we will have war or peace in the decade that lies ahead. We have only the lessons of the past to guide us as to the future. The past definitely teaches us that dictatorships have launched aggressive warfare because they miscalculated the intentions of the democracies. John Foster Dulles would not be fit to be our Secretary of State today if he did not do everything in his power to make sure that the Communist dictatorships do not miscalculate again.

I know the American people, as well as the people of the whole world, both slave and free, urgently desire and pray for peace. I know that the Eisenhower Republican administration receives grateful recognition from the American people because it brought us peace in Korea and has since kept us at peace. I know that the leaders of the administration, from the President on down, are dedicated to the pursuit of a just and honorable peace. But there are certain principles vital to our moral integrity and certain interests essential to our national security which cannot and will not be sacrificed merely for the sake of peace alone.

Setting forth those principles and defining those interests which cannot be compromised, in terms unmistakably clear to any would-be aggressor, is necessary to prevent a future war being started through miscalculation. By our adherence to these principles and our protection of these interests, we have been brought to the verge of war in the past and we may be so brought again in the future. But an abandonment of previously announced positions might be more tragic even than war itself. Another Munich conference or a series of them would never prevent war, but only make it more inevitable. To the extent that our positions are made known in advance and then adhered to, come what may, to that extent the chance of averting war is enhanced.

Mr. ROGERS of Colorado. Mr. Speaker, will the gentleman yield again?

Mr. BENTLEY. I shall be glad to yield to the gentleman.

Mr. ROGERS of Colorado. Is the gentleman familiar with the prediction made by the present Secretary of State, Mr. Dulles, just before World War II broke out in Europe? Is the gentleman familiar with the statement that has been recorded in the paper to the effect that he said we had nothing to fear from Hitler and that no war would break out in Europe?

Mr. BENTLEY. No, I cannot say that I am familiar with that particular statement, but, of course, Mr. Dulles was speaking as a private citizen at that time without the knowledge that comes from Government service.

Mr. ROGERS of Colorado. In view of the fact that he did speak at that time as recorded in the press, is there anything which would lead the gentleman to believe that he is better qualified at this time than he was at that time?

Mr. BENTLEY. He is certainly better informed. The gentleman must recognize the difference between the Secretary of State and a private citizen, especially as to the sources of information available to him.

Mr. ROGERS of Colorado. Has not Mr. Dulles been in and out of the State Department quite a number of years,

with the Democrats as well as the Republicans?

Mr. BENTLEY. Could the gentleman tell me if he was in the State Department at that time or had been?

Mr. ROGERS of Colorado. I am not informed, but at least he had knowledge to the extent that he felt he was capable as a private citizen of making a prediction about what was going on in Europe, and we know how wrong that turned out to be.

The only thing I want to know from the gentleman is, whether based upon experience it is best now to entrust to one man the right to determine whether we go across the brink or whether we do not? That is the question I propounded to the gentleman a while ago.

Mr. BENTLEY. Based on the experience that we have had since Mr. Dulles has become Secretary of State, I think he is ably qualified for his present position. I have no way of judging what experience he had before he came to office.

Mr. CURTIS of Missouri. Mr. Speaker, will the gentleman yield for a question and an observation?

Mr. BENTLEY. I yield to the gentleman from Missouri.

Mr. CURTIS of Missouri. I wish the gentleman would actually quote the statement that Mr. Dulles has been quoted as making, because I think if you read the actual statement you will find it is quite limited in its observation, obviously taken out of context. I would like to see the statement itself and the context in which it was made, because I certainly do not think it implied what the gentleman has stated it did imply.

Mr. ROGERS of Colorado. May I make a further observation?

Mr. BENTLEY. I yield further to the gentleman.

Mr. ROGERS of Colorado. I do not have the context of what he stated or the speech that was made, but so far as I know there has been no denial but what Mr. Dulles did make that prediction just before the war broke out.

The first question I asked of the gentleman is whether or not he was advised of the circumstances under which Mr. Dulles had made that statement; of course, he said he did not know that.

Mr. BROWN of Ohio. Mr. Speaker, will the gentleman yield?

Mr. BENTLEY. I yield to the gentleman from Ohio.

Mr. BROWN of Ohio. May I suggest that perhaps Mr. Dulles made his statement relative to the situation in Europe based on information which had been furnished him by the State Department at that time?

Mr. BENTLEY. I think that is quite possible, I may say to the gentleman from Ohio.

Mr. HALLECK. Mr. Speaker, will the gentleman yield?

Mr. BENTLEY. I yield to the gentleman from Indiana.

Mr. HALLECK. I am a little surprised that the gentleman from Colorado would go back to World War II, coming from his side of the aisle, because that is one time we got to the brink and we really got over the brink into the terrible war that followed. We finally got into that war at Pearl Harbor.

I think we all know today that intelligent, far sighted, good judgment at that time would have averted Pearl Harbor.

Mr. BEAMER. Mr. Speaker, will the gentleman yield?

Mr. BENTLEY. I yield to the gentleman from Indiana.

Mr. BEAMER. I want to compliment the gentleman from Michigan for his very forthright remarks, and particularly there is one statement about which I wish to ask a question. The gentleman said there was a miscalculation on the part of the Germans, that that was one of the bases; I want to ask the gentleman, going back not only to World War II but also to World War I, whether or not the statements of the administration at that time advertising to the world our lack of preparedness was not a very great reason why we got over the brink and into war?

Mr. BENTLEY. Based on what I have been told, I understand that to be correct.

Mr. SCOTT. Mr. Speaker, will the gentleman yield?

Mr. BENTLEY. I yield to the gentleman from Pennsylvania.

Mr. SCOTT. May I congratulate the gentleman on his excellent statement and point out that if we arrive at the brink of anything during this administration it will be the Communists that will bring us to the brink, not the Government of the United States. I would like to make this further comment. When we entered the Korean war, speaking of getting to the brink, I was standing as I am now behind this very microphone. It was about half past 12. Most of the Members had gone downstairs to lunch. The very distinguished and beloved majority leader made an announcement here that we had suddenly entered the war in Korea. At that time Republicans and Democrats alike, without regard to party, supported the action of the President. But we were not told in advance, we had no foreign policy discussion, we knew nothing about the late night meeting. It was broken to us when most of the Members were off of the floor with a sudden statement, not accompanied by any previous discussion or any possibility of seeking the public opinion of America or the public opinion as represented here in the Congress. I would much rather have the American people engage in a discussion and know beforehand rather than to have these things suddenly broken during the lunch hour at a time when practically no one is on the floor.

Mr. McCORMACK. Mr. Speaker, will the gentleman yield?

Mr. BENTLEY. I yield to the gentleman from Massachusetts.

Mr. McCORMACK. The gentleman is certainly making some statements which are not historically correct. The gentleman should go back and study history a little more when he refers to the majority leader. It happened that I was on the floor when he made his references to me.

Mr. SCOTT. I would not have made them if the gentleman had not been on the floor.

Mr. McCORMACK. The gentleman had better study history a little more carefully.

Mr. SCOTT. Since the gentleman is asking for a correct statement, I suggest that he go to the CONGRESSIONAL RECORD of that day. The gentleman from Massachusetts made that statement at about half past 12, at which time I got up and asked whether or not we were entering into this conflict with too little or too late. The gentleman from Pennsylvania [Mr. FULTON] asked whether we were at war or not and, as I recall, the gentleman did not answer the query.

Mr. McCORMACK. The gentleman from Pennsylvania overlooks the fact there was a meeting of both sides in the White House preceding that.

Mr. SCOTT. In the early hours of the morning.

Mr. McCORMACK. The gentleman can very easily extend this. I am wondering whether some of my friends on the other side in an election year want to create an atmosphere where the appearance is that bipartisanship is broken, then of accusing someone else? Above all, we have to keep bipartisanship no matter what happens. I am speaking as a member of the minority party. My party is not in control of the White House, remember that. Foreign policy is made by those in control of the White House and the executive branch of our Government. The leadership is there.

Mr. SCOTT. And if broken, it is broken by the other party?

Mr. McCORMACK. Broken by whom?

Mr. SCOTT. The gentleman has said that as far as policies are made they are made in the White House. So if bipartisanship is broken it must be by the other side.

Mr. McCORMACK. The gentleman is always capable of making a political statement. The gentlemen on the Committee on Foreign Affairs should be careful what they say.

Mr. SCOTT. I think that is a good statement.

Mr. McCORMACK. I think the gentleman is trying to provoke a situation for political purposes.

Mr. COLMER. Mr. Speaker, will the gentleman yield?

Mr. BENTLEY. I yield to the gentleman from Mississippi.

Mr. COLMER. Just for what it is worth I would like to make a brief observation. I do not know that it will be any contribution to the discussion, but I would like to make it just the same.

It is very unfortunate, in my opinion, for both sides of the aisle that this controversy has arisen, election year or no election year. The people of this country are more interested in the preservation of the Republic than they are in the election of a Republican or a Democratic President. That should be borne in mind.

What good purpose is served by going back and digging up skeletons, if skeletons there be, about who is responsible and who is not responsible for what has gone before? The thing that we need more, in the judgment of this humble Member of the House, is to present a unified front to our potential enemies, the Communists. Now, so far as the foreign policy of this administration and

the preceding administration is concerned, in my humble judgment there is no difference in the conduct of our foreign affairs. This administration has followed the procedure of the previous administration in dealing with the Communists. That policy is and has been all along to permit the Kremlin to call the signals and we run the defensive plays. Now, the thing that we want to do, it seems to me, in this country, is to place the future of this country in our dealings with the Communists on a unified front regardless of politics and quit this knocking and bickering on both sides. Such discord can only serve the enemy.

Mr. BENTLEY. I would like to say to the gentleman from Mississippi that I certainly agree with him. I would like to say that the members of this party, on this side of the aisle, were not the ones that first started to criticize Secretary Dulles, because of this recent magazine article and because of a sentence that was perhaps badly worded and taken out of context. If we are to have such criticism, it behooves the Secretary's own party to answer it, and as the Secretary only said yesterday in a press conference, we can have constructive debate on foreign policy without breaking down or wrecking the security of this country.

Mr. CEDERBERG. Mr. Speaker, will the gentleman yield?

Mr. BENTLEY. I yield to the gentleman from Michigan.

Mr. CEDERBERG. I was going to say the same thing as the gentleman from Michigan, that any criticism of the Life magazine article came from the other side of the aisle and not our side of the aisle. Shortly after the article appeared on the newsstands members of the other party appeared on radio and television all over the United States crticizing that very article, and we are here to defend the Secretary of State who has done such a tremendous and magnificent job in keeping this country at peace.

Mr. ROGERS of Colorado. Mr. Speaker, will the gentleman yield further?

Mr. BENTLEY. I yield.

Mr. ROGERS of Colorado. Do I understand from your last statement that you do not claim by your speech here to take any credit as a Republican for the activities of Mr. Dulles?

Mr. BENTLEY. I certainly think the Republican Party can claim credit for having put Mr. Dulles in the State Department.

I would like to conclude by saying this: I am not a strong defender of our present foreign policy in some respects, especially as regards the operation and administration of the foreign-aid program. But, in the last analysis, a foreign policy will be judged by the results it has produced. A foreign policy that gets us out of war and which keeps us at peace is obviously more successful than one which got us into war in the past. That is the basic essential of foreign policy: To keep us at peace provided that peace be just and lasting. I worked for the State Department under many of Mr. Dulles' predecessors long enough to know that I resigned from the Department in 1950 because I did not agree with the way our foreign policy was being conducted at that time, which was only 2 months before Korea. And, Mr. Speaker, although I reserve the right to criticize our present policy wherever I believe criticism is justified, I have nothing but praise for the way that Mr. Dulles has sought to prevent war. If our friends on the other side wish to make foreign policy an issue in the 1956 campaign, I am sure the American people will indicate in November which kind of foreign policy they prefer, the Democrat version or the Republican one.

Mr. Speaker, I ask unanimous consent to insert here as part of my remarks three articles: An article from a recent issue of U. S. News & World Report by David Lawrence, entitled "Firmness, Not Defeatism"; an editorial from the January 23d issue of the Detroit Free Press entitled "The Kibitzers Behind Secretary Dulles' Chair"; and an editorial appearing in this morning's issue of the Washington Post and Times Herald by Roscoe Drummond, entitled "What Would They Have Done on Formosa Threat?"

The SPEAKER pro tempore. Is there objection to the request of the gentleman from Michigan?

There was no objection.

(The editorials are as follows:)

[From the U. S. News & World Report of January 27, 1956]

FIRMNESS, NOT DEFEATISM

(By David Lawrence)

The American people can breathe easier as a result of the pronouncements on foreign policy recently made by the Secretary of State, John Foster Dulles, and because of the outspoken support given him publicly last week by President Eisenhower.

Mr. Dulles has been speaking frankly to the world lest some aggressor miscalculate and start a war on the theory that the United States would not resist.

Irrespective of the exact wording of the Life magazine article which stirred up a controversy, the fact is that the governments in Peiping and Moscow have, in effect, now been told that the United States has not succumbed to the "strategy of terror" which the Communists have used through their propaganda in an effort to anesthetize public opinion here and abroad.

For many months now, the Communists have been playing a sinister game. They have endeavored to frighten the peoples of the West by emphasizing the horrors of the hydrogen bomb. But while the President tried to get an agreement to ban the use of nuclear weapons and entered wholeheartedly into a conference "at the summit" at Geneva last summer to bring about a truce in the world, the Communist governments upset those hopes shortly after the conference was held.

Marshal Bulganin said on December 31 last that he does not rule out the possibility of a nuclear war. Here was a veiled threat which had to be met, and the magazine article—reflecting in the main views of Mr. Dulles—was an opportune reminder that the American determination to use nuclear weapons, if necessary, has not changed.

What must be avoided today is the creation of the same atmosphere as enveloped Europe just before World War I and again before World War II. In each case a government that was planning aggression miscalculated. The belief prevailed in both instances that the United States would not enter a European war or that, if American intervention came, it would be too late to prevent a victory for the aggressor.

Adlai Stevenson in 1952 said that "the men in the Kremlin thought they would be unopposed" in Korea. Unfortunately, Secretary Acheson in January 1950 gave that impression, and America had to engage 6 months later in a bloody war to "repel aggression." A warning in advance might have avoided that war.

Mr. Dulles has sought in season and out to let the aggressor know in advance what is going to happen if there should be an attack in Europe or elsewhere threatening the security of the United States or its allies.

Fortunately, our allies agree with the course outlined by Mr. Dulles—namely, massively retaliation, in case of attack, which, of course, means the use of nuclear weapons on a selective basis to achieve the most effective results in a military sense.

Our allies are glad the United States is standing for firmness and not defeatism. Prime Minister Eden of Great Britain made a public speech supporting this very point last week after some British newspapers had misinterpreted the Life article as meaning something inconsistent with British policy. Mr. Eden said:

"If there is less fear of world conflict today, this is due to the deterrent of nuclear weapons. Remove the deterrent, or take risks in pretending that it is not there, and the world outlook would be terrifying indeed.

"The justification of both the atomic and hydrogen bombs is that they are deterrents, so awful that no country will risk their use against itself. It is therefore true that the danger of world war should decrease unless an aggressive-minded nation gets into its head that the bomb will not be used against it, whatever it does."

It cannot be proclaimed too often that the United States and its allies mean business and are not bluffing. It is to be hoped, moreover, that Soviet Russia will not make the mistake of assuming that the petty partisans in Congress are speaking for the American people when these unwise politicians attack the administration on a political front.

The aggressor could select 1956, our election year, as the occasion for taking risks.

It is reassuring that Senator GEORGE, Democrat, chairman of the Foreign Relations Committee, has not shared the critical attitude of some of his colleagues.

There is no international harm in a divided political party but we must not present the spectacle of a divided Government. The world should have no doubt that we have a firm leadership in these critical times.

This is the time of all times for politicians to abandon partisan techniques and stand up for America.

The courage of the Secretary of State, Mr. Dulles, should not be derided but applauded.

The wisdom of issuing warnings to an aggressor is unmistakably clear. The episode in which Secretary Dulles recently figured has turned out to be a timely warning. It becomes a constructive contribution to world peace.

For the policy of the United States is, and should continue to be, one of firmness, not defeatism.

[From the Detroit Free Press of January 23, 1956]

THE KIBITZERS BEHIND SECRETARY DULLES' CHAIR

Consider the melancholy plight of a Secretary of State living through hazardous times and an election year simultaneously.

Whatever he does, there must be no hint of appeasement. To be accused of it, about all he needs do is shake hands with an Iron Curtain statesman.

But neither is he to indicate that there are some things the United States won't stand for. When he does that he leads his country to the brink of war—because obvi-

ously we'd be in quite a fix if the other side told him to go jump in the Potomac.

Nor can he embark on any line of action in which there might just possibly be hope for a more friendly, less belligerent attitude by both sides. Averell Harriman, for one, makes this plain. He says we were "taken in" by going to Geneva last summer, and is querrulous about even trying Red intentions for size.

On the other hand, the Secretary is not to leave the enemy guessing—as we've done in the instance of Quemoy and Matsu. Without any information on what we'd really do, the foe might make the wrong guess and leave us with a very nasty choice.

We may be having a dull day, but admit frankly that we can't think of any other alternatives. However, if Secretary Dulles' critics have thought up some other lines of diplomacy we'd like to hear them expounded. We're afraid, though, that any invitation of this kind is going to get us nothing but a dead silence.

[From the Washington Post and Times Herald of January 25, 1956]

DULLES CRITICS QUERIED

(By Roscoe Drummond)

WHAT WOULD THEY HAVE DONE ON FORMOSA THREAT?

The new threats which Red China is aiming at Formosa provide a good opportunity to measure the critics of Secretary Dulles over the Life magazine article.

Are the critics merely complaining that Dulles has got himself entangled in a tactless expounding of policy?

Or are they contending that Dulles has involved the Nation in a policy which is wrong in fact and which should be reversed?

Are the critics, those in the press and those in politics merely complaining that the Secretary is wrong in exposition or are they contending that he is wrong in substance?

If the critics are simply saying that he has spoken unwisely and inopportunely most objective observers will, I think, feel they are right.

But if the critics are implying, without having the candor to say so, that Dulles should not risk going to the brink of war by warning a possible aggressor that aggression would mean war, then that is something else again.

What I am trying to say is this: Isn't it about time we began to discuss the realities of American foreign policy and not just phrases about foreign policy?

What is happening in the Formosa strait and the stalemated American-Chinese Communist talks at Geneva are a timely measure of the difference between acts and words.

In the Life article Secretary Dulles said: "The ability to get to the verge of war without getting into war is the necessary art."

Obviously that is a loose phrase. It played right into the hands of the Communist propagandists around the world, and Dulles can be validly criticized for saying it.

He did not mean, everyone knows he did not mean and the record of events refutes the idea, that it was United States policy that has brought the world to the verge of war at any time in the past 3 years or in the past 10 years.

The truth behind Dulles' loose phrase, as I see it, is that when events have shown that they were bringing the world to the brink of war the United States has been willing to risk war in order to avert war, has been willing to warn the potential aggressor that aggression would certainly involve him in war.

The Formosa situation is a precise example of this policy.

A year ago the Chinese Communists were openly proclaiming that they would take Formosa.

There was a foreboding buildup of Communist military power at the staging points from which an attempt to take Formosa would have to be launched.

There were tension-laden and probing attacks on some of the Nationalist-held islands which constitute the military approaches to Formosa.

Here was a series of events which tended to bring the world to the brink of war.

What was the most constructive and least riskful course which the United States could pursue to keep the Communists from toppling the world off the brink into war itself? We could do nothing, if we chose. We could leave the Communists in doubt and thus give them a reasonable calculation that they could commit the aggression with impunity. We could use words without fitting them to deeds.

The United States did none of these things. We removed the perilous element of doubt (1) by joining with the Chinese Nationalist Government in the mutual defense of Formosa, (2) by a Presidential statement clearly affirming that aggression against Formosa would be met with resistance, (3) by Congress overwhelmingly passing a resolution supporting the President.

This is the substance of "walking to the brink of war" as the best means of averting war. What critics of Dulles will contend that we shouldn't? What would they have done instead?

Mr. HOFFMAN of Michigan. Mr. Speaker, will the gentleman yield?

Mr. BENTLEY. I yield to the gentleman from Michigan.

Mr. HOFFMAN of Michigan. I read somewhere or heard somewhere some statement about returning good for evil, and without any intimation of any kind, if there has ever been anything evil in what the gentleman said, I recall the statement of my distinguished colleague from Massachusetts that he had less than no admiration for me. I want to return the compliment by saying that I congratulate him this morning on not only today but so often refraining from injecting politics into any discussion that we have here on the floor.

Mr. McCORMACK. Mr. Speaker, will the gentleman yield?

Mr. BENTLEY. I yield to the gentleman from Massachusetts.

Mr. McCORMACK. Again I think the RECORD should be corrected. I never said I did not have any admiration for the gentleman.

Mr. HOFFMAN of Michigan. Less than no admiration.

Mr. McCORMACK. What I did say was that I had a minimum of high regard for him.

Mr. HALLECK. Mr. Speaker, will the gentleman yield?

Mr. BENTLEY. I yield to the gentleman from Indiana.

Mr. HALLECK. Mr. Speaker, I, too, want to commend the gentleman from Michigan [Mr. BENTLEY] for the statements he has made on the floor. I think what he has had to say will be helpful. Certainly I agree with the gentleman from Mississippi [Mr. COLMER] that the thing paramount in the hearts and minds of all the people of America is that we avoid another war. There may be differences of opinion about how best to avoid a war and, of course, on occasion they will be expressed. But, as to any breach of the bipartisanship that we all hope for, I might again remind the Members that I certainly practiced it as the majority leader of the 80th Republican Congress when we responded to the request of President Truman for interim aid to France and Italy, Greek-Turkish aid, the Marshall plan, and then NATO. As one who has participated in that and knows something of it, I hope that that bipartianship will prevail. But I must say that I have been chafing in recent days when I have listened to speech after speech after speech by Democratic Members not only here but in the other body, over the radio, on the television, in the newspapers, challenging and criticizing Secretary Dulles for his statement and his position.

The important thing is simply this. The people of this country want a strong, a firm and consistent foreign policy which will be understood not only by our own people but by potential enemies anywhere wherever they may be. Because, in that, with a strong, powerful defense, the American people see their best chance for peace.

In my opinion, all the Secretary did was to put potential enemies on notice that we are not going to be pushed around.

I might recall also in that regard that the Formosa resolution, which certainly was an expression of that very sort of firm foreign policy, was adopted almost unanimously by the Congress of the United States. As we say out in Indiana, nothing pays off like success. We are still at peace and with God's help and the exercise of the kind of judgment of which, I am sure our leaders are capable and of which I think we ought to be capable, we shall remain at peace.

Mr. SCOTT. Mr. Speaker, will the gentleman yield?

Mr. BENTLEY. I yield to the gentleman from Pennsylvania.

Mr. SCOTT. Will the gentleman agree with this statement that war, having been defined as the failure of diplomacy, the keeping of the peace from a posture of strength is the best proof of a successful diplomacy?

Mr. BENTLEY. One hundred percent, I will say to the gentleman from Pennsylvania.

NATIONAL FLOOD INSURANCE AND REINSURANCE

Mr. O'HARA of Illinois. Mr. Speaker, I ask unanimous consent that the gentleman from Ohio [Mr. ASHLEY] may extend his remarks at this point in the RECORD.

The SPEAKER. Is there objection to the request of the gentleman from Illinois?

There was no objection.

Mr. ASHLEY. Mr. Speaker, I have today introduced a bill to provide for national flood insurance and reinsurance, and for other purposes, in order to meet the widespread economic distress suffered by so many of our citizens in recent years.

I am aware, Mr. Speaker, that a number of disaster insurance plans have been introduced in the early days of this Congress, principally by our colleagues from the New England States. The

tragic consequences of the torrential floods which swept their States last fall are well known to us all, Mr. Speaker, and I think we are all equally aware of the great flood damage which has recently been caused in California.

Less publicized and, therefore, little known, is the great loss suffered in other parts of the country—particularly in the Great Lakes area. Because I have a direct concern with the people and the economy of this region, I should like to point out the unfortunate situation with which we are faced.

It goes without saying, Mr. Speaker, that flood damage in many cases is in direct ratio to the lack of preventative measures which have been taken to control our lake and river waters. Many communities in the country have received some measure of protection from the Flood Control Act of 1936. Under this act, Congress declared a national policy and adopted a national program for flood control. That policy was stated as follows:

> That flood control on navigable waters or their tributaries is a proper activity of the Federal Government; that investigations and improvements of rivers and other waterways, including watersheds thereof, for flood-control purposes are in the interest of the general welfare; that the Federal Government should improve or participate in the improvement of navigable waters or their tributaries, including watersheds thereof, for flood-control purposes if the benefits to whomsoever they may accrue are in excess of the estimated costs, and if the lives and social security of people are otherwise adversely affected.

Unfortunately, Mr. Speaker, no specific reference was made to flood control in the Great Lakes by either committee in reporting out this measure. In 1937 Congress amended the 1936 act by enlarging and expanding its policy, but again the Great Lakes area was neither specifically included or excluded.

Flood-control laws were enacted in 1936, 1939, 1940, 1941, and 1942—but in no case was there specific reference to the Great Lakes, nor any change in the policy set forth in the 1936 act, as amended.

The 1944 Flood Control Act, however, did include authorization for construction of certain projects in the Great Lakes Basin as well as for preliminary examination of Reno Beach, Ohio, with a view to its protection from floods caused by frequent windstorms and from increases in the lake level of Lake Erie.

Similarly the Flood Control Act of 1946 authorized the project for flood protection in the Great Lakes Basin at Mount Clemens, Mich. But at this time, Congress also declared that no project or modification thereof for flood control on rivers and harbors shall be authorized by the Congress unless a report for such project or modification has been previously submitted by the Corps of Engineers.

During the 2d session of the 80th Congress, a letter from the Secretary of the Army, with accompanying papers pertaining to the Reno Beach project, was referred to the House Committee on Public Works. These papers are contained in House Document No. 554, of the 80th Congress. In his letter of transmittal the Secretary pointed out that, according to the Director of the Bureau of the Budget, "while there would be no objection to the submission of the report to Congress, authorization of the proposed works should not, at least at this time, be considered to be in accord with the program of the President." The Budget Director stated that while the Secretary of the Army based his discussion concerning authority for the Reno Beach project on amendatory flood-control acts, the Director found no change in the declaration of policy as contained in the basic 1936 act. One amendment in 1944 defined flood control to include channel and major drainage improvement. The Director argued that had Congress intended the 1936 policy to include lake and tidal floods, it would have amended the basic policy as it did in connection with drainage improvements; that to amend the policy so as to broaden flood-control work to include any inundations, would result in a restrictive effect on river-control works and was therefore undesirable. In response to this position taken by the Director, the Secretary of War pointed out that amending acts included the words "floods aggravated by or due to wind or tidal effects" and that authority for Reno Beach included such language, but the Director contended that the intent was for protection from floods constituting a menace to national welfare, and that the Reno Beach project is primarily to protect that area and is therefore a State or local responsibility.

Notwithstanding the director's contention, the flood control bill of that Congress, H. R. 6419, approved June 30, 1948—62d Statutes, pages 1171, 1178—contained authority for construction of certain projects in the Great Lakes Basin, including protection of the Reno Beach-Howard Farms area in Lucas County, Ohio. During hearings on the bill before the House Committee on Public Works, Colonel Gee of the Corps of Engineers of the Army testified—page 80—that the Reno Beach and Howard Farms is an area of over 2,000 acres of farmland of very high productive value, that the protection desired is that against overflow from the waters of Lake Erie. The House committee reported—House Report No. 1870, 80th Congress, page 49—that it "feels that the basic project is well justified by the prevention of damage and by the other values which will accrue from its construction."

This same congressional intent was manifested in the Flood Control Act in 1950 which authorized flood protection projects at Caledonia and Wellsville, N. Y., in the Great Lakes Basin.

In the hearings before the House Committee on Public Works prior to enactment of the Flood Control Act of 1954, water levels of the Great Lakes were discussed at some length. Col. Alfred D. Starbird, assistant chief, Civil Works for Flood Control, California, explained that the wide fluctuations in the levels of the Great Lakes, results from three basic reasons, namely, long-range fluctuations due to the rain cycles over a period of years, seasonal fluctuations higher in summer than in winter, and the daily fluctuations brought out basically by either a difference of barometric pressure between various areas of the lake or actually wind-driven tidal effects. Seven localities were considered for improvement in the report—House Document No. 424, 83d Congress—accompanying the hearings, of which three were recommended by the Corps of Engineers, namely, Detroit Beach, Mich., Lakeland-Luna pier, Michigan, and Point Place, Toledo, Ohio.

Colonel Starbird quoted the Bureau of the Budget as considering projects of this type to be an expansion of the Federal flood control policy enunciated in the Flood Control Act of 1936 and that the "Bureau of the Budget believes it would be desirable for the Congress, before authorizing these projects, to examine the extent, if any, to which the Federal Government would be justified in expanding its responsibilities for flood control to cover inundation of property aggravated by, or due to wind or tidal effects," and further advised that until the Congress takes affirmative action to expand the policy enunciated in the Flood Control Act of 1936 to cover this type of project, authorization of the project should not be considered to be in accord with the program for flood control. In response to a question by Representative MACK as to whether approval of these projects would establish a new precedent, it is significant that Colonel Starbird stated that there already is a precedent, that the Reno Beach Howard-Farms project was approved in the Flood Control Act of 1948 at an estimated cost of $500,000.

And there the matter rests today, Mr. Speaker. I think it is clear that this so-called congressional intent with respect to exclusion of the Great Lakes from flood-control projects has been established not by Congress, but by the Bureau of the Budget. It is perfectly clear that Congress intended Great Lakes flood-control projects to be planned when it authorized the Reno Beach project in 1948. Yet the Corps of Engineers have been told by the Bureau of the Budget that congressional intent has changed, and that the Great Lakes are now to be excluded. As a direct result of this infringement upon congressional prerogative by the executive branch of the Government, the Corps of Engineers has withheld their recommendation of these Great Lakes projects to the Bureau of the Budget for inclusion in the President's program.

In an effort to establish clearly the intent of Congress—which was specifically made known in 1948—I introduced during the last session bills which would authorize construction of flood control improvements on Lake Erie and which established that the inundation of property because of or aggravated by wind, waves, or tidal effects on the Great Lakes properly comes within the flood control activities of the Federal Government.

I go into this lengthy background, Mr. Speaker, because I do not want there to be any misconceptions, in the minds of the Bureau of the Budget or elsewhere, as to whether or not the Great Lakes

region is to be included in the disaster insurance program which I believe Congress will enact in the months ahead.

In my bill, I make it clear, for purposes of providing for national flood insurance and reinsurance, that the term "flood" shall include rising water caused by tide, wind, or rain, and water inundation caused by, or aggravated by, wind, waves, or tidal effects on the Great Lakes, and that it shall have such further meaning as prescribed by regulation of the Administrator. It is my hope, Mr. Speaker, that Congress will give close study to the direct connection between lack of flood protection in the past and the need for flood insurance in the present. It is my further hope that immediate scrutiny and attention will be given to both of these programs and that a clarification of congressional intent with respect to flood control will soon eliminate the confusion and misconceptions, deliberate and otherwise, which have been fostered by the Bureau of the Budget.

RESPONSIBLE JOURNALISM

Mr. CURTIS of Missouri. Mr. Speaker, I ask unanimous consent to address the House for 1 minute, to revise and extend my remarks, and include extraneous matter.

The SPEAKER. Is there objection to the request of the gentleman from Missouri?

There was no objection.

Mr. CURTIS of Missouri. Mr. Speaker, I understand the attention of the House has already been called to an article that appeared in the Washington Post and Times Herald this morning by Drew Pearson. I believe that anyone reading that article will realize that very serious charges have been made not only against individual Members but against the entire House of Representatives. If those charges are true, of course we have a very serious situation to face up to. On the other hand, if those charges are untrue, the various newspapers of this country which carried this article must face up to a serious situation if they wish to merit the title of responsible journals.

Mr. Speaker, I asked for permission to insert the article I referred to in the CONGRESSIONAL RECORD so that not only all Members could see it and judge its nature for themselves, but also so that this matter would become available for future reference. This is the article:

[From the Washington Post and Times Herald of January 25, 1956]

THE WASHINGTON MERRY-GO-ROUND

(By Drew Pearson)

FUND OF $1.5 MILLION BACKS GAS BILL

Whether you are for or against the bill to exempt natural gas from Federal regulation, you can't help but rub your eyes at the clockwork precision of the lobby which is bent on pushing the Harris-Fulbright bill through Congress.

Never in the many years I have covered Washington have I seen such a skillful job of backstage manipulation. Whether the public wants natural gas regulation or not, it probably isn't going to get it. The Southwest oil and gas boys appear too powerful.

They have organized themselves into a lobby which 2 years ago began operating very quietly for the present Senate showdown. No detail was overlooked. Everything was geared originally to get the gas bill to a vote by last summer.

There was only one thing the lobby didn't figure on—the heart attack of the able Senate leader, LYNDON JOHNSON, the real godfather of the bill. Without his deft guidance, the bill missed out last summer, but JOHNSON has now made it the first order of business in the current Senate, despite opposition from many of his own Democrats, and despite the fact that Republicans welcome this debate as a chance to show that Democrats are in on the giveaway business, too.

Here are details of how the gas lobby quietly laid the groundwork for the showdown vote now about to come up in the Senate.

Stacked committee

First, Senator JOHNSON asked Mr. Eisenhower to appoint a Cabinet advisory committee to study the question of energy, including natural gas and its exemption from Federal regulation. Second, LYNDON switched his Texas colleague, PRICE DANIEL, though a freshman Senator, from the Interior Committee, where he had helped to pass the tidelands oil bill, to the Judiciary Committee, where he could help pass the natural gas bill.

Meanwhile Mr. Eisenhower, taking advice from his Texas friends, pretty well stacked the advisory committee with friends of the gas industry. Consultants to the natural gas section included Richard Gettell of Texas Oil; Richard Gonzales, of Humble Oil; Minor Jameson Jr., of the Independent Petroleum Association of America; and Serge Jureney, of Continental Oil.

Jureney, incidentally, is assistant to the chairman of Continental Oil, L. F. McCullum, who is also head of the Natural Gas Industry Committee, mainspring behind the gas lobby.

This committee, at this point, proceeded to raise a total of $1.5 million with which to pressure and propagandize Congress.

Next step was to get their bill introduced in Congress under the best possible auspices. To do this they picked PERCY PRIEST of Tennessee, chairman of the House Interstate Commerce Committee.

Work begins

Tennessee is a State which does not produce gas and does not relish an increase in the price of gas. Despite this, the lobby figured they could control PRIEST and even reported in advance in the Oil and Gas Journal that "once his bill is ready, PRIEST plans to hold prompt hearings."

Introduction of the bill was timed to coincide with the report of the Cabinet advisory committee, which in view of its heavy industry membership was sure to recommend against Federal regulation.

It did.

The lobby slipped up on one minor matter, however. Congressman OREN HARRIS, of Arkansas, was finally picked to be author of the gas bill, instead of PRIEST. HARRIS has long been close to the Arkansas public utilities and Pan American Airways. His wife was even the recipient of nylon stockings from Ham Moses, of Arkansas Power & Light during the war when they were scarce.

So HARRIS introduced the gas bill, while PRIEST pushed it. PRIEST did a remarkably efficient job.

When the final vote came up in the House, it squeaked through by a 209–203 vote margin only because it had the powerful support of popular Speaker SAM RAYBURN and Republican leaders.

The fact that RAYBURN was for the bill was easy to understand. He comes from Texas. And the big oil boys have long been able to redistrict RAYBURN's congressional district and defeat him if SAM doesn't go down the line for gas and oil.

GOP rollcall

With Republican leaders, however, it was different. Former Speaker JOE MARTIN comes from Massachusetts which needs cheap gas. CHARLEY HALLECK, the assistant GOP leader, comes from Indiana, also in need of cheap gas.

However, they came bustling down the House aisle as the vote was being taken, whispering to fellow Republicans, urging them to get in line for the gas bill.

"There'll be plenty of campaign funds to support any Congressman who votes right," was the word passed through the lobbies.

Here are some of the Congressmen who bowed to the lobby, despite the fact that they come from gas-consuming areas where housewives want low-priced gas:

Maryland: MILLER, DEVEREUX, HYDE, Republicans.

Maine: HALE, NELSON, MCINTIRE, Republicans.

Massachusetts: ROGERS, BATES, NICHOLSON, CURTIS, MARTIN.

Michigan: HOFFMAN, WOLCOTT, BENTLEY, THOMPSON, CEDERBERG, DONDERO.

Nebraska: CHASE, HARRISON, MILLER, Republicans.

New Jersey: WIDNALL, OSMERS, Republicans.

New York: Mrs. ST. GEORGE, COLE, MILLER, KEARNEY, GWINN.

Ohio: MCCULLOCH, BROWN, BETTS, JENKINS, F. P. BOLTON, VORYS, HENDERSON, BOW, MINSHALL, MCGREGOR, Republicans.

Illinois: MCVEY, HOFFMAN, SHEEHAN, CHURCH, REED, MASON, ALLEN, ARENDS, VELDE, SIMPSON, SPRINGER, VURSELL, CHIPERFIELD.

Only three northern Democrats voted for the bill: GRAY, of Illinois, WALTER, of Pennsylvania, and ASPINALL, of Colorado. In California four Democrats who usually vote with the consumers this time voted with the lobby: MILLER, of Oakland, KING, of Los Angeles, DOYLE, and SHEPPARD.

Now, I think it very important for all Members of Congress to weigh carefully the full implication of the charges made in this article. If the charges are true, of course, the very process of legislation has been subverted and the Harris-Fulbright bill did not pass the House honestly. If it can happen on natural-gas legislation it can happen on any piece of legislation. The institution of the Congress itself is in question. Incidentally you will note that I was not named in the article though I certainly fit the description of a Republican Congressman from an essentially gas-consuming constituency who voted for the Harris bill. My vote I do not have to state, but will for the RECORD, was based upon my belief that the best regulation is honest competition and that there is real and honest competition in the gas-producing industry. This is the surest way to get the lowest price for the consumer. I might state that this or other honestly presented facts and arguments and not bribery was in my judgment the sole motivating force in the votes of my colleagues.

It does no good for Members to say to themselves and others, as I have heard them, "Oh, this is just Drew Pearson. Nobody believes him." Perhaps it is true that Mr. Pearson's reputation as an honest journalist is not very good among persons in public life who have had occasion to deal with him and his reporting, but the general public does not know this. Newspapers enjoying good reputations around the country print his syndicated column and the general public rightfully

assumes that responsible newspapers would not print and help circulate the words of a reporter whose veracity was questionable.

It does no good for the Members of the House to brush off this charge lightly. In any republican form of government—for that matter in any form of government—bribery and corruption can exist. It is important for our institutions to remain above reproach on this score. Any charge on this score made by anyone, in my judgment, should be investigated at once; proven true or false and the results published. If the charges were made without any basis of fact the person who made these charges should be called upon to explain just why the charges were made and his explanation publicized.

I want to say here and now that the need for constant criticism of the actions of public officials is so necessary and so great in a republic that nothing should be done to curb such criticism beyond the laws we presently have against slander and libel and beyond the personal decisions that other men must make in deciding whether to publicize criticism that seems unsubstantiated, or criticism that emanates from an individual who through his past actions has shown a sloppy regard for the truth.

There has been entirely too much loose conversation, and reporting in the press, radio, and television which brings the institution of the Congress into discredit among our citizenry. I know no surer or fatal way to undermine a Republic than to discredit the institutions which go to make it a Republic, in the eyes of the people. A Congress of integrity is the basic institution in any Republic. There are two ways to discredit the Congress. One, to make false and unsubstantiated charges against the integrity of its Members. Two, to pass off honest charges as "smears" and to do nothing about investigating them and correcting the errors if errors exist.

Mr. Drew Pearson has become more than a national figure. If the charges made in his article have any semblance of truth in them we should know it and do something about it. If they have no truth in them we should know that. Either many Members of the Congress are discrediting the Congress in the eyes of our citizenry or Mr. Drew Pearson is. It is time we found out who.

Mr. Speaker, one way to do this and the way I am presently advocating is to appoint a special committee of the House to go into this matter, at once, and let Mr. Pearson come before this committee in public hearing and document his case.

There has been too much public debate devoted to attacking the integrity of one's opponents instead of attacking the facts and logic advanced by one's opponents. There is too much fair argument on both sides of the issue involved in determining whether the Federal Government should attempt to regulate the gas producers without resorting to the "smear" approach.

REPUBLICANS ARE THE WORKERS' CHAMPIONS

Mr. HOFFMAN of Michigan. Mr. Speaker, I ask unanimous consent to extend my remarks at this point in the RECORD and include an editorial from the Saturday Evening Post.

The SPEAKER. Is there objection to the request of the gentleman from Michigan?

There was no objection.

Mr. HOFFMAN of Michigan. Mr. Speaker, the top smear artists of the Democratic Party have long charged Republicans, individually and as a group, with being antilabor.

The facts are to the contrary. Republicans gave the worker the Taft-Hartley Act, which labeled all the time by certain union leaders as the "slave labor act," has given the worker, as distinguished from the labor politicians, greater benefits than any legislation ever before put on the books. Under it union membership has increased as have union funds.

Republicans generally are, as is evident, loyal Americans who believe in freedom to work, as opposed to the political policy and philosophy of certain union officials who have attained position and power in labor organizations by insisting that before an individual woman or man can hold a job he must join, pay an initiation fee, and thereafter monthly dues, to a labor organization.

The exercise of that power is equivalent to the power to levy a tax. Even the State legislators and the Congress are limited in their authority to levy taxes.

But certain union leaders insist, and they have all too often been successful, that their unions have the right to charge a fee or a tax fixed by them, which must be paid by every individual who wants to hold a job to the organization they represent and that they in turn can use that fee to elect candidates to office.

That means that, if you or I are Republicans, if we wish to work in an industrial plant in our home town or city, we must first in order to exercise the right to work—the right to earn a livelihood and provide for our dependents—pay a sum of money to the union whose officers can then take the sum which we pay in and use it, should we have a brother or a sister who is a Republican and a candidate for public office, to defeat that brother or sister at the polls.

The proposition needs but to be stated to show that it is unfair, unjust, un-American, vicious, and can only lead to tyranny and oppression by a labor government.

Because I, as a Republican, insist that it is wrong to permit any individual or any group to force me, if I want an industrial job, to pay $2, $5, or $7.50 a month in order to hold that job and then permit the union officials to use that sum to defeat me at the polls should I be a candidate, or to defeat the candidate I support, these union leaders and certain Democratic smear artists try to pin an antilabor label on me.

In Michigan there no longer is a functioning Democratic Party organization though there is a political organization using that name. The CIO and some of its officials have taken complete control of the Democratic Party and they are spending union funds to advance the interests, not necessarily of the Democratic Party, but of their own political stooges.

The situation to which reference has just been made is outlined in an editorial published in the Saturday Evening Post dated Jnauary 28, 1956, which reads as follows:

THERE ISN'T ANY REPUBLICAN WAR AGAINST LABOR

Columnists, labor leaders, and politicians—some of them Republicans, too—have been giving out that the Republican Party, or, at any rate, some of its conservative members, is "fighting labor." Walter Reuther even accused some prominent Republicans of plotting to disfranchise the workingman. What started all this?

The most prominent Republican mentioned by these criticis is Senator BARRY GOLDWATER, of Arizona, who has cited impressive evidence that CIO unions have contributed part of their funds, collected as dues from the members, to the Political Action Committee, which almost invariably supports Democratic candidates. Inasmuch as union dues are compulsory in union-shop plants, this means that many workers are compelled to give financial support to candidates who do not represent their views. Inasmuch as surveys indicate that a fair percentage of union members are Republicans, it is difficult to defend the donation of union funds exclusively to Democrats.

The contention of the union leaders is that these political contributions are voluntary; but Gus Scholle, chairman of the Michigan PAC, stated in an interview in the Detroit Free Press that the committee's activities were supported from two sources—voluntary contributions and dues money allocated by local unions. Dues money is, of course, supplied by people of various political beliefs. The union defense of this practice appears to be an effort to show that the various committees through which the funds were channeled were not political parties within the meaning of the Taft-Hartley Act, which forbids such contributions. Nevertheless, in Michigan Democratic candidates have been the almost invariable beneficiaries of CIO contributions, however routed through committees devoted to education or citizenship.

In The CIO and the Democratic Party (University of Chicago Press), Fay Calkins, a former CIO political worker, reports that in the 1950 campaign in Michigan "CIO unions contributed about $211,550," or 64 percent of the total Democratic campaign fund. "CIO gave all but $6,000 of its contribution directly to candidates rather than to the State committee. CIO thus used its funds not only to elect Democratic candidates, but also to strengthen its position inside the liberal coalition."

This would be O. K. with everybody if CIO were not doing it all with money paid in part by union members who do not favor Democratic candidates and who have no interest in "strengthening the liberal coalition." That's what the argument currently raging is about.

An important principle is involved in this debate, as was pretty clear to everybody in the days when the chief offenders were corporations which contributed out of their treasuries to political candidates, usually Republicans. Such use of economic power was frowned upon, not only because it violated the rights of stockholders who might be Democrats, but more because it tended to put political parties and officeholders into the pockets of vested interests. The shoe is now on the other foot, but the principle remains.

This is all there is to this alleged war against labor by the GOP. President Eisen-

hower, in his message to the merged AFL-CIO, urged that the "rights of minorities holding different social, economic, and political views must be scrupulously protected and their views accurately reflected." That summarizes the Republican attitude on union politics.

INTERPOSITION: THE BARRIER AGAINST TYRANNY

The SPEAKER pro tempore. Under previous order of the House, the gentleman from Mississippi [Mr. WILLIAMS] is recognized for 60 minutes.

Mr. WILLIAMS of Mississippi. Mr. Speaker, on May 17, 1954, the Supreme Court of the United States drove a knife into the heart of the American Constitution. On that date the Supreme Court delegated unto itself and the Federal Government certain powers in excess of those granted under the Constitution. On that date, nine appointed Justices assumed unto themselves the power to amend the Constitution in the absence of approval by the people or the several States in the manner which is provided in the Constitution. Willfully and wantonly, they violated every principle of established law. They usurped the legislative powers of the Congress, and contributed affirmatively to the destruction of our dual sovereignty form of Government.

For purposes of this discussion, let us set aside the emotional and political aspects of the subject matter involved in those decisions as well as the merits or demerits of racial segregation per se, and consider instead the constitutional crisis which the people of the 48 States face as a result of the Court's action.

For the States of this Union, North or South, to permit the Supreme Court's brazen act of usurpation to stand unchallenged is for them to surrender meekly their sovereignty to the Central Government. For the States to permit their sovereignties to be so usurped would be to provide the foundation on which oligarchies are built.

Because some States do not have segregation laws, their people may think that the Court's illegal ruling is of no importance to them. They may even believe conscientiously that the Federal Government would be morally justified in the employment of its full force and power against the Southern States in order to compel integration of the races.

If they believe either, they are overlooking the disastrous effects of the Court's action of May 17, 1954.

If the Supreme Court has the inherent right, under its judicial powers—which are not clearly defined in the Constitution—to amend the Constitution in this instance, the Court may likewise amend the Constitution by interpretation in cases affecting other States, and in matters equally as vital to them.

Chief Justice John Marshall, a Federalist himself, whose opinions would certainly show him a believer in a strong central government, once wrote this language into a decision:

> No political dreamer has ever been wild enough to think of breaking down the lines that separate the States, or of compounding the American people into one common mass.

In their attempt to destroy the lines that separate the States and to compound the American people into one common mass, the present Court found it necessary to go outside the law. They found it necessary to use, as the basis for their ruling, various sociological documents, some actually written by foreigners whose information on the subject was gained from abstract sources. The Black Monday decisions violate every principle of established law. There is no basis for such rulings in statutory law, nor can a substantial premise be found throughout the entire history of Anglo-Saxon common law.

Mr. Speaker, let us recall for a moment why the Constitution came into being and how the Union was formed. From a convention of patriots representing 13 independent colonies, there emerged a document forming a Federal Union. The time was 1787; the place, Philadelphia. After declaring their independence from the British Crown, they recognized the necessity for a common union or federation for the mutual protection of all. Acting on this premise, a convention was called to meet in Philadelphia in the late spring of 1787. In attendance were lovers of liberty who had made extreme sacrifices and endured extraordinary hardships in their common resistance to tyranny. The colonies' independence had been secured at a very high price: Death, destruction, privation, bankruptcy, and a tragic war. The high price paid for their liberty was fresh in the minds of the assembled patriots.

In that Convention each Colony voluntarily surrendered to the Union certain powers which they regarded as necessary to the purposes and function of the Central Government. These powers so surrendered were specifically enumerated and carefully limited. The individual States reserved to themselves all powers not expressly delegated to the Union nor prohibited to themselves in accordance with the terms of their compact.

In spite of the cautious wording of the original document, the States refused to ratify the Constitution until ample assurance was given to the States and the people that the Central Government so created could never devour its creators, or deprive the people of their inalienable rights. As a result, the Bill of Rights, the first 10 amendments were added to the Constitution.

These 10 amendments did not expand the authority of the Central Government. On the contrary, they further restricted its authority. Like the Ten Commandments, our Bill of Rights are "thou shalt nots," directed to the Federal Government. They shield the people and the States from an oppressive and tyrannical government born of overconcentration of powers. They were, and are now, the basis for individual liberty and State sovereignty.

The 10th amendment clarified the matter of delegated and reserved powers—in the simpliest of language. It reads:

> The powers not delegated to the United States by the Constitution, nor prohibited by it to the States, are reserved to the States respectively, or to the people.

In elaborating on the 10th amendment, the Supreme Court said, in 1864:

> The reservation to the States respectively can only mean the reservation of the rights of sovereignty which they respectively possessed before the adoption of the Constitution of the United States and which they had not parted from by that instrument. And any legislation by Congress beyond the limits of the power delegated would be trespassing upon the rights of the States or the people and would not be the supreme law of the land, but null and void. (*Gordon* v. *United States* (117 U. S. 697).)

In this particular case the Court had reference to an act of Congress, but its application is to the power of Federal Government. It follows, of course, that whichever branch of the Federal Government goes beyond the limits of the power delegated to it is trespassing upon the rights of the States or the people and such act is null and void. The 10th amendment applies with equal force to all agencies of the Federal Government.

Mr. Speaker, for nearly a century and a half the Supreme Court, the Congress, and the Executive recognized that the power to segregate the races was among the reserved powers of the States. Like the police power, the power to maintain and regulate schools, the power to segregate the races was reserved to the States for the reason that it was not specifically delegated to Congress nor prohibited to the States in the Constitution.

The Supreme Court had many opportunities to construe the meaning of the 14th amendment, and did so on several occasions.

The Court consistently held that States must extend equal protection of their laws to all persons; but not specifically the same protection to all persons. The Court's language was never intended to prevent reasonable classification as long as all classes were treated alike. This was known as separate but equal doctrine. The present Court upset the historical findings of the Federal judiciary in their decision of May 17, 1954, by saying:

> We conclude that in the field of public education the doctrine of "separate but equal" has no place. Separate educational facilities are inherently unequal.

In the words of the Indianapolis Star, under date of January 3, 1956:

> But we believe that in the issuance to the States, in the name of the Federal Government, of an order to cease the operation of segregated schools, the Supreme Court exceeded the Constitutional authority of the Federal Government.
>
> The single conclusion on which the Court rested its assumption of this authority was, after all, a shaky one. It was the Court's arbitrary assertion, thereafter referred to as a fact, that separate schools cannot possibly be equal. Carried to its logical conclusion, this means that Indianapolis Public Schools 80 and 84, to pick 2 at random, cannot be equal because they are separate. To be sure they are separate on the basis of pupils' addresses rather than race or some other characteristic. But they are separate nonetheless, and pupils are arbitrarily assigned to one or the other. Going further, it could be said that if there were two third-grade classes in a given school, they cannot be equal because they are separate. In short, if what the Supreme Court asserted as a fact

is indeed a fact, the only community equality of educational opportunity is found in the one-room school. Yet on this premise the Court assumed application of the 14th amendment to the States' operation of public-school systems.

Mr. Speaker, it is quite obvious that the Court not only undertook to rewrite the 14th amendment, which they have no right to do, but they also have rendered a decision which is utterly impossible of enforcement.

Let us take a further look at the background of the Black Monday decisions. The language of the 14th amendment is the same as when it was submitted by Congress and ratified by the States. The present Supreme Court would have us believe that its meainng and intent has changed. This is not true; it was never intended by the sponsors or the ratifying States that it should take from the States their right to segregate the races in their public schools and other local institutions. How can the Court reconcile its interpretation of the intent of the 14th amendment in face of the fact that the very Congress which submitted it to the States proceeded to provide for a segregated school system in the District of Columbia, over which it exercises domain? How can they reconcile their position with the fact that a great number of the ratifying States continued to maintain segregated school systems?

If the idea had ever been entertained that segregated schools were to be prohibited by the operation of the 14th amendment, it stands to reason that Congress and the States would have abandoned their segregated school systems then and there. Certainly they would not have violated their own creature in the very act of creation.

The Constitution of the State of Mississippi was adopted in 1890, and it provides for separate public schools for the white and Negro races. The question of whether this provision was in conflict with the 14th amendment was raised in the case of *Gong Lum* v. *Rice* (275 U. S. 78) before the Supreme Court in 1927. Chief Justice Taft, in delivering the Court's opinion, said:

> The right and power of the State to regulate the method of providing for the education of its youth at public expense is clear.

Previously, in the case of *Cumming* v. *Richmond County Board of Education* (175 U. S. 528, 545) the Court had said in an opinion delivered by Mr. Justice Harlan:

> Under the circumstances disclosed, we cannot say that the action of the State court was, within the meaning of the 14th amendment, a denial by the State to the plaintiffs * * * of the equal protection of the laws, or of any privileges belonging to them as citizens of the United States. We may add that * * * the education of the people in schools maintained by State taxation is a matter belonging to the respective States.

In the case of *Plessy* v. *Ferguson* (163 U. S. 537, 544, 545) the Court had held the separate but equal doctrine as being in conformity with the intent of the 14th amendment. In that case, the Court had held that the establishment of separate schools for white and colored children "has been held to be a valid exercise of the legislative power even of courts of States where the political rights of the colored race have been longest and most rigidly enforced."

There is no doubt but that the Supreme Court has the authority to construe the Constitution when the issue is of first impression before the Court and there is no legislative history of the issue. But in the desegregation cases there were a long line of Court decisions, as well as 90 years of legislative history. In nearly threescore cases, the Federal Judiciary had held to the separate but equal maxim. For nearly a century, the Congress and State legislatures made laws in reliance on the settled principle that each State had the power to regulate its school system without interference by the Federal Government. In effect, the Supreme Court has now amended the Constitution, taking from the States powers exercised by them since the formation of the Union.

Only the people, acting through two-thirds of their national representatives and three-fourths of their State legislatures or State conventions can legally amend the Constitution. The Supreme Court cannot lawfully do it. But if the Black Monday decisions are allowed to stand, it will have been amended.

If the Court is sustained in its continued usurpation of power, State boundaries will be erased and the Constitution rendered meaningless.

On May 17, 1954, the Court did not suggest or contend that the principle enunciated in Plessy against Ferguson, in Cumming against County Board of Education, in Gong Lum against Rice, and all the other cases were bad decisions. The Court did not say they were erroneous interpretations of the Constitution. Instead, the Court held that these previous decisions were bad psychology and errors in sociology.

If we are to recognize the Supreme Court's Black Monday decisions as valid and binding, then we must also assume that the 10th amendment to the Constitution was repealed by the enactment of the 14th amendment. Certainly such was not the intention of those who forced the 14th amendment through the Congress and subsequently fought for its ratification by the States.

Is the Supreme Court of the United States, consisting of nine men holding office by appointment, and answerable not to the people but to their respective consciences if such they have, to exercise final and absolute dominion over every phase of society? Are they to be recognized as the sole and only judges of the limits to which the Federal agency may go in the exercise of its powers, the Constitution to the contrary notwithstanding? Are we to assume that the States and the people are helpless and without recourse against unconstitutional usurpations of authority by the Federal establishment? Are the States defenseless? Must they yield to Federal authority, when the exercise or assumption of that authority is beyond the limitations imposed on the Federal establishment in the Constitution?

If these premises are to be recognized as sound, then we have already changed our form of Government, and no longer live under a constitutional republic. If these premises are sound, we are wasting the fruits of the peoples' labors in maintaining State governments and in supporting county and municipal governments.

The Federal Government, being a creature of the several States, through usurpation, is slowly but surely cannibalizing its creators, to the end that it and it alone shall sit in exclusive judgment of the acts of the citizens of the several States.

If an unlimited central government is to be according to the will of our people, then it should be established by the people. The Court, an appointed body, is clothed neither with the authority nor the ability to speak for the people.

Look for a moment to the Declaration of Independence, which holds that Government derives its just powers from the consent of the governed. In elaborating further on this doctrine, the Declaration of Independence warns us as follows:

> Prudence, indeed, will dictate that governments long established should not be changed for light and transient causes; and accordingly all experience hath shown that mankind are more disposed to suffer while evils are sufferable, than to right themselves by abolishing the forms to which they are accustomed. But when a long train of abuses and usurpations * * * evinces a design to reduce them under absolute despotism, it is their right, it is their duty, to throw off such government, and to provide new guards for their future security.

These words were directed to the King of England and the tyranny of his regime, of course. Not the least among their grievances was the assertion:

> He—
>
> The King—
>
> has combined with others to subject us to a jurisdiction foreign to our constitution, and unacknowledged by our laws, giving his assent to their pretended acts of legislation * * * for taking away our charters, abolishing our most valuable laws, and altering fundamentally the forms of our governments; for suspending our legislatures, and declaring themselves invested with power to legislate for us in all cases whatsoever. * * * In every stage of these oppressions we have petitioned for redress in the most humble terms: Our repeated petitions have been answered only by repeated injury.

Today, the people of the Southern States suffer oppression at the hands of an irresponsible Supreme Court. We have seen that Court arbitrarily void provisions of our charters; they have abolished some of our most valuable laws, and they have virtually declared themselves invested with power to legislate for us in all cases.

Yes, Mr. Speaker, we in the States have petitioned again and again to this Court for redress, but the Court turns a deaf ear to our pleas, choosing instead to harken to the conscienceless demands of minority pressure groups seeking political favor, and to whom the preservation of constitutional Government is a matter of neither moment nor consequence.

Annually we gather in this Chamber for a reading of Washington's Farewell Address to Congress. We accord the reading of this document the proper out-

ward reverence and honor which it certainly deserves, and we can do no less. Many hear its reading, but few listen to the words or attempt to grasp its profound meanings.

If one listens closely to the next reading of this monumental message, he will hear this admonition to all who shall live under the Constitution of the United States:

> The Constitution which at any time exists till changed by an explicit and authentic act of the whole people is sacredly obligatory upon all. * * * But let there be no change by usurpation; for though this in one instance may be the instrument of good, it is the customary weapon by which free governments are destroyed.

As God-fearing people, we are obligated to resist tyranny, no matter what form it may take. If we are true to ourselves, we must resist it even when it wears the sheep's clothing of judicial robes, if freedom is to be the legacy we leave to our children.

The resolving of this crisis does not call for complacency, timidity, or cowardice. It will call for taxing new reservoirs of courage, and will demand sacrifices that will test the strength of our convictions. In the face of the Supreme Court's brazen usurpation of authority, its flagrant disregard of constitutional limitations, its wilful flaunting of judicial precedents, its wanton contempt for the doctrine of stare decisis and recognized principles of established law, we must resort to drastic measures if we are to preserve the structure of our Republic. This will mean suffering and sacrifice on the part of liberty-loving Americans, and it means seizing the offensive from the conscienceless self-seeking elements who seek to destroy our Republic. It means that we must seek and find the courage that distinguished our great American ancestors in their struggle to build this Republic, and there can be no retreating from principle for any cause whatsoever.

Mr. Speaker, inasmuch as the Federal Government is a creature of the States, it is the solemn duty of the States to protect themselves from encroachments upon their sovereignty. No machinery for this is set up in the Constitution. No relief is available in the statutes. Yet the law teaches us that for every wrong there must be a remedy.

The Black Monday decisions of the Federal judiciary go beyond the limits of delegated powers and therefore are an invasion of powers reserved to the States, but the States have a remedy. It was first used by Georgia in the 1790's. It was used by Kentucky and Virginia in the same decade. Other States used it in the 19th century. Jefferson, Madison, and Calhoun were its authors and originators. It was called the doctrine of interposition.

In the words of Jefferson from the Kentucky resolutions:

> *Resolved*, That the several States composing the United States of America are not united on the principle of unlimited submission to their general Government; but that by compact under the style and title of a Constitution for the United States and of amendments thereto, they constituted a general government for special purposes, delegated to that government certain definite powers, reserving each State to itself, the residuary mass of right to their own self-government; and that whensoever the General Government assumes undelegated powers, its acts are unauthoritative, void and of no force:
>
> That to this compact each State acceded as a State, and is an integral party, its co-States forming as to itself, the other party:
>
> That the Government created by this compact was not made the exclusive or final judge of the extent of the powers delegated to itself, since that would have made its discretion and not the Constitution, the measure of its powers; but that as in all other cases of compact among parties having no common judge, each party has an equal right to judge for itself, as well of infractions as of the mode and measure of redress.

In the words of Madison—committee report on the Virginia resolutions:

> It appears to your committee to be a plain principle, founded in commonsense, illustrated by common practice, and essential to the nature of compacts, that where resort can be had to no tribunal superior to the authority of the parties, the parties themselves must be made the rightful judges, in the last resort, whether the bargain has been pursued or violated.
>
> The Constitution of the United States was formed by the sanction of the States, given by each in its sovereign capacity. It adds to the stability and dignity, as well as to the authority of the Constitution, that it rests on this legitimate and solid foundation.
>
> The States, then, being the parties to the constitutional compact, and in their sovereign capacity, it follows of necessity that there can be no tribunal above their authority to decide, in the last resort, whether the compact made by them be violated; and, consequently, that, as the parties to it, they must decide themselves, in the last resort, such questions as may be of sufficient magnitude to require their interposition.

In the words of Calhoun:

> This right of interposition, thus solemnly asserted by the State of Virginia, be it called what it may—State-right, veto, nullification, or by any other name—I conceive to be the fundamental principle of our system, resting on facts historically as certain as our revolution itself, and deductions as simple and demonstrative as that of any political or moral truth whatever; and I firmly believe that on its recognition depends the stability and safety of our political institutions.

None can say that these three great statesmen were advocating anything but preservation of the Constitution and the Union. They had contributed as much, if not more, than all their contemporaries to the creation of this Republic. Certainly their philosophy and their interpretation of constitutional limitations should be given credence today, when the relationship of the Federal Union to the States is in issue.

The right of the States to check encroachments of the Federal Government must, of necessity, be an integral part of our system of dual sovereignty, and vice versa. What happens when a State encroaches on the Federal Government's delegated powers? The Federal Government immediately interposes its sovereignty between the encroachment and the citizens affected. Does anyone believe that our Founding Fathers would confer such power on the creature and withhold it from the creator? No, Mr. Speaker, the principle of interposition is a fundamental part of our system of dual sovereignty. The right of interposition should be reserved for use only when there is a deliberate, palatable, and dangerous usurpation of the sovereign States' powers.

A precedent in American history, when interposition was carried to its logical conclusion occurred in Georgia.

GEORGIA AND THE SUPREME COURT, 1792–93

The issue in the case of Chisholm against Georgia was the right of the Supreme Court to hear cases in which a State was sued by a citizen of another State. Chisholm, a citizen of South Carolina, sued Georgia to recover some lands confiscated during the Revolutionary War.

Georgia refused to recognize the competence of the Supreme Court to hear the case and when the case came to the Court in 1792, Georgia declined to enter an appearance but merely submitted a written remonstrance against the jurisdiction of the Court. In 1793, the Supreme Court ordered Georgia to appear under penalty of a judgment by default for Chisholm. Georgia maintained its defiance and a writ of inquiry was awarded for Chisholm.

The writ was never executed and Georgia succeeded in its defiance of the Court. Opposition to the Court's assumption of jurisdiction was intense in Georgia—the State house of representatives passed a bill declaring it a felony punishable by death for anyone to attempt to execute any compulsory process issuing from the Supreme Court in this case—and widespread in the other States. On the day after the Court's decision was announced, a constitutional amendment was introduced in Congress to prevent a State from being sued in the Federal courts. The 11th amendment which reverses the decision in Chisholm against Georgia was finally ratified in 1798.

There were other cases where the right of interposition was imposed but they turned into open defiance and were never followed through to their logical conclusion. Several interposition resolutions lay inactive or were withdrawn without following the amendment process. Others were not followed through because the legislation protested was amended, or repealed by Congress. Notable examples of the latter are the interposition resolutions of many Northern States in the matter of the fugitive slave law, and South Carolina on the tariff issue. Cases are cited below—not as examples of complete interposition but as examples of the forms of interposition that have occurred in American history.

PENNSYLVANIA AND THE FEDERAL COURTS—THE CASE OF THE SLOOP "ACTIVE"

This conflict between the Pennsylvania and Federal Government originated in the Revolutionary War. The sloop *Active* was captured during the war and sold. The Pennsylvania Court of Admiralty ruled that the proceeds belonged to the captors, but the owners of the ship appealed to the Continental Congress, which, through its Committee on Appeals, reversed the State court. The ruling of the Committee on Appeals was ignored.

Almost 20 years later Olmsted, the owner, applied to the Federal district court for a process to enforce the ruling of the Committee on Appeals. In 1803 Federal District Judge Peters ruled that the money be paid to Olmsted, but he was defied by the State and his decree was not enforced. Olmsted applied to the Supreme Court, which in 1809 issued a writ of mandamus directing the enforcement of the district court's decree.

When the Supreme Court's decision was announced the Governor notified the legislature that he proposed to call out the State militia to prevent the enforcement of the Court's decree. The Federal marshal attempted to serve process on the State treasurer, but was stopped by the State troops. However, the marshal declared his intention to call out a posse in order to enforce his authority.

At the last moment the State backed down. The process was served and the legislature appropriated the money to pay Olmsted's claim. As a final humiliation the general of the State militia was convicted in Federal court for forcibly resisting the Federal marshal. He was, however, pardoned by President Madison almost immediately afterward.

THE VIRGINIA SUPREME COURT OF APPEALS AND THE SUPREME COURT—MARTIN V. HUNTER'S LESSEE

This conflict between Federal and State authorities arose out of litigation to determine the title to certain lands in Virginia. The history of the litigation and the issues of law involved are very complex but do not need to be described in an account of the conflict between the two courts.

In 1810, the Virginia Court of Appeals held that Martin's claim to the lands in issue was not valid because of Virginia statutes restricting the rights of aliens to inherit land within the commonwealth. A writ of error to the Supreme Court was, however, allowed and that Court reversed the Virginia decision and entered an order requiring the Virginia Court of Appeals to enter judgment for Martin.

The Virginia court refused to comply with the mandamus from the Supreme Court. Their refusal was based on the independence of the State judiciary. The Virginia court acknowledged the supremacy clause of the Constitution but denied that this involved the supremacy of the Federal courts.

After the Virginia court's refusal to implement the Supreme Court's decision, the case went back to the Supreme Court on the sole issue of that Court's power to secure compliance with its decisions. Compliance was secured by sending the case back to the lower Virginia court in which it had originated and which enforced the Supreme Court's decision.

CONNECTICUT AND THE EMBARGO ACT, 1809

The Embargo Act was passed by Congress in 1807 and led to much discontent in the New England States. Many memorials against the act were passed but Congress ignored the protests and in 1809 passed a stringent enforcement act.

Connecticut refused to cooperate in the enforcement of this act and the general assembly in special session resolved—

That to preserve the Union and support the Constitution of the United States, it becomes the duty of the legislatures of the States, in such a crisis of affairs, vigilantly to watch over, and vigorously to maintain, the powers not delegated to the United States, but reserved to the States respectively, or to the people; and that a due regard to this duty, will not permit this assembly to assist, or concur in giving effect to this unconstitutional act, passed, to enforce the embargo.

The extent of the opposition to the embargo caused Congress to repeal it within a year of this protest.

OHIO AND THE NATIONAL BANK

In 1819 Ohio placed a tax of $50,000 on every branch of the Bank of the United States within its borders in order to drive it from the State. Despite the Supreme Court decision in McCullough against Maryland which had declared such a tax unconstitutional, Osborn, the State auditor, determined to collect the tax. He was enjoined from collecting the tax by the circuit court but nevertheless proceeded to take it by force from one of the branches of the bank. The Ohio legislature supported Osborn in a series of resolutions objecting to the doctrine that the States are bound on questions of constitutionality by Supreme Court decisions. The legislature also passed an act to withdraw from the Bank of the United States the protection of the laws of this State as a further way of seeking to expel the Bank which had been supported by the Supreme Court.

The Bank instituted proceedings against Osborn and in 1824 the Supreme Court affirmed a lower court decision against him. The tax money was refunded to the Bank.

GEORGIA AND THE INDIANS

In the 1820's Georgia became dissatisfied with the slowness of the Federal Government's removal of the Creek Indians from Georgia Territory. Governor Troup charged the Federal Government with failing to carry out its promises and ordered a State survey of the lands. President Adams threatened to use the Army to stop the Georgia surveyors but Governor Troup successfully defied him. The issue was settled by the withdrawal of the Creeks beyond the Mississippi.

At the same time as the Creek controversy, Georgia also took over the lands of the Cherokees within its borders. The Cherokee laws were annulled and Georgia statutes enforced in the territory. This controversy went to the Supreme Court when a Cherokee was convicted under Georgia law and sentenced to death. The Supreme Court granted a writ of error, but it was ignored, and the Cherokee was executed. At least two other cases arising out of the Georgia statutes regulating the Cherokee lands were appealed to the Supreme Court. In both the Court ruled against the State, but in each case the State authorities ignored all communications from the Court, and the criminal penalties awarded by the Georgia courts were carried out.

NULLIFICATION IN SOUTH CAROLINA

Opposition to the protective tariff increased in South Carolina throughout the 1820's. The 1828 "tariff of abominations" produced a formal protest from the State legislature and nullification sentiment increased for the next 4 years. The tariff of 1832 did not alleviate the situation, and in the fall of 1832 the State legislature issued a call for a State convention. The convention met in November 1832 and passed an ordinance of nullification that declared the protective tariff unconstitutional and authorized the legislature to take all steps necessary to prevent the enforcement of the tariff acts as from February 1833.

President Jackson responded with a message declaring that he would enforce the tariff with all the means at his disposal and a Force bill was introduced in Congress.

The Force bill was passed, together with a compromise tariff act that was acceptable to South Carolina. The South Carolina convention reassembled in March, rescinded its nullification act against the tariff, but passed an ordinance of nullification against the Force Act.

FUGITIVE SLAVES AND PERSONAL LAWS

The Federal Fugitive Slave Act of 1793 caused opposition from States in which abolitionist sentiment was strong. The act relied on State officers to enforce its provisions and several States passed laws extending the right of jury trial to suspected fugitive slaves. Such laws were passed in Indiana, 1824; Connecticut, 1838; Vermont, 1840, and New York, 1840. Though these laws were not direct challenges to Federal authority, they undoubtedly were designed to hinder the operation of the Federal statute.

The situation was altered by the decision of the Supreme Court in the case of Prigg against Pennsylvania. The significant portion of the decision was the ruling that State officers could not be compelled to enforce a Federal statute. As a direct result 4 States—Massachusetts, Vermont, Pennsylvania, and Rhode Island—passed laws prohibiting State officers from performing the duties assigned to them under the law of 1793 and also forbidding the use of State jails for fugitive slaves.

A new Federal Fugitive Slave Act was passed in 1850 which did not rely on State officers for its enforcement. Personal liberty laws providing safeguards for the fugitive slave and making the enforcement of the law more difficult were passed in 10 States—Vermont, Connecticut, Rhode Island, Massachusetts, Michigan, Maine, Wisconsin, Kansas, Ohio, and Pennsylvania.

The most positive defiance of the Federal Government on the fugitive slave issue occurred in Wisconsin in the 1850's. Sherman Booth, an abolitionist editor, was arrested for forcibly rescuing a fugitive slave. The State supreme court released him on a writ of habeas corpus and at the same time held the Federal Fugitive Slave law unconstitutional. However, Booth was indicted and convicted in the United States District Court only to have the State supreme court again release him. In 1855 the Supreme Court issued a writ of error but the Wisconsin court ignored it and refused to send a copy of its record.

The Supreme Court managed to procure a copy of the record in 1857 and in 1858 reversed the judgment of the Wisconsin court. The State courts refused to enforce the verdict but Booth was arrested by a United States marshal in 1860. He was rescued, rearrested, and finally pardoned by President Buchanan in the same year.

The South Carolina nullification resolution of 1832 nullified a revenue act designed to finance the United States Government. The revenue act was clearly within the delegated powers of the Congress, and was an act which it was constitutionally empowered to pass. There was no question in this case but that the act was constitutional.

Following the adoption by South Carolina of its nullification resolution, the legislatures of the States of Mississippi, Alabama, North Carolina, and Virginia adopted resolutions taking exceptions to South Carolina's right thus to nullify a legal and constitutional act of Congress. Even so, South Carolina won a distinct victory by her act of nullification.

In spite of this precedent, I do not believe that a State can legally nullify an act which Congress has the constitutional right to pass. No State can legally void actions of the Federal Government when those actions are clearly within the scope of powers delegated to the Federal Government by the Constitution. If such acts could be so nullified, we would have no effective Federal Government, of course.

But, Mr. Speaker, this is not the case presented by the May 17, 1954, decision. In the present case, the Supreme Court is clearly attempting to destroy the Constitution itself. It has made an abortive attempt to amend the Constitution. It is attempting to nullify the powers reserved to the States under the Constitution. Through acts of interposition, the States would merely be seeking to nullify the action of the nullifiers.

By design, the Supreme Court has committed a deliberate, palpable, and dangerous invasion of the field of sovereignty exclusively reserved to the States. The nine justices have committed an act of treason against the Constitution of the United States.

It is the duty of the States, in the face of such flagrant and illegal assumption of power by the Federal judiciary, to interpose their sovereignty and nullify the decision. In doing so, the States are protecting the Constitution against nullification by the courts, and are protecting the liberties of the American people.

The time is at hand when the States must reassert their constitutional rights or suffer their own destruction. The zero hour for State governments has arrived, and it might well be the zero hour, also, for our Republican form of government.

Mr. Speaker, I have heard many say that they favor interposition, but are opposed to nullification. This is the same thing as saying that we favor the aiming and firing of our guns but we are against hitting the target.

The very purpose of interposition is to nullify. If that is not to be the purpose, the act of interposition becomes merely an expression of disfavor and is meaningless.

Mr. Speaker, interposition is the act by which a State attempts to nullify. Interposition without nullification is a knife without an edge, a gun without bullets, a car without an engine, a body without life.

If the States are to preserve their sovereignties, if they are to preserve the Constitution, they must interpose and declare the Black Monday decisions to be illegal and invalid and of no force and effect within the territorial limits of their respective jurisdictions. This position I believe the States have the right and duty to take and to maintain until such time as this question of contested powers has been settled legally and finally by constitutional amendment.

Mr. Speaker, the South desires nothing more or less than its right to order and control its own affairs within the limitations of its constitutional prerogatives. The Southern States will not submit to judicial tyranny any more than our sister States will sanction illegal usurpations of their sovereignty. In seeking relief from the oppression of this decision, we must and will call on our sister States for their support to the end that the sovereign rights of all the States shall be preserved.

Mr. Speaker, while the Black Monday decisions constitute the basis for our present grievance, it might be well for the States of this Union to take stock of other usurpations of their sovereign powers. Treatymaking powers, taxing powers, the interstate commerce clause, and Government competition with private enterprise have all been, in recent years, the subject of frequent abuse by the three branches of the Federal Government. If we are to maintain our present form of government, the time is at hand when the States should take action, also, to redefine delegated and reserved powers.

Again I emphasize that public-school segregation, as vital as it is to the people of my State and the South, is but part of the all-embracing problem brought on by the Black Monday decisions. There have been deliberate, palpable, and dangerous encroachments in other fields. The trend toward centralization of power into the hands of the few was merely stabilized and amplified by the Black Monday decisions. It is quite apparent that we can expect more and more such abortive invasions of State sovereignties, and more and more usurpation of power by the Federal establishment. The question of whether the States are sovereign in the matter of reserved powers should be settled now, once and for all.

What will be the object of the Supreme Court's next act of usurpation? What among Jefferson's inalienable rights will be next to suffer destruction by judicial legislation?

Will it be the police power of the States? Intrastate transportation and commerce? Will it be State and local regulatory powers? Will it be property rights, marriage laws, contract laws, criminal laws? If we surrender to this trend, where will it end: Can anyone say?

In discussing the unsurrendered powers of the States, the Court, in 1911, said:

> Among the powers of the State not surrendered—which power therefore remains with the State—is the power to regulate the relative rights and duties of all within its jurisdiction as to guard the public morals, the public safety, and the public health, as well as to promote the public convenience and the common good. (*Chicago et al.* v. *McGuire* (219 I. S. 549).)

Will this be the next principle of constitutional government to feel the ax of the Court's usurpation?

We know not which principle of constitutional government will be next to be attacked. Therefore, the people are entitled to know whether the States—the original source of all Federal authority—or the Federal Government itself, is to be the final and supreme arbiter of the extent of delegated and reserved powers under our Constitution.

Jefferson once said:

> Timid men * * * prefer the calm of despotism to the boisterous sea of liberty.

He said:

> The God that gave us life gave us liberty at the same time. The hand of force may destroy, but cannot disjoin them.

It was his creed that resistance to tyranny was obedience to God.

Mr. Speaker, the same God that watched over Jefferson and inspired him to swear eternal hostility to tyranny watches over us. With His divine guidance and help we shall not fail.

Mr. RIVERS. Mr. Speaker, will the gentleman yield?

Mr. WILLIAMS of Mississippi. I yield.

Mr. RIVERS. Mr. Speaker, I want to congratulate the gentleman on this scholarly discussion of this unconstitutional decision by the politico-sociologically minded outfit known as the Supreme Court. The Supreme Court has invited and dared the States of the Union to interpose between them and law and order—yea, even riots and bloodshed in the States. To maintain their self-respect, Mr. Speaker, the States have no alternative in the absence of this action by this Congress in amending the Constitution or referring it to the people for amendment to interpose and follow out all the orderly processes in nullifying that unwarranted, unconstitutional, and unprecedented act of that politico-socialistic outfit up there.

This was done by the State of Pennsylvania, by the State of Massachusetts, by the State of Connecticut, by the State of Ohio, and the States of South Carolina, Georgia, Mississippi, and others when a like-minded Supreme Court tried to do the same thing at an earlier date.

So, Mr. Speaker, these people who said the South has nothing to do are going to find out. They see now across the Potomac that Virginia is doing something. It is not only South Carolina and the State of the distinguished gentleman from Mississippi now speaking. That is not all. You are going to see that we do not propose to have our institutions destroyed by that outfit across the street that care as much for precedent as the man in the moon. We are going to do something. This is just a gentle reminder that we are not going to take

it lying down. The gentleman should be thanked for his efforts. It is a scholarly presentation on an inflammatory issue which is destined to destroy this country if we do not put a stop to it.

Mr. DAVIS of Georgia. Mr. Speaker, will the gentleman yield?

Mr. WILLIAMS of Mississippi. I am delighted to yield to the gentleman from Georgia.

Mr. DAVIS of Georgia. Mr. Speaker, I want to say that the distinguished gentleman from Mississippi is making a very able statement today pointing out that the contention which is made by some people, that the Constitution is what the judges say it is, is not in fact, true. Our Constitution has no such uncertain and unstable meaning as that.

Our loyalty, of course, the loyalty of all of us, is to the Constitution of the United States. We have all taken an oath to support the Constitution, but our loyalty is to the Constitution of the United States itself and not to any erroneous construction, not to any perverted meaning, which is given to it by nine persons who happen for the moment to be sitting on the Supreme Court Bench. I wish to express my appreciation to the gentleman for the able way in which he is bringing out that important truth.

Mr. WILLIAMS of Mississippi. I am very grateful to my distinguished friend and jurist from the State of Georgia.

Mr. FLYNT. Mr. Speaker, will the gentleman yield?

Mr. WILLIAMS of Mississippi. I yield to the gentleman from Georgia.

Mr. FLYNT. Mr. Speaker, I should like to congratulate and commend my distinguished friend and colleague from Mississippi [Mr. WILLIAMS] on his masterful and scholarly open support of and reaffirmation of faith in the Constitution of the United States of America. I think it would be appropriate at this time to quote verbatim from the Constitution of the United States, to read therefrom the 10th amendment:

AMENDMENT X

The powers not delegated to the United States by the Constitution, nor prohibited by it to the States, are reserved to the States respectively, or to the people.

I now follow that by quoting the 11th amendment to the Constitution of the United States:

AMENDMENT XI

The judicial power of the United States shall not be construed to extend to any suit in law or equity, commenced or prosecuted against one of the United States by citizens of another State, or by citizens or subjects of any foreign state.

Mr. WILLIAMS of Mississippi. I might say at that point that the 11th amendment came about as the result of an act of interposition and nullification by the State of Georgia in 1790.

Mr. FLYNT. That is eminently correct.

Mr. Speaker, I am delighted that this masterful address of the gentleman from Mississippi [Mr. WILLIAMS] has been brought to the attention of the House today. I think it is most convincing evidence of the fact that those of us who happen to live in the southern States believe first and foremost in the preservation of a constitutional form of government, as it was, and as it is, and as we pray that it shall ever be, written in and made a part of the Constitution of the United States.

Before I go any further, lest some of my statements may be misunderstood, I want to say without any reservation or evasion that I am here and now willing to take a solemn oath that I hold no malice, hatred, or prejudice whatsoever in my heart, in my mind, or in my soul, against any man or any group of men, living or dead, because of his race or the color of his skin.

I think, Mr. Speaker, I have demonstrated and proved that by nearly 20 years as a member of the bar of all courts of the State of Georgia and of all courts of the United States, including the Supreme Court of the United States. I think I demonstrated it as an assistant United States attorney for the Northern District of Georgia, as a soldier in the United States Army for over 67 months, as a member of the general assembly of Georgia, as a solicitor general of the State of Georgia, and now as a Member of Congress.

In each instance over those 20 years, indeed, I believe, over the 41 years of my life, I have earnestly sought to give to every man and woman every dignity to which he is entitled as a human being and every right to which he is entitled as a citizen of the United States of America.

Yes, Mr. Speaker, I am willing to take such an oath, that I have no prejudice, malice, or hatred in my heart against any person or race. Yet I am just as willing to take another solemn oath that if necessary I will expend every ounce of my strength, every drop of my blood, even my life itself, to resist the efforts of the United States Supreme Court to usurp the power to amend the Constitution of the United States.

The skeptics and the wild-eyed dreamers may say with regard to the school decisions handed down on the 17th day of May, 1954, "What difference does it make whether those decisions were constitutional or not?" I will just as quickly reply that it makes all the difference in the world. If the Supreme Court of the United States can usurp the power to amend the Constitution of the United States of America and to write into it by judicial legislation that which was never intended by those who wrote the Constitution or by those who live under it today, then that same Court or any other similarly constituted group could just as easily abolish habeas corpus, trial by jury, freedom of speech and press, freedom of religion, the greatest of all freedoms—the freedom of choice, and every other personal right and emblem of liberty, which no human being in the world ever had guaranteed to him by the basic instrument of government of any country until the American Bill of Rights was added to the United States Constitution. If and when the time ever comes when the Supreme Court of the United States, or any other court, can usurp the amendatory powers which lie solely in not fewer than three-fourths of the States, then when that time comes we will become serfs under a totalitarian government even as Germany was under Hitler or as Russia is under the Communist conspiracy today.

The thing that has made and has preserved us as a great Nation is the fundamental premise that the United States of America is an indissoluable union of indestructible States. Our Federal Government is based upon the inviolate concept of the separation of powers so that neither the executive, the legislative, nor the judicial branch can go completely wild and destroy the sovereign rights of a sovereign people or of a sovereign state.

If that time ever comes there will be no one left to stop it because the supposed defenders of the Constitution, the black-robed justices of the United States Supreme Court, will be leading the carnival parade riding the chargers of dictatorship and tyranny like the Four Horsemen of the Apocalypse. I hope that time never comes and I humbly pray that it will not.

Mr. Speaker. I believe that our Constitution of the United States of America is a sacred thing. The most sacred and divinely inspired instrument produced by the brain and purpose of man since God gave the Ten Tablets of the Law to Moses on Mount Sinai, and since the Man of Galilee delivered His sermon on another mountain nearly 2,000 years ago.

Yes, the United States Constitution is a sacred thing. It protects and defends the weak and the oppressed against tyrants and would-be tyrants of strength and power. It protects minorities from vastly greater majorities. It protects the humblest cottage and the most stately mansion with equal sanctity. It protects the least of us from the powers of tyranny and despotism. It has caused us to have the greatest way of life ever experienced, or ever known, or ever dreamed of by the mind of man.

It has been defended by many thousands of Americans who have died to save it and yet who died with smiles in their souls because they helped to save it. It has been defended by countless millions more who have lived and so lived that our Nation, truly a nation under God and a nation under a divinely inspired Constitution, might be strengthened and might never perish from this earth. Let us, as citizens of the greatest nation the world has ever known, say reverently that if there has ever been a God's promised land on earth, this Nation of ours is it.

I hope that under our Constitution of the United States of America that we may ever preserve our Nation, and defend our Constitution against every attempt, foreign or domestic, to undermine or to destroy the concept of dual government under which the Federal Government has certain delegated powers and under which the States have certain reserved powers.

Let us as American citizens explicitly declare that the powers of the Federal Government result solely from the compact to which the States are parties and that the powers of the Federal Government in all of its branches and agencies are limited by the terms of the instrument creating that compact and by the

plain sense and intention of those provisions.

Let the terms of the United States Constitution and its plain sense and intention, apparent from the very face of the instrument itself, be that the ratifying States, parties thereto, have agreed voluntarily to delegate certain of their sovereign powers, but only those sovereign powers specifically enumerated, to the Federal Government thus constituted and that all powers not delegated to the United States by the Constitution or prohibited by it to the States be reserved to the States respectively or to the people.

Let us say in positive language that the Supreme Court of the United States has no authority to amend the United States Constitution by judicial order or judicial decree. The State of Georgia did not agree, indeed, I believe no State ever agreed in ratifying the 14th amendment, that the power to operate racially separate schools was to be prohibited to them thereby. As evidence of such clear understanding of the terms of the 14th amendment and its plain sense and intention, we all know that the very Congress which proposed the 14th amendment for ratification by the States, established separate schools in the District of Columbia. Further, we know that in many instances the very same State legislatures which ratified the 14th amendment also provided for separate public schools. Still further, we know that State and Federal courts alike, without any exception recognized and approved this clear understanding over a long period of years and held repeatedly that the power to operate such schools was indeed a power reserved to the States, without intervention of the Federal courts.

With the Supreme Court decision that recently approved the acts of the various States, the question of contested power has arisen. The Court asserts for its part that the States, did, in fact, in 1868, prohibit unto themselves, by means of the 14th amendment, the power to maintain separate schools, which power certainly the States have exercised for more than 80 years. Most of the States for their part, assert that they never surrendered such power. We, in the United States, who live in the section and States represented by me and by the gentleman from Mississippi, mindful of the resolution by which we ratified the 11th amendment to the United States Constitution, and mindful also of the resolution by which we ratified the first 10 amendments to the Constitution of the United States,which together are called the Bill of Rights, and cognizant of similar resolutions adopted by other States, both North and South, again assert this fundamental principle. That whenever the Federal Government attempts deliberately, palpably and dangerously to exercise powers not granted to it, the States who are parties to the compact have a right, and are in dutybound, to interpose for preserving the authorities and rights and liberties pertaining to them.

Failure on the part of the States thus to assert the clearly reserved powers would be construed as tacit consent to the surrender thereof and such submissive acquiescence to powerful and dangerous encroachment upon one power would, in the end, lead to the destruction and surrender of all powers, and inevitably to the obliteration of the sovereignty of the sovereign States, contrary to the sacred compact under which this Union of States was created.

We, as American citizens, concerned with this massive expansion of central authority, nevertheless have reserved our rights to interpose against the progress of such power, in the hope that will ameliorate such transaction. Now, however, in a matter so gravely affecting the people of our respective States in their most vital public institution, we can remain silent no longer.

Therefore, we must invoke that divine guidance impleaded by our people on July 4, 1776, when they first declared themselves to be a free and independent people and appeal now to all Americans everywhere, without regard to geography or latitude, and to all of our sister States and their citizens, for that decision which only not less than three-quarters of the States are qualified to make under our mutual compact.

We respectfully request them to join us as we make proper application for interposition.

We pledge our firm intention to take all honorable, legal and constitutional measures available to us to resist the illegal encroachment upon our sovereign power.

Let us state in no uncertain terms that we shall not be bound by the unconstitutional act, decision or decree of the Supreme Court of the United States.

Let us say in language that cannot be misunderstood that we swear allegiance to the Constitution of the United States and reaffirm our faith in it as the guardian and defender of our most sacred rights, and that we shall scrupulously obey its provisions, its orders, and its mandates.

Let us also clearly state that we will respect and will obey all properly constituted decrees of all courts and that we reaffirm our obedience and allegiance to the principle that the Government of the United States of America is a Government under law and not a Government of men alone.

Let us clearly state that we will respect and obey the Constitution and laws of the United States, but that we also expect to be allowed to respect the laws and the Constitution, of the sovereign States in which we live.

Finally, let us unmistakably state in language that cannot be misunderstood that we always have, do now, and shall ever, obey the law, but that as part of the sovereign people we shall never subject ourselves to, nor will we obey men—even nine in number—however white the marble of the building which houses that once-hollowed courtroom, or however black their judicial robes, so long as they disregard the Constitution, overthrow all judicial precedents, and admittedly base their decisions upon the insane rantings of a man named Gunnar Myrdal, who by his own admission, hates America with everything that constitutes a part of the American way of life.

Let us take renewed courage, and let us speak out whenever the occasion may arise so that we may never be accused of acquiescence because of our silence.

Let us take renewed courage as we try to preserve the greatest instrument the world has ever known, the Constitution of the United States. We know we are right. We shall not falter, and we shall not fail.

Mr. WILLIAMS of Mississippi. Mr. Speaker, I am very grateful to my friend from Georgia for those remarks.

Mr. LANDRUM. Mr. Speaker, will the gentleman yield?

Mr. WILLIAMS of Mississippi. I yield to the gentleman.

Mr. LANDRUM. I congratulate the gentleman from Mississippi. While the decision which prompted the very scholarly and masterful address he has delivered is of peculiar interest to us who live in the southern section of this country, the gentleman from Mississippi has, nevertheless, taken the time and made the effort, painstakingly, to point out to all of us the impending dangers inherent in such a decision as that rendered by the Supreme Court last May.

I think all Americans, and I know those of us who are charged with the responsibility of representing the American people in the form of government which we enjoy, should take notice of the statement made by the gentleman and of the dangers pointed out by this scholarly statement. It is time for us to realize that although this thing particularly disturbs us from our section of the country, that the time is at hand, when the Supreme Court has taken over the responsibilities which you tell the people you are going to perform when you come to this body to represent them. As the gentleman from Mississippi has suggested, the thing which is of particular moment is: Let us get down to business and realize that it is time now for us to understand the real problems, and the problem which is going to confront us until we resolutely stand here and resolve it ourselves. The Supreme Court must be stopped from usurping the legislative functions of our Government.

While I have the floor I also, if the gentleman will permit, wish to thank my friend and colleague from Georgia [Mr. FLYNT] for the splended statement he has just delivered.

Mr. HOFFMAN of Michigan. Mr. Speaker, will the gentleman yield?

Mr. WILLIAMS of Mississippi. I yield to the gentleman from Michigan.

Mr. HOFFMAN of Michigan. Without getting into this segregation issue, may I ask whether or not the principle involved in the case that the gentleman is discussing is not the same one the courts followed in the case of the offshore oil and in the natural gas case also?

Mr. WILLIAMS of Mississippi. Certainly the same principle is involved. The Court has usurped its powers in that case.

Mr. HOFFMAN of Michigan. Another question. Has the gentleman any opinion as to whether the appointment of

former Members of Congress to the Supreme Court, they having had a record of being permitted to legislate, and having legislated, is proper? And is it possible they have taken the idea over there with them that they are still a part of the legislative body created by the Constitution?

Mr. WILLIAMS of Mississippi. It appears so, but God only knows what they might think.

Mr. HOFFMAN of Michigan. I recall very distinctly when as a lawyer in my home community I used to read the decisions of the Supreme Court with almost as much conviction as I read my prayer book or Bible, either Old or New Testament. But down here when I have been getting five opinions in one case, and even those who are in the majority having different reasons—all of them—for their decisions, I have on occasions slipped and turned to a Western for my reading.

Mr. WILLIAMS of Mississippi. The gentleman has a very rare disease. It is the same as I have. I love the Constitution and believe we should follow it to the letter and that it should be changed only in the manner in which the Constitution provides and not by legislation or judicial decree.

Mr. HOFFMAN of Michigan. I wonder how many at the present time on the gentleman's side of the aisle, how many Members of the gentleman's party, will go along to prevent these—what would you call them. You cannot call them racketeers or extortionists—but respectable men who are welcome at the White House, for example, who have control of these unions, from collecting so much money?

Another thing, the charge is made here often by those on the other side that the Republican Party is antilabor. You know, these labor fellows now compel me, if I want to work in an industrial plant, to pay them—a while ago it was $2, then $5 and now it is $7—then they use that money to defeat me at the elections. Would you gentlemen not go along to outlaw all collections by the so-called labor organizations of money to be used against even Republicans?

Mr. WILLIAMS of Mississippi. Is the gentleman suggesting I have a ring in my nose?

Mr. HOFFMAN of Michigan. No; the gentleman has kept whatever it is free from the wringer and I want to express my appreciation.

Mr. WILLIAMS of Mississippi. The gentleman should not ask me that question. Ask somebody else. The gentleman knows where I stand.

Mr. HOFFMAN of Michigan. I know, but do you think there is any hope of getting that false charge withdrawn that the Republican Party is antilabor? I think the gentleman voted for the Taft-Hartley Act.

Mr. WILLIAMS of Mississippi. Yes, I voted for it, then voted to override the President's veto.

Mr. HOFFMAN of Michigan. Yes, I think it was put across by a Republican Congress with the help of certain Democratic Members.

Mr. WILLIAMS of Mississippi. We are talking about segregation and interposition. I appreciate the gentleman's remarks but I would like to get back on the track.

Mr. HOFFMAN of Michigan. I thought we would make a little hay, if possible.

Mr. RIVERS. Mr. Speaker, will the gentleman yield?

Mr. WILLIAMS of Mississippi. I yield to the gentleman from South Carolina.

Mr. RIVERS. At this time the Supreme Court and the prestige of that outfit has been brought down to an all-time low. Jefferson said in substance, I believe, that it is just as well that judges through their bias and unconstitutional laws be brought to task rather than the republic be destroyed. The Constitution is, after all, the supreme law of the land and this outfit has brought this derision and storm and vilification on themselves.

Mr. ABERNETHY. Mr. Speaker, will the gentleman yield?

Mr. WILLIAMS of Mississippi. I yield to the gentleman from Mississippi.

Mr. ABERNETHY. First permit me to congratulate my colleague on his very able and splendid address. He has given this House something to think about. The time has certainly come for the Congress to curb the Supreme Court and force it within the powers and limitations given it by the Constitution.

In this connection, I was very muchly interested in what our very able colleague from Michigan had to say a moment ago about the appointment of Congressmen, and I might add governors which he omitted, to the Supreme Court of the United States. Personally I have thought for a long time that that is a very bad practice and something should be done about it.

Mr. WILLIAMS of Mississippi. The gentleman might add, also, presidential candidates. I think that would be better.

Mr. ABERNETHY. Yes, I thank the gentleman. I not only think it is a very bad practice, but I think it has led to some very bad decisions and legislating by judicial decree. Also, the Court has fallen into disrepute. It seldom agrees on what the law is. Frequently its decisions are purely political, undoubtedly influenced by the political lives which all of them have led. They are men who studied law and practiced politics. They are not supreme in the science of law as our Founding Fathers intended them to be.

For many years, I have thought of introducing legislation which would disqualify Cabinet officers, governors, Senators, Congressmen, and so on from serving on the Federal bench at any time within 5 years of having served in such capacities. My object was to divorce the bench from the politician. It was my pleasure last year to discuss this proposal with certain officers of the American Bar Association. They were meeting here in Washington at the time. Many of them favored the idea. Some reserved opinion. Only one opposed. Thereafter I had a bill drafted by the legislative counsel. I got it out again the other day, took a look and made some revisions. I hope in the next few weeks to introduce it. I realize that if it should become law, it would disqualify me and every Member of this Congress from serving on the bench for 5 years from our last day of service here. That is exactly what I wish to do. As for myself I know I am not qualified to serve as a Federal judge, but my qualifications are as good as many who have been so assigned. I do not think, Mr. Speaker, that any Member of the Congress or any others who hold high political positions ought to be permitted to serve on the bench at any time within 5 years of a political service. If such a bill were made law, it would reverse what we have had on the Supreme Court the last 20 years. It would contribute materially to the establishment of a court made up of men who had devoted their lives to one of the oldest sciences known to man—the law—instead of a court made up of politicians and political "has beens." The judiciary would then be dignified with real students of the law and their opinions would be respected by one and all alike.

The SPEAKER pro tempore. The time of the gentleman from Mississippi has expired.

Mr. HOFFMAN of Michigan. Mr. Speaker, I ask unanimous consent that the gentleman be permitted to proceed for 3 additional minutes.

The SPEAKER pro tempore. Is there objection to the request of the gentleman from Michigan?

There was no objection.

Mr. HOFFMAN of Michigan. I would like to ask the gentleman to yield in view of what has just happened.

Mr. WILLIAMS of Mississippi. I yield.

Mr. HOFFMAN of Michigan. The gentleman from Mississippi [Mr. ABERNETHY] very modestly said he doubted his ability to serve on the Supreme Court.

Mr. ABERNETHY. Mr. Speaker, if the gentleman will yield, if the gentleman thinks I am so qualified, I deeply appreciate it.

Mr. HOFFMAN of Michigan. Now, I practiced law for some thirty-odd years in Michigan, and I would not even have presumed to be a candidate for one of the local judicial positions because I did not think I knew enough. Then I came down here and then the President appointed a police judge out of Detroit to be an associate justice of the Supreme Court. Now, how can you say that it requires any qualifications to be a member of that Court?

Mr. ABERNETHY. I might say to the gentleman that I have practiced law since 1924; that is, I attempted to practice, but I confess that during the last 20 years of my life I have not been entirely free of politics which certainly has not added to my stature as a possible jurist. But with all deference I submit that my qualifications are equal to if not exceeding those of some who now occupy the Federal bench, including the Supreme bench, with the qualification of neither being sufficient to meet the test of a real jurist. When a man gets into the field of political activity as a Senator or a Congressman or a governor and so forth, as a general thing, I think he loses at least temporarily some of the judicial

touch that he ought to have in order to qualify for a judicial position. There may be exceptions, I know; but the safe thing to do is to keep those who have been leading political lives off of the bench. The judiciary should be confined to those who have spent their lives mastering the law and nothing else.

Mr. BOYLE. Mr. Speaker, will the gentleman yield?

Mr. WILLIAMS of Mississippi. I yield to the gentleman from Illinois.

Mr. BOYLE. Of course, I have misgivings when I take the floor here this afternoon but I do not propose to sit idly by and hear our Supreme Court described and characterized in such uncomplimentary terms as have been employed today. I am admitted to practice before the Supreme Court of the United States, I have been admitted to the highest court of the State of Illinois, and I have been honored by the House of Representatives in making it possible for me to sit on the Committee on the Judiciary. I do not think we win anything when we deprecate the Supreme Court of the United States by a lot of loose language, directed not so much at its decisions but at its membership and their competence.

Mr. WILLIAMS of Mississippi. If I may interrupt.

Mr. BOYLE. Yes.

Mr. WILLIAMS of Mississippi. What can we compliment the present Supreme Court for? Certainly not their legal or judicial qualifications.

Mr. BOYLE. I compliment them for their qualifications. I may disagree with them in certain cases, as I have in the past. But I do not think you win by deprecating that Court which is recognized the world over as probably the loftiest judicial tribunal in the whole world.

It seems to me, as an officer of the Court, if I were to stand idly by and permit this assault to transpire without raising at least my own small voice in protest, I would be unfair to my assignment as a lawyer and my assignment on the Committee on the Judiciary of the House.

The SPEAKER pro tempore (Mr. HALEY). The time of the gentleman from Mississippi [Mr. WILLIAMS] has expired.

Mr. FLYNT. Mr. Speaker, I ask unanimous consent that the 30 minutes granted me under a special order for today may be transferred to the gentleman from Mississippi [Mr. WILLIAMS].

The SPEAKER pro tempore. Is there objection to the request of the gentleman from Georgia?

There was no objection.

Mr. WILLIAMS of Mississippi. Mr. Speaker, I am very grateful to my friend from Georgia for transferring his time to me. However, I shall not use more than 2 or 3 minutes and I shall use that for the purpose of replying to my good friend from Illinois [Mr. BOYLE] who so ably and valiantly sought to defend the nine political Justices who sit on the Supreme Court bench across the way.

Like the gentleman from Illinois [Mr. BOYLE], I believe in obeying the legal decisions of a court when that court is construing law and not making law.

In 1949 the Solicitor General of the United States, Mr. Perlman, in the case of Henderson against Southern Railroad, which was one of these segregation cases, asked the Supreme Court of the United States—and I think I can quote from what was in his brief—as follows:

> What we seek is not justice under the law as the law is written. What we seek is justice to which law in its making should conform.

Mr. Speaker, I am sure my good friend from Illinois will agree with me that when courts adopt that premise in the interpretation of law, there will be no such thing as established law in this country.

My good friend from Illinois may also be interested to know that at least two of the members of the present Supreme Court had never been admitted to practice before the Supreme Court before they were made members of that Court. I might also tell the gentleman from Illinois that among 8 of the 9 Justices there were less than 2 years' combined judicial experience at the time that these gentlemen took office. I think we should tell the whole story.

I think my colleague from Mississippi [Mr. ABERNETHY] has pinpointed one of our great needs in this country, and I do hope this Congress will have the courage and recognize the need for limiting the powers of the Supreme Court; and also to consider legislation establishing requirements and qualifications for members of that bench.

Mr. HOFFMAN of Michigan. Mr. Speaker, will the gentleman yield?

Mr. WILLIAMS of Mississippi. I yield.

Mr. HOFFMAN of Michigan. I do not believe you are going to get the Constitution amended because there is a political issue in there on that particular thing. But is there any reason why the Congress, every time the Supreme Court legislates, should not overrule their decision as to specific statutory legislation by passing a bill, just as we did on the gas business?

Mr. WILLIAMS of Mississippi. There is no reason, of course, except political. The gentleman knows that I am ready to do it and I know he is ready to do it.

Mr. HOFFMAN of Michigan. I am, too.

Mrs. BLITCH. Will the gentleman yield?

Mr. WILLIAMS of Mississippi. I am delighted to yield to the charming and able lady from Georgia.

Mrs. BLITCH. The gentleman is to be highly commended for his comments on the iniquitous decision of the United States Supreme Court on May 17, 1954. I join him and my other colleagues who have expressed their deep convictions here today—convictions bred into them, I am sure, by a consuming love of liberty and the knowledge that only by preserving a government which functions by laws, and not through the whimsies of men, can we hope to keep the Republic we so dearly cherish, and under which we enjoy the blessings of liberty.

The clear threat to constitutional government has been made by the members of the United States Supreme Court. I take second place to no one in my respect for the three divisions of Government of the United States. But my reverence for one is not superseded by awe of either of the other two.

Thomas Jefferson, one of the framers of our Constitution, foresaw the possibility of a degenerated Court when that document was being written. His protestations were overruled by Alexander Hamilton, who argued, in effect, that there would be so few men in the Nation really qualified for membership on the Court that it would be impossible for the Court to be composed of men other than those of the most superior ability.

The mistake was made in that the qualifications of Justices were not spelled out. And so today we have a Court that by one decision has usurped the powers of Congress and the rights of the States.

Furthermore, by predicating its decision not on law and not on legal precedent, the Court has itself established a precedent which, if followed in any successive decision, they have jeopardized the liberty of every individual citizen of this Nation for all time to come, unless steps are taken to obliterate the excess of power in which the Court wallows.

So I would warn my colleagues of all parties and all shades of social opinion that if they would be mindful of the deprivation of individual human liberty, and if they would deserve the noble heritage which has come to all of us, then they must join their colleagues of the South in a fight to correct this evil, or, as sure as the sun sets this afternoon, we, in turn, will have no heritage of liberty to pass on to our children, much less to generations yet unborn.

Mr. WILLIAMS of Mississippi. I am very grateful for your contribution. Your position is sound, indeed.

Mr. WINSTEAD. Mr. Speaker, will my colleague from Mississippi yield?

Mr. WILLIAMS of Mississippi. I am glad to yield to my distinguished friend and colleague from Mississippi.

Mr. WINSTEAD. I want to compliment and congratulate the gentleman for his masterful presentation and assure him that I am in complete agreement with the thoughts he has expressed. The South is united in opposition to the Supreme Court's decision, and our stand shall prevail.

FLOOD DISASTERS AND THE URGENCY FOR ACTION

The SPEAKER pro tempore. Under previous order of the House, the gentleman from Massachusetts [Mr. PHILBIN] is recognized for 60 minutes.

Mr. PHILBIN. Mr. Speaker, following the great floods of August 19, 1955, the Massachusetts delegation under the leadership of Majority Leader MCCORMACK and Speaker MARTIN met at Boston and designated a Committee on Flood Prevention and Relief comprised of the following Members of the House: PHILIP J. PHILBIN, chairman; HAROLD D. DONOHUE; EDWARD P. BOLAND; EDITH NOURSE ROGERS; RICHARD B. WIGGLESWORTH, and JOHN W. HESELTON.

This committee tackled its task immediately and gave most vigorous attention to the very difficult problems of relief, rehabilitation, protection and disaster insurance, which arose from the terrific impact of successive floods in our State and area. Members of our committee maintained continuous contact with the Army engineers, Federal Civil Defense, Small Business Administration, housing agencies, and other Federal, State, and local units concerned with the alleviation of flood conditions and the rehabilitation of stricken communities.

We also appeared in person before several congressional committees considering these problems and urged relief on an emergency basis and rehabilitation as rapidly as it could be effected. We also pleaded for adequate flood protection and disaster insurance. We are continuing to press for earliest possible action by the House upon the public works supplemental appropriation bill of 1956, which is now pending before the Appropriations Committee.

It is important that the Congress as a whole and the House Appropriations Committee in particular is most sympathetic with our plight and most anxious to render early assistance in the form of appropriations for many projects designed to prevent future floods. It is expected that action will be taken on this measure in the near future, and it is anticipated that by February 15 the Army engineers will have available either planning or construction funds for many projects. Of course, it is our plan to seek additional funds in the regular appropriation bill for fiscal year 1957.

Since there is great interest in the progress of measures to cope with floods and similar disasters, it appears appropriate to present herein for the RECORD a detailed outline of the flood disaster in the Northeast, especially in Massachusetts, an analysis of the situation in various river basins and extensive proposals for urgent action, including authorization and appropriations for flood control and related projects.

In the main these remarks substantially set forth the contents of our report and I hope they will be informative and helpful to Members of the House, who desire to have a fuller understanding of the great problems which confront us in the Northeast arising out of the recent very destructive floods.

DISASTER STRIKES

From the doldrums of the tropical seas on August 19, 1955, the devastating Hurricane Diane struck the Northeast and over an area of several hundred miles poured a vertiable deluge of torrential rains upon the countryside.

Carrying winds of 125 miles an hour at its eye, this great tropical storm spread over a 250-mile area packing a wallop, according to scientists, that no atomic bomb could match. Fortunately for the Northeast, as it progressed northward, the storm lost much of its fury. While it smashed along the east coast, as it veered inland, it lost wind force, but its heavy rains brought damaging floods and disaster in many places from Pennsylvania to New England.

This unwanted climatic visitor moved so fast and erratically that no accurate forecast of its path or probable effects could be made. Previous storms preceding Diane had been responsible for heavy rainfall and actually about 21 inches of rain was dropped upon our area in less than a week, turning almost every stream into a surging chaos.

Streams raised out of their banks, a battering ram of debris swept invincibly toward the sea.

Lives were lost, communities had to be evacuated, homes were destroyed and swept away in the flood, factories and industries wrecked or damaged, business establishments flooded and their goods swept away or destroyed, and a $2 billion havoc visited upon much of southern New England.

The damage in Massachusetts was so great as to defy full description.

RELIEF IS PROMPT

Relief was speedily mobilized. President Eisenhower flew from Denver to an early morning Bradley Field, Conn., conference with various governors and congressional leaders to take personal charge of Federal Government relief operations. He immediately cut red tape and cleared the way for action to relieve the afflicted and bring about rehabilitation of stricken communities.

Collaborating with local and State agencies, the Red Cross, the Army engineers, Civil Defense, Small Business Administration, various housing agencies, Armed Services components, Department of Commerce, Office of Defense Mobilization and many other Government offices and personnel moved vigorously in the stricken area to furnish needed relief and to start the huge job of mopping up the sand, silt, debris, rubbish and tangled wreckage that littered most of the area.

The homeless were fed, clothed, housed and furnished with medical treatment and supplies. Public communications, services, were restored; industries and business establishments put back in operation. No effort will be made here to outline all the damage that was done, of the many services rendered by the Government working with officials of State and local communities.

It is enough to say that the flood damage was enormous and stupendous, the loss of life was most serious and tragic, and the work of relief and rehabilitation to date magnificent.

Credit must be given to the Red Cross, to Federal agencies and to State and local agencies for their contributions and, above all, to the stricken people who, notwithstanding their tragic losses, faced these most distressing conditions with supreme courage and immediate, determined efforts to help themselves.

FLOOD CONTROL URGENT

The disastrous floods conclusively demonstrated one fact beyond question, namely, that Massachusetts and other parts of New England are not adequately protected against floods. Because of the hilly terrain, the heavy rainfall and the settlement of communities in river basins perhaps our area can never be fully protected against all damage from floods. But we certainly can and must be given every possible protection that is feasible from an engineering standpoint and deemed essential to prevent repetition of the last disaster. While we cannot wholly eliminate floods, we can certainly minimize their impact.

The Army engineers have made many studies of Massachusetts water resources in relation to flood control projects. Since 1927, 1936 and 1938 floods, particularly since August 19, 1955, this able group has given intensive consideration to and has submitted recommendations for specific flood control projects. This report will deal in detail with conditions in the several Massachusetts river basins and make recommendations for appropriate action by the Congress based upon past and current surveys.

CONNECTICUT RIVER BASIN

The Army engineers made exhaustive studies of this river basin and many of the results thereof are set forth in House Document 455 of the 75th Congress to which we allude.

The flood-causing storms usually travel across the territory under consideration in a north-northeasterly direction, at a speed of from 150 to 200 miles per day. The Connecticut River watershed, being long and narrow and lying practically north and south, is traversed diagonally, therefore, by these storms, with the result that the peak of the storm will cross the watershed generally in less than 1 day. This, together with the fact that the flow of the river is in the opposite direction to the course of the storm, combines to make the effects of the storm less severe and of shorter duration than might be expected from storms of equal intensity under different conditions.

Storms in New England fall into two classes—continental storms and tropical hurricanes. The latter can be expected in any month from May to December, but the greatest number seem to occur in August, September, and October. Storms originate in the Caribbean and the Gulf of Mexico and move in a westerly or northwesterly direction, after recurving northeast. They seldom reach the Northeast with destructive force, but when they do excessive precipitation occurs.

The Massachusetts congressional delegation committee on flood prevention and relief cites some basic problems:

What can be done about depreciation of values after floods? While there is a tendency, in the absence of disastrous floods over a period of years, for a gradual recovery of these depreciated values, the successful control of otherwise damaging floods will prevent recurrence of this depreciation and its subsequent loss.

Would dikes do away with opposition to flooding of lands required by flood reservoirs?

A system of dikes would cost about $43 million, according to 1939 Engineer estimates. They would cost more now. Protection would be one-half as effective as that afforded by reservoirs, the Engineers state.

Flood control in the Connecticut Basin would be best served by reservoirs and dikes where justified to protect areas of high value, they conclude.

Statistics on flood damage are compelling. For example, the Engineers estimate that the flood of March 1936 in the middle and lower Connecticut River Basin caused damage of $34½ million.

On the other hand, Army engineers state that completed projects in the Connecticut River Basin since made possible a saving of $45 million in the recent floods.

One project alone, the Knightville Dam, held back some 9,100,000,000 gallons of floodwaters. This prevented about $11,500,000 in damages, they state.

Dikes at Hartford are credited with preventing $22 million in damages; East Hartford, $3,750,000; Holyoke, $930,000; Chicopee, $500,000; West Springfield, $4,100,000; and Springfield, $1,800,000.

Had the rainfall extended to Vermont and New Hampshire, the downstream dikes in Massachusetts would have become overflowing bathtubs, in the Engineers' estimation.

The rainfall of Hurricane Diane was particularly heavy in the watersheds of the Westfield River, the West River, the Mad and Still Rivers which flooded Winsted, Conn., the Housatonic and the Naugatuck, which flooded Waterbury, the Connecticut, which spared Hartford because of an elaborate system of flood-control devices, the Quinebaug, in the Thames River Basin, which ravaged Southbridge and Putnam, Conn., the French River, also in the Thames Basin, which caused severe damage in Webster and Dudley, and the Blackstone, which swept through Blackstone Valley Basin into Woonsocket, causing heavy losses in many communities along the way.

In the view of the Engineers, protective dikes, dams, and floodwalls will not completely control floods until upstream dams and reservoirs are constructed. These reservoirs will hold back such flash rainfall as that which accompanied Hurricane Diane and permit rivers to flow at more normal levels, thus cutting flood damages to a minimum.

A very serious problem is presented in the Connecticut River Basin by flooding of the Quaboag, Swift, and Ware Rivers, not only along their own courses, but particularly by their confluence with the Chicopee River at Three Rivers, Mass. Great damage was suffered in this area and flood-control projects there are urgently needed. The completion of the Barre Falls Reservoir will be helpful, but other projects must be undertaken to control flood waters along the Quaboag, the Ware, Swift, and Chicopee Rivers. The reservoir project at West Brookfield is being restudied and resurveyed in connection with proposed plans for the entire area. It would afford protection for the Warrens, Palmer, and Three Rivers areas.

At the urgent request of our valued colleague, Mr. Heselton, we have recommended for authorization the flood control dam and reservoir on the middle branch of the Westfield River at Littleville, Mass.

The request for the West Brookfield reservoir on the Quaboag River was submitted to Congress on February 12, 1936, and again on December 11, 1937, by the Army engineers. The Congress authorized the project in the Flood Control Acts of 1936 and 1938.

The Army engineers classify West Brookfield as inactive due to a lack of economic justification. The most recent studies on West Brookfield were made in 1952. No change in the inactive designation was deemed feasible as a result of this survey but since the recent floods, at our request, studies are being pursued. It is probable that alternative sites or proposals will be selected in order to achieve practicable flood control in this area. The committee is urging special Engineer surveys for the flood-control needs of this area, including Spencer, Leicester, and the Brookfields.

The Barre Falls project, located on the Ware River east of Barre, is designed to protect Ware, Three Rivers, and downstream points on the Chicopee River as it flows into the Connecticut.

The project was authorized by the Flood Control Acts of 1936 and 1938.

The 1946 budget made no provision for Barre Falls. Congress, however, appropriated $55,000, the first advance planning grant for Barre Falls.

Again, the 1947 budget carried no funds for this project. The Congress appropriated $50,000 for further planning.

The 1948 budget asked $10,000 for this project. Congress appropriated $42,000.

The 1949 budget carried an item of $20,000 for Barre Falls. Congress appropriated $50,000.

The 1950 budget requested $10,000 for Barre Falls. Congress voted $20,000.

A total of $217,000 has been appropriated for Barre Falls for advance planning. The Engineers list this project as ready for construction. About $15,000 is needed for final planning, and we urge this and a construction appropriation.

Ten flood-control projects in the Massachusetts portion of the Connecticut River Basin have been completed at a cost of $19,153,000 to the Federal Government. These projects are the Birch Hill Reservoir on the Millers River, Chicopee, Holyoke, Knightsville Reservoir on the Westfield River, Northampton on the Mill River, Riverdale, Springdale, Springfield, Tully Reservoir on the east branch of the Tully River, and West Springfield. These completed projects did much to minimize damage in the Springfield and western Massachusetts area during the August floods.

THAMES RIVER BASIN

It is in this basin that the greatest Massachusetts damage occurred in the recent floods. It is here that perhaps our most urgent problem for flood protection exists on a very broad scale. A glance at the situation presently obtaining reveals the extensive work that will be required in this basin.

The Mansfield Hollow Dam, above Willimantic, Conn., the only completed project of seven proposed for the Thames River Basin, is credited with holding back some 11 billion gallons of water during the recent floods.

Four of these proposed projects are located in southern Massachusetts: East Brimfield, Westville, Hodges Village, and Buffumville. The other three are located in Connecticut: South Coventry, Andover, and Mansfield Hollow.

In addition, Congress has appropriated about $500,000 for improving the Quinebaug-Thames River channel at Norwich. While the work has not been completed, serious flooding at Norwich was definitely prevented this year.

The Westville Dam project on the Quinebaug River just outside Southbridge was deferred some time ago on the ground of lack of economic justification. The recent floods have focused attention on the real need for this project. Concurrence on the Buffumville Dam on the Little River at Charlton, Mass., was granted by Governor Tobin and Congress appropriated funds for planning purposes in June 1954. Funds to complete planning were voted by Congress this year.

Concurrence on East Brimfield was granted by Governor Herter in early September after the recent disastrous floods. State concurrence on Hodges Village has been granted and Westville is now before Governor Herter.

Local opposition was raised against two other Thames River Basin flood-control projects in the Thames Basin: one at South Coventry on the Willimantic River and the other on the Hop River at Andover. These projects have been listed as inactive by the Engineers.

Mansfield Hollow Dam at the meeting point of the Fenton, Mount Hope, and Natchaug Rivers with the Shetucket, just above Willimantic, was completed about 3 years ago. It has been successful as stated above in preventing serious floods.

Our committee presents herein the following references to pending projects in the Massachusetts portion of this basin:

The Buffumville project, located on the French River above Webster, is designed to protect Webster and Dudley from floods. It is 1 of 4 projects in the Thames River Basin located in Massachusetts.

The project was authorized by the Flood Control Act of 1941 and Congress has already appropriated about $165,000 for planning.

The project is designated by the Engineers as "ready for construction."

The Hodges Village project, located on the French River, is designed to protect Webster and downstream points in the Thames River Basin. It was authorized by the Flood Control Act of 1941.

No funds have been requested for this project, nor has Congress appropriated any.

The Army engineers state that in 1940 informal contacts were made with the State for concurrence on this project, at which time it was indicated State concurrence would not be forthcoming.

The New England division engineer, on September 21, 1955, formally requested Governor Herter for concurrence. The Governor has indicated he is having the matter investigated. The Army engineers state there is no known opposition to this project.

The East Brimfield project, located on the Quinebaug River west of Fiskdale, is designed to protect Southbridge. It is located in the Thames River Basin and previously was listed by the Army engineers as "inactive," either due to lack of

economic justification or lack of local interest. The Engineers have redesignated this project as "active" following the August floods.

The Engineers submitted the East Brimfield and the other Thames Basin projects to Congress on September 17, 1940. Congress approved East Brimfield in the Flood Control Act of 1941 and later appropriated $70,000 for planning.

At present additional funds are required to complete planning and these, plus construction appropriations, we propose to seek.

The Westville project, located on the Quinebaug River just west of Southbridge, is designed to protect this community and downstream points in the Thames River Basin.

Westville was authorized by Congress in the Flood Control Act of 1941 and $65,000 for planning was appropriated through June 30, 1945.

The 1946 budget requested $10,000 for Westville for further planning. Congress appropriated $14,000.

The Army engineers list this project as "inactive." The latest studies, made in 1952, indicated a lack of economic justification for the further advancement of this project. This lack was then attributed to increased development in the reservoir area.

However, it must be pointed out that this project together with East Brimfield, is most essential to protect Southbridge and downstream points, and to afford protection to the large plant of the American Optical Co. and other industries. These projects are particularly needed to protect homes and public services in the area.

BLACKSTONE RIVER BASIN

Damage in this river basin has also been very extensive and repetitious and since the river passes through thickly settled communities with industries located on or near the riverbanks, frequent flooding has been extremely costly.

After the floods of 1938, Congress authorized a survey of the Blackstone River Basin to alleviate future flood conditions. The Army engineers formulated a comprehensive plan of flood prevention, listing four projects as key points of the plan. Congress appropriated funds to work out detailed plans and engineering studies for these projects.

The Massachusetts projects are:

Worcester diversion tunnel, for which the Congress appropriated $70,000 for plans.

West Hill Reservoir, for which the Congress appropriated $83,000 for plans.

With the $70,000 appropriated for the Worcester diversion tunnel, the Engineers made several surveys and recommended the boring of a diversion tunnel through Pakachoag Hill and construction of a connecting channel to channel the Blackstone River around the Webster Square business area at Worcester. The Engineers spent a considerable portion of the $70,000 appropriation to ascertain just where the tunnel should go. Drill tests were made to find the type of rock to be tunneled. Nationally known consultants were hired to conduct still further tests. Our valued colleague, Congressman DONOHUE, has given this project his able and most vigorous attention.

The Worcester diversion tunnel is purely a local project designed to benefit Worcester alone. The city is called upon to pay only the cost of the land involved, estimated at about $450,000. The Federal Government would spend $4,190,000—more now—to complete the project. In the recent flood, the power plant of the Worcester County Electric Co., located at Webster Square, is reported to have suffered a loss greater than the entire cost of the completed project.

Key to the Worcester diversion project is assurance on the part of Worcester that it will provide necessary land and rights of way.

The West Hill Reservoir project is in need of funds to complete planning. This proposed reservoir is located on the Blackstone downstream from Worcester where the Blackstone Valley spreads out to flat terrain in a location containing a number of ponds and lakes, together with the West River which empties into the Blackstone.

This is largely a wildlife recreational area, given over in part to boating, swimming, hunting, and fishing. Upon completion of surveys, the Engineers recommended West Hill Reservoir which would consist of the widening and deepening of a large lake so that extra water could be stored in flood times.

Our Commonwealth expressed interest in developing the reservoir area into a State recreational project under an optional plan at a cost of about $200,000 to the Commonwealth. Negotiations are currently continuing.

Proposed construction of the reservoir at West Hill on the West River is to control runoff from a 28-square-mile drainage area and reduce floods downstream.

The proposed West Hill Reservoir will have capacity of 11,900 acre-feet at an estimated cost of $990,000—more now. The reservoir would control runoff from 28 square miles, provide a high degree of protection to points on lower West River, and would have considerable flood-reducing effect at downstream points on Blackstone.

The Worcester diversion tunnel would eliminate, it is believed, 100 percent of damage on Kettle Brook in upstream end of Worcester, 80 percent on lower end. Total annual benefits would be $161,880 so the Engineers estimate.

Federal funds for this proposed plan are contingent upon local interests giving assurance that they will (a) for Worcester diversion, Woonsocket channel, and Pawtucket floodwall, hold and save the United States free from claims for damages due to the construction works, maintain and operate all the works after completion, provide the necessary lands, easements, and rights-of-way; (b) for the Worcester diversion and Woonsocket channel, construct certain bridges, and remove obstructions to provide the necessary cross-sectional flow area.

The Engineers also recommend that the flood control capacity of the West Hill Reservoir be increased to provide conservation storage in the amount desired by the State of Massachusetts; providing that the estimated increased cost of the enlarged reservoir, in excess of the cost of the flood control reservoir, be contributed by the State prior to construction; and that in the event the State does not make the necessary appropriation, the reservoir be constructed without the conservation capacity.

The detail on West Hill follows:

The site is located in Massachusetts on the West River, 3 miles above its mouth, and 2 miles east of Uxbridge. The dam would be built to a height of 43 feet. A side channel spillway would be located in rock in the left abutment. The crest of the spillway would be 760 feet above mean sea level, and 15 feet below the top of the dam. The reservoir outlet would consist of a gate-controlled tunnel in rock in the left abutment. The flood-control capacity of the reservoir would be 11,900 acre-feet, equivalent to 8 inches of run-off from the drainage area of 28 square miles. With reservoir filled to spillway crest, an area of 860 acres would be inundated. It would be necessary to relocate two 14 foot gravel roads for a distance of 1.6 miles and 1.6 miles of 18 foot bituminous macadam road.

This reservoir would provide a high degree of protection to points on the West River and would have a considerable flood-reducing effect at downstream points on the Blackstone River. The total cost of the dam and reservoir would be $990,000 with annual charges of $52,980. The total average annual benefits that would accrue would be $72,770. The ratio of average annual benefits to annual costs is 1.38. The reservoir is included in the proposed plan for the Blackstone watershed. One of the above alternative projects involves conservation features with State participation.

The committee sought clarification from the Engineers of the flood prevention problem of those communities in the vicinity of Millbury between the Worcester diversion tunnel and the West Hill Reservoir, two vital projects in the Blackstone River Basin program. The Engineers state that "the recent floods of this past August indicate that conditions between the end of the Worcester diversion tunnel and the West Hill Reservoir must be examined. This work has been initiated, but no definite solution to the problem has been reached."

The committee will continue to work closely with the Army Engineers in seeking a solution to the problem. We are greatly indebted to Brig. Gen. Robert Fleming and his staff for this cooperation.

The West Hill project, located on the West River east of Riverdale, is designed to protect Uxbridge, Millville, and Blackstone in the Blackstone Basin.

The Army engineers submitted its request to Congress for West Hill on May 26, 1944. The project was authorized by Congress in the Flood Control Act of 1944, with $43,000 appropriated for advance planning through June 30, 1945.

The 1947 budget asked for $40,000 for West Hill. Congress appropriated this amount.

This project is multipurpose and includes recreational features. It is now the subject of negotiation between the

Commonwealth and the Federal Government to come to agreement on respective participations. We urge speed in considering and acting on this project because it is vital to several communities in our State as well as the lower Blackstone.

MERRIMACK RIVER BASIN

The Merrimack River Basin has also been the scene of many ravaging floods and great damage to individuals, communities, and industries. State compact agreements are still under consideration looking toward interstate flood-control projects. Our beloved colleague the gentlewoman from Massachusetts [Mrs. ROGERS] has contributed greatly in this area.

Along the river many valuable projects have been undertaken which have ameliorated dangerous water conditions, in some places through channel-widening and channel-deepening operations, smaller dams, and flood walls and dikes along the course of the river. However, this river and its tributaries, the Concord, Sudbury, and Assabet Rivers, and other smaller streams running into them, still present very serious problems which the Army engineers are considering. Corrective action will have to be taken throughout this entire river basin.

Studies are going forward to determine the need in this basin for constructing additional reservoirs and local protection works and improving the river in the interests of navigation, flood control, and water power. In fact, review reports have been authorized for practically all authorized flood-control projects and the entire area is being carefully studied, according to the Engineers.

In 1938 local flood-protection projects were completed on the Nashua River at Fitchburg and vicinity. However, recent floods caused considerable damage along this river at, above, and below Fitchburg, and at our request the Engineers are now making further studies to ascertain feasible plans for additional required protection.

CHARLES RIVER BASIN AND NEPONSET RIVER BASIN

These river basins will also require flood-prevention projects in order to forestall extensive damage from periodic storms.

As part of their survey of the Charles River, the Army engineers are reviewing the flood-prevention needs of the Milford area. Brigadier General Fleming, the New England division engineer, states:

> The flood of August 1955 was the record flood in this community. The Corps of Engineers has recently been authorized to make a complete reappraisal of flood-control plans in the area affected by the 1955 flood. Conditions on the Charles River, at Milford, will be carefully examined during the course of this study.

In the Dedham area along the Neponset River, Mother Brook was responsible for great damage and loss, and the Hyde Park and Readsville sections of Boston were also seriously affected. The Engineers are also giving these basins their attention. Our able colleague, Mr. WIGGLESWORTH, is especially active in plans for this area.

HOUSATONIC RIVER BASIN

This river and its tributaries definitely require flood-control projects practically throughout much of the basin. As is the case with the Thames, this river at flood stage seriously affects our neighbors in the great State of Connecticut. Studies and surveys are also proceeding in this basin.

HOOSIC RIVER BASIN

The Hoosic River has repeatedly gone on the rampage and it will be necessary to construct proper controls over this and other streams in the basin.

It is believed that completion of presently active projects at Adams and North Adams will largely relieve conditions in this river basin. The commiteee supports full appropriations to complete them at the earliest possible time. Our able colleagues, Mr. HESELTON and Mr. BOLAND, are giving special attention to projects in western Massachusetts.

OTHER NECESSARY WORK

Attention is also being given and surveys conducted to determine the feasibility of preventing flooding on the Mystic River, the Ipswich River, the Neponset River and the Housatonic River. In fact, we reiterate that, according to the engineers, all flood stricken areas, and all river basins, in our State are under study or review in order that effective control of floodwaters may be planned and instituted. In view of general conditions, the committee strongly urges that the studies and reviews be expedited, so that appropriations for construction can be sought at the earliest possible date.

NAVIGATION AND BEACH EROSION PROJECTS

The committee concurs in the recommendations of the New England Governors Conference regarding navigation and beach erosion projects in the whole New England area. The following is a listing of the Massachusetts projects and the amount of Federal funds needed in the fiscal year 1957 budget:

Mystic River, $2 million; Town River, $302,000; Fall River Harbor, $1,620,000; Weymouth Fore River, $2,058,000; Revere Beach, $75,000; Gloucester Harbor and Annisquam River, $180,000; Nantucket Harbor, $162,000; Chatham—Stage—Harbor, $167,000; Newburyport Harbor, $90,000; Falmouth Harbor, $60,000; Cape Cod Canal—Onset Bay, $157,000; Cohasset Harbor, $175,000; Boston Harbor—President Roads Anchorage, $2 million; Quincy Beach, $430,000; and Scituate Harbor, $393,000.

ARMY ENGINEER STUDIES

The committee has been in close touch with the Army engineers and Brig. Gen. Robert J. Fleming, Jr. and his staff have not only rendered Massachusetts and the flood area a great service, but under current authority are presently engaged in rounding out their old studies and making new studies where required with a view to instituting necessary projects or controls. At a later date we will have full reports on these recent surveys.

WATERSHED PROTECTION AND FLOOD-PREVENTION LAWS

Under Public Law 566, 83d Congress, the Department of Agriculture is authorized to inaugurate certain limited programs to prevent floods and protect watersheds by building small check dams, channel clearance, terracing, soil-conservation practices, and planning. This program is suitable for smaller areas and does not contemplate large flood-control projects and, therefore, it is not usually competitive with the projects of the Army engineers. Funds are furnished for this work to local communities and groups on a matching basis by the Federal Government, and it may well be that projects under this law would furnish a suitable answer in many communities where larger dams and projects are not economically justifiable or necessary, and where restoration and conservation of soil is a problem.

The objective of the Watershed Control and Flood Prevention Act is to reduce the peak flow of floods, cut down on the flow of silt and debris and rubbish, halt soil erosion, build up moisture in the subsoil of farms, and keep wells from going dry.

This program under the Department of Agriculture is not necessarily confined to agricultural regions alone, but is flexible enough to extend into industrial and residential communities where there is a substantial relationship to soil conservation, land utilization, and the prevention of damaging floods affecting productive soil.

FLOOD-CONTROL PROJECTS

It is very important that the committee give its earnest attention to specific, necessary flood-control projects. We are fortunate in one sense in that several of the necessary projects have already been authorized by the Congress, and that engineering studies of some of the others are under way. Other projects already authorized, but inactive up to this time, either for lack of economic justification or lack of local interest, can now, where necessary, be activated.

The committee strongly recommends that our delegation, coordinating our efforts with the New England Governors' Conference and the congressional delegations of the other New England States urge earliest possible action by the Congress on the following projects:

FOR AUTHORIZATION

Littleville Flood Control Dam and Reservoir to be located on the middle branch of the Westfield River.

FOR NECESSARY APROPRIATIONS FOR ENGINEERING STUDIES AND CONSTRUCTION OF THESE PROJECTS ALREADY AUTHORIZED

Barre Falls Reservoir, on the Ware River in Barre, Mass: Connecticut River Basin.

Buffumville Reservoir, Charlton, Mass.: Thames River Basin.

East Brimfield Reservoir, Holland, Brimfield, and Sturbridge, Mass.: Thames River Basin.

Hodges Village Reservoir, Oxford, Mass.: Thames River Basin.

Worcester diversion tunnel, Auburn and Millbury, Mass.: Blackstone River

Basin, 10 percent contributory by city of Worcester.

West Hill Reservoir, Upton, Northbridge, and Uxbridge, Mass.: Blackstone River Basin.

Adams local protection, Hoosic River, Adams, Mass.: Hoosic River Basin.

North Adams local protection, Hoosic River, North Adams, Mass.: Hoosic River Basin.

Westville Reservoir, Southbridge, Mass.: Thames River Basin.

All of the above with the exception of the Westville project were recommended by the New England Governors' Conference. That project is located on the Quinebaug River just west of Southbridge where recent flood damage was so severe and extensive. It has already been authorized, studied, and is urgently needed.

INDUSTRIAL AND OTHER DAMS

Many of these dams were washed out entirely, flooded, or were seriously damaged by the floods. Because they are usually located on private property, title to which is held by private individuals, companies or communities, the replacement and repair of these dams has presented no inconsiderable controversy.

The Army engineers state that under current authority, Public Law 875, they are not authorized to replace or repair these dams or, in fact, to do any other work, unless it is necessary to protect the public safety, or restore public facilities in an emergency. It is their considered opinion, moreover, that in many cases, it would be better not to replace these dams, but to let the water in the rivers and streams where they are located run unimpeded and freely toward the sea, thus minimizing flood danger.

The other side of this controversy is presented by local industries which use the water (a) for power, (b) for industrial purposes, (c) for fire protection, and local communities and residents using the water for fire protection and recreational purposes. There are also instances where the water behind these dams is used for agricultural purposes.

In two special instances pertinent to note here, these industrial dams gave way, one with gravest consequences involving serious loss of life and great damage to the area below, and the other without loss of life, but with considerable damage. In both instances, individuals and families had located their homes on the banks of the bodies of water formed by these dams and overnight when the floods came found their surroundings radically changed from attractive waterways to virtual mud holes—insect-infested, disease-breeding—unsightly and foul. Recreational use is entirely eliminated and fishing and swimming and boating made impossible. The plight of people living on the sites of these former attractive ponds is admittedly serious; their damage great, their rehabilitation difficult.

But there are a great many industrial and smaller dams on main rivers and tributaries and smaller streams heretofore serving a real, valuable purpose which, for one reason or another, will have to be replaced, rebuilt, or strengthened. The question is: Who will bear the cost? Under a real worthwhile adequate overall flood control program, is this the obligation of the Federal Government, or are such projects so closely bound up with private ownership, proprietary rights of individuals and local interests that they are to be deemed essentially the obligation of the local, county or State governments, or a combination thereof

The committee believes that there is an area for cooperation and coordination between Federal, State, county, and local governments as to these projects. We feel that some of them closely associated with larger projects should be financed by the Federal Government, whereas those by law or practice, traditionally the responsibility and problem of local, county or State units, might be dealt with by those respective units with possible contributions, if necessary, by the Federal Government.

The damage is so extensive and so great and the cost so high that it is probably all too true that only the Federal Government could assume this obligation without undue inconvenience, danger and prohibitive expense to individuals, industries and local and State units. The committee is of the opinion that the Army engineers, in connection with their current exhaustive studies, should be called upon to make appropriate recommendations at a very early date covering this subject matter, so that our delegation may move with all possible dispatch to insure every relief that Congress can appropriately grant predicated upon the demonstrable needs, as well as the responsibilities, of every level of Government concerned with solving these vital problems.

STATE CONCURRENCE

Under present procedures relating to the inauguration and institution of major flood control projects, the law requires State concurrence by the governor or, in a case like the Worcester diversion tunnel, where most of the benefits are strictly local, by duly constituted local authorities who shall also expressly agree to a substantial contribution in the form of water rights, land titles, easements or cash toward the completion of the project.

In the past the Governor of Massachusetts has given concurrence to the Barre Falls Reservoir project, the Buffumville Reservoir project and the East Brimfield Reservoir project. Of recent date the procedure requires hearings prior to the granting of the necessary State concurrence. Hearings on the Hodges Village Reservoir project were held and State concurrence was granted. The Westville Reservoir project requires State concurrence. It is not expected at present that any objections will be interposed. The concurrence is a condition precedent to Federal construction appropriations.

EMERGENCE ENGINEERING STUDIES

The delegation and the committee have previously very strongly urged allocation of emergency funds to complete engineering studies on all pending necessary flood control projects heretofore authorized by Congress.

The committee believes that pending congressional studies of flood and disaster insurance should be accelerated, so that the Congress may take early action upon measures in this category which would insure property of individuals, corporations and communities against damage by natural and man-made disasters.

The committee also believes that pending proposals to expand and perfect weather services, forecasting and warning systems and weather research should be given very careful consideration and acted upon by the Congress.

The committee further believes that the Congress should give attention to the coordination and improvement of the flood and disaster relief and rehabilitation agencies of the Federal Government. Consideration should be given to the question of direct governmental monetary relief for afflicted individuals, industries and businessmen so that they will not be overwhelmed by oppressive debt and obligations which constitute great hardship developing out of disaster.

The President's disaster relief fund should be increased to $50 million to be available annually whenever required. At the time of the Northeast floods, less than $10 million was in the fund. Congress this year appropriated $3 million for the President's fund.

ARMY ENGINEER EXPENDITURES

Up until the heavy October rains, the Army engineers had channeled $2,885,545 into Massachusetts for a total of 103 flood rehabilitation projects. Because of the restrictions of Public Law 875, 39 requests for help had to be disapproved, totaling $992,150, because private property was involved or no public hazard was deemed to exist. The committee has been in continuous touch with the Engineers regarding this work.

While the Engineers have been restricted considerably by Public Law 875, they have done their very best to comply with all requests for assistance. Moreover, they have done outstanding work in many communities whenever called upon and their contributions have been great indeed.

Reexamination of Public Law 875 should be considered by the Congress looking toward possible liberalization of this act to permit permanent, not just temporary, repairs to public and private facilities when disaster strikes.

ATTENDANCE AT CONGRESSIONAL HEARINGS

The chairman and members of the committee attended and presented their views on various aspects of flood control, rehabilitation, protection and disaster insurance before hearings held at Springfield by the subcommittee on water resources of the House Government Operations Committee, under the able chairmanship of our valued colleague, Congressman ROBERT JONES, of Alabama, and before the subcommittee of the United States Senate Committee on Banking and Currency, under the able leadership of our distinguished friend, the Senator from New York, Senator HERBERT LEHMAN.

At both these hearings we were accorded every courtesy, received most sympathetic attention and were given most generous expressions by the chairman and members of the respective com-

mittees that our proposals and urgent requests will receive earnest consideration.

We believe that these congressional committees are prepared to render us very valuable assistance, and that all Members of Congress when they become fully aware of the tragic and damaging consequences of recent floods will render us effective support and assistance—in our objective of speeding essential projects, and other necessary measures remedial, preventive, and protective.

For their constant interest, counsel and assistance, we express our deep gratitude to our distinguished colleagues, Hon. JOHN W. MCCORMACK and Hon. JOSEPH W. MARTIN.

APPLICATION FOR PASSPORTS

Mr. RICHARDS. Mr. Speaker, I ask unanimous consent to take from the Speaker's table the bill (H. R. 5844) to increase the fee for executing an application for a passport from $1 to $3, with Senate amendments thereto, and concur in the Senate amendments.

The Clerk read the title of the bill.

The Clerk read the Senate amendments, as follows:

Lines 7 and 8, strike out "the fee of $1" and by inserting in lieu thereof "a fee of $3." and insert "the retention by" and "of the fee of $1" and by inserting after the word "officials" the following language: "to collect and retain the sum of $2 as the fee."

Amend the title so as to read: "An act to increase the fee for executing an application for a passport."

The SPEAKER. Is there objection to the request of the gentleman from South Carolina?

There was no objection.

The Senate amendments were concurred in, and a motion to reconsider was laid on the table.

LEAVE OF ABSENCE

By unanimous consent, leave of absence was granted to Mr. SHEPPARD, for the balance of this week, on account of official business.

SPECIAL ORDERS GRANTED

By unanimous consent, permission to address the House, following the legislative program and any special orders heretofore entered, was granted to:

Mr. WILLIAMS of Mississippi (at the request of Mr. FLYNT), today, for 1 hour.

Mr. FLYNT, today, for 30 minutes.

Mr. BAILEY, for 40 minutes, on Monday next.

Mr. YATES, for 40 minutes, on tomorrow.

Mr. PHILBIN, for 1 hour, today.

Mr. FLOOD, for 2 hours, on February 16, in connection with the celebration of Lithuanian Independence Day.

Mr. BYRD, on Thursday, for 5 minutes.

EXTENSION OF REMARKS

By unanimous consent, permission to extend remarks in the CONGRESSIONAL RECORD, or to revise and extend remarks, was granted to:

Mr. ANFUSO.

Mr. MCVEY and to include an editorial.

Mr. YOUNG and to include extraneous matter.

Mr. ZABLOCKI and to include extraneous matter.

Mr. BYRD in three instances and to include extraneous matter.

Mr. CHELF (at the request of Mr. HARDY) and to include extraneous matter.

Mr. MADDEN.

Mr. O'NEILL in two instances and to include extraneous matter.

ENROLLED BILL SIGNED

Mr. BURLESON, from the Committee on House Administration, reported that that committee had examined and found truly enrolled a bill of the House of the following title, which was thereupon signed by the Speaker:

H. R. 1496. An act for the relief of Leong Ding Foon Quon.

ADJOURNMENT

Mr. O'HARA of Illinois. Mr. Speaker, I move that the House do now adjourn.

The motion was agreed to; accordingly (at 2 o'clock and 28 minutes p. m.) the House adjourned until tomorrow, Thursday, January 26, 1956, at 12 o'clock noon.

EXECUTIVE COMMUNICATIONS, ETC.

Under clause 2 of rule XXIV, executive communications were taken from the Speaker's table and referred as follows:

1421. A letter from the Administrator, General Services Administration, transmitting a report of overobligation of allotment under "Repair, improvement, and equipment of federally owned buildings outside the District of Columbia," pursuant to 31 United States Code 665; to the Committee on Appropriations.

1422. A letter from the Judge Advocate General, Department of the Navy, transmitting a draft of proposed legislation entitled "A bill to authorize the construction of modern naval vessels, and for other purposes"; to the Committee on Armed Services.

1423. A letter from the President, Board of Commissioners, District of Columbia, transmitting a draft of proposed legislation entitled "A bill to amend the act entitled 'An act to grant additional powers to the Commissioners of the District of Columbia, and for other purposes,'" approved December 20, 1944, as amended; to the Committee on the District of Columbia.

1424. A letter from the Chairman, United States Civil Service Commission, transmitting a draft of proposed legislation entitled "A bill to provide a measure of coordination between the Civil Service Retirement Act and the Social Security Act, and for other purposes"; to the Committee on Ways and Means.

REPORTS OF COMMITTEES ON PUBLIC BILLS AND RESOLUTIONS

Under clause 2 of rule XIII, reports of committees were delivered to the Clerk for printing and reference to the proper calendar, as follows:

Mr. BROWN of Georgia: Joint Committee on Defense Production. Fifth annual report of the activities of the Joint Committee on Defense Production (Rept. No. 1669). Referred to the Committee of the Whole House on the State of the Union.

Mr. ENGLE: Committee on Interior and Insular Affairs. S. 1683. An act to amend the act of June 13, 1949 (63 Stat. 172), and for other purposes; without amendment (Rept. No. 1670). Referred to the Committee of the Whole House on the State of the Union.

Mr. DURHAM: Committee on Armed Services. S. 2624. An act to amend an act entitled "An act to provide for the sale of the Port Newark Army Base to the city of Newark, N. J., and for other purposes," approved June 20, 1936, as amended; without amendment (Rept. No. 1670). Referred to the Committee of the Whole House on the State of the Union.

Mr. KILDAY: Committee on Armed Services. H. R. 2216. A bill to amend the act of June 19, 1948 (ch. 511, 62 Stat. 489), relating to the retention in the service of disabled commissioned officers and warrant officers of the Army and Air Force; without amendment (Rept. No. 1672). Referred to the Committee of the Whole House on the State of the Union.

Mr. KILDAY: Committee on Armed Services. H. R. 2220. A bill to clarify the status of citizens or nationals of the Republic of the Philippines who are retired members of the uniformed services and who hold offices of profit or trust under the Republic of the Philippines, and for other purposes; without amendment (Rept. No. 1673). Referred to the Committee of the Whole House on the State of the Union.

Mr. KILDAY: Committee on Armed Services. H. R. 2426. A bill to amend the Navy ration statute so as to provide for the serving of oleomargarine or margarine; without amendment (Rept. No. 1674). Referred to the Committee of the Whole House on the State of the Union.

Mr. DURHAM: Committee on Armed Services. H. R. 8101. A bill to authorize the Secretary of the Army to give 25 World War II paintings to the Government of New Zealand; without amendment (Rept. No. 1675). Referred to the Committee of the Whole House on the State of the Union.

Mr. DURHAM: Committee on Armed Services. H. R. 2452. A bill to provide for the conveyance of certain lands by the United States to the State of Wisconsin; with amendment (Rept. No. 1677). Referred to the Committee of the Whole House on the State of the Union.

Mr. JOHNSON of California: Committee on Armed Services. H. R. 7761. A bill providing for the conveyance of a portion of the Sharpe General Depot, Calif., to the Stockton Port District; without amendment (Rept. No. 1678). Referred to the Committee of the Whole House on the State of the Union.

REPORTS OF COMMITTEES ON PRIVATE BILLS AND RESOLUTIONS

Under clause 2 of rule XIII, reports of committees were delivered to the Clerk for printing and reference to the proper calendar, as follows:

Mr. KILDAY: Committee on Armed Services. H. R. 5590. A bill to amend the act entitled "An act to recognize the high public service rendered by Maj. Walter Reed and those associated with him in the discovery of the cause and means of transmission of yellow fever," approved February 28, 1929, by including therein the name of Gustaf E. Lambert; with amendment (Rept. No. 1676). Referred to the Committee of the Whole House.

PUBLIC BILLS AND RESOLUTIONS

Under clause 4 of rule XXII, public bills and resolutions were introduced and severally referred as follows:

By Mr. FRELINGHUYSEN:

H. R. 8779. A bill to establish a program of financial assistance to students in higher education, and for other purposes; to the Committee on Education and Labor.

By Mr. COOPER:

H. R. 8780. A bill to amend the Internal Revenue Code of 1954 to relieve farmers from excise taxes in the case of gasoline and special fuels used on the farm for farming purposes; to the Committee on Ways and Means.

By Mr. REED of New York:

H. R. 8781. A bill to amend the Internal Revenue Code of 1954 to relieve farmers from excise taxes in the case of gasoline and special fuels used on the farm for farming purposes; to the Committee on Ways and Means.

By Mr. ADAIR:

H. R. 8782. A bill to provide certain allowances and benefits to personnel of the Veterans' Administration who are United States citizens and are assigned to the Veterans' Administration office in the Republic of the Philippines; to the Committee on Veterans' Affairs.

By Mr. ASHLEY:

H. R. 8783. A bill to provide for national flood insurance and reinsurance, and for other purposes; to the Committee on Banking and Currency.

By Mr. BERRY:

H. R. 8784. A bill relating to the adjustment of wheat support prices for grade, and for other purposes; to the Committee on Agriculture.

By Mr. BLATNIK:

H. R. 8785. A bill to amend the act of June 22, 1948 (62 Stat. 568), and for other purposes; to the Committee on Agriculture.

By Mr. BROYHILL:

H. R. 8786. A bill to amend section 5 of the act of August 7, 1946, entitled "An act for the retirement of public school teachers in the District of Columbia," as amended; to the Committee on the District of Columbia.

By Mr. BURLESON:

H. R. 8787. A bill to provide for a prorated stationery allowance in the case of a Member of the House of Representatives elected for a portion of a term; to the Committee on House Administration.

By Mr. CARNAHAN:

H. R. 8788. A bill to provide for the establishment of the Foreign Affairs Advisory Board; to the Committee on Foreign Affairs.

By Mr. CRETELLA:

H. R. 8789. A bill to revise the Civil Service Retirement Act; to the Committee on Post Office and Civil Service.

By Mr. DENTON:

H. R. 8790. A bill to terminate the White County Bridge Commission, to transfer its assets, liabilities, functions, and authority to the Commissioner of Public Roads, and to authorize the donation of the bridge operated by the Commission to certain State agencies; to the Committee on Public Works.

By Mr. DEANE:

H. R. 8791. A bill to amend section 270 of the Internal Revenue Code of 1954 so as to reduce the maximum amount of deductions allowable to individuals from the operation of certain businesses; to the Committee on Ways and Means.

By Mr. EDMONDSON:

H. R. 8792. A bill to provide certain allowances and benefits to personnel of the Veterans' Administration who are United States citizens and are assigned to the Veterans' Administration office in the Republic of the Philippines; to the Committee on Veterans' Affairs.

By Mr. FASCELL:

H. R. 8793. A bill to amend paragraph (2) of the subdivision (c) of section 77 of the Bankruptcy Act, as amended; to the Committee on the Judiciary.

H. R. 8794. A bill to amend the Tariff Act of 1930 to provide that muzzle-loading pistols and revolvers shall be exempt from duty; to the Committee on Ways and Means.

By Mr. FRELINGHUYSEN:

H. R. 8795. A bill to provide for national flood insurance and reinsurance, and for other purposes; to the Committee on Banking and Currency.

By Mr. FRIEDEL:

H. R. 8796. A bill to increase the amount of telephone and telegraph service furnished to Members of the House of Representatives, and for other purposes; to the Committee on House Administration.

By Mr. GEORGE:

H. R. 8797: A bill to promote the dispersal of industrial facilities in the interest of national defense; to the Committee on Armed Services.

By Mrs. GREEN of Oregon:

H. R. 8798. A bill to provide that certain survivor benefits received by a child under public retirement systems shall not be taken into account in determining whether the child is a dependent for income tax purposes; to the Committee on Ways and Means.

By Mrs. GRIFFITHS:

H. R. 8799. A bill to correct an inequity resulting from the setting of the effective date of Public Law 68 of the 84th Congress; to the Committee on Post Office and Civil Service.

By Mr. HALE:

H. R. 8800. A bill to create a corporation to restore normal employment in labor surplus areas of group IV classification and produce industrial development in such areas; to the Committee on Education and Labor.

By Mr. HARRISON of Virginia:

H. R. 8801. A bill to change the postal classification of advertising matter, and for other purposes; to the Committee on Post Office and Civil Service.

H. R. 8802. A bill to amend the Internal Revenue Code of 1954 to provide an exclusion from income in the case of amounts withheld from retired pay of members of the uniformed services pursuant to the Uniformed Services Contingency Option Act of 1953; to the Committee on Ways and Means.

By Mr. HERLONG:

H. R. 8803. A bill to amend paragraph 219 of the Tariff Act of 1930 to remove the provision that certain glass imported in boxes must be packed in units containing 50 square feet or multiples thereof; to the Committee on Ways and Means.

By Mr. HOPE:

H. R. 8804. A bill to amend the Watershed Protection and Flood Prevention Act; to the Committee on Agriculture.

By Mr. HYDE (by request):

H. R. 8805. A bill to amend the District of Columbia Redevelopment Act of 1945 so as to afford certain preferences to businesses displaced by slum clearance or redevelopment and business property owners affected thereby; to the Committee on the District of Columbia.

By Mr. JARMAN:

H. R. 8806. A bill to provide for the conveyance of certain lands by the United States to the city of Lindsay, Okla.; to the Committee on Government Operations.

By Mr. KNOX:

H. R. 8807. A bill to extend for an additional 3 years the time within which the State of Michigan may commence and complete the construction of certain projects heretofore authorized by the Congress; to the Committee on Foreign Affairs.

By Mr. McDONOUGH:

H. R. 8808. A bill to correct an inequity resulting from the setting of the effective date of Public Law 68 of the 84th Congress; to the Committee on Post Office and Civil Service.

By Mr. McINTIRE:

H. R. 8809. A bill to amend the Fair Labor Standards Act of 1938, as amended, to exempt homeworkers in rural areas from the minimum wage and maximum hours provisions of that act in certain cases; to the Committee on Education and Labor.

By Mr. METCALF:

H. R. 8810. A bill authorizing the Secretary of Interior to construct, equip, maintain, and operate a new fish hatchery in the vicinity of Miles City, Mont.; to the Committee on Merchant Marine and Fisheries.

By Mr. MILLER of California:

H. R. 8811. A bill to authorize the Secretary of the Army to make a monetary allowance in lieu of providing a headstone or marker for the unmarked grave of a soldier, or a member, or former member of the Armed Forces; to the Committee on Armed Services.

By Mr. MORRISON:

H. R. 8812. A bill to revise the Civil Service Retirement Act; to the Committee on Post Office and Civil Service.

By Mr. MULTER:

H. R. 8813. A bill to authorize the regulation of the solicitation of proxies in respect of securities issued by certain banks, and for other purposes; to the Committee on Banking and Currency.

By Mr. OSTERTAG:

H. R. 8814. A bill to amend title II of the Social Security Act to increase the amount of outside earnings permitted without deductions from benefits payable thereunder; to the Committee on Ways and Means.

By Mr. PATTERSON:

H. R. 8815. A bill to authorize Federal assistance to States and local governments for the restoration of property and facilities of public park and recreational areas damaged or destroyed in major disasters; to the Committee on Public Works.

By Mr. PHILBIN:

H. R. 8816. A bill to authorize the construction of flood-protection measures, with particular reference to areas where severe damages have recently occurred as the result of extreme rainfall accompanying hurricane storms; to the Committee on Public Works.

By Mr. SILER:

H. R. 8817. A bill to provide for the conveyance of certain property of the United States to the city of Corbin, Ky.; to the Committee on Agriculture.

H. R. 8818. A bill to establish an immediate program to aid in reducing the public debt by providing that certain receipts from the sale of capital assets of the Government shall be used for such purpose; to the Committee on Ways and Means.

By Mr. TEAGUE of Texas:

H. R. 8819. A bill to provide certain allowances and benefits to personnel of the Veterans' Administration who are United States citizens and are assigned to the Veterans' Administration office in the Republic of the Philippines; to the Committee on Veterans' Affairs.

By Mr. TEAGUE of Texas (by request):

H. R. 8820. A bill to increase the maximum amount payable by the Veterans' Administration for mailing or shipping charges of personal property left by any deceased veteran on Veterans' Administration property; to the Committee on Veterans' Affairs.

By Mrs. FRANCES P. BOLTON:

H. J. Res. 485. Joint resolution for the establishment of a Commission on Nursing Services; to the Committee on Interstate and Foreign Commerce.

By Mr. BURDICK:

H. J. Res. 486. Joint resolution to provide for the observance and commemoration of the 50th anniversary of the official founding

and launching of the conservation movement for the protection, in the public interest, of the natural resources of the United States; to the Committee on the Judiciary.

By Mr. CHUDOFF:

H. J. Res. 487. Joint resolution to provide for the observance and commemoration of the 50th anniversary of the official founding and launching of the conservation movement for the protection, in the public interest, of the natural resources of the United States; to the Committee on the Judiciary.

By Mrs. GREEN of Oregon:

H. J. Res. 488. Joint resolution to provide for the observance and commemoration of the 50th anniversary of the founding and launching of the conservation movement for the protection, in the public interest, of the natural resources of the United States; to the Committee on the Judiciary.

By Mr. HOPE:

H. J. Res 489. Joint resolution to provide for the observance and commemoration of the 50th anniversary of the official founding and launching of the conservation movement for the protection, in the public interest, of the natural resources of the United States; to the Committee on the Judiciary.

By Mr. HYDE:

H. J. Res. 490. Joint resolution to provide for the observance and commemoration of the 50th anniversary of the official founding and launching of the conservation movement for the protection, in the public interest, of the natural resources of the United States; to the Committee on the Judiciary.

By Mr. RODINO:

H. J. Res. 491. Joint resolution to authorize the President to designate the month of March in each year as National Nephrosis Month; to the Committee on the Judiciary.

By Mr. STAGGERS:

H. Res. 391. Resolution providing for the consideration of the bill (S. 669) to provide an elected mayor, city council, school board, and nonvoting delegate to the House of Representatives for the District of Columbia, and for other purposes; to the Committee on Rules.

PRIVATE BILLS AND RESOLUTIONS

Under clause 1 of rule XXII, private bills and resolutions were introduced and severally referred as follows:

By Mr. BUCKLEY:

H. R. 8821. A bill for the relief of Unto Aro; to the Committee on the Judiciary.

By Mr. COLMER:

H. R. 8822. A bill for the relief of Col. John A. O'Keefe; to the Committee on the Judiciary.

By Mr. DORN of New York:

H. R. 8823. A bill for the relief of Constantinos Cokkinos; to the Committee on the Judiciary.

By Mr. GAVIN:

H. R. 8824. A bill for the relief of Carmen Mario Cannella; to the Committee on the Judiciary.

By Mr. HERLONG:

H. R. 8825. A bill for the relief of the Olson Corporation of Beresford, Fla.; to the Committee on the Judiciary.

PETITIONS, ETC.

Under clause 1 of rule XXII, petitions and papers were laid on the Clerk's desk and referred as follows:

451. By Mr. BENTLEY: Petition of the Michigan Crop Improvement Association regarding the situation on Canadian seed wheat; to the Committee on Agriculture.

452. By Mr. BUSH: Petition of 126 citizens of Williamsport, Pa., favoring the passage of legislation to prohibit the transportation of alcoholic beverage advertising in interstate commerce, and its broadcasting over the air; to the Committee on Interstate and Foreign Commerce.

453. Also, petition of residents of Williamsport and Lycoming County, Pa., favoring the passage of legislation to prohibit the transportation of alcoholic beverage advertising in interstate commerce, and its broadcasting over the air; to the Committee on Interstate and Foreign Commerce.

454. By Mr. CRETELLA: Petition of the Woman's Christian Temperance Union, containing 37 names, in support of H. R. 4267, the Siler bill; to the Committee on Interstate and Foreign Commerce.

455. By Mr. MUMMA: Petition of Mrs. Ruby M. Kagel, and 20 other residents, of Duncannon and vicinity, Pennsylvania, urging enactment of legislation prohibiting the transportation of alcoholic beverage advertising in interstate commerce, and its broadcasting over the air; to the Committee on Interstate and Foreign Commerce.

456. By Mr. RUTHERFORD: Petition of Mrs. Helen Ewing, president, El Paso WCTU, director of alcohol education of United Church Women, and 1,200 signers, in support of the Langer bill (S. 923) and the Siler bill (H. R. 4627) to bar alcoholic beverage advertising in interstate commerce and over the air, opposing the serving of alcoholic beverages on commercial airliners; to the Committee on Interstate and Foreign Commerce.

457. By the SPEAKER: Petition of the president, Hawaii Statehood Commission, Honolulu, T. H., petitioning consideration of a resolution adopted by the Hawaii State Constitutional Convention held in Honolulu on November 12, 1955, requesting that the Hawaiian Organic Act be amended so as to reconstitute the Legislature of the Territory of Hawaii along the lines set forth in the proposed Constitution for the State of Hawaii; to the Committee on Interior and Insular Affairs.

458. Also, petition of the deputy county clerk, County of Maui, T. H., requesting the issuance of public improvement bonds by the Territory of Hawaii without respect to the limitations imposed by the Hawaiian Organic Act or other acts of Congress, etc.; to the Committee on Interior and Insular Affairs.

459. Also, petition of Gerassimos Tsetoulis, Montreal, Canada, relative to an appeal of the treatment given the general Greek quota; to the Committee on the Judiciary.

EXTENSIONS OF REMARKS

Resolution by West Virginia Legislature Urging Congressional Action To Effectuate Sale of the Institute Plant

EXTENSION OF REMARKS
OF
HON. ROBERT C. BYRD
OF WEST VIRGINIA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, January 25, 1956

Mr. BYRD. Mr. Speaker, the Senate Banking and Currency Committee will begin hearings tomorrow on Senate Resolution 197, introduced by Senator FULBRIGHT. Senate Resolution 197 would disapprove the sale of the Institute Rubber Producing Facility, at Institute, W. Va. I shall appear at the hearings in opposition to Mr. FULBRIGHT's resolution. I am sure that the Members of this House are sufficiently aware of the importance of proceeding with finalization of the Institute sale. I know that they are cognizant of the beneficial effect which the sale of this plant would have upon the State of West Virginia, especially in view of my State's recent history of unemployment.

As an indication of the importance of the Institute sale to the people of West Virginia, the legislature of that State, presently in session, on January 30 passed a resolution memorializing the Congress to oppose any and all measures the purpose of which would be to disapprove and block consummation of the sale of this facility. I am inserting a copy of the memorializing resolution at this point in the RECORD:

Senate Concurrent Resolution 6

Whereas there is now pending before the Banking and Currency Committee of the Senate of the United States a resolution to disapprove the negotiated contract for the sale to private ownership of the Federal Government's synthetic rubber facility at Institute, W. Va.; and

Whereas the report to Congress of the Synthetic Rubber Facilities Disposal Commission shows the pending sale to return to the Government by far its most favorable recovery, on the basis of net book value, of all of the copolymer plant sales; and

Whereas the Disposal Commission's report further shows clearly and conclusively that the pending sale contract fully meets the requirements of the disposal act with respect to—

1. Procurement of fair value price.
2. Market protection for small business.
3. Protection of competitive health of rubber industry.
4. Protection of public against any monopolistic trend; and

Whereas acceptance by Congress of this sale will provide immediate activation of this large facility which has been idle all but 2½ years since 1947, thus giving lucrative employment to hundreds of persons with prospect of steady work at substantial wages by private employers; and

Whereas the entire State of West Virginia, by the United States Department of Labor classification, has been for the past 2 years a class IV–B labor area (meaning highest level of unemployment) and the pending sale would alleviate this condition; and

Whereas the terms of the pending Institute sale contract are equal or superior to those upon which each of the other 12 copolymer plants have been sold to private ownership during the past year, and there appears to be no just reason why the pending Institute sale as the last one should be measured by any other standards than those which have governed the preceding copolymer plant sales; and

Whereas the rejection of the Institute sale contract apparently could have no other result than to deprive West Virginia of a great industrial operation in a facility ready for use, since the willing purchaser could provide himself with the same facilities elsewhere, without limitation as to size other

than the limitation he places on his own investment risk: Now, therefore, be it

Resolved by the senate (the house of delegates concurring therein), That the Legislature of West Virginia, in regular session assembled, does hereby respectfully and earnestly memorialize and petition the Banking and Currency Committee of the Senate of the United States to reject the disapproval resolution on the sale of the Institute plant, now pending before it; and further

Resolved, That, should such a resolution be reported to the Congress, that the Members of Congress be hereby respectfully and earnestly memorialized and petitioned to reject the same; and further

Resolved, That copies of this resolution be forwarded to the Vice President of the United States and the Speaker of the House, to all members of the Senate Banking and Currency Committee, to all West Virginia Members of the Congress and, should any disapproval resolution reach the floors of Congress, to all Members of the House and Senate thereof.

The Need for Youthful Spirit in Government and Private Affairs

EXTENSION OF REMARKS

OF

HON. ALEXANDER WILEY

OF WISCONSIN

IN THE SENATE OF THE UNITED STATES

Wednesday, January 25, 1956

Mr. WILEY. Mr. President, I was privileged last Sunday to address the Green Bay Junior Chamber of Commerce of the subject of the need for youthful spirit in government and private affairs. I ask unanimous consent that my address may be printed in the CONGRESSIONAL RECORD.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

SENATOR WILEY STRESSES THE NEED FOR YOUTHFUL SPIRIT IN UNITED STATES GOVERNMENT AND PRIVATE AFFAIRS—SAYS YOUTHFUL SPIRIT "WILLING TO TAKE CAREFULLY CALCULATED RISKS" IS ESSENTIAL IN AIR-ATOMIC AGE

(Excerpts of address delivered by Hon. ALEXANDER WILEY, Republican, of Wisconsin, before Green Bay Junior Chamber of Commerce, January 22, 1956, Beaumont Hotel)

It is a real privilege for me to be present at this distinguished service award banquet.

Wisconsin is proud of the Jaysee movement. And Green Bay has every reason to be particularly proud of the award tonight to the most outstanding young man who has best served this fine community.

VALUE OF GRASSROOTS LEADERSHIP IN COMMUNITY

Awards of this nature serve to spotlight the most responsible type of grassroots citizenship.

They give a wonderful shot in the arm to those fine folks who, known and unknown, 365 days a year, are trying to make Green Bay and other Wisconsin and American communities real garden places.

I mean the sort of flourishing community in which we most enjoy raising our children—a wholesome community, appealing, friendly, clean, forward looking.

SPIRIT OF YOUTH ESSENTIAL FOR FOUR REASONS

The fact that you have selected your outstanding young man serves as the keynote for my comments tonight.

Why? Because America needs the spirit of youth, as much or more now than at any previous time in our history. Let me prove that point by four basic reasons:

1. We need the spirit of youth which recognizes the new realities of the air-atomic age, the realities of the contracted world of the 20th century.

I shall have more to say about this later on.

YOUTHFUL SPIRIT VITAL IN SCIENCE

2. Second, we need youth, because this is a scientific age. And in this age we urgently need the young mind, the growing mind, the fresh mind, which is curious, which is inquiring, which seeks to come up with answers to the great, great scientific problems of the universe.

What science? All science—physical science and social science, "pure" science and applied science.

I refer particularly to nuclear science, to electronic science, to physics, chemistry, biology, as well as to astronomy, geology, and yes, very definitely the social sciences as well.

Man today is reaching out billions of light-years into outer space.

He is preparing to fling a space satellite hundreds of miles into the sky, there to circle the earth in its orbit, and to transmit data on cosmic waves and other phenomena.

Meanwhile, too, man is reaching down to the most minute form of matter and energy within the atom. He seeks to harness forces so tiny that not even man's highest-powered electronic microscope can see them.

And so, in this quest of the infinite, man needs a youthful, dynamic spirit.

In our great atomic laboratories it is not unusual to find young 30-year-old geniuses directing operations that may critically affect the peace and well-being of the globe.

MANY YOUNG CIVILIANS IN GOVERNMENT

So, too, I may add, in our United States Government in Washington—in nonscientific pursuits as well—we have been bringing in an increasing number of able young leaders.

We have had a 27-year-old Assistant Secretary of Health, a 33-year-old Assistant Secretary of Labor, a new 37-year-old member of the Interstate Commerce Commission.

We have literally dozens of young men, serving as "right hands" to top Cabinet and agency officials. These young men come from the grassroots of America.

UNPRECEDENTED MASS OF YOUNG LEADERS IN WASHINGTON

Comparative studies are not readily available as regards the total number of young men appointed down through the years, by the executive branch of the Government.

But I have seen impressive lists of the enormous number of young people who have been appointed to very high office in Washington since January 1953.

And I believe that there is good ground to estimate that, probably at no previous time in American history, have more qualified young men been appointed in such numbers and to such high positions, in virtually every single Cabinet department and agency of our Government, than the past few years.

From the ranks of these young men will come the Cabinet officers and agency heads of tomorrow. From their ranks in the Department of Defense will come, as well, America's military leadership in years to come.

YOUNG AND OLD WOULD SUFFER IN WAR

It has long been said that "young men fight the Nation's wars, but older men are responsible for handling the Nation's affairs at peace."

Well, the facts show that, today, young people are high up in the effort as well, to keep this Nation at peace. That is as it should be.

Of course, the burden of the next war, if ever it comes, would not simply fall on the young people in combat ranks, it would fall on our entire population.

War must not come; it need not come, and I don't believe it will come.

AMERICA'S GROWING PEACETIME NEEDS

3. Now, let us continue on the need for youth.

Thirdly, we need the spirit of youth to meet the dynamically growing peacetime needs of our people.

We number, as you know, 165 million people today.

We will number 220 million people by 1975. This tremendous increase in population means that we need a youthful spirit which will help provide us with more housing, more jobs, more schools, more playgrounds, more hospitals, more roads, yes, more parking space, more suburban communities, more of all the good things of life.

Our gross national product today is $400 billion. It will reach the half-trillion-dollar mark in the not too distant future. But that will take work—and a youthful spirit.

TEAMWORK ESSENTIAL

4. Finally, and perhaps most important, we need the spirit of youth in teamwork.

Young folks—on and off the athletic field—particularly enjoy working together, playing together, growing together; and that is what we need today.

We are a country of competitive individualists, but we need cooperation.

We need it between the 48 States. We need it between regions—North and South, East and Midwest and Far West.

We need it between labor and management. (If you or I want to see grim examples of the results of lack of cooperation and understanding, you and I need only look to communities very close to us, to see the tragic consequences.)

THE AIR-ATOMIC FACTS—KEY TO SURVIVAL

But, my friends, I should like to turn back now to the very first phrase to which I referred.

You will remember that I mentioned that we need the spirit of youth in the air-atomic age.

Why? Because upon such spirit depends our very survival.

If you were to ask me: "Senator WILEY, what is your most important job in Washington? What do you regard as your greatest obligation?" My answer would be simply this— in one word: "Survival."

I mean that this Republic must endure; it must protect itself. That is the first law of nature—self-preservation.

You are all familiar with the overall Communist threat—a military-diplomatic-economic threat to our beloved country.

It is the most serious threat in world history.

Why, particularly, the military threat?

NATURAL BARRIERS NO LONGER EXIST

The answer is simple: It is because natural barriers no longer exist against possible lightninglike destruction of our country.

What were those barriers?

They were two: First, the barrier of space. Second, the barrier of time.

Today, because of man's ingenuity and inventiveness, there is virtually no space or time barrier between ourselves and the potential enemy.

The Atlantic and Pacific Oceans have been shrunken to the size of mere ponds. And the north polar area has been shrunken as well.

I have said from one end of Wisconsin to another, and I say to you tonight: We, in Green Bay, are actually closer than is the east coast to enemy attack—across the polar route—from Soviet bases in Siberia.

The fastest jet bomber from Soviet bases can reach us in less than 6 hours. Is it any wonder that our neighbor city of Milwaukee is today being ringed with Nike guided missile sites for purposes of defense against aerial onslaught?

And if there is developed—in 1 year—or 5 years an intercontinental ballistic or guided missile, it may reach us—not in 6 hours—but

in less than half an hour. I repeat, less than half an hour.

In less than 30 minutes, a Soviet guided missile—with a nuclear warhead—could come crashing down on us, from over the Arctic roof of the world.

So, I ask, can we dare underestimate the need for fresh minds, youthful minds, open minds to cope with this terrific defense problem?

YOUTH NOT A MATTER OF CHRONOLOGICAL AGE

You will note that I do not refer necessarily to young people, alone, as such.

Why? Because youth is not really a matter of chronological age. The truly young person is the person who is young in spirit.

There are so-called elderly men and women who genuinely have the youthful spirit, as much as a bright-eyed young person of 25 or 30. That is precisely what we need in this air-atomic age—alert eyes, alert minds—dynamic outlooks, peering into the future.

NO ENTANGLING ALLIANCES—AN OBSOLETE CONCEPT

Now, just as the facts of the air-atomic age have changed the strategy and tactics of war, so they have changed international diplomacy.

For years we Americans had prided ourselves on our avoidance of entangling alliances.

But now we have found that even if we wanted to continue that policy it would be hopelessly obsolete; it would no longer protect us.

So if some of us tend to look backward instead of forward, we must take the blinders off our eyes. We must recognize the new and dangerous world in which we live.

A great American President, Abraham Lincoln, once said: "The dogmas of the past are inadequate to the stormy present. * * * As our case is new, we must think anew and act anew. We must disenthrall ourselves and we will save our Nation."

THE REPUBLIC—MY PARAMOUNT INTEREST

Thus, in my work as senior Republican on the Senate Foreign Relations Committee, I have sought to make sure that we follow up-to-date policies which will truly save our Nation.

My interest, as you know, has always been this Republic—yours and mine—first and foremost.

But I have recognized—as you, my friends, should, that, because the globe has been contracted, we must try to prevent wars before—not after—they flare up in far corners of the world.

Of course, we must not try to take on all the world's burdens, but we must be willing to carry our share. We must not be mental shirkers or slackers.

Youth has courage. Youth is willing to face the facts. That is the spirit we need.

SAMPLES OF KEY QUESTIONS TODAY

What are the facts? Where are the dangers in the world today? What can we do—what should we do, if anything, about them?

These are vital questions. They deserve study.

What about our attitude toward the riots in North Africa, so near our strategic air bases?

What should be our position on the explosive Middle East problem, between the Arabs and the Israelis?

What about the growing Communist threats inside countries ranging as far apart as France and Indonesia?

What should be the level of appropriations in next year's mutual-security bill? How much can we really afford? How much is necessary? What safeguards, what restrictions, should be written in the bill? Should aid be limited to 1 year? What should be our attitude, as regards aid to neutralist powers?

These are not easy questions. But they are not questions which we can duck.

Reality is still reality, whether we ignore it or not. And we dare not ignore it, if we would survive; as we must, and as we will.

It is not I, alone, who must come up with sound answers to these questions: it is you and you and you who must help me, and help all our legislators and our Chief Executive to find and to stay on the right path to peace.

THE BRINK-OF-WAR CONTROVERSY

Now, you have all heard about the recent criticism of our Secretary of State because he is said to have asserted that we have been close to the edge of war on three occasions.

These criticisms of Secretary Dulles are, in my judgment, unfair and unfounded.

It is not he who brought us close to conflict, nor President Eisenhower, but the leaders of the Kremlin. Secretary Dulles merely responded to the Red danger; he did not create it. He responded firmly and forthrightly, precisely as the American people and the Congress desired.

In this world, we cannot escape danger.

Let no one fool himself into thinking that there is any easy, nondangerous way to avoid global conflict.

War requires sacrifices and risks, and avoidance of war requires sacrifices and risks.

These are perilous times. The unhappy fact of the world in which we live, is that perhaps for the rest of our lifetimes, whether we like it or not, we are going to live close to danger.

That does not mean that war would be actually imminent at any time, but it does mean that, so long as the Soviet Union continues to desire to conquer the world, we have no alternative but to be ready and vigilant every single hour of every single day and year.

Our vigilance helps to prevent war. Our firmness reduces the danger of war. It is not the taking of risks which brings war closer; it would be a policy of timid appeasement—a policy of so-called no risk—which would really be the greatest danger of all the riskiest of all alternatives. Why? Because the Reds grow fat and strong on their enemies' weakness.

We want peace. We despise war. But we will not be appeasers. We will not throw a little nation to the Red wolf, or a big nation. We will and we must stand firmly against Red aggression.

This is the answer of America's young and old alike.

CONCLUSION

It has been a great pleasure to be with you tonight, as you salute the outstanding young man of Green Bay.

I want to reiterate my tribute to the Jaycee movement of Wisconsin and the Nation.

I hope that this occasion will serve as a great stimulus to the young folks who did not gain this coveted award tonight.

They should feel encouraged to carry on their work, because whether they win a prize or not, they can feel real satisfaction for jobs well done, on behalf of a greater Green Bay and greater America.

Yugoslavia in the Security Council

EXTENSION OF REMARKS

OF

HON. WILLIAM E. JENNER

OF INDIANA

IN THE SENATE OF THE UNITED STATES

Wednesday, January 25, 1956

Mr. JENNER. Mr. President, I ask unanimous consent to have printed in the CONGRESSIONAL RECORD a news release issued by me on December 20, 1955, entitled "Yugoslavia in the Security Council."

There being no objection, the release was ordered to be printed in the RECORD, as follows:

YUGOSLAVIA IN THE SECURITY COUNCIL

It is deeply humiliating to any true American to see the representative of the United States at the UN taking part in a deal over whether the Philippine Islands should have the vacant seat on the Security Council.

The Philippine Islands are perhaps our closest friends as a nation. They were our allies in a cruel war and bore the heaviest brunt of the battle, while the Soviet Union, which contributed no men to the Pacific War, took all the spoils. The Filipinos are our friends in the struggle to preserve freedom and international morality against Communist hate and barbarism. We know that in another war against totalitarian brutality our fighting men can count on them to stand beside us in the fray.

What is Yugoslavia to us? The Yugoslavs shot down American airmen on a peaceful mission and sneered at our demands for an apology. What was Tito doing while the Filipinos were fighting a bloody fight for every inch of their soil? Tito was a traitor to his own country, hiding in Moscow until the danger was over and he could come back in safety and murder our valiant ally, Mihaelovitch and his brave men. Let us not forget in passing that Mihaelovitch's guerrillas destroyed the Nazi supply trains which were to equip Rommel's armies in Africa. Our men who fought in Africa have reason to remember.

Does anyone in the United States believe American fighting men could count on Tito's armies to fight beside them, if we are forced into another war with totalitarianism? I hope our representative to the U. N. is not so innocent to believe that.

Let me remind you of the real reason why the Soviet Union is determined to prevent the Philippines from taking their seat on the Security Council. When the Bandung Conference opened, the Soviet Union and Red China were confident that Nehru could manage it as they wished into innocuous desuetude. Their little plan did not work because the wise and brave anti-Communist nations of Asia and Africa spoke out with all their force against the new colonialism of the Communists. The grand climax of that great conference was the speech by Carlos Romulo, in which he told the people of Asia to forget some of their hatred for the colonial power on whose flag the sun never sets and face the immediate threat from the new colonial powers on which the sun never rises.

The Soviet Union never forgives and never forgets. The Philippines must be humiliated because they spoke out as freemen.

But what of the United States? Do we not have enough courage to support, without stint, the brave and far-sighted Philippine nation, which spoke at Bandung as America used to speak.

The choice of the Philippines for the Security Council is an issue of principle and we must watch while the delegate from the United States consents to decide an issue of principle by drawing straws.

Imagine George Washington agreeing with the British to draw straws over who would win at Valley Forge. Imagine General Pershing drawing straws with the Germans over the battle of Belleau Wood. Imagine, if you can, General Eisenhower drawing straws with the Nazi leaders over the Battle of the Bulge.

What has happened to our country? The answer to our stupid weakness over the Philippines is the same as the answer to our stupid weakness over Outer Mongolia. It is the same as our stupid weakness over the clever move of the U. S. S. R. to pair by its veto, the desert province of Outer Mongolia with the 90 million highly productive people

of Japan. The trouble is that our representative in the U. N. does not represent the people of the United States. He does not represent the Government of the United States, including Congress. He receives his instructions from, and represents only, the permanent elite established within our Government by the New Deal, whose real policy is firmly to establish a collectivist international, in which the United States will be one obedient province.

The plan was carefully laid to put over both the package deal on Outer Mongolia, and the defeat of the Philippines, in the shadows while the Geneva Conference was theatrically lit up to hold our attention away from the U. N. It was a clever plan but it failed. Free China's courage bought us time.

Yesterday I said that Congress must look into the question of our representative's fantastic role in opposition to Dr. Tsiang of Nationalist China and in support of Soviet bulldozing tactics. Today I say again, Congress must look at our fantastic role in the fight to reward a brave leader of the anti-Communist Afro-Asian nations, with a well-deserved seat of honor on the Security Council.

In both cases we will find the same dominant role of the permanent elite over our foreign policy.

If the American people are ever to have a voice in the United Nations or in any other aspect of our foreign policy, Congress must cut down the power of this nonelected cabal and restore government by the people in place of government by leviathan.

Albert Gallatin and Our Trade Policy

EXTENSION OF REMARKS

OF

HON. CLEMENT J. ZABLOCKI

OF WISCONSIN

IN THE HOUSE OF REPRESENTATIVES

Wednesday, January 25, 1956

Mr. ZABLOCKI. Mr. Speaker, 160 years ago there was elected to our House of Representatives from western Pennsylvania the young Swiss-American Albert Gallatin who, as a Congressman, Secretary of the Treasury, and minister to European lands, was to establish his reputation indelibly in the history of this country to such a degree that he is ranked in the annals of America as one of the Founding Fathers, along with Washington, Jefferson, John Adams, and Madison. Gallatin was born in Geneva on January 29, 1761, and I believe it is fitting that we who have succeeded him as Congressmen celebrate his birthday today.

In his diary, Juljan Ursyn Niemcewicz, famous Polish writer and poet who accompanied Revolutionary War hero General Kosciuszko on a visit to America in 1797, early makes mention of the young Gallatin. He wrote:

> Our stay in Philadelphia brought me countless friendships. I made friends with many Members of Congress and citizens of Philadelphia—among them Jefferson, whom I had met when he was American Ambassador to France, and Gallatin, born in Geneva and one of the finest Members of Congress.

The youth of 19 who landed in Boston in 1780 was not fleeing Europe in the sense that he personally was oppressed; but it was in America that he felt he had the greatest opportunity to work out those principles of democracy which he was to hold so high throughout his valuable life.

Before embarking upon his successful and distinguished career as a public official, Gallatin fought in the Revolutionary War, taught at Harvard, and farmed in western Pennsylvania. He read extensively and was largely self-taught. It is in a sense surprising to read that his command of the English language was poor, and that he spoke with a heavy accent throughout his many years in this country. He himself complained to Jefferson that he could not write even a decent letter without great labor. In spite of these difficulties, he became distinguished as an excellent debater, and well-known for his logic and his tremendous knowledge and understanding of financial matters.

In the realm of finance, he was to institute two major reforms which were to give the people greater control over the Nation's finances. With Jefferson, he instituted a system of strict accounting and submission to Congress of all appropriations. This was to earn him the enmity of the aristocratic Hamiltonian forces who held the contrary view that there was time enough to tell the Congress about disbursements after the money had been spent.

Gallatin's management of the public debt earned him the gratitude of the American people during the first decade of the 19th century. Under the Federalists, public debt had risen to some $83 million—which was better than 9 times the total annual income of the Federal Government. Yet Gallatin, upon entering into office of the Secretary of the Treasury, made careful plans and estimated that the entire debt could be repaid in 17 years. During the 8 years of the Jefferson administrations—when the total revenues of the Government averaged $12 million a year—he lived up to his promise and managed to retire $57 million of the public debt. That is a record difficult to better.

For his financial acumen and democratic principles, Gallatin earned himself the hatred of the Federalist Party which was to abuse him for his foreign birth and accent. But he had the love of the people, the confidence of Jefferson and the unshaken belief that America's way was the democratic way.

The reduction of taxes and the promotion of trade were the basis of Gallatin's policy throughout his political career; and, in negotiations with foreign lands, he worked to end discriminatory tariffs to further the development of commerce. In this respect, he was one of the earliest proponents of the policy of "trade, not aid," either for his own country or for others.

It is regretfully that I recall now that just over a year ago this country ran counter to Gallatin's ideas in its dealings with Switzerland, land of his birth, in blocking the road to harmonious trade relations with that friendly trade partner.

Shortsightedly, we imposed higher tariffs on the imports of watches which largely emanate from Gallatin's native city—Geneva. A blow thereby was struck, not only against the Swiss watchmakers, but against America's exporters who value highly this cash market, and the American consumer who must pay more for his watch—results Gallatin would not countenance.

Few persons seem to remember that Switzerland, which has received no economic aid from us, has been our best cash customer in Europe. Since World War II, they purchased more from us than we bought from them. Our export surplus to Switzerland during this period amounted to $500 million. The annual volume of trade between our two countries has been very substantial. In 1954, for instance, we exported over $150 million worth of agricultural, manufacturing, and mineral commodities to Switzerland. Of this total, almost $3 million came from the State of Wisconsin.

Now if we are going to close our markets to Swiss goods, we are simultaneously curtailing their ability to purchase our products. We are hampering an exchange which is beneficial to both countries. It would be well, I believe, if we would reconsider the effects of our recent actions in the light of Gallatin's sensible precepts put forward nearly two centuries ago.

Report of the Second Hoover Commission

EXTENSION OF REMARKS

OF

HON. CLIFTON (CLIFF) YOUNG

OF NEVADA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, January 25, 1956

Mr. YOUNG. Mr. Speaker, under leave to extend my remarks in the RECORD, I would like to insert a resolution received from the Las Vegas Junior Chamber of Commerce concerning the Second Hoover Commission report.

Their action herein is but one of a number of indications in my State of a growing awareness of the continuing need for efficiency and economy in government and adherence to constitutional principles:

> *Be it resolved*, That the Las Vegas Chapter of the United States Junior Chamber of Commerce endorse and support the principles of Federal efficiency, economy, and adherence to constitutional precepts and hereby urge our Representatives in Washington to give full study and consideration to the report of the Second Hoover Commission as a possible blueprint for securing better government at a better price.

In particular, I would like to commend Mr. Dave Boyer, chairman of the Las Vegas Jaycees committee on Your Stake in Better Government, and the members of his committee for the efforts they have expended in studying this complex report and their work at a grassroots level to obtain better government.

St. Louis Federal Jury Turns Against Injustice

EXTENSION OF REMARKS
OF
HON. FRANK CHELF
OF KENTUCKY
IN THE HOUSE OF REPRESENTATIVES
Wednesday, January 25, 1956

Mr. CHELF. Mr. Speaker, under unanimous consent, I place in the CONGRESSIONAL RECORD an editorial entitled "St. Louis Federal Jury Turns Against Injustice" that appeared in the Florence Morning News, Florence, S. C., on Tuesday morning, January 24, 1956, concerning the indictments of Matt Connelly and Lamar Caudle. Also a copy of a wire that I sent to the Messenger and Intelligencer at Wadesboro, N. C., on December 2, 1955, with respect to the same subject matter.

As a former chairman of the subcommittee of the House Judiciary Committee that conducted an investigation of the Justice Department in 1952, I agree with this editorial. In my opinion the indictment of Caudle will boomerang on the Republican Party because it is strictly political. A Democratic and Republican investigation of Caudle in 1952 and again in 1953 found nothing about which to indict Caudle. Why all this action on the eve of the 1956 presidential election?

The matters follow:

[From the Florence (S. C.) News of January 24, 1956]

ST. LOUIS FEDERAL JURY TURNS AGAINST INJUSTICE

The Federal grand jury in St. Louis is giving confirmation to strong statements of opinion that have been voiced over the past few weeks.

Matt Connelly and Lamar Caudle of the Truman administration have been indicted in St. Louis on a tax fraud conspiracy charge. The charge has all the obvious earmarks of a political effort to make Democrats bad and Republicans good. In a "frame" of this kind, where could the Republicans find two better men than Caudle and Connelly?

Now the jury has charged that much of what has happened is political; that the Government almost ordered the indictments; and, that things are going slow as a matter of election timing—not as a matter of justice.

Caudle has been hounded for years.

Previous hearings and investigations have demonstrated that this Justice Department tax official exemplified something of a high point in political naivete. They can prove he didn't use good judgment in some instances, but they haven't been able to prove he was dishonest—and they have worked with this same charge before.

If Caudle were not honest, any prosecutor able to pass a bar exam would have been able to prove it by now. The effort expended has been amazing.

Why try again?

Because he is a good gimmick.

His name has been tied to "Democratic corruption." Lamar Caudle has been associated with all of the evil connotations of Trumanism. This is election year and the Republicans made such a hit with their anvil chorus of crime and corruption at last election time that they are playing for a repeat.

Since the last time the Republicans burned a "Truman witch" a few of their 14 carat gold crusaders have tarnished. Men like Talbott, Wenzell and Strobel have pointed out that all Republicans aren't proper public servants.

The Republicans needed a real quick deal to get back in the headlines as champions of justice. They have done so by making justice a part of party politics.

From St. Louis comes the word that some members of the grand jury want out. Both Democrats and Republicans have protested the tactics being used and have been quoted in the St. Louis Post-Dispatch as believing the investigation is being handled so that any further indictments will be spaced at long intervals until November to serve the Republican Party rather than the interests of justice.

It would seem that the Republicans have enough to answer for without using the Justice Department as a means of stuffing the ballot boxes.

There is something more than sinister, worse than unjust, about using a man—already persecuted past reason—to serve partisan political advantage.

No one has been able to demonstrate that Lamar Caudle has been anything other than naive and kindhearted—neither of which seem to be acceptable in government. If we could feel that the government was honest in seeking conviction, then there would be little complaint; but there is the obvious evidence that the government is doing nothing more than using a well-worn name in an old game to win a new election.

WASHINGTON, D. C., *December 2, 1955.*
MESSENGER AND INTELLIGENCER,
Wadesboro, N. C.:

While I have not and shall not criticize a grand jury or court for any action or judgment, nevertheless, I believe I am one person who can say that your fellow-citizen, Lamar Caudle, has been really investigated. If after that investigation our subcommittee had thought he should have been jailed we would have said so in no mistaken language. After a thorough, searching, and relentless study and examination of the record and of the facts, the Subcommittee of the Judiciary Committee of the House investigating the Department of Justice in 1952 said among other things the following about Lamar Caudle:

"Every member of the subcommittee and its staff who observed Caudle and listened to his testimony over a long period shares in the opinion that he is an honorably motivated man. This does not rule out his shortcomings * * *. He made errors of judgment, some of which played their part in destroying public confidence in the government he served; and he swallowed more in the name of personal loyalty than any man should stomach, but Caudle never sold himself for riches or for power. If indeed he so much as skirted the edges of venality and corruption, he did more soul-searching about it than many of his associates who have emerged with unscathed reputations. And in every instance where the choice was clearly black or white, Caudle's choice appears to have been impeccably correct.

"The career of this man from his start as an eager young United States attorney to his final inglorious demise as a scapegoat is the most accurate reflection of decay within the Department of Justice that this subcommittee has come upon."

I am of the opinion that the leadership of the Republican Party wants to use both Caudle and Connelly as scapegoats to divert the attention of the country from the miserable record of Ezra Benson who has without any effort at all in less than 3 years, almost ruined every farmer in America. The GOP leadership wants us to forget such names as Adolphe Wenzell, Peter A. Strobel, and former Secretary of Air Talbott, and others who have been forced out of the present administration.

As a young prosecuting attorney I found it was much easier to indict a man than to convict him. As a young lawyer I also discovered it was far easier to sue a man in court than to get a judgment against him. It requires only words to indict or sue but thank God under our democratic judicial system it takes proof to convict in a criminal court or to get a judgment in a civil court. Last summer when the Justice Department requested the House Judiciary Committee to furnish it with our confidential files of our 1952 investigation, as the former chairman of the subcommittee that investigated the Department of Justice, I was unanimously named by the full committee to study the old records and to recommend to the committee whether they should allow the Justice Department to have these files. Although I knew at the time that "Justice" was on a hunting and fishing expedition, nevertheless, I recommended to the full committee that they allow the Department to have free access to all the files. In reading the old records this past summer I found nothing that would have changed my mind, thinking, opinion, or judgment in the Caudle case and for that matter any other individual investigated by us. Remember, the fellow heading the Department of Justice at present once intimated that former President Harry S. Truman was a "traitor" to his country. Just how partisan can one get? In my opinion Lamar Caudle is being castigated, eradicated, and "politicated." Therefore, in the interim, between now and the time of trial, I urge the good people of Wadesboro, Anson County, and North Carolina, where Lamar Caudle was born, raised, and educated, to reserve judgment of their fellow-citizen. Don't let anybody sell your hometown boy short.

FRANK CHELF,
Member of Congress, Former Chairman, Chelf Subcommittee.

Tito Suggests

EXTENSION OF REMARKS
OF
HON. WILLIAM E. McVEY
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES
Wednesday, January 25, 1956

Mr. McVEY. Mr. Speaker, under leave to extend my remarks in the RECORD, I should like to include an editorial from the pages of the Chicago Tribune entitled "Tito Suggests." We shall soon have before us the mutual security appropriation which, in more understandable terms to the public, means our foreign aid spending program. The appropriation asked for this year is about $2 billion in excess of the amount appropriated during the last session. To those of us who have voted consistently against the foreign-aid program in previous years, this amount seems excessive.

Particularly are we opposed to spending of the type that has been appropriated heretofore for Yugloslavia. That country adheres to the Communist doctrine. Tito, himself, has openly espoused that philosophy. There can be no doubt on this question. Nevertheless, we have aided that country in cold cash to the tune of approximately $689,316,000, in addition to substantial loans and credits.

The Federal Government has no money except what it draws from the taxpayers of this country. In my judgment, there is no justification for taking taxpayers' dollars to help support a Communist country in any part of the world.

Other governments receiving our aid are using such funds to balance their budgets and reduce taxes while we continue on the road of deficit spending. Our expenditures in our various foreign aid programs, without interest charges, now total $108,847,779,000. Think what a splendid fiscal position we would enjoy if even a considerable portion of that expenditure could have been used to discharge our own obligations.

Anyone who feels we can buy friendship with money is doomed to disappointment. Ideologies are not for sale. We can only hope to win out over Communist philosophy by setting an example to the world of a better form of government, and even in that case, we shall not always win. Take for example, China. That country, not including Formosa, has received aid from this country to the extent of $2,476,260,000. Yet everyone is acquainted with the controversies continually raging between China and the United States.

It is difficult for the average individual to understand the impact on our economy of this foreign aid spending program. If one should undertake to spread this cost over the householders of the Nation, it would be found that for every family of four, this program has cost or will cost approximately four thousand dollars. The working men and women, as well as the corporations, will carry this burdensome taxload, much of which is hidden in the excise taxes we pay everyday. We meet these taxes at every turn, and it is important that workers become conscious of the inroad of taxes upon their earnings.

The following editorial deals with only one aspect of our foreign-aid program, but it is well worth reading:

TITO SUGGESTS

Hardly had Secretary of State Dulles and his delegation to the United Nations discovered that we are now primarily in social and economic competition with the Soviet Union for the favor of fence sitting countries than Marshal Tito of Communist Yugoslavia professed to discover the same thing.

In a speech at Belgrade he called upon the big powers to gain the sympathy of underdeveloped countries through economic aid rather than treaties of military alliance. He coupled this statement with a denunciation of the Baghdad Pact, in which the United States has a sympathetic interest. This treaty alines Pakistan, Iran, Iraq, Turkey, and Britain in a defensive coalition against Soviet incursions into the Middle East.

When Tito called upon the big powers to give unselfishly, he was obviously mindful of two things. One is that he has collected a billion dollars in aid from the United States; the other, that he has refused to join 14 non-Communist nations in the North Atlantic Treaty organization for defense against Russia.

The possibility cannot be excluded that Tito sees some profit to himself in supporting the notion that the most agreeable rivalry between the United States and the Russians is a competition in handouts. He stands to collect from both sides, and, on performance, he can expect to collect more handsomely from the United States. This commits him to nothing, which is very much to his taste, for his renewed friendship with the Soviet Union in the last year suggests that it is not in his temperament to side against his fellow Communists in a quarrel.

The Committee for an Effective Congress

EXTENSION OF REMARKS
OF
HON. WILLIAM E. JENNER
OF INDIANA
IN THE SENATE OF THE UNITED STATES
Wednesday, January 25, 1956

Mr. JENNER. Mr. President, I ask unanimous consent to have printed in the CONGRESSIONAL RECORD a news release issued by me on December 30, 1955, entitled "The Committee for an Effective Congress."
